Caliente.COM

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

PUBLIC OPINION

Number 1
Volume XXXII

The Week

Thursday
January 2, 1902

IT appears in the summary of opinions in this issue on the disintegration of the McKinley cabinet that the reorganization of the president's council is quite generally regarded as natural and inevitable, and there is very little disposition to seek in changes of cabinet officers any indication of change of policy on the part of the administration. No such indication could be discovered in the retirement of Postmaster-General Smith, but in the appointment of Governor Shaw to succeed Mr. Gage there is a promise that whatever backing the treasury department can give to reciprocity will be forthcoming. There could scarcely be any difference of opinion in regard to the secretary's financial policies, but it is known that he is not in sympathy with the reciprocity movement, while Governor Shaw has been a most outspoken advocate of the tariff policy embodied in the last public expressions of President McKinley, and the secretary-elect's opinions upon the future of our foreign trade have formed a large part of his utterances since his appointment was announced, showing that his interest lies in that direction rather than in the direction of strictly financial matters, in regard to which he says plainly that we can not do better than follow in the footsteps of Mr. Gage.

WITH the coming of Governor Shaw into the cabinet Iowa assumes an importance in the national government that has rarely, if ever before, been held by officials from any one state. Two secretaryships, the speakership of the house, the direction of the senate committees on appropriations and the Pacific railroads, and the chairmanship of four important house committees are in the hands of Iowa men, giving that state an influence even more far-reaching than that of Maine when Blaine, Reed, Frye, Dingley, and Boutelle all occupied influential positions. The situation can only be compared to the domination of New York during the first administration of Grover Cleveland, when that state had the presidency, the secretaryships of the treasury and the navy, and other high places in the government.

“**POSSIBILITY of a War with the German Empire.**” This is a rather startling headline to find in a conservative New York newspaper, but there it is found, heading a dispatch from Washington, suggesting the possibility of serious difficulty with Germany in connection with the latter's claim against Venezuela. We do not agree that there is any possibility of a war with Germany on this account, but the discussion shows how rapidly the Venezuela business is assuming a serious form. Whether or not it will become still more serious depends altogether upon the attitude of Germany. Venezuela's side of the controversy is stated semi-officially in an article in the foreign department. The shiftiness and poor logic of this statement are too evident to arouse any sympathy in behalf of the alleged republic whose destinies are shaped by such a man as President Castro.

THE end of Tammany rule in New York and the beginning of Mayor Low's administration makes a very encouraging political opening of the year. It marks a step toward the correction of the greatest evil with which we have to contend in this country—municipal corruption, and it is sincerely to be hoped that the success of the new administration will be such that other cities will be inspired to emulate New York's example. Mr. Low's appointments have been influenced solely by the fitness of the appointee to serve the public interests, the administration is in no respect hampered by obligations to any evil political influence, and it is thus possible for the first time to test the claims of reformers that, given a free hand, they will show how well a municipality can be governed.

AT the launch of the new battleship *Missouri*, on Saturday, Secretary Long took advantage of the opportunity to reply to those who are alarmed by the spending of a hundred millions on the navy during the present year. To the objection that the expenditure of this sum was a tax of \$6 on every family in the United States, the secretary answered that the money reverted to the families involved in the form of wages or otherwise, and as to the navy being a menace to peace, the secretary held, on the contrary, that it was a means for the preservation of peace, claiming that our only war in recent years would not have been entered into by Spain had she not thought our navy inferior to her own. Mr. Long also touched upon the absolute necessity of extending naval protection over our foreign trade, and if he did not succeed in allaying the alarm of those timid Bostonians who deplore the present naval program, he must have satisfied every one else, if they were not satisfied before, that the program, if it is faulty in any respect, is to be complained of as being too small rather than too large.

GROVER CLEVELAND'S acceptance of a place on the arbitration commission recently instituted by the New York labor and capital conference gives that body added importance in the public eye, and therefore increases the likelihood that it will have an important influence in the settling of labor disputes. Those who should refuse to accept the offices of the commission as now constituted would place themselves in a very bad light before the community, it being pretty well understood by this time that the successful side of a strike is that side that is supported by public opinion. This was very clearly demonstrated in the last strike of the coal miners, who, backed by public sympathy, soon brought their employers to terms; and in the case of the steel strikers, who were defeated mainly because they were unable to convince the public that they had the right of the controversy on their side.

IN spite of the fact that British troops in South Africa have suffered another disaster in De Wet's dashing raid at Zeefontein, the London correspondents say that more attention is being paid to the details of the settlement and the restoration of the country to a peace footing than to the incidents of the “ever-ending war,” as some one has called it. Upon what basis the persistent rumors of peace rest, is not at all clear to the observer from a distance. But negotiations are said to be in progress between Kitchener and the Boer leaders, and it is clearly only a question of months when the war must come to an end through the exhaustion of the Boer resources in men and munitions of war. If it is true, as reported, that the Boers have received assurances that their homesteads will be rebuilt at the cost of the British government, that the banished leaders will be permitted to return to their country within a year of the proclamation of settlement, and that amnesty shall include the convicted Cape rebels, these instances of British liberality will go along toward lessening the reproach in which the government is now held on account of its harsh conduct of the war.

WITH the dispute between Argentina and Chile taking a new form every day, it is difficult to say anything about it more than has already been said. Peace reports based upon the signing of a protocol by Chile turned out to be premature, Argentina rejecting the terms proposed, giving rise to new apprehensions that a peaceful settlement of the boundary dispute between the two countries is impossible. A new element of danger is introduced into the controversy by the circumstance that the people of Argentina appear to be very anxious for war, and President Roca is probably not in a position to withstand their demand if it should be persisted in.

AMERICAN

The Treaty-Making Powers of the Senate

CAN THE SENATE AMEND TREATIES?

HENRY CABOT LODGE, in the January *Scribner's Magazine*, expresses surprise that the action of the senate in amending the first Hay-Pauncefote treaty should have been so much misunderstood, not only in England but in this country. The purpose of his article is to show that the power to amend treaties has been recognized as belonging to the senate since the beginning of our national history. The Jay treaty with England in 1795 was so amended and the action of the senate was accepted by England as a legitimate part of the negotiations. Historically, the president has a part in the ratification of treaties only by virtue of a concession made by the states' rights party in the constitutional convention to the nationalists, led by Hamilton. The original "Virginia plan" vested the power to ratify in the senate alone. Mr. Lodge cites numerous instances showing the close relation of the president and senate in all matters concerning treaties, and gives a list of sixty-eight treaties amended by the senate and afterwards ratified by the foreign powers with which they had been negotiated.

The results of the preceding inquiry can be easily summarized. Practice and precedent, the action of the senate and of the presidents and the decision of the supreme court show that the power of the senate in the making of treaties has always been held as the constitution intended, to be equal to and coördinate with that of the president, except in the initiation of a negotiation which can of necessity only be undertaken by the president alone. The senate has the right to recommend entering upon a negotiation or the reverse, but this right it has wisely refrained from exercising, except upon rare occasions. The senate has the right to amend and this right it has always exercised largely and freely. It is also clear that any action taken by the senate is a part of the negotiation, just as much so as the action of the president through the secretary of state. In other words, the action of the senate upon a treaty is not merely to give sanction to the treaty, but is an integral part of the treaty-making and may be taken at any stage of a negotiation. It has been frequently said of late that the senate, in the matter of treaties, has been extending its powers and usurping rights which do not properly belong to it. That the power of the senate has grown during the past century is beyond doubt, but it has not grown at all in the matter of treaties. On the contrary, the senate now habitually leaves in abeyance rights as to treaty-making which at the beginning of the government it freely exercised, and it has shown in this great department of executive government both wisdom and moderation in the assertion of its constitutional powers.

This is not the place to discuss the abstract merits of the constitutional provisions as to the making of treaties. Under a popular government like ours it would be neither possible nor safe to leave the vast powers of treaty-making exclusively in the hands of a single person. Some control over the executive in this regard must be placed in the congress, and the framers of the constitution entrusted it to the repre-

sentatives of the states. That they acted wisely can not be questioned, even if the requirement of the two-thirds vote for ratification is held to be a too narrow restriction. These, however, are considerations of no practical importance, and after all only concern ourselves. Our system of treaty-making is established by the constitution and has been made clear by long practice and uniform precedents. The American people understand it and those who conduct the government of other countries are bound to understand it too when they enter upon negotiations with us. There is no excuse for any misapprehension. It is well, also, that the representatives of other nations should remember, whether they like our system or not, that in the observance of treaties during the last 125 years there is not a nation in Europe which has been so exact as the United States, nor one which has a record so free from examples of the abrogation of treaties at the pleasure of one of the signers alone.

The Disintegration of the "McKinley Cabinet"

THE press views the disintegration of the "McKinley cabinet" as a perfectly natural political evolution. It is pointed out that when Tyler became president by the death of Harrison, in 1841, he retained Webster as secretary of state two years, but the other members of the Harrison cabinet retired soon after Tyler assumed office. When Fillmore succeeded Taylor he constructed an entire new cabinet. When Arthur, by the assassination of Garfield, became president, he retained Secretary of War Lincoln throughout his term, and kept two other of Garfield's secretaries until 1882; but Blaine, Windom, MacVeagh, and James retired soon after he assumed office. Johnson, however, retained more of Lincoln's cabinet, Seward, McCullough, and Wells remaining throughout his term.

The *Philadelphia Ledger* (Ind. Rep.) thinks that "should the entire cabinet be displaced, it would be without special significance as to the president's policy with respect to essential issues. The matter resolves itself into the statement that the president, in gathering about him new advisers, is simply exercising his prerogative." The *New York Press* (Rep.) does not believe that there was any "antipathy of principle or interest between Roosevelt and McKinley's advisers. There was nothing to work out separation but the bent of personal equation," of which we now see evidences.

"It was inevitable," in the opinion of the *Detroit Free Press* (Ind. Dem.) "that in time a new president would want about him new advisers of his own choosing. The changes are gradually coming, and it is entirely in keeping with the usual course of such events that the chief public discussion should be from a political point of view. The senators and representatives want to know how 'their men' in office or waiting for offices are going to fare as the result of this progressive transition. How will it affect the future ambitions of the place-makers and place-givers? How

can they best protect themselves and their henchmen? The politicians are agitated a good deal more than the people during the cabinet changes. The masses retain their faith that Roosevelt will not lend himself to the running of a political machine." The closing sentence of the *Free Press's* editorial is doubtless a reference to the charge that the appointment of Postmaster-General Payne is the first step in the upbuilding of a "Roosevelt machine."

The Cincinnati *Enquirer* (Dem.) predicts that "Mr. Roosevelt will ultimately have a cabinet that will be Rooseveltian, and not, in form or substance, appearance or reality, a mere trusteeship of a former administration. When the new president entered upon his duties, the assurances were earnest and profuse that the old cabinet was to stand, and all and singular the methods and policies of the old administration were to be persevered in. We do not undertake to say that under the distressing circumstances there should have been less of this sort of assurance. Men fit to be in the political family of the chief executive, though, ought to have been able to foresee practical results, and if any of them are disappointed at being substantially dismissed, they are not to be pitied. The time is at hand for the inevitable ripping up." And "the final result, as to the *personnel* of the Roosevelt cabinet, will be interesting to note," the St. Louis *Republic* (Dem.) opines. "Younger and more strenuous men will probably be called into service than have ever before acted as advisers to an American president. The effect of this policy in national and international affairs remains to be seen. Judging from Great Britain's eagerness to retire her aged leaders and substitute men of early middle age, such a policy should be of advantage to the country."

LESLIE M. SHAW

The New Secretary of the Treasury

LESLIE M. SHAW, OF IOWA

Governor LESLIE M. SHAW of Iowa has accepted President Roosevelt's offer of the secretaryship of the treasury in succession to Mr. Gage, who will shortly give up that office.

Mr. Shaw was born in Vermont in 1848, but has lived nearly all his life in Iowa, where he was educated and where he has practised law since 1876. He has also been president of two Iowa banks, and was twice elected governor, his term of office extending from 1898 to 1892.

The New York newspapers have reported some criticisms of the appointment on the part of financial interests, but these criticisms do not find expression in the editorial columns. The *Evening Post* (Ind.) says that "the president has shown that he has a clear

perception of the particular type of man needed for the head of the treasury department. A man whose sturdiness and sense would reassure the great financial interests, and yet whose sympathy with the people would remove him from any possible imputation of 'representing Wall Street.' Mr. Roosevelt found these qualities in Governor Shaw." The New York *World* (Dem.) finds it "a very agreeable change to have as director of the nation's finances a man who has never breathed the tainted atmosphere of Wall street, a man who has acquired a fortune in the old-fashioned way, in an old-fashioned community; a man who, in his tastes and habits, is representative of that great body of simple, thrifty, moral, progressive American men and women who are described collectively as 'the' people."

The *Commercial Advertiser* (Rep.) gives a history of Mr. Shaw's long fight for sound money in the west, and declares that "it would be difficult to point to any former secretary of the treasury who had, at the time of appointment, qualifications superior to those possessed by Mr. Shaw." The New York *Press* (Rep.) sees in the appointment an inspiring incident which should bring absolute conviction that the true path to popular favor is steadfast advocacy of sound financial doctrine. This is another reference to Mr. Shaw's outspoken campaign for sound money when many of his party in the west were "trimming" on that very delicate subject.

The Philadelphia *North American* (Ind. Rep.) thinks that Governor Shaw was selected because he was more in accord than was Secretary Gage with the president's attitude toward questions relating to foreign commerce. "It is more than likely," says the *North American*, "that Governor Shaw's devotion to the policy of mutual trade concessions determined his choice as secretary of the treasury in preference to some other financier better known in banking circles." The soundness of Governor Shaw's views on the currency, and the high esteem in which he is held by the people of his state, satisfies the Philadelphia *Record* (Dem.) that the appointment is a wise one. "That Governor Shaw will make an able secretary, no doubt need be entertained," the Des Moines *Leader* (Rep.) assures the country, after telling of his services to the cause of sound money in 1896 and 1900. "He early espoused the gold side of the money controversy, and when the Republican leaders, from presidential candidate down, were mincing their words and treading among eggs, Governor Shaw was talking straight from the shoulder, and in a section where the Republican party was honeycombed with silver sentiment. That is the stamp of man he is. His legal training and experience as a banker are also strong qualifications for the place."

The Washington *Star* takes no stock in the objection that two members of the cabinet should not come

from the same state, and approves the president's evident plan to obtain the services of able men wherever he finds them. The *Pittsburg Press* (Rep.) thinks that "Iowa and the whole west should be flattered by the president's partiality, for it is difficult to believe that he would take two cabinet members from one state if he could avoid it." The appointment, on the whole, has upset the arguments of those who have been contending that President Roosevelt was reconstructing his cabinet with a view to building up a "machine."

The Censure of General Miles

STILL ANOTHER CHAPTER IN THE SCHLEY CASE

THE censure of General Miles by the war department for his approval of the dissenting opinion of Admiral Dewey in the Schley case has added a new chapter to that already long controversy. General Miles was called to account under the army regulation which provides that "Deliberations or discussions among military men conveying praise or censure, or any mark of approbation, toward others in the military service are prohibited." The *New York World* (Dem.), among other newspapers, calls attention to the fact that this regulation was made to protect military commanders against the intrigues of their subordinates, and that "to so stretch a rule as to use it as a pretext for a gross insult to the lieutenant-general is simply a small-spirited piece of administrative impertinence." The *New York Times* (Ind. Dem.) says that the president may be able to stop the Schley scandal in the army and navy by repressive measures, but that he can not throttle the friends of Schley in congress nor the people of the United States. The *Hartford Times* (Dem.) claims that General Miles expressed "the common sense of the American people about the matter in hand," and for this Mr. Root "has vented his personal displeasure toward the lieutenant-general of the army in the tone of an angry schoolmaster. Nothing," the *Times* claims, "that General Miles has ever said or done has

so endeared him to the American people as his expression of what they all feel in regard to the attempt that has been made to disgrace and punish Schley because he was present at the battle of Santiago and Sampson was not."

In the opinion of the *Washington Post* (Ind.), "the worst that can be said of General Miles is that he went outside of propriety. The best that can be said of him is that he voiced the fixed convictions of nine-tenths of his fellow-citizens," and the *Post* is willing "to let it go at that." The *Baltimore Sun* (Dem.) anticipates that the next thing to be done "is to squelch the seventy-six million persons, more or less, who are in hearty agreement with Admiral Dewey and General Miles, 'for,' the *Sun* points out, "it is undeniable that if the ranking officers of the army and the navy are incompetent to pass judgment upon military questions, the untutored masses have no business airing their opinions." The *Indianapolis News* (Ind.) believes that the country feels that there was "unnecessary harshness" in the rebuke of General Miles. "Discipline," says the *News*, "can not be subserved by humiliating the lieutenant-general of the army. It may only be hoped that the action will have a wholesome effect in checking the army and navy squabbles that have been in progress and that seem to threaten us with a condition that is paralleled only by the Dreyfus affair."

But there is another side to the comment on the censure of General Miles. The *Chicago Inter-Ocean* (Rep.) says that Miles, like McClellan, has used his army position to forward his presidential ambitions, and that the president and Secretary Root "deserve well at the hands of a long-suffering nation" if they have been able "to shut him up." The *Chicago Record-Herald* (Rep.) "can find no fault with the spirit and justice of this reprimand," and it anticipates that it will have a wholesome effect upon the discipline of the American army and navy. The *Chicago Post* (Rep.) agrees with Secretary Root that Miles had no business in the controversy and deserved rebuke, "but he expressed the true and popular sentiment, and the truth is entitled to some consideration." The *Providence Journal* (Ind.) sees in the incident a lesson to

THE END OF THE TALE?—*Minneapolis Journal*

"RUDE" SHAW: "A Happy New Year, gentl!"—*New York World*

army and navy officers to abstain from newspaper interviews and frequent speech-making. But the *Journal* argues that Admiral Dewey's opinion, so far as it related to the credit due Schley for the Santiago victory, was deserving of correction because the court refused to receive testimony on this point, and for this reason the approval of Dewey's action by Miles was really less censurable than the action of the former. The *Boston Journal* (Rep.) thinks that "it is impossible to deny the justice and the necessity of the severe rebuke administered to Miles, because his comment was not merely unfair and imprudent; it was subversive of discipline."

The Charleston Exposition

The American Monthly Review of Reviews, New York
Condensed for PUBLIC OPINION

THE "South Carolina and Interstate and West Indian exposition," which opened on December 1, at Charleston, is really the first typically southern fair, for Atlanta is far north of South Carolina in everything except latitude. The people of South Carolina, and more especially of Charleston, have in this enterprise two general objects in view besides the specific purpose of stimulating the trade and progress of their own city—to exhibit before the world the achievements of southern industry and art, and to demonstrate the great and important future of trade with the West Indies and Spanish America. Although it was as late as January, 1901, that the general assembly of South Carolina appropriated fifty thousand dollars for the state exhibit, the entire exposition was in a much more complete condition on opening day than is the rule with such institutions. In general, the South Carolinians, under the energetic leadership of Capt. F. W. Wagener, president of the exposition company, have shown the most notable enterprise, ingenuity, and good taste in availing themselves of their natural advantages for making an attractive and imposing exposition with the comparatively small amount of money at their disposal. The one fact of the proximity of the world-famous Carolina pine has almost cut the cost of building in half, as compared

with the cost of corresponding construction in a northern city of such large edifices.

The exposition has fourteen principal buildings, and all are now completed. Those on the northern section of the grounds, and the Lowndes estate, with its rolling land and graceful live-oak trees, are less formal in architecture; Mr. Bradford L. Gilbert, in charge of the designing, has had the good taste to refrain from aggressive efforts in the structures built on this naturally beautiful piece of ground. Thus, the Machinery and Transportation building, and the Negro building, are long and low in outline, constructed in the general type of the Mexican missions. In the southern half of the exposition grounds, the more elaborate essays in architecture have been made around the four sides of a wide plaza. The central figure is, appropriately, the Cotton palace, 360 feet long, 160 feet high, and covering 50,000 square feet. These figures will show that the enterprise is on no small scale. The architecture of the main buildings is throughout more or less true Spanish renaissance. The color is ivory, with the roofs simulating the red-tile characteristic of this Spanish-American type. The material of the buildings is Carolina pine, with iron strengthening, the whole covered with the usual "staff" composition. As one looks down the plaza, the Liberal Arts building is on the right of the Cotton palace, and to the left, the Agricultural building. At the northern end of the plaza is the auditorium, with a seating capacity of 4,000, and at the entrance are the Administration building and Minerals and Forestry edifice. The great plaza itself is 1,200 feet long and 900 feet wide, while the general effect of spaciousness and the impressiveness of the building masses on the sides have been increased by the construction of a sunken garden below sloping green terraces in the center of the space. This pleasant court, lined with majestic palmettos, will, over and above its æsthetic use, add greatly to the comfort of seeing the exhibits in the buildings about it.

There is a Midway, of course, and a race-track and a live-stock exhibit. Of the special American exhibits, Maryland and Pennsylvania are well in the lead; New York appropriated only \$15,000 for the entire enterprise.

The Finances of Porto Rico

J. H. HOLLANDER, in the December *Political Science Quarterly*, New York. Excerpt

THE present financial status of Porto Rico compares favorably with that of any locality in the United States—indeed, with any similarly circumstanced community in the world. Without a dollar of funded or floating insular indebtedness, with sources of revenue that may be expected to meet the requirements of reasonable and economical administration, with reserve funds of more than one and a half million dollars, designed for "construction work," but available, in case of emergency, in aid of current expenditure—the firm basis of a secure insular economy may properly be said to have been laid. A qualitative examination yields results no less satisfying. Translated into plain language, the financial reorganization of Porto Rico means that the burden of taxation upon the real economic life of the island is less today than at any time in its history; that the great bulk of its one million souls are entirely exempt from direct taxation and are subject to moderate excises only, to the extent of their injurious or luxurious consumption; that coffee, tobacco, and fruit lands—the great mainstay of its people's life—are paying less taxes by half than before the enactment of the revenue act; that,

through the operation of a generous exemption clause, thousands of little patches of untilled soil are being brought into cultivation and a sturdy peasant proprietor class is being developed; and, finally, that having enacted and put into operation an adequate system of public revenue, Porto Rico derives not only the advantage which comes from secure public solvency and sound public credit, but receives the stimulus and reaps the harvest of free trade with the United States.

These are general statements, but a descent to particulars gives even more striking returns. Of the two million dollars a year that the insular government spends, one million and a half—seventy-five per cent—represent revenues (customs duties and excise taxes) that in every part of the United States accrue, not to the state, but to the federal treasury. In other words, as compared with every state and territory in the union, Porto Rico raises by what might be called distinctively insular taxation only one-fourth of what it is actually enabled to spend; over and above an initial gift of more than two million dollars, the island receives annually, as a virtual bounty from the United States, one and a half million dollars. But even the moderate burdens which now rest upon the island are self-imposed. Of the two million dollars constituting the annual insular expenditure, almost exactly one-half is devoted to the maintenance of schools and roads.

FOREIGN

Europe vs. Anglo-Saxondom

A NEW PHASE OF AN OLD DISCUSSION

EMPHASIS is given to the views expressed in the following article by the report in a French weekly that Emperor William, in a private conversation, recently advocated a "blockade" against American competition, and in general terms emphasized the power that might at any time be exerted by a united Europe against the competition of Anglo-Saxondom either in industrial or martial combat. We condense from an article by "Calchas" in the December *Fortnightly Review*, London (New York: L. Scott Pub. Co.).

The kaiser is one of the prophets who has more power than all his hearers to promote the fulfillment of his own vaticinations, and it is not difficult to recognize in this new conception of the solidarity of Europe a fresh presentment of an idea which has long dominated a mind that pursues through the most exalted dreams only such thoughts as if realized would be infinitely to the practical advantage of his empire. "The yellow peril" represented as the common danger has now apparently given place to the "American peril." The solidarity of the continent against the United States or England, or both combined, could mean nothing more nor less than the economic supremacy of Germany upon the continent and the naval leadership of the continent by Germany. The limitation of military budgets might be effected by arrangement and the European powers would be free to concentrate all their resources upon the otherwise almost hopeless problem of the successful development of their fleets against the Anglo-Saxon. Now, if there be any ultimate purpose behind that activity of Germany at all points of the compass which suggests simultaneous designs upon China, Asia Minor,

South America, and upon sea power generally, and is well calculated to confuse the judgment of other countries, that master aim will not be disclosed until the work of creating the fleet is complete. It will be the second or third navy in the world. And if we are not ensured by that time against possible danger from Germany, it may be too late.

Let us again recapitulate the argument. To avoid war in Europe which, whatever the result, would be an inconceivable catastrophe for the industrial Germany created since 1870, must continue to be the supreme object of Teutonic statesmanship. To secure that end the cultivation of amicable relations with Russia and France is indispensable. This can only be done effectually by promoting the theory of European solidarity against the two great Anglo-Saxon powers who are outside the continental area—England and the United States. War at sea, however hazardous, would be beyond comparison preferable for Germany to a death-grapple with her great neighbors in the heart of Europe. If it were a war against England waged in concert with Russia, Germany would lack neither food for her people nor a market for her products. The land route to Asia would be open to her troops, and compensation might be found there to any extent for the probable loss of the comparatively insignificant colonies she at present possesses. These may appear far-fetched and fantastic visions if looked at from the point of view of our relations with Berlin alone.

But as the problem can not be isolated in that fashion, let us look at the possibilities from another side. It is obvious that a breach between the British empire and France or Russia would drive both those powers into the arms of Germany at once, and con-

summate the crowning ambition of Berlin. If, indeed, we were worsted at sea by the dual alliance, a thing which ought to be unthinkable, the work a European coalition might attempt would be done without it. But if, which is the greater likelihood, we should defeat France and Russia, they would resort at once to Germany, who would be able to form the European league at her own price. But it is hard for any sane politician to believe that she would wait to see their fleets destroyed before taking action. Her only good chance of emancipating her naval power from our supremacy would be to strike at us in concert with them. They would open negotiations at the first sign of danger for her assistance. If she gave that assistance, whatever the immediate fate of her fleets linked with those of her allies, the compensation would be overwhelming. Her industry would be supreme within the continental blockade; and the military force of Russia, Germany, and France together might hope to redress on land the worst chance at sea, and to find their account in a new partition of Asia from which the English flag would have disappeared.

How the Poles Are Asserting Themselves

January Review of Reviews, New York. Condensed for PUBLIC OPINION

IN eastern Germany, the attempt to exterminate the Polish language in purely Polish districts by putting it under the absolute ban in schools, churches, and courts of justice, together with the various concurrent measures by which it is sought to Germanize those regions, has of late met with a resistance so bitter and implacable that one may now safely predict the almost total failure of the Prussian policy and its early abandonment. (See PUBLIC OPINION, 19th December.) In other words, the partition of Poland has not destroyed the Polish racial self-consciousness, and under conceivable circumstances the Poles might rise in another struggle for independence. It is not half so likely that anything of this sort will happen, however, as that the Polish subjects of the three adjacent empires will be treated with much more deference in the future than in the past.

The Poles now number about 15,000,000 people, of whom perhaps 3,000,000 are in eastern Prussia, chiefly in the province of Posen; 4,000,000 in north-eastern Austria, chiefly in the province of Galicia, and about 8,000,000 in the extreme western part of Russia. The Austrians have practically ceased all attempt to interfere with the Poles of Galicia, who are comparatively contented in their chief towns of Cracow and Lemberg, and whose representatives appear in the *reichsrath* at Vienna as a distinct Polish group. The

Russian Poles, whose capital is at Warsaw, are not so favorably situated as their brethren across the Austrian line; but inasmuch as the Poles, like the Russians, are of Slavonic stock, they seem to live more comfortably under Russian than under German rule, especially since the Russians do not antagonize their use of the Polish language. The Prussian government, on the other hand, has been extremely relentless in its attempt to Germanize the province of Posen, and the Poles of that province have had the active sympathy and encouragement of their compatriots across the Russian and Austrian frontiers. The press of eastern Europe has teemed with this engrossing topic, and the Polish immigrants in this country are following it eagerly.

The friction has never been greater than during the past few weeks. Several students have been convicted and sentenced to long terms of imprisonment for membership in the Polish national league, on the ground that this organization is treasonable in its motives. Punishment of an extreme sort, moreover, has been inflicted in one or two Polish villages on account of the refusal of certain Polish children, by direction of parents or priests, to receive instruction at school in the German language. Against the methods of the Prussian government these Polish people of Posen have now flamed up with a spirit that reminds one of the conditions that prevailed in Ireland some years ago, when boycotting and kindred methods were at their height. Polish women everywhere are leaguering themselves together to boycott all sorts of German products, and are pledging themselves to buy goods manufactured in France and England in preference to anything made in Germany. The Prussian government had used every means in its power to push German colonization into Posen, and to promote the acquisition of land and property by Germans, as well as the control of trade. The Poles are now turning the tables, and are buying out every German merchant or landowner who can be made uncomfortable enough to be induced to sell and leave the country. The Polish question was debated in the *reichstag* at Berlin last month with much acrimony. The great Polish novelist, Henry Sienkiewicz, has been taking a leading part in the agitation against Germany.

The subject has also been much discussed of late in Russia and Austria as well as in Germany. Influential Russian newspapers have suggested that it would be sound policy for the Hapsburg monarchy to forsake Germany and the triple alliance, treat all its nationalities on precisely equal terms, thus winning the favor of the Poles, and to form close relations with France and Russia, under which circumstances it might safely reduce its military expenditure. The triple alliance is, of course, in no immediate danger of

CHOSES TURQUES

dissolution. Nevertheless, German prestige is not likely to continue quite so imposing and dominant as heretofore, and the future is likely to bring about some radical readjustments in the grouping of European powers. Russia more than ever is the dominant factor.

Venezuela's Side of the Dispute with Germany

FOLLOWING is a translation of an article which appeared in *La Republica*, Caracas, the semi-official organ of the Venezuelan government. The article doubtless represents the government's position as to the German claims which Emperor William threatens to collect by force:

We are informed by cable that a German squadron is coming to make a demonstration in Venezuelan

THE ENTERING WEDGE.—*Brooklyn Eagle*

waters and to collect the interest which is due to the disconto. Without doubt the cable has lied, as is its custom. To speak the truth, we must believe that the emperor's government has been deceived by the institution in question just as the Venezuelan government and creditors were when the negotiation was effected.

Nothing is now, nor can at any time be, owed to the disconto, since that institution is nothing but a pay office for the Venezuelan government when the latter deposits funds to be paid out. The Venezuelan government is indebted to the Barquisimeto, Petare, German, Guanta, and Mérida railroads, among whom the loan was subscribed; but it owes nothing to the disconto.

The transaction of the loan is, furthermore, subject to revision, because, *owing to an error*, an arrangement was accepted which was detrimental to the Venezuelan government and creditors, and favorable to the disconto, which risked nothing and bound itself

to nothing. The disconto has neither lent a cent to Venezuela nor paid a cent for the Venezuelan government. The disconto only undertook to sign the scrip of the debt which was issued by the Venezuelan government, and set out on the scrip that it did not bind itself to anything.

Fifty millions of scrip were issued and ten millions were given to the disconto. Should it be asked why was this gift made, the answer is that it was thought that the signature of the disconto, owing to the credit which it enjoyed, would confer value on the scrip, and that in case of crisis when the government could not pay, the disconto would. But this idea was never realized; the scrip never rose beyond forty, and the disconto has done absolutely nothing to increase its value. On the contrary, there are those who assert that it has purchased at a low price.

As the motive which caused the gift has proved to be illusory, we are entitled to recover it. If we were to hold otherwise the contract would confer all the profits and advantages on one party only, while the other would be subject to the burdens and obligations. The fact that it did not bind itself to the performance of anything proves that for the disconto the contract was eminently hazardous and can not, therefore, be made the basis of a serious reclamation. From our point of view the government, instead of paying, should review the whole transaction.

A New Era in Mexico

PROF. PAUL S. REINSCH, in the *January Forum*, New York
Condensed for PUBLIC OPINION

UNTIL quite recently, Mexico was not regarded as a safe place for commercial and industrial investments. Its potential wealth was recognized, and the possibility of unusually large returns from Mexican investments was well known; but the political conditions were too unsettled. It was difficult to find men of character and standing who had long experience in Mexican affairs; and the methods of the ordinary Mexican promoters were so untrustworthy that Mexico became in the minds of most people the home of wildcat schemes and South sea bubbles—a view which there was much to justify. But things have changed and a new era has begun. In political affairs a régime of security and stability has been gradually established by the group of able men who are controlling the government. Under the leadership of the veteran president they form a powerful, well-organized party within which personal ambitions are loyally subordinated to public ends; and the eventual successor to President Diaz is already practically determined upon, so that the fear sometimes expressed lest upon the death of that great ruler the country should be in danger of a revolution has no foundation in fact.

The line of development in which foreign capital has most recently become interested is tropical agriculture. It is a well-known fact that the Mexican haciendas have been among the steadiest and best-paying undertakings on the American continent. But as agriculture requires very close touch with the laboring population, which the Mexican planter handles with great ease, but which to others is an uncertain element, foreign investors, until very recent times, did not make use of the opportunities afforded by the rich lands of the republic. The reformation of the Mexican sugar industry along modern lines is just beginning, and the first well-equipped plantations are reaping wonderful returns.

Excellent coffee is being raised on the higher lands of the tropical belt of Mexico. In this culture, too, large capital is necessary on account of the expensive character of machinery and the large quantity of labor required in harvesting the berries and preparing them for the market. A product that is looked upon with much favor, because it does not necessitate a long process of manufacture or treatment, is cocoa, which is cultivated in this region with comparatively little labor and small expense. The cultivation of tropical fruits has not yet been undertaken on a large scale, partly on account of the absence of rapid and regular means of transportation. Some plantations are, however, canning their fruit for the Mexican market, where it brings very acceptable prices. The finest grade of tobacco is raised in the Valle Nacional, near Tuxtepec, and in the Tuxtla district. The artificial culture of rubber has now been undertaken on a large scale; though it is often argued that the natural supplies of Brazil, Peru, Africa, and India are so abundant that artificial cultivation will not be profitable.

From all that has been said, it will be seen that Mexico is not a land for the investor of small means. As a farmer could not himself do heavy manual labor

in this climate, he would have to make liberal use of hired help. His expenses of management would, therefore, be practically as high as those of a large plantation. The original cost of the land, when reckoned as including the expenses of clearing and planting and of caring for the crop until its maturity, amounts to a large sum per acre. Should he desire to plant rubber, the farmer must wait for at least seven years, until his returns begin to come in; while for the other cultures he would need expensive machinery. Companies and individual planters with large capital, however, would have far to seek at present to find a more promising field for investment and a more desirable locality than southern Mexico.

AN INDUSTRIAL ARBITRATION LAW, modeled on the New Zealand plan, has just been placed upon the statute books of the commonwealth of Australia. It recognizes only registered industrial unions of both employers and employees. The president of the court must be a judge of the supreme court. Every care has been taken to make the court an independent and dignified tribunal. Its powers are very large and no appeal lies from its decision. The compulsory provisions of the New Zealand law are of course retained.

SOCIOLOGICAL

Russia's Vodka Monopoly

ANNA NORTHEED BENJAMIN, in January *Ainslee's Magazine*, New York. Condensed for PUBLIC OPINION

M SERGE DE WITTE, minister of finance, stands a political giant out of the uncertain turmoil of Russian bureaucracy. Americans know him best as the man who has been playing a game of tariff chess with Secretary Gage; Europe thinks of him as he who set the unstable Russian currency on a rock; but in Russia, his excellency, the minister of finance, is more often associated with the sort of social-financial scheme which is changing conditions in the lives of the lower classes, and which is known as the "Government Vodka Monopoly." The two objects avowed in de Witte's mind were the increase of national revenue, which was an urgent necessity, and the regulation of the liquor consumption of the empire. Excessive drinking is one of Russia's greatest national evils; throughout the world, drunkenness is associated with the Russian. By making vodka (brandy) a product of government factories only, to be sold in government stores, and a comparatively small number of

licensed places, the tremendous profits of the liquor trade would pour into the czar's exchequer, and at the same time it was thought that the evil of excessive drinking could be regulated in various ways.

I heard the monopoly constantly alluded to in Russia, but it was at last only by visiting one of the 350 or more huge factories which have sprung into being at de Witte's command, and the government shops in both city and country, that I gained a vivid idea of the colossal measure of the undertaking, and its influence one way or another on the life of the average Russian. In every department of the factory I was equally impressed by the perfect order and system, and the up-to-date, economic methods; but from a human point of view, a large, separate building within the factory enclosure was of still greater interest. While the government is constantly guilty of acts creditable to the middle ages, in its public works it often attempts to realize ideals which have a suggestion of Utopia. The men employees receive

From *Ainslee's Magazine*

A VODKA SHOP IN THE COUNTRY

OPEN-AIR PERFORMANCE IN A TEMPERANCE GARDEN

INTERIOR OF A CITY VODKA SHOP

from seventeen to thirty-five roubles a month, and the women from fifteen to twenty-five; these wages are very generous, taking into consideration the standard of living; and in the building of which I have spoken is a great dining-room where each employee can get a dinner for ten kopecs (five cents), consisting of soup, kvas (a mild drink made from black bread), tea, and meat. Here also are newspapers and a small library, and a room containing the musical instruments of a band organized among the men. Every week or two a concert or theatrical performance is given by the employees. Now the monopoly is planning to put up dormitories where the workers of both sexes can obtain lodging at the same proportionate rate as food, thus enabling them to save a large proportion of their wages.

The government shops are meant to supersede almost entirely the old *traktirs*, taverns or saloons. The conditions attached to the part of shopkeepers are such that well-educated, self-respecting men and women can undertake the work. Out of the 360 shops in St. Petersburg 300 are attended by women, and they are paid a salary of from 720 to 900 roubles a year. This is good pay in Russia. Besides, they have lodging over the shop, with fuel and light. Sometimes, also, they are provided with an assistant. I was told that most of these women were of good family, and I talked with one who was very intelligent, and spoke fluently in French. None of the many women in this employment has ever taken a kopec from the monopoly, whereas there has been considerable loss through the dishonesty of men employees. Therefore women are generally preferred. In the country shops, the sum total of all the monopoly shops is about 1,900; the keepers are mostly men. It is necessary to maintain 2,000 collectors, who are principally from the peasant class, to gather in the accounts, and the money received in the shops and from licensed *traktirs*.

There is one splendid development of the monopoly which should win more faith for it as a factor for good than anything yet proved by the system itself. I refer to the temperance societies formed in connection with the monopoly, and their work. Since the year 1898, the government has divided certain sums among the temperance societies established in the governments where the monopoly is in force. Beginning with a little over 1,500,000 roubles, the sum has mounted up to over 3,000,000 in 1901, and over 4,000,000 this year, out of the enormous revenue of over 200,000,000 which it receives from the monopoly. With this government money, added to more raised in other ways, the societies have established tea houses and cheap temperance restaurants to the number of 1,715; reading-rooms and circulating libraries, 1,201; lecture rooms, 654; Sunday-schools, 18; evening schools, 10; singing classes, 147; tea gardens and theaters, 503; halls for dancing, 346; Christmas trees, 30, and various other places of amusement, 150.

WORK AMONG THE WOMEN OF ITALY: An attempt to train Italian women for positions as nurses has been made at Florence, where Miss Baxter, a graduate of the Johns Hopkins hospital at Baltimore, and Miss Turton, an English trained nurse, have opened a "Casa di Cura." As its name implies, this is, first of all, a small hospital, a necessary adjunct in any training-school for nurses. In the double work of this institution the laws of right living will receive an emphasis as yet inadequately conveyed in Italy. Another attempt has been made at Turin, the capital of Piedmont, where at the Protestant hospital the Waldensians have just established a training school for nurses and deaconesses.

The Black North

A SOCIAL STUDY BY PROFESSOR DU BOIS

PROFESSOR W. E. BURGHARDT DU BOIS, of Atlanta university, Georgia, where he holds the chair of economics and history, has written for the *New York Times* a series of articles giving a clear and detailed account of the Negro race in the north. The three cities Professor Du Bois has selected for personal investigation are Philadelphia, New York, and Boston. In each case he examines briefly the early history of the Negroes, then traces the changes that have taken place, and describes the present conditions. He pays particular attention to the occupations in which the Negroes are, or can be, engaged, the degree of their success in them, the peculiar difficulties with which they have to contend, the amount of property they have been able to accumulate, and their social and religious organization and association. He says that the following are some manifest conclusions of his study:

To all intents and purposes, the Negroes form a world among themselves. They are so organized as to come in contact with the outer world as seldom as possible. The average Negro today knows the white world only from afar. His family and relatives are colored, his neighbors, with few exceptions, are colored, and his acquaintances are chiefly colored. He works with colored people, if not for them; he calls on colored people, attends meetings and joins societies of colored people, and goes to a colored church. Here the paradox stands to puzzle the best Negro thought. How can Negroes organize for social and economic purposes and not, by that very organizing, draw and invite the drawing of the color line? Every inpouring of freed southern immigrants into the north has naturally forced their ideas of clan life on the community of blacks, estranged the older free-Negro element, and deprived the whole group of its best natural leadership.

The northern Negro needs today intelligent, far-seeing leadership. His problem differs from the problems in the south, because his history, condition, and environment are different. And such leadership demands leisure for thought and education—the emerging again of a dominant intelligent class such as the free Negroes formerly were. This would rapidly happen could the Negro find work. The problem of work, the problem of poverty, is today the central, baffling problem of the northern Negro. It is useless and wrong to tell the Negro to stay south, where he can find work. A certain sort of soul, a certain kind of spirit, finds the narrow repression and provincialism of the south simply unbearable. It sends the aspiring white man north, it sends also the Negro. It is a natural movement and should not be repressed. That the question of fitness plays a considerable part in determining the condition of the Negro is without doubt true. His training hitherto has but ill-fitted him for the stern competition of world-city life. He knows but little of modern skilled labor, he has not been trained in thrift, he is not, as a rule, neat and tidy, and he is apt to be slow and unreliable.

What is the remedy? First, the Negroes must try to make the deserving and fit among them as numerous as possible. So long as the majority are mediocre workmen, and a considerable minority lazy

and unreliable, those who seek to attack the race will have ample ammunition. Whatever, therefore, may be best as to Negro organization in many lines, certainly all must unite in keeping the blacks from succumbing to the present temptations of city life. Three lines of effort here seem advisable: First, systematic search for work; second, better homes; third, political reform.

In New York and Philadelphia the Negro is too handicapped by race prejudice to make much headway, but he has made some. In Boston the atmosphere has been more liberal, although by no means unbiased, and he has had better success. The select laborers, as janitors, porters, messengers, draymen, are an unusually trustworthy and respectable class in Boston. They form perhaps 15 per cent of the workers, and are connecting links between menial labor and skilled labor or business.

Our Wise Virgins

THE YOUNG WOMEN WHO HAVE FOUND SOMETHING TO DO

IN our issue of November 7, we quoted from Mr. Eliot Gregory's article on "Our Foolish Virgins," in which he accused "the average New York miss" of being "little better than a parlor boarder in her home," of acting the rôle either of "a disheveled sports-woman, or an adventurous navigator, or a frivolous matinee-girl." In the January *Century*, Lillie Hamilton French replies to Mr. Gregory with an article on "Some of Our Wise Virgins." She writes of the young women in New York who have found something to do besides seeking for amusement. "They are all-round women, who regard a visit to a tenement as belonging as much to the order of their days as the giving of a cup of tea in an afternoon to a visitor with whom they may have danced a cotillion the night before. You find them in no given locality, you need look for them at no particular hours, for their activities involve no questions of éclat, and the chronicle of their charities forms no feature in 'special columns.' They are as elusive, when you seek them, as some fragrance of the forest."

This writer says that this quickening of conscience is often experienced by a class of young girls generally pictured to the popular imagination as mere pleasure-seekers. "It was a quotation from Drummond about men living on the top floor of their being, instead of in the basement, which some seven years ago inspired to good deeds a group of young girls, all belonging to that part of the world generally spoken of as 'fashionable'—that part of the world, to be more explicit, which has its box at the opera in winter, and its home at Newport during the summer." Mrs. French believes that the development of the altruistic virtues, the wanting something to do, the being ashamed of having no purposes, is a part of a general process of development, that it is normal, it belongs to the day, to the generation, to the great impulsive forces of the century.

In conclusion Mrs. French says there is no escape from the query, "What sort of wives will these wise virgins make?" She replies as follows: "I have seen many of these women, after marriage, entering frankly and cheerfully into the less favored conditions of husbands whom they loved, embracing poverty, if need were, and meeting the problems that had to be met—helpmates in the best sense, peers of their husbands on any plane."

The Social Organization of Briarcliff Farms

MR. LAW'S HOME IDEA

ABOUT eleven years ago Mr. Walter H. Law, a successful man-of-affairs, retired from business while yet in the prime of his life and established on a site twenty-seven miles from New York, overlooking the Hudson, a small dairy farm which has since assumed very large proportions. He has proved two things of value: the first is a purely commercial fact, that farming on scientific principles can be made to pay; the second is that farm-life near a great city can be made a happy and invigorating social life for everybody concerned, from the laborers to the owner. We have already spoken in PUBLIC OPINION of the methods that have made Briarcliff manor a financial success; we now quote from the current *World's Work* some of the reasons for its social success. The writer, Mary C. Blossom, thus sums up some of the advantages enjoyed:

There is an excellent system of waterworks carrying the purest and best of spring water over the farms and a pretty railroad station, schoolhouse, a post office, a telegraph and a long-distance telephone station. In addition to these there is a large electrical powerhouse, which furnishes the power needed on the farms and supplies lights in all the buildings and residences. There is a pretty ivy-mantled church with a stone parsonage next door. Mr. Law is also building the Briarcliff Lodge, a beautiful hotel of wood and stone. Prominent speakers are invited from time to time to talk to the men. On these occasions the Briarcliff orchestra, made up of the farm workers, usually contributes its share to the entertainment. The son of the owner of Briarcliff is a member of this orchestra. The men are met on a footing of equality, which enlists their interest and coöperation and brings closer relations between employer and worker, and this is one of the key-notes of successful social betterment.

The home-idea is a large part of Mr. Law's design for his community of three hundred workers. He feels that it is better for the men to own their own homes and feel pride in them; so he sells a plot of land fifty by fifty or seventy-five by one hundred and fifty feet to any desirable worker at a nominal price; he then asks him to choose just what kind of a house he will have, and builds it for him, taking a mortgage on it, to be paid off at easy stages. For the unmarried men there is a home known as "Dalmeny." No one is obliged to live there, but the house is so well kept that it is not large enough for all who desire to come. The cost of living is from fifteen to eighteen dollars a month, including room, board, and laundry. There are separate rooms for seventy men, with free access to shower-baths and tubs on every floor. On the ground floor is a smoking and assembly-room, adjoining which is a lavatory with marble basins and a plentiful supply of clean towels, so that cleanliness is not only possible, but convenient. One of the rooms in the house is kept for a barber, who is paid by the men. Mr. Law frequently joins the men at their meals, and they seldom fail to make themselves presentable before they sit down to the table. Thus has the estate of Briarcliff taken its place as a force for the advancement of the agricultural class. It gives no man more than he earns, but it helps him do for himself. There is good-fellowship prevailing there, and a general air of contentment.

LETTERS & ART

Thackeray in the United States

THACKERAY AND BAYARD TAYLOR—DID AN AMERICAN WRITE A CHAPTER OF "THE VIRGINIANS"?

MR. JAMES GRANT WILSON contributes his second paper on "Thackeray in the United States" to the January *Century*. It is made up largely of anecdotes and letters, accompanied by sketches drawn by Thackeray for his American friends. Mr. Wilson writes: "Who that saw Thackeray in this country in the fifties will ever forget that giant form, crowned with a state-ly and massive head, covered with almost snow-white

HE DRESSES FOR DINNER

From the *Century*

PART OF A LETTER FROM THACKERAY TO WILLIAM DUER ROBINSON

hair? Said Fitz-Greene Halleck, who was five feet seven, to a young friend as they approached the English humorist and Bayard Taylor on Broadway: 'Behold those two Brobdingnags coming this way. Together they measure twelve feet and several inches in their stockings.' Mr. Wilson says that with three possible exceptions, Thackeray admired Bayard Taylor more than any other American whom he had met, and a few years later presented to him Schiller's sword, perhaps his most valued possession; for Fields relates that on one occasion, when Thackeray desired a little service done for a friend, he remarked with a quizzical expression, "Please say the favor will greatly oblige a man of the name of Thackeray, whose only recommendation is that he has seen Napoleon and Goethe, and is the owner of Schiller's sword." When Bayard Taylor was in London he received many kindly attentions from Thackeray, including, a little later, a portrait of Tennyson, with the message accompanying it, to which were added a few lines. Taylor appended his initials and the date, June, 1857, so that, as may be seen in the *facsimile*, the same page contains the chirography of the three T's—Tennyson, Thackeray, and Taylor. The original is framed with the portrait, and belongs to Mrs. Bayard Taylor, as does the last photograph of Thackeray. It was presented to Mr. Taylor, after her father's death, by Mrs. Ritchie.

Mr. Wilson revives the old contention of many Marylanders that John P. Kennedy wrote a portion, if not an entire chapter, of "The Virginians." Mr. Dandridge Kennedy writes from Warrenton, Virginia: "While in this country, Thackeray was, for a time, the guest of my uncle, John P. Kennedy, and during that period my uncle took him on a visit to his brother, Mr. Andrew Kennedy, in Virginia. I believe that many of the family have credited the chapter you speak of to my uncle, but I can not positively assert it." Mrs. Ritchie writes that it is hardly nec-

essary to contradict the assertion, since the chapter is entirely in her father's handwriting, adding: "No doubt Mr. Kennedy gave the facts about the scenery, but I am sure my father wrote his own books." Thackeray made frequent appeals to American friends for aid in writing "The Virginians"; a letter to William D. Robinson, "Cashier of the Customs, New York," contains the following: "I fondly talk of going to America in the autumn and finishing my story *sur les lieux*. I want to know what was the color of Washington's livery; where the deuce was George Warrington carried after he was knocked down at Braddock's defeat? Was he taken by Indians into a French fort? I want him to be away for a year and a half, or until the siege of Quebec. If you see Fred. Cozzens or George Curtis, ask them to manage this job for me." Later, Thackeray presented to Mr. Robinson a copy of "The Virginians" (now a prized treasure in the Robinson family) bearing this inscription:

In the U. States and in the Queen's dominions
All people have a right to their opinions,
And many people don't much relish "The Virginians."
Peruse my book, dear R., and if you find it
A little to your taste, I hope you'll bind it.

My dear B.T. I am so busy yesterday
that I couldn't keep my agreeable appointment
with Thompson, & am glad I didn't forget you to Greenwich
Here's a note to comfort you, & I am ever yours
J. H.

June, 1857.
B. T.

My dear Thackeray,

Your American friend & post-
-traveller has never arrived. He has
I suppose changed his mind. I am
sure I should have been very glad to
see him for my 'castle' was never
yet 'harried & entrenched' against
good fellows. I write now this line to
say that after the 30th I shall not
be here.

My best remembrance to your daughter
whom I have twice seen once as little
girl & again a year or so later.

Yours ever A. Taylor

The New Plays of the Week

"THE WILDERNESS" AND "DU BARRY"

TWO plays have passed through the ordeal of a New York "first night" this week—Mr. Henry V. Esmond's society drama, "The Wilderness," and Mr. David Belasco's historical pageant, "Du Barry." The first has been welcomed by the press as a "pleasing reaction from the blood and thunder, the fuss and fury, the antique clothes and the antic English of the swash-buckling drama which has ruled the stage for now almost two years." The play is built upon the experience of a young woman who began as a fortune-hunter, striving to make a wealthy and brilliant marriage, and ended, after achieving her object, in becoming an affectionate, loyal wife. The New York *Times* says that the play is "not given greatly to plot, but is rather by way of being a comedy of sentiment and refined morals in which a plot is not needed. There are no risky situations or indelicate remarks; the humor is very mild and chiefly supplied by a mother-in-law and the woman-hating uncle. Indeed, so colorless is the play that one is surprised to find it good." According to the *Commercial Advertiser*, "there is much natural comedy, especially in the first act; and, judged by standards lower than those which Mr. Esmond has created for himself, the play might be praised for its amiable feeling, its theatrical neatness, and its serious intention." Miss Margaret Anglin, who played the leading and most difficult rôle, has been unanimously praised for her interpretation of the heroine in her worldly, sophisticated state and in the awakening of heart and conscience. Mr. Charles Richman is said by all critics of the play to have distinguished himself as the grave, self-poised, unselfish lover and husband.

Mr. Belasco has apparently molded the Jeanne Du Barry of history to meet the requirements of Mrs. Leslie Carter. His Du Barry passes from a millinery shop, through a gambling house, to the court of Louis XV, and thence to the guillotine, like the real creature, but her character and vicissitudes are mostly imaginative and Belascoan. The *Evening Post* says: "The object, which from a commercial point of view has probably been attained, is the exploitation of Mrs. Leslie Carter, by the arbitrary conversion of the Du Barry, who was a living woman, into a Zaza, who was a tawdry stage puppet. In theatrical classification it is a panoramic melodrama; as written stuff it is about on the level of modern comic opera; scenically it is dazzling; dramatically it is lurid but empty, a flash in the pan; artistically, save in the matter of decoration,

it is naught. It is a glittering fraud, essentially "Brummagem," mud, copper-gilt and burnished. Mrs. Carter's Du Barry is a coarse, flaunting, audacious courtesan, not absolutely devoid of the grosser arts of provocation, but without grace of speech or delicacy of manner, or any of that marked but indefinable fascination which constitutes the rarest power of woman, while emotionally she is nothing more or less than a virago. Her strong point is her ability to work herself up into a condition of declamatory hysteria, in which the display of sustained vocal energy is uncommon, and, if it had the inspiration of genius behind it, would be most impressive. As it is, it is more akin to plain rant than anything else." To quote again from

the *Commercial Advertiser*, "the doll of history, who was so cordially hated by the people for her wanton extravagance, is turned into a tin saint of the 'Zaza' make, the numerous tribe of which share Marguerite Gautier's virtue without Dumas's genius. Mrs. Carter gives a representation of Du Barry's 'doll' qualities which is purely idiotic. One moment she has a long speech about her lack of volition and the next she knocks a man down with a chandelier." The *Times* discovers an "advance in art" both for Mr. Belasco and Mrs. Carter, and all the papers praise the costly and luxurious mounting of the play. The *Sun* says: "The pomp and circumstance of the French court at Versailles was reproduced at a daring cost in money expended with the utmost care and taste. Realism in fabrics and furniture had never been carried further on our stage, nor had more accuracy been achieved in illustrating the architecture and

decorations of a given period."

Doctors of Letters

AN ANALYSIS OF EIGHT REPRESENTATIVE AMERICAN AUTHORS

THE writer of "The Point of View," in the current *Scribner's*, makes an interesting analysis of the eight new doctors of letters created at the Yale bicentennial—Mr. Aldrich, Mr. Cable, Mr. Clemens, Mr. Gilder, Mr. Howells, Mr. Brander Matthews, Mr. Thomas Nelson Page, and Mr. Woodrow Wilson.

Of these eight authors, six have written novels; three have published poems; four have had plays performed with more or less success; six have come forward as essayists and four as critics of literature; one is an historian; and while two are now college professors, three are, or have been, editors of leading magazines. One of the eight, although he has written stories and plays and essays, is best known as a humorist, and another of the eight has been poet,

novelist, critic, essayist, dramatist, and editor. The variety of fields in which these eight authors have sought to express themselves is characteristic of the present condition of American literature, which is marked by a healthy versatility among men of letters.

Of these eight authors, only one is a New Englander by birth, and only two are New Englanders by residence; and this in spite of the fact that the selection of these men of letters was made by the officers of a New England institution. No one of them is a New Yorker by birth, and four of them are now living in New York city. Five of them were born south of Mason and Dixon's line, and no one of them is now a resident of any southern state. Two of them were born in the middle west, and both of these now live in New York, after having dwelt for years in New England.

Of these eight authors, only three are college graduates, and they are the three youngest. This fact calls attention to singular alternation in the history of American literature, of groups of college-bred men with groups of men without college training. The most prominent American authors of the present day who happen to be over fifty years of age, are—by a large majority—not college-bred men, whereas it is from the colleges that have come many of the most promising of the American men of letters, who have not attained the dignity of half a century. Perhaps the explanation is not far to seek. In the very beginning a college education was hard to get, and often was hardly worth the having. Then in time, with the settling of the country, the advance of our civilization, and the improvement in our educational facilities, there came to the front a group of men trained in the humanities and ready to supply to a new people the olden culture and the classical tradition. But the land kept on expanding, and its population having crossed the great river and the great plains and the great mountains, and pushed on to the Pacific coast, a new generation thrust themselves forward, in whom native ability was abundant, and who applied exact observation and a large vision, to the wealth of new material displayed on every hand. Now at last the conditions seem to be becoming a little too complicated either for the academic artist or for the gifted student of life; and this is the reason why some of the best of the younger men are seeking to combine in a measure the qualities of the successive groups of their predecessors.

Mr. Howells as a Critic

BRANDER MATTHEWS, in the January *Forum*, New York
Condensed for PUBLIC OPINION

OF all the American authors at the opening of the new century, Mr. Howells is easily the most multifarious. It is as a novelist that he has presented himself most frequently; but he has also attempted the stage, although no one of his original dramas has had the good fortune to establish itself in the theater. He has revealed himself as a poet of somber imaginations, not made visible elsewhere in his works. He has given us a series of charming books of travel. He is one of the most delightful of our essayists, with an exquisite felicity of phrase, akin to Heine's. He is one of the most delicate of our humorists, with a reserve that recalls Hawthorne's. And he is a constant critic of contemporary literature, gracious of manner and courteous of phrase, except when expressing his scorn of what seems to him unworthy, mean, and base.

Most of us like to move through life along the line of least resistance; and we are inclined to resent any sudden call to think out the reasons for our opinions. Mr. Howells's declaration of the faith that was in him could not fail to shock many a prevalent prejudice; and at times his manner was not so persuasive as it might be—if, indeed, it was not fairly to be described as frankly aggressive. Himself free from the vulgar superstition of admiration for things once admired but no longer admirable, Mr. Howells wasted no perfunctory praise on what he had described as "those classics common to all languages—dead corpses which retain their forms perfectly in the coffin, but crumble to dust as soon as exposed to the air." He waked up the congregation by making a direct personal application of his principles—by naming names, by pointing out how Scott and Dickens and Thackeray had strayed from the path of truth, by daring to express his own preference for Jane Austen and for Anthony Trollope. He even went farther, and said boldly that certain Russians and Spaniards and Italians set a better example than any then to be had in the English language.

The limitations of Mr. Howells's criticism are not merely the limits of his likings. He is no drifting impressionist with never an anchor to windward. He has a solid body of doctrine; he has a creed of his own to serve as a test. But his criticism, like that of most other critics, is at its best when it is affirmative rather than negative. It is most useful and significant when it is constructive, and its utility is least when it is most destructive; and here again it is like that of most other critics. It is valuable to have our attention called to the fact that it was Charles Reade who first "perceived that there is something feline in every woman," and that "he also divined that in many and perhaps in most cases she wishes to use the arts of the cat for no worse purpose than getting a soft place in a man's soul and sweetly purring there." It is instructive to be told that "novelists ought not to have their favorites among their creations, as parents ought not to have their favorites among their children"; and there is no denying that "George Eliot has her preferences most distinctly," and that "she pursues some of her women with a rancor as perceptible as her fondness for others." Mr. Howells does not declare his theories merely to celebrate himself, as M. Zola has been accused of doing. He declares them rather because his character is forever forcing him to bear witness to the truth as he sees it.

THE CRY OF THE CANDID: The attack of W. E. H. on R. L. S. inspires the following in the *Academy*:

I.—THE LATE DR. JOHNSON
By X X X

It is time to speak out. After a careful reading of Mr. Boswell's so-called "Life" I am bound to put on record that the Samwell in those pages is not the Samwell that I knew. Search as I may, I find no mention of his having knocked over an old applewoman in Fleet street one dark night and kicking her prostrate body. Why not, I ask? I miss these endearing touches.

II.—THE LATE SIR WALTER SCOTT
By † † †

It is time for truth: falsehood has played its part too long. The Walt of Mr. Lockhart's slavish pages is not the Walt I knew and loved. The sickening dead-level of human kindness and gentleness which is maintained by the Walt of the book is another contribution to the mischievous and deliberate falsification of character now being prosecuted by all biographers. And where do I come in? This is a colorless book. There is not a word of the orgies of Roxburgh club.

THE CARICATURE OF WHISTLER in our last issue should have been credited to the *Critic*.

SCIENTIFIC

Experiments in Low Temperature

SOME EFFECTS OF COLD ON THE PHYSICAL PROPERTIES OF MATTER

AN article in the January *Harper's Magazine* (New York), by Henry Smith Williams, M.D., contains an interesting summary of the efforts to reduce temperature to the point of absolute zero—273 deg. C., where it is assumed all chemical activity ceases. The pioneer investigators in this field were Rumford, Davy, and Young, with their contention that heat was not "a material substance but a manifestation of the activities of particles of matter." One by one the "permanent gases"—nitrous oxide, marsh gas, carbonic oxide, oxygen, nitrogen, and hydrogen—have been reduced to liquids, the lowest temperature having been obtained by Professor James Dewar, of the Royal Institute, in the production of solid hydrogen. This gas became solid at a temperature of —258 deg. C., only 14 deg. from absolute zero. The author speaks, in conclusion, of the possibility of utilizing liquefied gas for experimental investigation of the properties of matter.

The questions investigated have to do with the physical properties, such as electrical conductivity, magnetism, light absorption, cohesion, and chemical affinities of matter at excessively low temperatures. It is found that in all these regards most substances are profoundly modified when excessively cooled. Thus if a piece of any pure metal be placed in an electric circuit and plunged into liquid air, its resistance to the passage of the electricity steadily decreases as the metal cools, until, at the temperature of the liquid, it is very trifling indeed. The conclusion seems to be justified that if the metal could be still further cooled until it reached the theoretical "absolute zero," or absolutely heatless condition, the electrical resistance would also be nil.

When it comes to the phenomena of light, we can see our way a little more clearly. When we learn that many substances change their color utterly at low temperatures—red things becoming yellow and yellow things white, for example—we can step easily and surely to at least a seeming partial explanation. We know that the color of any object depends simply upon the particular ether waves of the spectrum which that particular substance absorbs; and if does not seem anomalous that molecules packed close together—at —180 deg. of temperature—should treat the ether waves differently than when relatively wide apart at an ordinary temperature. And yet that may not be the clue to the explanation at all. The packing of the molecules may have nothing to do with it. The real explanation may lie in the change of the ether waves sent out by the vibrating molecule; indeed, the fact that the waves of radiant heat and those of light differ only in amplitude lends color to this latter supposition. So the explanation of the changed color of the cooled substance is at best a dubious one.

Another interesting light phenomenon is found in the observed fact that very many substances become markedly phosphorescent at low temperatures. Thus, according to Professor Dewar, "gelatine, celluloid, paraffine, ivory, horn, and India rubber become distinctly luminous with a bluish or greenish phosphorescence, after cooling to —180 deg. and being stimu-

lated by the electric light." The same thing is true, in varying degrees, of alcohol, nitric acid, glycerine, and of paper, leather, linen, tortoise shell, and sponge. Pure water is but slightly luminous, whereas impure water glows brightly. On the other hand, alcohol loses its phosphorescence when a trace of iodine is added to it. In general, colored things are but little phosphorescent.

There are at least two of the low-temperature phenomena, however, that seem a little less puzzling—the facts, namely, that cohesion and rigidity of structure are increased when a substance is cooled, and that chemical activity is very greatly reduced, almost abolished. Professor Dewar found that the breaking stress of an iron wire is more than doubled when the wire is cooled to the temperature of liquid air, and all other metals are largely strengthened, though none other to quite the same degree. He found that a spiral spring of fusible metal, which at ordinary temperature was quickly drawn out into a straight wire by a weight of one ounce, would, when cooled to —182 deg., support a weight of two pounds, and would vibrate like a steel spring so long as it was cool.

The low-temperature field is still full of inviting possibilities. The last known gas has indeed been liquefied, but that by no means implies the last stage of discovery. With the successive conquest of this gas and of that, lower and lower levels of temperature have been reached, but the final goal still lies well beyond. Thus it seems likely that at the absolute zero all matter will have the form which we term solid; and, moreover, a degree of solidity—of tenacity and compactness—greater than ever otherwise attained. All chemical activity will presumably have ceased, and any existing compound will retain its chemical composition unaltered so long as absolute zero pertains; though in many, if not in all, cases the tangible properties of the substance—its color, for example, and perhaps its crystalline texture—will be so altered that it is no longer recognizable by ordinary standards, any more than one would ordinarily recognize a mass of snowlike crystals as air.

Filth Not a Cause of Disease

DR. CHARLES V. CHAPIN, in the January *Popular Science Monthly*, Garrison, N. Y. Condensed for PUBLIC OPINION

AS soon as the germ theory of disease ceased to be a mere theory, and the true facts in regard to the etiology of the infectious diseases began to be known, and bacteriology gave us exact knowledge of the life history of the minute organisms which are their cause, the erroneous generalizations of the filth theory became apparent.

Observations of cholera outbreaks, both in England and this country, furnished the best arguments for the filth theory. The disease abounded in filthy locations and among filthy people. It was perhaps natural, though not logical, to accuse all filth as likely to produce cholera. What has been said of cholera is applicable also to typhoid fever. This disease is due to a bacillus which does not grow outside of the body, but is carried in excremental filth just as is the cholera

spirillum, and it must be controlled in just the same way. The diphtheria bacillus is also strictly parasitic and grows, except in rare instances, on the mucous membrane of human beings. From persons so infected it is transmitted to others, usually by means of cups, spoons, pencils, or other articles, or directly by kissing or fondling.

Bubonic plague has always been classed as a typical filth disease, but here again careful laboratory work has resulted in a vastly clearer knowledge of its causation, though a great deal yet remains to be learned. The bacillus which causes it was discovered by Kitasato, in 1894; and it has been found that it rarely if ever increases in numbers outside of the body, but rather tends to die off, frequently very rapidly. Typhus fever, smallpox, scarlet fever, measles, and whooping cough have by some enthusiasts been attributed to filth, but very few observant persons who have studied the distribution of these diseases and followed their outbreaks consider them other than purely contagious. They, of course, never originate in filth or develop in filth, but may spread more among filthy people just because such persons use very little soap and water and allow their faces, hands, belongings, and dwellings to become and remain smeared with mucus, saliva, pus, and other infectious material.

Yellow fever is the one disease which it has been believed could surely be traced to filth. No disease in this country is so dreaded, and its supposed dependence upon filth has made it the last stronghold of the advocates of this theory. We all owe a great debt of gratitude to Surgeon Reed and his associates for teaching us the true method of combating this disease and dealing a death blow to the filth theory. By their experiments in which they failed to transmit the disease by fomites, they showed that the poison, the exact nature of which still remains unknown, does not live outside of the body and therefore can not develop in filth. Thus one by one the zymotic diseases have been shown to be purely contagious, and not to have their origin in filth. In not a single one of these diseases has our more exact knowledge placed its source outside of man or other animals.

"Benzozone"

THE DISCOVERY OF AN INTESTINAL ANTISEPTIC ANNOUNCED

A DISPATCH to the New York *Tribune* from Ann Arbor, Mich., announces that Prof. Frederick G. Novy, of the University of Michigan, has discovered an absolute intestinal disinfectant and antiseptic. Dr. Novy is one of the great bacteriologists in the country, and last winter, during the bubonic plague scare on the Pacific coast, he, with other eminent specialists, was dispatched by the national government to investigate and devise means with which to combat the malady. Bacteriology and physiological chemistry are his specialties, and his students are confident that he has at last discovered the long sought but almost despaired of preparation to nullify the poisons that produce typhoid and cholera. Five students offered themselves as "subjects" upon whom the experiments might be made. After a week of constant analysis, during which they had nothing to eat and only sterilized milk to drink, the announcement is made unofficially that success attended the trials and a new weapon is given man to combat disease.

If this discovery proves as successful in actual practise as in the chemical laboratory, no longer will

dysentery be the most deadly enemy of military camps. Now more soldiers die from dysentery in a prolonged campaign than from bullets. Asiatic cholera and typhoid fever are a terror to all countries, and in large cities the latter has been especially prevalent this last year. These diseases are known to thrive on filth, and they have been practically impossible to combat. The patient has died or recovered, depending on his strength to resist the attack. Professor Novy's discovery reaches what the medical profession has believed to be unattainable. An absolute intestinal antiseptic that would destroy the animal organism in the intestines producing the disease has long been hoped for, yet generally considered impossible to secure. Such a preparation would purge the body of the source of such diseases as have been named, and so render the person free from the cause as well as from the disease itself.

Dr. Novy's "benzozone," it is asserted, does what the healthy system does. It prevents these bodily poisons from developing disease. In time of susceptibility to these diseases it is a substitute for the bodily action and removes the cause of disease.

The Uses of Weeds

THEODORE DREISER, in the January *Ainslee's Magazine*,
New York. Condensed for PUBLIC OPINION

VAST sums of money and an army of men are being employed by the government to locate, understand, and put to their proper uses the weeds of the country. From every town and hamlet and country wayside this great government gathers reports concerning these vegetable outlaws. It is known now that the presence of these weeds, collectively and uncared for, is not all bad. When young and growing, besides giving a more sightly appearance to utterly vacant ground, they purify the air, and herein lies the chief benefit conferred by their presence in cities. Numerous fires in dwellings, factories, and locomotives, and the breathing of the people continually rob the air of its oxygen and charge it with carbonic acid gas. Growing plants of whatsoever kind, and weeds in particular, reverse this condition by drawing off into themselves the carbonic acid gas, and often other injurious gases, and giving out oxygen in return. So a vacant lot covered with healthy growing weeds is much better for the public health, and certainly is more pleasing to the eye than the bare ground.

Everyone knows that dandelion is an excellent pot-herb when taken by itself and cultivated. It is not so generally known that this is true of chicory, milkweed, and pigweed, although the government is now calling attention to their value as food. Prickly lettuce, while not thoroughly understood, is known to be liked by sheep and is therefore thought to have some quality which will eventually make it useful. The same is true of the wild carrot.

Weed investigation has also resulted in a great addition to the known foods for cattle, and the discovery of a number of plants that will fertilize the soil. During this century and within recent years a score or more of valuable leguminous plants have been discovered in what were considered weeds, and hardly a year passes that new ones are not added to the list. They are plants which make food for cattle and which, when planted in poor soil, improve it by taking from the atmosphere and the deep subsoil things which the surface soil needs. The manner in which they are known to improve poor soil forms a remarkable scientific discovery. Their roots extend

into the stiffer and more compact subsoil, where no ordinary plant can reach, and after loosening and opening it up so that air and water can have action upon it, suck up from below great quantities of potash salts and phosphoric acid. When these weeds are plowed under or die, these salts and acids are left near the surface where they can be utilized by the cereals and root crops which live upon them. For instance, wheat and potatoes flourish well where these weeds have gone before and done the work of getting the necessary food for them from the subsoil and the air.

Much land is of no value until these weeds come in and make it so. This is particularly true of sandy soils and reclaimed marsh lands, which are deficient in potash, a thing necessary in all farming land. On these the deeper rooted legumes, such as gorse, broom, alfalfa, lupines, sulla, and the perennial beans are of great value. Their roots not only reach down very deep and bring up potash from the subsoil in the manner described, but their leaves take great quantities of nitrogen from the air. Now, when a soil is rich in potash and nitrogen it is good soil, and as these plants die and leave their gathered potash and nitrogen on the surface, the sandy and marshy soils become good land. All the farmer has to do is plow these rotting weeds under and he has land on which he can raise cereals, root crop, and tobacco—that

hardest, most wearing plant upon soil. The government has induced farmers to try the Florida beggar weed. One experimenter reported that by planting it in his field and plowing under the annual crops for two successive years, the soil had been completely changed in texture and color. Another farmer discovered that a crop of beggar weed, turned under, will, when decomposed, retain near the surface in ready reach of the roots of succeeding crops not only all the nitrogen that it took out of the atmosphere, but also whatever fertilizers were subsequently applied. A third reported that all his field produced more luxurious crops after having been given over one season to a rank growth of this weed.

THREE SCIENTIFIC SOCIETIES were in session at Columbia university Christmas week. They were the Archæological institute of America, the American Mathematical society, and the American Physical society. The society of Biblical Literature and Exegesis also met in connection with the Archæological institute. One of the most notable addresses was that of Sir Robert Ball, F.R.S., Lowndean professor of astronomy and geometry in Cambridge university, on "Recent Researches in the Theory of Screws." In the Archæological institute much interest was manifested in Professor A. V. Williams Jackson's report of his recent visit to India. The American Mathematical society was addressed for the first time by a woman, Professor Charlotte Andrews Scott, on the "Theory of the Circuits of Plane Curves."

RELIGIOUS

The Churches and the Labor Movement

HALL CAINE, in the *British Weekly*, London. Condensed for PUBLIC OPINION

TWO great forces are always at work to keep the churches back while the people are pressing forward. One of these is a low and partly unworthy force, the other is a high and mistaken one. The unworthy force is the material interests of the churches and of their clergy. Few churches are so spiritual but they have their body to think of as well as their soul. There are fabrics to maintain, clergy to pay, and in some instances state establishments and even political power to keep up. The body of the churches, in the material sense, is always at war with the soul of the churches. It is always on the side of the existing order, of the government and authority which prevails at the given moment, and consequently it is always opposed to the struggles of the people to alter the social state. Like the press, the churches have their material interests with the rich and powerful, and on the side of the thrones and princes.

The higher reason is the sincere conviction which the churches, as a whole, seem to have taken since the early Christian ages—that the existing order of society is divinely ordained, and that any attempt to alter it is a wicked effort to disturb the scheme of the Creator. Conscious of the misery of the world, of the shocking inequalities of wealth and poverty, of fearful want and frightful luxury existing side by side, the churches appear to have despaired of altering anything to any purpose. At a loss to reconcile Christianity to life as it actually is, they have found relief in the idea that the teaching of the Gospel is a purely religious message, which has nothing to do with economic questions or the condition of man in this world.

There is a third reason, peculiar to our own time, why the churches have never yet been with the people

in the struggle for their social and economic rights. The labor movement labors under the stigma of being an irreligious movement. Its leaders are thought to be irreligious men, and its claims are believed to be against the teachings of religion. This is what the pope said in effect in a recent encyclical, and one of his bishops, since made a cardinal, lately denounced the people's movement throughout Europe as a movement contrary to the seventh and tenth commandments of the Roman decalogue, advocating and encouraging slavery, crime, incontinence, atheism, and the destruction of religion. But is it the fact that the labor movement, either in England or anywhere else, is an irreligious movement? I say it is not an irreligious movement, and never has been so. I say that the movement of the people for their rights, by whatever name it may be called, is the most truly religious social movement the world has ever known. What is the religious principle of the Gospel, so far as it concerns the life of man in this world? Is it not a proclamation of the solidarity and brotherliness of the whole human family? And what is the principle of the labor movement but that and that only?

Perhaps there is truth in the statement, so frequently made by the churches in general, and by the Roman Catholic church in particular, that the leaders of the labor movement are, for the most part, on the side of unbelief. But it is the fault of the churches themselves, and not of the Gospel, if that is so. The churches have so persistently resisted the progress of freedom, so frequently told us that the Gospel has nothing whatever to do with the condition of man in this world, so deliberately tried to draw the people off from the struggle for their just rights, so strenuously exhorted them to patience and submission against in-

tolerable wrongs, so persistently taught that the Kingdom of Heaven is to be looked for within and not without, that it is little wonder if many men who feel acutely the sufferings of the world have come to think that Christianity, with its useless lesson of fatal resignation, leaves humanity in the lurch. But the solid body of the labor party are not to be found among the unbelievers. The vast multitude of them, though they may be outside the churches, are holding on to the fundamental things of the Christian religion, and they are not to be driven out of them.

The Religion of Southern Negroes

MR. ERNEST HAMLIN ABBOTT, who has been commissioned by the *Outlook* (New York) to prepare a series of studies of Religious Life in America, devotes the fourth article of the series to a consideration of the religious life of the southern Negro. In preparing his material he traveled in the south, attending many Negro churches and talking with leading religious workers of both races. In opening his discussion he refers to two meetings which he attended, one in Charleston and the other in Atlanta, both of which were marked by a high degree of emotionality.

It is such exhibitions of uncontrolled and artificially aroused emotion that are referred to in most generalizations about Negro religion. But it is to be remembered that even in these pronounced cases there was evidence of a strong tendency away from emotionalism. The preacher in Charleston felt it necessary to spend a good part of his sermon on very plain speaking concerning moral conduct; and the matter of the address made by the Atlanta preacher at the prayer-meeting, however violent his manner, had direct bearing on the lives of his people. And Dr. Du Bois, of Atlanta university, whose published studies of the conditions of his race have entitled his testimony to great weight, told me that all such churches give similar evidence of two factors: one, the old-style darkey whose religion is of the hallelujah order; the other, the younger generation who are ashamed of these emotional outbreaks. The younger element is, of course, finally going to control. And one especially hopeful fact is to be noted: partly because the church is for the Negroes their one racial rallying-place, partly because the Negroes have been born and bred in a community where among the whites church-going is the rule, not the exception, the great mass of Negro working people go to church. I found it generally safe to assume that the colored porter or waiter or driver whom I happened to speak to was an attendant, almost always a member, of a church. Whatever advance, therefore, is to be seen in the colored churches is indicative of an advance made by at least the respectable part of the race abreast.

In the movement away from an emotional religion unrelated to conduct, the churches may roughly be divided into two classes: those which believe that the emotional character of the Negro ought not to be suppressed, but educated and guided; and those which believe that that emotional character should be minimized by the magnifying of the intellectual and ethical.

Except in the Catholic churches of the south, it is very rarely that Negroes worship in the same churches

with the whites. A Baptist church of Charleston still reserves, according to its ante-bellum custom, one gallery for colored people. It is usually well occupied, and their rights are scrupulously maintained by the church, even when the seating capacity is taxed to its utmost. Most of the colored people who attend are members of colored churches, but they come to the service in this white church because they feel that they are getting from the preaching there something which they could not get from their own ministers.

The church which, better than any other I happened upon, represents those leaders of the Negroes who are guiding the race away from a merely emotional religion, was a colored Congregational church of Atlanta. Without exception, the distinguishing characteristic of the church is the fact that the whole church itself is organized into what are called circles of help. Each circle consists normally of ten members, every one of whom has a distinctive duty. The minister receives monthly reports from the circles, and when I talked with him was planning to have an occasional meeting of the same "numbers," all the "sevens," for instance, for the consideration of their special work. Although the church has barely four hundred members, it is far more influential than some of the Negro churches with a membership of two or three thousand.

In conclusion, I am reminded of the Irishman's saying that in one respect all women are alike—in that they are all different. My one generalization concerning the religious life of the Negroes in the south is that without qualification it is impossible to generalize.

The Modern Bible Craze

COMMENT ON SOME RECENT "REVISIONS"

THE publication recently of some half-dozen attempts to translate the Bible into modern colloquial English moves the *Northwestern Christian Advocate* (Chicago) to indulge in some severe criticism:

These so-called modern Bibles are helpful as commentaries to the average reader, but as substitutes for the version which the people are wont to accept as the holy scriptures, no one of them has yet justified such a place. It is almost inconceivable that men should expect some of these to be considered seriously as the Bible. If such renderings are continued to be presented to the Bible-reading and Bible-loving world, every man who has ability to write and may be unsatisfied with the Bible or with the versions which have already appeared may produce a Bible in his own language and present as good a claim for its acceptance as those which preceded it. To impress the world as a divine book, the dignity of the language of the Bible must be maintained, and in this respect no improvement can be made upon that of the King James version, which has been practically the making of the English language, except in the substitution of words which may be understood in the language of today for obsolete words, and the correction of such renderings as the revisions of the original texts may show to have been erroneously translated. Such translations as these modern Bibles can never write themselves upon the hearts and into the lives of people as the old version has done. Even the breaking up of the Bible into verses, while it has in some instances kept the reader from obtaining the most perfect understanding of the thought of the passages, has had its advantage in its convenience for the memorizing of scripture. It will be well if in the revising of the scriptures the verse form should be retained, with such modifications as will clearly bring out the sense and yet make it easy for the reader to commit to memory those passages which, being brought oft to remembrance, have comforted and inspired them.

The *Cumberland Presbyterian* (Nashville), in discussing the best known of these revisions, the American Standard revision, calls attention to the fact that that version speaks of baptism "in" water instead of "with" water, the "with" having been retired to a marginal reference; and quotes from a correspondent who brands it as "a mere sectarian immersionist version":

If, as many believe, and as we are inclined to think, this exchange of prepositions was the result of doctrinal bigotry, and not the legitimate fruits of accurate scholarship, then a great wrong has been done, almost a blasphemous wrong, which the publishers and revisers together should hasten to confess and correct.

A Proposal to Devote English Schoolboys to the Church

The Guardian, London. Condensed for PUBLIC OPINION

WHEN we come to consider the remedies for the present lack of candidates for holy orders, it is tolerably obvious that if there is a multiplicity of causes there must needs also be a multiplicity of cures. Those who believe the difficulty to be mainly financial will naturally turn first of all to financial remedies. We, who do not share this belief, can at least gladly welcome any well-considered measures of financial improvement. There is little danger that clerical incomes will be so far improved as to become a source of temptation to the worldly minded when they are compared with the prospects of other careers.

If, however, the mountain will not come to Mahomet, Mahomet must go to the mountain. If, or in so far as, we fail to improve the prospects, we have to find, or to create, a larger supply of men who will be contented with such poor prospects as the church has to offer. In order to accomplish this we must do one of two things: we must either induce a larger number of men to come forward out of the class from which candidates have hitherto been drawn (which can only be done by the kindling of greater spiritual zeal or by the removal of the difficulties which are at present keeping men away from holy orders) or else we must make up our minds to draw recruits from a different class. An income of 150*l.* per annum will be penury in the eyes of the public school and university man; it will present itself in a different light to the lad who is just passing out of the sixth standard in the elementary school. There are those who think that in the boys who pass through the elementary schools there is a large store of material which the church has hitherto failed to turn to account. There will be need of extreme caution in dealing with the candidates who come from this class. There is an obvious danger that lads may be tempted by the desire of "bettering" themselves both socially and financially by ordination. That has to be guarded against by a strict and prolonged course of discipline which allows no scope for self-indulgence and acts as a thorough test of vocation. Again, this material is lost unless boys can be got hold of at the age of sixteen or earlier. That means an interval of seven years before they can be ordained. It is necessary to isolate them, to a large extent at all events, from their previous surroundings. If they escape the temptations to self-indulgence which university life entails, they also lose the breadth of view and the wholesome contact with their fellows which it provides. There is undoubtedly a danger that they may contract some of the failings of seminarists. We are by no means blind to the difficulties and defects under which such a scheme labors, but in view of the present scarcity of men, and

the certainty that there does often exist a real sense of vocation among the poor which has hitherto been crushed out and wasted, we can not turn contemptuously away from an experiment which is being carried out with great zeal and courage.

In so far as the present dearth of clergy arises from the general moral and intellectual conditions of the age, the evil can only be indirectly treated. The dearth of clergy is only a symptom. The remedy must be applied to the underlying causes. If Englishmen can be awakened out of moral torpor to value the ideals of simplicity and self-sacrifice and piety and reverence above those of comfort and ease and mammon-worship, there will once again be a more plentiful supply of candidates for holy orders. If the intellectual atmosphere becomes once more favorable to faith instead of to skepticism, and the problems which vex an age of unfaith are solved by fuller knowledge and clearer light, one main obstacle to a better supply of candidates will have passed away.

Various Topics

A NEW AMERICAN CHURCH building in Berlin is under way. The corner-stone was laid Thanksgiving day by Ambassador White.

EPISCOPAL CHURCH IN HAWAII: The diocesan synod of the Anglican church in Hawaii has taken steps looking to incorporation with the Protestant Episcopal church in the United States.

FRENCH CATHOLICS PROTEST: The Paris correspondent of the *London Times* says 8,000 persons have petitioned the chamber of deputies against the order of M. de Lanessan, the minister of marine, abolishing the Good Friday ceremonies in the navy.

CHRISTIANS IN INDIA are increasing in numbers rapidly, according to the recent census in south India, where the Christians now number over 1,000,000, the increase during the decade was 18 per cent, as compared with 7 per cent for the population, 6 per cent for the Hindus, and 9 per cent for the Mohammedans.

BIBLICAL SEERS AND EPILEPSY: An eminent medical authority in London, Sir Thomas Brunton, has expressed the opinion that the Biblical seer was only an epileptic. In an address on Theories, Apparitions and Visions, he declared that nearly every one of these phenomena is traceable to mental causes produced by disease.

THE POPE AND DIVORCE: At the consistory, held December 16, the pope, in an impassioned address, denounced the suggested divorce laws for Italy and appealed to the Italians not to allow such an evil to be introduced. The pope declared that the example of other countries in the matter of divorce was criminal, in so far as they recognized divorce. He prayed God to spare Italy from the social plague which once admitted, even on a limited scale, spread like a conflagration. The pontiff declared that divorce was the moral ruin of woman.

EMPEROR WILLIAM AND EVANGELICAL UNION: The tercentenary of the birth of Duke Ernest the Pious (who was born December 24, 1601, and who died in 1675) began at Gotha, December 26. The emperor, replying to an address by Prince Ernest of Hohenlohe Langenburg, regent of Saxe-Coburg and Gotha, declared that the great aim of his life had been the union of the Evangelical church in Germany, and that he hoped this day would mark the beginning of a flow of spiritual and temporal blessings throughout the whole of Germany.

THE ZIONIST CONGRESS opened in Basel, December 26, under the presidency of Dr. Theodore Herzl, of Vienna, and founder of the Zionist movement to Palestine. The congress is attended by over a thousand delegates, representing every important country of the world with the exception of Australia. In the course of his opening address Dr. Herzl referred to his audience held with the sultan last May, in which the sultan had expressed his sympathy with the Zionist movement, said he considered the Hebrews to be desirable colonists, and had declared himself their friend.

MISCELLANY

The Kidnapping of Miss Stone

THE BRIGANDS' CAREFULLY PLANNED CONSPIRACY

THE current issue of *Everybody's Magazine* contains a graphic account of Miss Stone's capture by brigands, written by Mr. Eugene P. Lyle, Jr., who went to Bulgaria soon after the outrage and spent many weeks in gathering all available information concerning it. Mr. Lyle's account is in part as follows:

At Bansko, in Macedonia, near the Bulgarian border, Miss Stone had just closed her summer school, and shortly before noon of September 3d set out for Djumia, several hours distant. Accompanying her were an Albanian preacher named Tsilka, and his wife, the Bulgarian teacher, who is a graduate of the Presbyterian hospital, of New York; a Bible woman; three muleteers; and six students who were returning with Miss Stone to the mission schools at Samakov, in Bulgaria. The party traveled for about three hours from Bansko, then stopped to eat a cold lunch which they had brought with them. When they set out again it was to continue their journey, Indian file, along the right bank of a stream that flows through a deep gorge. They passed a jutting rock and came into an open space flanked by steep bluffs. Beyond them was what the Bulgarians call the Supported Rock, because it is propped up like a shelf against the declivity. The missionaries kept on, without once thinking of any danger, when suddenly from behind the rock appeared a score of men, who thereupon halted them with menacing carbines.

Instantly the party was surrounded. Swarthy men dressed like Turks pulled the women from their horses and drove their prisoners across the stream, which was knee-deep. The brigands gave their orders by gruff signs, and by an occasional word in bad Turkish. Without thinking, they later let fall some phrases in Bulgarian, and this was good Bulgarian. Having plundered and gorged, the ruffians thought of murder. An hour before, they had captured a Turk, a poor wretch with hands tied behind him by his girdle, and a wounded head still running blood. Either the man might be able to identify them later, or perhaps it was thought necessary to convince the other captives of their intense earnestness; at any rate, they dragged the Turk ten feet down the bank and flung him upon his knees among some bushes. Then

they clubbed and stabbed. The body was recovered later, and it bore seven knife wounds. The tragedy took place in full sight of the prisoners.

Then came the real business of the expedition. This was the kidnapping of Miss Stone. The brigands paid only slight attention to any of the others. Miss Stone had gone to a rill just at hand, doubtless to bathe her temples lest she should faint after what she had just seen, when several of the outlaws motioned to her to come with them farther up the hill. Their manner was imperative, but not particularly rough. The conspiracy seemed to be carefully planned beforehand, even to details, for, with a remarkable considerateness and delicacy, they provided Miss Stone with a woman companion, Mme. Tsilka, and signed to her to follow Miss Stone. Mme. Tsilka glanced at her friends, lastly at her husband (she was not permitted to speak). The latter started forward, either to protest or to go with her, but several brigands ran between them and forced him back with their drawn weapons. Then the band divided. Some remained with the prisoners to be left behind, the others forced Miss Stone and Mme. Tsilka to mount their horses, and went on with them up the hill, when all trace of them was quickly lost in the gathering dusk.

The teachers and students were kept on the terrace throughout that night and closely guarded. They were not permitted to talk or to ask questions. Any movement or word brought the menace of a knife-point. In this way the brigands were remarkably successful in keeping their identity secret. The prisoners could see, however, that the band was composed mostly of young men, in whom there appeared some semblance of culture. Five or six only were older men, and these were grizzled fellows, veritable brigands. At day-break of the next morning, Sept. 4, the brigands on the terrace left their prisoners behind them, and silently departed in the direction taken by their fellows and the two captives the evening before. The latter had had a start of ten hours of darkness in which to travel. The border was but five miles away, and by secret passages known only to themselves they doubtless crossed into Bulgaria and sought hiding in one of the many caves of the Penin or Rilo mountains. As soon as they were left free, the prisoners hurried back to Ban-

TROOPS IN SEARCH OF MISS STONE'S CAPTORS

sko and telegraphed to Dr. House, of the missions at Salonica, and on the same day the people of the United States learned of Miss Stone's capture.

Since then only three or four bits of authentic news of the two women have been made public. Of reliable information, there is first the letter left under the doorstep of Mme. Tsilka's father in Bansko during the night of Sept. 13. In it Mme. Tsilka advised her husband to return to his church work in Albania, and not wait for her in Macedonia, since she might not be freed before two months. Two letters from Miss Stone were enclosed. [The contents of these letters, the terms of the brigands, and the efforts to ransom have all been recorded in PUBLIC OPINION.—Ed.] A later letter has come from Miss Stone. They are still alive and well. But any definiteness as to when they can be rescued is as far distant as at any time since their capture. Now that snow has fallen in the mountains, when brigands usually retire to villages for respectable citizenship during the winter, it is hoped that those holding Miss Stone will hasten the negotiations. Otherwise they may keep her in a cave till springtime. Their sufferings may scarcely be imagined. It is true that they have been reported safe and well, and that they are both hardy women, but Miss Stone is over fifty years of age.

Telegraph Talk and Talkers

L. C. HALL, in the January *McClure's*, New York
Condensed for PUBLIC OPINION

“TELEGRAPHESSE” is a living, palpitating language. It is a curious kind of Volapuk, a universal tongue, spoken through the finger-tips and in most cases read by ear. In its written form telegraphese, or “Morse,” as it is called in the vernacular, is rarely seen. Yet as a vehicle of expression it is, to the initiated, as harmonious, subtle, and fascinating as the language of music itself. Nothing could be simpler than its alphabet of dots and dashes. Yet it has come to pass that out of the manner of rendering this simple code has been evolved a means of communicating thought and feeling rivaling in flexibility and scope the human voice. A telegrapher's Morse is as distinctive as his face, his tones, or his handwriting; and as difficult to counterfeit as his voice or writing. Of this individual quality of telegraphese, the old war telegraphers tell many stories. A Confederate, for example, encounters on the march a line of wire which he suspects is being used by the enemy. He taps the wire, “cuts in” his instruments, and listens. His surmise is correct; he “grounds off” one or the other end, and, trying to disguise his style of “sending,” makes inquiries calculated to develop important information. But the southern accent is recognized in his Morse by the distant manipulator, who, indeed, may have been a co-worker in the days “before the war.” So the intruder gets only a good-humored chaffing. “The trick won't work, Jim,” says the federal operator. “Let's shake for old times' sake, and then you 'git' out of this.”

A woman's Morse is as feminine as her voice or her handwriting. I have often put to the test my ability to distinguish between the Morse of a man and that of a woman, and only once have I been deceived. It was mortifying to find that I had mistaken the sex of the sender, but I was consoled when I met the young woman. The high coloring was there, and the self-satisfied air; so also were the mas-

culine tie, the man's vest, and the striped shirt-front. Nor were the diamond pin and the toothpick wanting. When she introduced herself by her sign, called me “Culley,” and said I was “a crack-a-jack receiver,” I was convinced that it was nature, and not I, that had made the mistake as to her sex.

The mere sound of the styles of some transmitters is irresistibly comic. One of these natural humorists may be transmitting nothing more than a string of figures, and still make you chuckle at the grotesqueness of his Morse. It is an every-day thing to hear senders characterized as Miss Nancys, rattle-brains, swell-heads, or cranks, or “jays,” simply because the sound of their dots and dashes suggests the epithets.

Inheritance

GRACE ELLERY CHANNING, in the January *Atlantic*

Lo, what am I? A patch of things,
Mere odds and ends of lives flung by,
From age-long rag-bag gatherings
Pieced up by Fate full thriftily:
Somebody's worn-out will and wit,
Somebody's habits and his hair,
Discarded conscience, faith once fair
Ere time, the moth, had eaten it;
My great-grandfather's chin and nose,
The eyes my great-grandmother wore,
And hands from some remote—who knows?—
Perchance prehensile ancestor;
Somebody's style, somebody's gait,
Another body's wrist and waist,
With this one's temper, that one's trait,
One's tastes, another's lack of taste;
Feelings I never chose to feel,
A voice in which I had no voice.
Revealing where I would conceal
Rude impulses without a choice;
Faults which this forefather or that
Unkindly fostered, to my ill,
With others some one else begat
And made the matter worse still.
They chose, these masters of my fate,
To please themselves, bequeathing me
Base pleasures in the things I hate,
Liking for what misliketh me.
Out of the ashes of their fires,
Out of the fashion of their bone,
They fashioned me, my mighty sires,
And shall I call my soul my own?

Ay, borrowed husk, head, heart, and hand,
Slave on and serve me till we die!
I am your Lord and your Command!
But only God knows—what am I.

My Task

MAUDE LOUISE RAY, in *Harper's Magazine*

To love some one more dearly ev'ry day,
To help a wand'ring child to find his way,
To ponder o'er a noble thought, and pray,
And smile when evening falls.

To follow truth as blind men long for light,
To do my best from dawn of day till night,
To keep my heart fit for His holy sight,
And answer when He calls.

The Tempter

EDMUND V. COOKE, in *Lippincott's*

Squat in my path was my besetting foe;
I hurled him down a thousand fathoms length!
I paused to breathe, I turned again, and lo!
Again my way he blocked and mocked my strength.

THE NEWS OF THE WORLD

MONDAY, DECEMBER 23

DOMESTIC.—Governor Crane, of Massachusetts, declined the position of secretary of the treasury for business and domestic reasons....The treasury department drew a warrant in favor of Rear Admiral Schley for \$3,334, his share of the prize money due him for the destruction of the Spanish fleet at Santiago....Photographic supplies corporations unite and form a \$2,500,000 combination....Admiral Cervera sent a Christmas present to Vicar-General O'Callaghan, of New Hampshire, in remembrance of the latter's service to Spanish sailors...William Ellery Channing, author and poet, died at Concord, Mass....Six persons were killed by an accident to a trolley car near Allentown, Pa., which jumped the track on a sharp curve at the foot of a mountain, owing to wet rails and snow.

FOREIGN.—General Kitchener reports brisk fighting in the Transvaal and Orange River colony, with severe casualties to both British and Boers....A revolutionary demonstration against Turkey occurred in Sofia....The Chinese court arrived at Tzu Chow, within the boundary of Chi Li province, where it was welcomed by numerous officials....Sir Joseph Henry Gilbert, a well known chemist, died in London....A London dispatch announces the death of Edward Onslow Ford, R. A., the sculptor; he was born in 1852....A Levant line steamer, which arrived at Hamburg recently, has been quarantined, owing to the discovery on the vessel of rats which had died from bubonic plague.

TUESDAY, DECEMBER 24

DOMESTIC.—Civil Governor Taft sailed from Manila for San Francisco on the transport *Grant* in improved health; all the insurgent chiefs in the island of Bohol surrendered with their guns....Secretary Long dismissed Edgar S. Maclay from his post in the Brooklyn navy yard....The Union Traction company, of Philadelphia, increased the wages of its conductors and motormen as a Christmas gift....As a Christmas gift M. C. D. Borden gave to his employees a sum equal to 10 per cent of their wages for six weeks....George Emory Fellows, of the University of Chicago, has been elected president of the University of Maine, at Bangor.

FOREIGN.—Two Irish members of parliament and other members of the United Irish league were sentenced to terms of imprisonment from one month to three months for connection with a meeting called to incite tenants not to pay rent....A fort occupied by outlaws in South Beloochistan was demolished by British guns; a number of the men were killed and others captured, the British loss being three dead and eight wounded....A severe reverse was suf-

fered by the British forces in South Africa when De Wet, with a strong commando, attacked Colonel Firman's force at Zeefontein, and heavy casualties occurred, while the Boers carried off two guns.

WEDNESDAY, DECEMBER 25

DOMESTIC.—The annual report of the Philippine commission gives a summary of the legislation desired from congress; the commission wants its present authority continued for two years longer, and in the plan of civil government proposed provides for a popular assembly....The acceptance by Governor Leslie M. Shaw, of Iowa, of the secretaryship of the treasury, to succeed Lyman J. Gage, was authoritatively announced at Washington....A sternwheel Mississippi steamer was burned at her wharf in Memphis and three lives were lost, there being fifteen passengers asleep on board at the time....The police officers and patrolmen, as well as prisoners, are quarantined by smallpox at a Philadelphia police station.

FOREIGN.—The Argentine minister postponed his departure from Santiago de Chile, and it was announced that a protocol had been signed establishing a modus vivendi between the two countries; meanwhile warlike preparations continue in both countries, the Chilean senate authorizing the expenditure by the government of \$15,000,000 in preparations for defense; Argentina will construct in Italy two warships of 8,000 tons....President Castro, of Venezuela, has given new offense to France by seizing the property of a French citizen....Jacques Francois Henri Fouquier, the publicist and former member of the French chamber of deputies, is dead at Paris; he was born September 1, 1838.

THURSDAY, DECEMBER 26

DOMESTIC.—The navy department has taken the first steps toward the adoption of wireless telegraphy on warships....The McKinley National Memorial association has issued a statement in discouragement of commercial enterprises for the raising of funds for the association....Three men were killed and many were injured by the falling of a large steel crane at the American Bridge works, in Chicago.

FOREIGN.—The Zionist congress was opened at Basel, and President Herzl in his opening address referred to the statement of the sultan that he was a friend of the Jews....The news of the signing of a protocol which assures the peace of Chile and Argentina was confirmed, and it was regarded by the newspapers of Buenos Ayres as a triumph of common sense rather than of diplomacy....The draft of a treaty of commerce between Italy and Russia was signed at St. Petersburg....The

differences in the Japanese cabinet have been arranged through the telegraphic mediation of Marquis Ito, and the budget has been withdrawn to be re-drafted.

FRIDAY, DECEMBER 27

DOMESTIC.—A party of eighteen Americans, of the Ninth regiment, were attacked by bolomen on the island of Samar, P. I., and seven Americans were killed; Captain Schoeffel was slightly wounded....U. S. Senator W. J. Sewell, of New Jersey, died at his home in Camden, N. J....Captain Richard P. Leary, who was the first American governor of Guam, died at the naval hospital in Chelsea, Mass....

FOREIGN.—The German cruiser *Vineta* arrived in the harbor of La Guayra, Venezuela; France does not anticipate complications with Venezuela over the infringement of the rights of a French citizen by that republic....The rebels under General Marin were defeated by the Colombian government troops at Honda, on the Isthmus of Panama; 400 men were killed in the fight....The Marquis Ito, of Japan, was received in audience by King Edward.

SATURDAY, DECEMBER 28

DOMESTIC.—Andrew Carnegie has changed the form of his offer of \$10,000,000 for higher education to the government, so that the gift will not be in steel corporation bonds....The battleship *Missouri* was launched at Newport News and named by Miss Marion Cockrell, of the state from which it takes its name.

FOREIGN.—The revolution in Venezuela is spreading; the rebels are awaiting the landing of arms and ammunition from the filibustering steamer *Ban Righ*....Severe fighting is reported at different points in Colombia, in which the government troops were said to be victorious.

SUNDAY, DECEMBER 29

DOMESTIC.—The latest hitch over the transfer of the Danish West Indies to this country is said to be due to the activity of speculators at Copenhagen, who hope to reap personal profit out of investments....In a train wreck at Malta, Ill., four persons were killed and eighteen injured....Hugh Bonner, ex-chief of the New York fire department, has been asked to take charge of the Manila fire department.

FOREIGN.—General Luciano Mendoza, the revolutionary leader in Venezuela, is reported to have suffered several defeats and to have fled with a small party to inaccessible mountains in the state of Guarico....An electric wire caused a loss of \$250,000 in a Victoria (B. C.) department store....The seaport town of Saffee, Morocco, was struck by a waterspout and two hundred persons were washed out to sea and drowned.

BOOK REVIEWS

"Thomas Wolsey" "The Women of the Salons" "William Hamilton Gibson"

THOMAS WOLSEY, LEGATE AND REFORMER. By Ethelred L. Taunton. Cloth, \$5. New York: John Lane: The Bodley Head.

THIS interesting volume is a thorough examination of Wolsey in his relations as an ecclesiastical statesman. This work, the author thinks, has never been done before. Wolsey was first and last a churchman, but this, the most prominent feature in his character, has been thrown into the background by his great achievements in the secular sphere. The author has gone to the original documents, and has considered every scrap of evidence that could have any bearing on the subject. He does not appear as a champion of Wolsey, but merely as one seeking the truth. The result seems to us a remarkably candid and convincing discussion. The author is a Roman priest, loyal to the Roman church. He has no sympathy with the Reformation as it came through the new learning, Luther, and Calvin. But he does fully recognize the need of reformation—the shortcomings, even the gross immorality of some of the popes and the clergy. He thinks, however, that reformation should have taken place within the church. Wolsey throughout his public career was a loyal and consistent Catholic. All his strivings after position and honor were that he might use these in reforming the monks and clergy and advance the cause of Rome. He did use all his ingenuity to be made a legate, but as soon as he got the commission he instituted thoroughgoing reforms. He did aspire to become pope, and worked to that end, but it was with a view to glorifying his king and to the enlightenment and glorification of Christendom. In the celebrated divorce case which was Wolsey's undoing, his course, so the author claims, was in the main consistent and upright. After his fall his true greatness and genuine piety came out. "Despoiled of all his goods, shut out from the presence of the king by enemies who knew and dreaded his influence, stripped of all his dignities and basely accused of high treason, stricken in body and soul, and a prey to grief which reveals a highly sensitive nature, Wolsey rose to the occasion and showed the true nobility of his soul. He found in God and the service an abundant consolation for his earthly disgrace." The author squarely faces the evidence as to Wolsey's illegitimate children, and finds it at least not fully convincing, and dismisses it with the comment: "An age that could tolerate Alexander VI, who certainly, while pope, had a son, would look mildly upon such lapses on the part of a cardinal." The publishers have given us an elegant piece of work. The illustrations are exceptionally good.

THE WOMEN OF THE SALONS, AND OTHER FRENCH PORTRAITS. By S. G. Talkentyre. Cloth, pp. 235, \$4. New York: Longmans, Green & Co.

WE HAVE here some brightly written sketches of women who made notable "the age of persiflage"—salonnières in whose rooms the revolution and the encyclopedia were nursed into being; where free thought, politics, science, and literature, love-making, intrigues, brilliancy, and corruption were mixed indiscriminately together. Madame Du Deffand is the subject of the first sketch, perhaps because she was typical of all that was best and worst among the rulers of the salon. She is followed by Mlle. Lespinasse, a woman of talent but mainly distinguished by the looseness of her morals and as having "the most inflammable imagination since Sappho." Madame Geoffrin, the subject of the third sketch, appears to have been able to combine brilliancy with respectability, while Madame D'Epinay, her successor, possessed neither, and it is very difficult to understand from the account of her career how she came to be classed among the brilliant women of her time. When she shines at all it is by the reflected brilliancy of her friends, Rousseau and Voltaire among others. Madame Necker and Madame DeStaël come next in chronological order, proving that goodness, strength, and rare mental qualities could exist even in the fetid atmosphere of the old régime. Madame Recamier is dismissed as a person of small importance, as indeed she was. A woman who could only say, "Look at me; in that lies my strength and your weakness." At this point in the volume the "other French portraits" begin with a sketch of Dr. Tronchin, whose fame at one time was as great as that of Voltaire or Diderot. Madame Bonaparte, the mother of Napoleon, Madame de Sévigné, and Madame Lebrun are the subjects of the concluding sketches in a volume that is perhaps fragmentary and furtive, but interesting because of the light it throws upon one of the most important phases of French society in the era preceding the revolution.

WILLIAM HAMILTON GIBSON. By John Coleman Adams. Cloth, pp. 275, \$2. New York: G. P. Putnam's Sons.

IN HIS SHORT and very busy life Mr. Gibson did much to dignify and beautify the study of nature. Equally facile as artist or author, he brought to his work a technical care and perfection that won for him immediate and wide recognition. Mr. Adams has given due emphasis to these qualities and has imparted an added value to his biography by dwelling on the personal charm of the man and his attitude toward his chosen calling. The reader is struck by the artist's ability to see beauty in the

most unpromising material, a city backyard, the street, a bare barn-yard. "He was a genuine missionary of science, an apostle of art, a herald of the wonders and beauties of the world."

ESOTERIC CHRISTIANITY. By Annie Besant. Cloth, pp. 403. New York: John Lane: The Bodley Head.

AN EXPOSITION of the teachings of the latter-day mystics. The central thought is the existence of a divine idea behind each external act and within each material form. With this as a starting point, Christ and his teachings and the sacraments and dogma of the church are discussed. This part of the Christian belief is esoteric—hidden—because it is beyond the comprehension of the average mind, and to attempt to explain it generally would result in nothing but confusion. The author inclines to the belief that men are slowly coming to a fuller comprehension of the linking of the material with the spiritual and the persistence of the latter through all time.

SCIENCE AND CHRISTIANITY. By F. Bet-
tep. Translated from the German.
Cloth, pp. 326, \$1.50. Cincinnati:
Jennings & Pye.

AN EXCELLENT attempt to reconcile the teachings of science and Christianity. The author contends that there is no conflict between the defensible conclusions of science and the beliefs of the Christian religion. The Darwinian teachings are rejected as untenable, and such questions as the nature of matter, the origin of motion and of life, intentional fitness in the arrangement of nature, consciousness, and free will are declared to be beyond the reach of the scientist. The subject matter of the book is divided into five chapters: Progress, Evolution and Modern Science, Christians and Science, Science, and Materialism.

DIOMEDE THE CENTURION. By Howard A. M. Henderson. Cloth, pp. 422, \$1.50. Cincinnati: Jennings & Pye.

A BOOK which reflects well the philosophical thought of the Roman world at the time of Christ and the influences which gradually undermined the empire of Rome, and traces the evolution of Christianity through the shifting lines of school and doctrine. The book is practically a study in comparative religion and is more the result of erudition than of any marked fictional or dramatic ability.

A MEDLEY BOOK. By George Frost. Cloth, pp. 204, \$1.50. New York: Longmans, Green & Co.

A COLLECTION of clever essays ranging in content from "Shopping" to "The Immanence of Poetry in Life," together with several short stories possessing many elements of excellence and charm.

THE FOUR EPOCHS OF WOMAN'S LIFE.

By Anna M. Galbraith, M. D. Cloth, pp. 200. Philadelphia: W. B. Saunders & Co.

THE NECESSITY for different methods and teaching in the medical treatment of women is one of the crying needs of our time, and Dr. Galbraith's book arrives at an hour when its reception should be cordial and sincere. Careful study of this book will disclose to maturing girls and to married women that indispensable knowledge of themselves, the precautionary measures which they should take to insure perfect health, and the dangers which are a constant menace to their happiness and well being. The book is entirely sane and a valuable contribution to the science of everyday life.

THE TEACHER'S COMMENTARY.

By F. N. Peloubet. Cloth, pp. 400, \$1.25. New York: Longmans, Green & Co.

IN A REVIEW of the first volume (Matthew) of this series we called attention to the value and comprehensiveness of the work of Dr. Peloubet. The present volume conforms in plan and method to the first, the resources of art, literature, history, etc., reinforcing the author's comment and exposition. The same conservative spirit is present, together with that wisdom which refuses to embroil the subject in academic discussions.

THE AMERICAN BIBLE. ST. LUKE

(GOSPEL AND ACTS). By Frank Schell Ballentine. Cloth, pp. 331, 50 cents. New York: Thomas Whitaker.

THIS STYLE of translation makes the Gospel read almost like a new book. The arrangement of the matter is very different from that of the authorized version; the lines run clear across the page; the verse numbers are omitted; the material is paragraphed, showing change of thought; and parallelisms are shown.

MONASTICISM AND THE CONFESSIONS OF

ST. AUGUSTINE. By Adolf Harnack. Translated by E. E. Kellett and F. H. Marseille. Cloth, pp. 171, \$1.25. Boston: Little, Brown & Co.

THE DEEP reverence of Dr. Harnack for his theme, his sympathy with the older faiths, and his deep insight into their meaning render his exposition of the ideals and history of monasticism unusually suggestive and profound. The Confessions of St. Augustine are summarized and woven into a simple and beautiful story of his life.

THE FIERY DAWN.

By M. E. Coleridge. Cloth, pp. 361, \$1.50. New York: Longmans, Green & Co.

THE romantic story of a young poet and patriot of Lyons, France. The story is well designed and contains more than one scene both picturesque and dramatic.

THE TWENTIETH CENTURY TESTAMENT.

In Modern English. Part Three. The Pastoral, Personal, and General Letters, and The Revelation. Cloth, pp. 513, 50 cents. New York: Fleming H. Revell Co.

LESTER'S LUCK.

By Horatio Alger, Jr. Cloth, pp. 362, \$1.50. Philadelphia: Henry T. Coates & Co.

THE NAME of Alger is a household one with boys. This book in plot and narrative goes back to the good old times when road agents and thrilling adventures were possible and when a boy who was clever could find all the danger he wished. The youth here does so, and what he finds and what he does will delight many a youthful reader.

THE WILD FOWLERS.

By Charles Bradford. Cloth, pp. 175, \$1. New York: G. P. Putnam's Sons.

AN ADMIRABLE little book for the amateur or experienced hunter. The old sportsman will find here the crisp, morning air and the thrill of sport, while the practical hints about guns, ammunition, and methods of taking game will lead the amateur to realize that "reading and writing are inflicted by schoolmasters, but a crack shot is the work of God."

IDYLLS OF THE GASS.

By Martha Wolfenstein. Cloth, pp. 295. Philadelphia: Jewish Pub. Society of America.

A SERIES of sketches of life in the Jewish quarter of a European town. Their apparent aim is to depict the homely life of the "Gass," but in the back of the author's mind—and not so very far back in the concluding chapters—is an arraignment of the "Christian" nations for their oppression of the race.

THE OPEN-AIR BOY.

By Rev. G. M. A. Hewett. Cloth, pp. 271, \$2. New York: Longmans, Green & Co.

THERE could be no more useful book than this to place in a boy's hands, both from an educational and practical standpoint. The work is in reality a treatise on all sorts of wood and field craft, from fishing to ferreting, the most valuable feature being that the implements are not provided, but the boy is shown how he can make his rods and his fish hooks himself.

SHORT TALKS WITH YOUNG MOTHERS.

By Charles Gilmore Kerley, M. D. Cloth, pp. 262, \$1.25. New York: G. P. Putnam's Sons.

WE ARE sure that a careful reading of Dr. Kerley's book will educate a young mother to the point where she becomes a wise guardian of an infant's life and not an incompetent and ignorant relative.

THE BABY. His Care and Training.

By Marianna Wheeler. Cloth, pp. 189, \$1. New York: Harper & Bros.

A PRACTICAL treatise on the care of babies in sickness and in health by the superintendent of the New York babies' hospital, who must be presumed to speak with authority on all subjects relating to the care of infants.

THE KING'S RUBIES.

By Adelaide Fuller Bell. Cloth, pp. 344, \$1. Philadelphia: Henry T. Coates & Co.

DESCRIBES how a young boy finds his people through the agency of some family jewels. His adventures are often amusing and sometimes exciting, as boys' adventures go.

The Risk is on Your Family if you are not Insured

A Life Insurance Policy protects the helpless wife and children; lifts the mortgage on the house and leaves a roof for shelter.

The Life Policies of

The Travelers Insurance Company are liberal. Being issued on the stock plan, the net cost is known and all results certain and guaranteed. The difference between the lower cost in The Travelers and the higher cost in a mutual and dividend-paying company remains in your own pocket as an anticipated dividend.

The Accident Policies

of The Travelers guarantee a weekly income in case of disability, and large amounts for loss of legs, arms, hands, feet or eyes. If death ensues a stated sum is paid.

Thirty-seven years of conservative business management emphasize and explain the soundness and strength of The Travelers.

Let us send you some interesting matter bearing on the superior advantages of The Travelers Policies. Branch offices in nearly every city.

THE WHITE STONE. By John McGraw Foster. Cloth, pp. 118. New York: Longmans, Green & Co.

A SERIES of helpful, strong sermons which emphasize the beauty and truth of the teaching of Christ. The book is suitable for Christmas both from the point of bookmaking and of subject matter.

MISTRESS MAY. By Amy E. Blanchard. Cloth, pp. 231, 80 cents. Philadelphia: George W. Jacobs & Co.

A BOOK written after the manner and plan of the Elsie books, but far superior from a literary standpoint. The book is well suited to childish needs and is pure and wholesome.

LUKE DELMEGE. By Rev. P. A. Sheehan. Cloth, pp. 580, \$1.50. New York: Longmans, Green & Co.

THIS is a story of a young priest who gradually has his hopes crushed out by successive failures in the tasks that he sets himself to accomplish.

BUD. By W. K. Marshall. Cloth, pp. 307, \$1. Cincinnati: Jennings & Pye.

THE THEME of the book is the interaction of all classes of society, the hero being a poor newsboy who by hard work and upright dealing wins respect and admiration.

ESTHER AT THE THOUSAND ISLANDS. By Flora Longfellow Turknott. Cloth, pp. 158, 90 cents. Cincinnati: Jennings & Pye.

A CHILD's story of a summer on the St. Lawrence, illustrated with photographs.

THE ART OF SOUL WINNING. By J. W. Mahood. Cloth, pp. 102, 25 cents. New York: Eaton & Mains.

A BOOK which should be read by every clergyman who finds his people unresponsive and lacking in earnestness and enthusiasm.

BIGG'S BAR AND OTHER KLONDYKE BALLADS. By Howard V. Sutherland. Cloth, pp. 78, 75 cents. Philadelphia: Drexel-Biddle.

A COLLECTION of clever verse redolent of mining life, filled with keen humor, and free outdoor fun.

DEAR DAYS. By Armour Strong. Cloth, pp. 316, \$1. Philadelphia: Henry T. Coates & Co.

A STORY of school life in the city of Washington. The principal characters are a little invalid and her pretty sister.

THE GENERAL SITUATION

Dun's Review, New York, Dec. 28

If any evidence was needed of the unparalleled prosperity with which this nation has been blessed during the past year, the expenditure for Christmas gifts and decorations should be ample. Up to the last hour on Christmas Eve the eager buying continued, while many orders will not be filled before the year's end because of the avalanche of business offered. Preparations were made for unusual activity, but in many cases stocks and facilities proved utterly inadequate. Holiday mail was 40 per cent heavier than last year's, which gives some measure of the expansion. Distribution of Christmas gifts among the employees of large firms and corporations was on the same scale, often the increase over last year amounting to 100 per cent, while the profit sharing at the end of the year will reach unprecedented figures. It is noticed that southern trade shows less satisfactory gains over last year than in other sections, which is not surprising, as the principal product of the south has averaged from \$8 to \$10 a bale less than a year ago, while the quantity thus far marketed shows no commensurate increase.

IRON AND STEEL

Following closely upon the interruption by floods and storms last week, transporting and manufacturing facilities were further handicapped by numerous accidents. Iron furnaces and steel mills were tied up, and the movement of coke was hampered. This resulted in such insufficient supplies of fuel that many stacks were banked at a time when full activity was especially desired. The situation as to coke is more critical than at any previous time this season. As high as \$3.50 per ton was offered for prompt delivery without securing supplies. Pig iron production is no longer at the high mark recorded when December opened, and with fancy prices for fuel it is natural that Bessemer should advance. In anticipation of a higher level, the principal consumer made large purchases at \$16.50, which has been the figure on smaller quantities for some weeks. A large Mexican rail order has been offered, but may go to Europe as domestic makers are unable to undertake any new deliveries for some time to come. Minor metals have quieted down after the violent reaction last week.

COTTON AND WOOL

Business in wholesale dry goods has been interrupted by holiday influences and stock taking among jobbers. Cotton goods ruled quiet, apart from the demand from converters, which was on a liberal scale. Cotton mills are sold ahead for several months as a rule, and there is no urgency to make new contracts, especially in view of the uncer-

tain raw material market. In the woolen goods division overcoatings find ready purchases, while prices on some lines just opened are about 5 per cent higher than last season. Results thus far are most encouraging. Reorders in spring weights are fair. Wool is strong and tending upward, with a good demand, not only from mills and dealers, but on speculative account. Stocks are closing the year in much better condition than at the start, exceptional consumption having made large inroads. Raw cotton is also making a better showing.

WHEAT AND CORN

Wheat recovered most of the recent moderate decline, supported by a fairly steady demand. Notwithstanding the high level of quotations as compared with earlier years, exports for the week from all ports of the United States, including flour, amounted to 3,540,972 bushels, compared with 2,756,014 bushels a year ago, and 2,417,018 bushels two years ago. Interior receipts were light, and flour mills have been handicapped by the car shortage which made it difficult to bring in raw material or take out the finished product. Nevertheless Minneapolis flour output continues to make most favorable comparisons with earlier years. Corn continues about 60 per cent above the price a year ago, which readily explains Atlantic exports of only 313,258 bushels, against 3,319,255 last year.

January disbursements. Exchange has been steady, but no gold exports were looked for, while one of the principal items of the week was a sale of a block of \$2,500,000 government bonds to the treasury. The inactivity of the stock market also caused a much-reduced inquiry for accommodations, but, above all, the market was cheered by the belief that after the holidays money will return to New York from the interior in large amounts. It is, in fact, stated that funds are already returning to western financial centers from nearby points, and the feeling is that more liberal supplies of money can be looked for in the market within a short time. While it is true that call-loan rates this week have ruled at from 6 to 8 per cent, the tone of the loan market was easier, and rates as low as 3@4 per cent were made after demands had been supplied. Time money was quiet, with little inquiry and an indisposition on the part of lenders to make any but long arrangements, the rates asked being based on 5@5½ per cent for all periods. Commercial paper was dull, with small offerings and a narrow buying demand, which was almost entirely from out of town. Rates were firm, 5@5½ per cent being quoted for indorsed bills receivable.

Foreign exchange is steady at 4.86¼ @4.86½ for demand sterling.

THE STOCK MARKET

Though dull and heavy early in the week on the holidays and on a break in American sugar, the New York stock market is higher and more active on a better feeling about money, with a decided recovery in sugar on better trade prospects and a sharp advance in Amalgamated copper on more favorable views of the copper situation. Railroad stocks show advances, Union Pacific rising on the company's favorable report and the anthracite colliers on good conditions in the coal trade. Decreases in railroad earnings for the third week of December had little effect. The United States steel stocks are strong on the expected favorable December quarterly earnings statement. Bonds are very strong, and the demand for investments is increased by the prospect of a heavy January demand for reinvestment of income.

While the dullness incident to the holiday season and the ending of the year affected the stock market to some extent this week, there has been no lack of interest in the proceedings. Speculation has continued to be almost entirely professional in origin and quality, and the public is not yet inclined to enter the market. Investment buying of bonds and the dividend-paying stocks is, however, seen, and there is also a tendency on the part of financial interests not directly identified with speculation to pick up securities at moderate concessions.

BANK CLEARINGS

Weekly clearings (five days) aggregate \$1,840,468,295, a decrease of 22 per cent from last week, but a gain of 3 per cent over last year. Excluding New York, the total for the week is 15

You're killing two birds with one stone when you use PEARLINE.

per cent less than last week, but 9 per cent larger than this week in 1900.

Various Topics

A new record price for a seat on the New York stock exchange was established Thursday by a sale at \$80,000.

The cotton crop, as estimated by 142 members of the New York cotton exchange, averages 10,590,000 bales. The minimum estimate is 9,500,000 bales and the maximum 11,500,000 bales.

According to the *Railroad Gazette's* annual estimate for the year ending December 31 the amount of mileage built by the railroads was 4,518 miles by 342 companies, as against 4,804 built by 286 companies last year.

Official returns of the French vintage in 1901 give a total of 57,963,514 hectoliters, or, calculated at twenty-two English gallons per hectoliter, 1,275,000,000 gallons. The value of the vintage is set down at 952,223,941 francs.

The *Insurance Press* publishes in its current issue a series of tables showing that within the past twenty-five years the fire loss in the United States has exceeded \$2,800,000,000. To this total the year 1901 has contributed losses aggregating over \$170,000,000.

The outlook appears to point to an unprecedented surplus in the world's stock of sugar. Licht, the German authority, has increased his former estimate of the present beet-sugar crop by 280,000 tons, thus making the total crop 6,710,000 tons.

Reviewing the conditions in the principal capitals of the world as measured by the liberality of the provision for celebrating with gifts and social festivities the merry season of Christmas, the *London Mail*, assuming that this furnishes a standard by which to estimate the condition of business and the general well-being of the people, thus summarizes the situation in seven cities: "London, medium; Paris, poor; Berlin, bad; Vienna, bad; Rome, good; St. Petersburg, good, and New York, excellent."

Wit and Humor

"Well, anyway, the English can beat us at cricket."

"Cricket isn't a game. It's a condition."—*Cleveland Plain Dealer*.

"Are you working—have you any engagement now?" asked the elastic skin man of the living skeleton.

"No," replied the other freak, "I am what is known as 'an idle curiosity.'"—*Youth's Companion*.

A lecturer on optics, in explaining the mechanism of the organ of vision, remarked: "Let any man gaze closely into his wife's eyes and he will see himself looking so exceedingly small that —" Here the lecturer's voice was drowned by shouts of laughter.—*London Tit Bits*.

PUBLIC OPINION

Number 2
Volume XXXII

The Week

Thursday
January 9, 1902

It is hard to say which side has won the Ohio political battle. We were told that the speakership of the lower house of the legislature was the most important element in the contest, and the "Hanna men" have secured that position and organized the house to suit themselves. The senate, however, is in the hands of the "Foraker men." Things of immense importance are said to hinge upon the result of the contest between the Ohio senators for control of the legislature, but unless one is imbued with that intense political temperament peculiar to Ohio, he can see nothing at issue in the fight except the personal prestige of Senators Hanna and Foraker—a thing of small importance except to the gentlemen in question.

AMONG the bargains which appeared after the holidays was the Panama canal, marked down from \$109,000,000, to \$40,000,000, a reduction so substantial that the Panama route, as the summary in the American department shows, again comes up for serious consideration. Many who had given up hope of getting a fair hearing for this route, in view of the nearly universal prepossession in favor of Nicaragua, are now bringing forward their arguments and are securing respectful listeners. Newspaper opinion is plainly in favor of a thorough consideration of the Panama route, whereas two weeks ago the press would have none of it. Probably the same change of position will manifest itself in congress when the canal bills are taken up.

OUR best information is to the effect that the first Cuban election was a farce, Maso withdrew leaving only Palma in the field, and, of course, his electors were chosen with practically no opposition. There was no interest in the election among the people, an indifference which would have been excusable had it been altogether due to the withdrawal of Maso. But the indifference of the people antedated this event; as a whole they cared little about the result—a fact which does not augur well for the political future of the country. However, it remains to be seen what the Cubans would do in case of an unhampered election; the supervision of the United States over that held last week was so close that it is not to be wondered at that the people thought it a waste of time to participate.

PALMA is probably the safest man who could have been chosen for first president of Cuba. His personality and his past history all encourage the belief that an administration under his control would be conservative and wise from our standpoint at least. Since the election he has said that he should seek first of all a reduction of our duties on sugar and tobacco, that economy and strict justice to all should be his aim, that he should make no demand for the immediate withdrawal of the American troops, and that "patriots would be called upon to serve their country as unselfishly as during the revolution." If they do that there is no question of the success of the republic of Cuba, but it is just on this point that there are the gravest doubts.

LAST week was a bad one for the trusts. Two industrials went to the wall and the trolley combine that controls the electric railroads and telephone lines of Michigan and Ohio found itself in very embarrassing circumstances. The collapse of the asphalt trust is the subject of comment in another place; the concern was the common over-capitalized affair that goes down at the first pinch. The crude rubber trust, however, was not over-capitalized; it was under-capitalized if anything, but it "bit off more than it could chew," to use a vulgar but exactly descriptive phrase. The trolley

combine almost failed because, it is alleged, a competitor, jealous of its progress, had managed to cut off its credit. Thus we have illustrated three ways in which a trust may hang itself, confirming the opinion of Mr. Schwab among others that the trust question may be left to regulate itself.

AFTER priding ourselves for several years that we had become a "creditor nation," it is rather disappointing to be told that we are in debt to foreign nations for a matter of \$1,700,000,000. This, at all events, is how we stand according to the computation of Mr. Nathaniel T. Bacon, who takes a page of the *New York Times* of Sunday last to prove that we owe this fabulous amount for interest disbursements, travelers' expenditures, military expenditures, outside of the United States, gifts and benefactions, foreign investments, and the repurchase of American securities held abroad. But the net trade balance in our favor is put at \$3,500,000 annually, and if we continue prosperous we may pay off the \$1,700,000,000 in time. It can't be said that the debt has worried anyone, and we can continue to be proud, not because we are creditors, but because we could owe \$1,700,000,000 without knowing it.

A VALUED reader of PUBLIC OPINION has asked us to "excoriate" Secretary Long for his remarks at the launching of the battleship *Missouri*. Aside from the fact that we do not feel it our duty to excoriate anyone, we must decline to accede to our correspondent's request, because, placing the construction we do upon Mr. Long's remarks, we find nothing objectionable in them. The secretary argued that naval expenditure was a good thing because it was not wasteful but productive; a large part of it represented wages, and the navy was a shield against danger and a protector of trade. Of course if one understands Mr. Long to mean that the naval expenditure of a hundred millions is to be defended on the ground that it is a distribution of so much money, then the government ought at once to spend a hundred billions and make us all rich. But we do not believe that the secretary was guilty of enunciating such a fallacy.

MR. KIPLING is after his hapless countrymen again in a column poem deriding their self-complacency and rebuking their indifference to the safety of the nation. There are seventy odd verses in the poem and each is provided with a sting for those who have been "Idle except for boasting." After such a raking over as no nation ever had before, Mr. Kipling tells "the islanders" how they must strengthen the nation—"Men, not gods, devised it; men, not gods must keep." And "keep" by breaking every man "to the matter of war." That's all—teach "each man born in the island" to shoot, and the salvation of England will be accomplished. How the anti-militarists and anti-imperialists will howl—and rightly, too.

IT is not likely that this indictment will have any lasting effect. The country, so the correspondents say, is already resenting the slurs on the Englishman's love for sport conveyed in the reference to "The flanneled fools at the wicket, and the muddled oafs at the goals," but Kipling's criticisms are likely to cause serious self-examination and to echo and re-echo in the press and from the platform for some time, even if his advice is disregarded.

AT least two and perhaps more full-fledged revolutions are in progress in Venezuela against the Castro government, promising the overthrow of that flimsy affair at no distant date. The dispute between Argentina and Chile now appears to be in a fair way toward amicable settlement or at least postponement, but a brand new boundary dispute has broken out between Peru and Ecuador.

AMERICAN

Panama or Nicaragua?

THE PANAMA CANAL COMPANY'S OFFER GIVES A NEW TURN TO THE DISCUSSION

ALL the New York newspapers, as well as most others, are now disposed to give a hearing to the claims of the advocates of both canal routes. This situation has been brought about by the abatement of the demands of the Panama company, which now offers to accept \$40,000,000 for what they formerly asked \$109,000,000. "The Panama canal is not to be opposed simply because it is the Panama canal," says the *Tribune* (Rep.). The route must be settled on the merits of the case. This is also the opinion of the *Times* (Ind. Dem.), the *Evening Post* (Ind.), and the *Commercial Advertiser* (Rep.). The *Sun* (Rep.) gives a hearing to General Abbot's arguments in favor of Panama, but says that these were doubtless considered by the commission which reported in favor of Nicaragua, and that it remains to be seen whether or not the new attitude of the Panama company changes the situation. The *Syracuse Post-Standard* (Rep.) points out also that the conditions have materially changed since the action of congress on the Hepburn bill, and "it seems very desirable that a certain latitude of choice should be given in the matter."

The Panama stockholders have been accused of trying to "bluff" the United States into paying an exorbitant price for their works, but the *Philadelphia Record* (Dem.) thinks this charge unjust. One hundred and nine millions was the price asked by the company for all its property; \$40,000,000 is the price they will accept for such part of this property as is wanted by the United States, so that the difference between the past and present claims of the company is due to "an honest difference" of understanding as to what was to be bought and sold.

"If, then," asks the *Chicago Evening Post* (Rep.), "we can obtain the franchises and property of the Panama company at a fair and reasonable price, does any senator or representative know of a valid reason for rejecting the offer and proceeding with the Nicaraguan scheme? We are told that public sentiment is committed to Nicaragua, but this is sheer nonsense. The people are enthusiastic in their support of the isthmian-canal proposal, but they are practical and level-headed enough to recognize that the question of routes must be settled without reference to caprice, sentiment, or prejudice." The *Detroit Tribune* (Ind.) says that the "Nicaragua crowd have been driven from the last line of entrenchments, and they are now seeking shelter behind sentimental shams"—the fact that the Nicaragua canal route is already before congress and the bad faith of the Panama company. The *Baltimore American* (Rep.) shows that the offer of the Panama stockholders to accept a low price for their assets completely changes the situation, and this paper claims that if the canal commission recommended the Nicaragua route only because it was cheaper, the Panama route should again be considered, because at the latest price set upon the latter it would be cheaper than Nicaragua. This is also the opinion of the *Louisville Courier-Journal* (Dem.): "The engineering estimates have been drawn up after very careful investigation and may be relied upon. Incidental questions must arise as to cost, but it would seem that the cheaper maintenance of the Panama

route entitles it to favorable consideration. Either is practicable, but the Panama being only about a third of the length of the Nicaragua gives it an advantage that can not be ignored. Besides, in the opinion of great many engineers it is the better of the two for engineering reasons. It follows, therefore, that the offer of the Panama stockholders ought to be carefully considered."

The opinion of the *Memphis Scimitar* (Dem.) is representative of those who hold that the Nicaragua route is the only one worth considering: "The Nicaragua route has been selected and will be adhered to because the canal commission has recommended it and because bills have been introduced and favorably reported in congress to make that recommendation effective, in response to a general expression of public sentiment, and thirdly, for the reason that the public has made up its mind to have a Nicaragua canal and is careless of the matter of expense. But above all, the American people understand that any change in the program thus mapped out and partially acted on would open the way to differences and delays that might defeat the canal project entirely."

Germany, Venezuela, and the Monroe Doctrine

THE basis of the trouble between Venezuela and Germany has already been explained at length. The dispute as to the German claims was in the usual slow course of settlement, when a few newspapers here and many in London saw fit to start a war scare based on the supposition that Germany contemplated acts antagonistic to the Monroe doctrine, and that the United States stood ready to oppose these acts by war if necessary. Of course this set the newspapers to work demonstrating that we had no grievance against Germany, and that the talk of war in behalf of the Monroe doctrine, behind which the recalcitrant Venezuela was hiding, was absurd and vicious. "The attempt made by certain alleged newspapers to create a belief that war is imminent between the United States and Germany over the latter's justifiable effort to protect the interests of her citizens is almost too contemptible to merit attention," says the *Brooklyn Eagle*, "and yet there are millions of people in this country who depend for their daily news upon whose business it is to manufacture sensation of a particular brand. The Monroe doctrine is not an ægis for thieves, even though they masquerade in the guise of volcanic republics. Whatever action Germany may take in Venezuela will be taken with the knowledge and the approval of the United States. And so we are in no more danger of fighting Germany than we are of being invaded by the Hottentots, and the battle of Dorking has been indefinitely postponed." The *Boston Journal* thinks that "it can not be too strongly emphasized that the United States has no objection to make to the course which Germany proposes to take to enforce her claims against Venezuela. She is welcome to get her money in any way she pleases, so long as she does not enter upon the

permanent occupation of ports or other territory. The United States has had experience of her own with the truculent dictator who is the present head of the Venezuelan government, and there will be no disposition at Washington to strain the interpretation of international obligations in his favor."

So also the Indianapolis *News* declares that "there is, as yet, no reason whatever for any anxiety in this country in regard to the trouble between Germany and Venezuela. Rather it is natural to assume that our government and that of the emperor understand each other thoroughly. We have, indeed, been told that such is the case. But even in the absence of information, the people would be justified in viewing the situation calmly." And the St. Louis *Republic*, in similar strain, asserts that "this government has neither the will nor the right to stand between Germany and Venezuela in the settlement of the former's claims. Emperor William has officially declared to the state department that he has no intention of acquiring territory in the West Indies or in South America. He may count confidently on the certainty that the United States government will not distort the Monroe doctrine into an utterance justifying the protection of any South American government in wrong-doing." This is also the opinion of the Savannah *News*. "If," the *News* says, "the people of Venezuela are relying upon the United States to prevent Germany from blockading her ports and collecting duties on imports, they will find they are mistaken. The United States have a strong squadron of warships off the Venezuelan coast for the purpose of protecting their own interests, and to see that the Monroe doctrine is not violated, but they do not intend to interfere with Germany in her efforts to collect the claims which her citizens have against Venezuela."

The Washington *Post* lays claim to "inside" information respecting Germany's motives and intentions. It is not altogether the railroad debt that Germany is concerned about; she is determined to end the situation in Venezuela which results in the ruin of German investors and business men. The *Post's* opinion is that "Germany will launch herself in stormy waters when she undertakes to seize the Vene-

zuelan custom-houses and collect from the world's commerce with that republic a debt which Venezuela herself does not acknowledge and for the integrity of which we have no final voucher. The Berlin government may see fit to accept the *ex-parte* statements of the kaiser's subjects and to make them the basis of a more or less peremptory demand for restitution. But those statements furnish no law for Venezuela, nor is the United States under any obligation to accept them as gospel truth. But the real question is whether European powers can send fleets and armies to the western hemisphere to collect debts claimed—honestly or dishonestly—by their subjects? Perhaps they can, but we take the liberty of persisting in the conviction that the experiment is fraught with peril."

Cuba's First Election

T. ESTRADA PALMA CHOSEN WITHOUT OPPOSITION

THE Cuban elections passed off last week without excitement, and resulted in the choice of General Estrada Palma as first president of the new republic. The popular ballot taken Tuesday was preliminary to the real elections to be held on February 24, but the vote is decisive enough to forecast the official return of the president-elect without opposition. On that day the president, vice-president, senators, representatives, governors of provinces, and members of provincial councils will be formally designated. General Palma was virtually the only candidate in the field. Maso, the Democratic candidate, having retired from the contest on the ground that the election arrangements were unfair. "The attitude of the Maso party," says the New York *Sun* (Rep.), "if by their abstention from voting they intend to lay the foundation for protest and repudiation of the result, can accomplish nothing; unless, indeed, it takes an aspect which shall render it impossible for the United States to withdraw from the island at the expected time. Loyal Cubans of all shades of political opinion will prepare to accept and sustain the coming administration of President Palma."

"The elections practically redeem the pledge which

KEEPING AN EYE ON THE GERMAN
—Phila. North American

this country made in the congressional resolutions before the outbreak of the war, and are a proof that political good faith has been kept with Cuba thus far," the *New York Commercial Advertiser* (Rep.) asserts, voicing an opinion that forms a part of nearly all the editorials on the elections. The *New York Tribune* (Rep.) believes that "in choosing General Palma—as they have practically done—the Cubans have done well. It is well that he is a man of ripe years and long experience. It is well that for many years past he has been identified with civil rather than with military affairs, for Cuba has now no more need of fighting. It is well that he knows and is known to the United States and is inclined to remain in close and cordial relations with it." The success of General Palma is also gratifying to the *Philadelphia Press* (Rep.), which says that "It is not without significance that the first president-elect of the reconstructed republican government of Cuba should be General Tomas Estrada Palma, who for twenty years has been familiar with American life and American ideals. In fact, General Palma, living in the retirement of his rural home in the state of New York, rather represents the even sense and lack of flightiness that is characteristic of the American statesman who hails from the country." The *Washington Post* (Ind.) claims that "unless these men—Palma and his coadjutors—are fit to take charge of Cuba, there is no excuse for the policy heretofore pursued by our authorities. If they be fit—as we are bound to suppose—there can be no excuse for holding them in leading strings a moment longer. We have selected the persons to whom the destinies of the island shall be confined, and, while there may have been a polite comedy of popular suffrage, the fact is notorious that we have presided over the whole incident from beginning to end. The *personnel* of the proposed political organization has been carefully chosen. It represents the deliberate judgment of the administration. If we are not ready now to make good our pledge of four years ago, we never shall be."

The *Pittsburg Dispatch* (Rep.) looks upon the withdrawal of Maso as a very serious matter. "Only the strongest administration," this paper says, "can succeed in establishing a popular government in the

face of such conditions as the deliberate non-participation of a large proportion of the voters, who thereby seek to reserve the right to make trouble for the elected officers upon any and all occasions. Unless Maso's strength is greatly overestimated, President-to-be Palma will have a difficult, if not impossible, task." As we said at the beginning of this summary, most papers regard the election as a consummation of the promises made to Cuba by the United States. There are doubters, however, like the *Boston Post* (Dem.), which asks: "Will President Palma ever be inaugurated and receive from the United States the government of the island of Cuba? More than two years ago—and he has not taken back his words since—Senator Hale, of Maine, declared, in the United States senate: 'There are very powerful influences in this country, largely located in New York city, largely speculative and connected with money-making enterprises, that are determined we shall never give up Cuba. I think the time will never come, unless something earnest and drastic is done by congress, when the last soldier of the United States will be withdrawn from Cuban soil.'"

The Failure of the Asphalt Trust

THE *North American*, of Philadelphia, where the failure of the Asphalt trust affected a large number of investors, says "the collapse reveals a state of financial rottenness in a stock market scheme, which has been unblushingly touted by some of its promoters almost up to the last, that, if not criminal, is none the less scandalous. Mr. Wortendyke, of counsel for the Asphalt trust, in a formal statement admits that 'the earnings of the subsidiary or operating companies during the present year have been very large, yet they are not sufficiently large to meet in full the fixed charges of the proprietary companies.' In other words, the asphalt paving business has been profitable, but the trust has been grossly over-capitalized for purposes of speculation among those who were kept in ignorance of the true value of the contributing properties. But

A BIRD IN THE HAND IS WORTH TWO IN THE BUSH
—*Minneapolis Journal*

WATCH YOUR UNCLE SOAK 'EM SOONS HE GETS THE
THING BUCKLED ON.—*Minneapolis Tribune*

there came serious interruptions in the cunningly devised program. Considerable competition developed in various localities. The political end of the game did not work altogether smoothly, so that there was danger of losing large contracts. The water began to run out of the over-soaked securities, and, in spite of the efforts of John M. Mack and others to stop the leak with reassuring statements to the press, values shrunk rapidly to their normal size. Excessive prices were paid in order to perfect the monopoly, but since the public was to be made to pay the bills, with a liberal commission added for the benefit of the promoters, close buying was not absolutely essential. It cost little to print a few million dollars more of bonds and stock certificates. Now that it is too late, it appears that the asphalt trust was rotten from the start. If the men who engineered it did not know the actual condition of things, with their superior opportunities, they must have been wofully ignorant; if they did, they were something worse."

"The cause of the failure is not difficult of determination," says the *Baltimore American* (Rep.). "The spirit of inflation is primarily responsible for it. Shrewd promoters were enabled to so play upon the fancy of the public as to lead it to believe that earnings might be realized as easily as stocks may be watered. The watering of stock is a simple process; the realization of profits is a hard and fast proposition, dependent for its decision upon the immutable law of supply and demand. It is the uniform experience of enormously inflated corporations that sooner or later this law will work their undoing. Inflation can not be indefinitely projected. The end must be reached in time. The asphalt trust has reached the end of its tether, and is a wreck against the laws of sound business. The public should learn that the season of inflation is ending, and be quick to run to cover before the end actually arrives." When a trust undertakes too much it fails, just as an individual who overreaches his ability, the *Detroit Tribune* (Ind.) observes: "A trust usually buys up separate concerns in a particular line of business, paying for the same in trust stock. It capitalizes its prospects for as many millions as it dares, and the gudgeons who buy the watered atmosphere wait in delightful expectation of profits. In

order to realize those profits an unusual price must be maintained, and an unusual price always provokes competition. Trust manipulation is regarded with distrust by the public in general, and with positive hatred by the laboring class. When a trust comes to bid for a contract against an independent concern, the trust is compelled to use money with legislative bodies, and even then hostile sentiment is often too strong to permit it to carry off the contract." The wreck, the *New York World* (Dem.) thinks, "need have no effect upon prosperity. The working companies are still intact, demand for paving is brisk and growing. The organizers of the trust may mourn the 'paper profits' they hoped to make golden out of the necessities of the public; the only actual losers are the 'lambs' who have blindly bought asphalt shares upon the market."

The Foreign Trade of America

EXTRACTS FROM ADDRESSES AT THE MEETING OF THE
AMERICAN ECONOMIC ASSOCIATION

THE fourteenth annual meeting of the American Economic association, which began at Washington, December 28, was characterized by able discussion of the foreign trade problems and policy of the United States. The ball was set rolling by Mr. Brooks Adams, who read a paper in the first session on The Meaning of the Recent Expansion of the Foreign Trade of the United States. In closing his address Mr. Adams presented the two methods of attack to which this country lies open, in the event of her pushing home her economic advantage.

"European nations, singly or in combination, may attempt commercial exclusion somewhat on the principle on which Napoleon acted against England; or they may adopt a policy which will lead to war, such, for example as disregarding the Monroe doctrine. In case of war the United States is vulnerable through her communications. Like all centers of international exchanges the United States must preserve her outlets open else she will suffocate, and these outlets now embrace both oceans. Such is the first method of attack. The second is by opening regions which shall be to America what America has already been to Europe—to force mineral production once more westward. I

WHAT'S HAPPENED TO THE ROLLER?

UNCLE SAM: "Here's a good place to turn over a new leaf."
—Minneapolis Journal

forbear to enter upon a discussion of northern China. This much, however, is clear. If such a people as the Germans could subdue those provinces, police them, organize them on the American basis, with labor trained and directed by Europeans versed in the American system, there seems to be no reason why America should not be undersold. The problem of future civilization, therefore, promises rather to turn upon the capacity of Europeans to partition and reorganize China, and upon the attitude which the United States may assume toward the experiment, than upon natural physical difficulties."

In the discussion that followed Mr. George E. Roberts, the director of the mint, scouted the idea that we have anything to fear in the Orient.

"No people who are simply patient, imitative, and industrious, but without intellectual life and energy—no people who are conservative rather than enterprising, can equal the people of the United States in productive capacity. They will fail to do it even with capable leadership. Japan has had a marvelous awakening, has a government not lacking in enterprise or ability, and her people are alert and receptive; but the fear of Japanese competition has passed away."

He gave it as his conviction that the "recent expansion of our exports is based on elements of superiority that will endure, but that superiority will avail little unless our relations with other peoples are those of comity and reciprocity. Two policies are open for us to pursue. One is the policy of isolation and exclusion—the policy of doing our own work completely, and of being confined to our own work and markets. It is a policy that will sacrifice our advantages, and is inconsistent with the genius and ambitions of our people. The other policy is that of fair trade, of amicable arrangements with others, which, while pressing our products into foreign markets, will recognize the fundamental truth that every country must employ its people in some manner, and that if we are to supply their wants in some line they must divert their labor into other lines."

The bubble of a European trade coalition against the United States was pricked by Mr. Worthington C. Ford, chief of the department of statistics of the Boston public library, in his paper on the Commercial Policy of Europe. After tracing the course of the commercial relations of Europe from the Cobden-Chevalier treaty between France and England in 1860, down to the present time, he concluded: "We have heard much of a combination among European nations against the commercial interests of the United States, and officialdom has shown periodic tremors over the possibilities involved in such a combination. But if our sketch of tariff legislation and treaty practise shows clearly any one fact, it is the utter impossibility of such a customs or commercial union."

Justice Bretwer on the Jury System

Justice DAVID J. BREWER, in the *International Monthly*,
Burlington, Vt. Condensed for PUBLIC OPINION

IF the jury is to be preserved, some things must be done—things necessary to elevate its character, make it a fair representative of the highest intelligence of the community or at least of the average, and not, as it now generally is, of the lowest intelligence. I make these suggestions as helpful in the matter. First, give them better compensation. As a rule they are paid no more than the ordinary day wages of an unskilled laborer, and it is generally true

that poor pay brings poor service. Better eight jurors reasonably paid than a dozen poorly paid. Secondly, free the work of the juror from some of the disagreeable annoyances which now too often attend it. He should not be compelled to work more hours than the judge. To shut him up and keep him confined day and night is a crime against society. He is treated too often as an object of suspicion—as though he were probably dishonest and must be specially shielded from temptation. Why should he be shut up while the judge is not? A bad man on the bench or in the jury-box will surely find ways to be tempted, and few things are more calculated to degrade his office in the sight of the juror, and to bring out all the evil that is in him, than the consciousness that he is an object of suspicion.

Everyone knows that in an important case the struggle of counsel is to secure one or more jurors who are friendly to their client or in sympathy with the cause or interest with which he is identified, or who may be easily influenced by appeals to prejudice or sympathy. The intelligent business man, the mechanic, and the farmer too quickly respond to the voice of the judge demanding justice, and hence, if possible, they must be excluded and the ignorant, easily moved by appeals of counsel, secured. Let the rule of unanimity be abolished and the result determined by the conclusions of two-thirds or three-fourths of the jury, and this struggle after the single helpful juror will largely disappear. And why should it be deemed essential? Neither in legislative halls, among judges, in arbitration proceedings, nor in scarcely any other body called to make a determination, is it the rule. In my judgment, the great objection to the jury system, as it is administered today, and the one which more than any other threatens its overthrow, is this rule of unanimity. Were it abolished, less time would be wasted in impaneling a jury, and a better class of jurors would ordinarily be selected. More than that, the truth would be more certainly determined.

But the final question is, whether it is worth while to preserve the system, even with the amendments suggested. For myself, I believe in the jury, and that it should be preserved as a factor in judicial investigations, and for these, among other, reasons. It is a tribunal which comes into being with the occasion and vanishes with the end of the trial. The community soon forgets who sat upon it, and there is no building up of prejudice against the individuals who composed it. How seldom do we see in the papers any complaint of the jurors who try a case, while the judge who presides at the trial is often thereafter the subject of bitter attack!

Again, there are many questions whose determination can not be according to any strict rules of measurement, and yet they must be settled. Is there any better way than, as it were, by asking the community how they should be settled? And that is done by leaving them to a jury, who, in theory at least, announce the average judgment. Take suits for personal injuries. Who shall say how much an arm or a leg is worth?

And, finally, it is of importance that the people as a whole should realize that the administration of justice is a part of their work. We can not too often repeat the statement that if popular government is to continue, all must take an interest therein, and realize that upon each one rests some share of responsibility; and the administering of justice is one of the peculiar duties of government.

FOREIGN

The Anglo-French-American Shore

P. T. McGRATH, in the January *North American Review*, New York
Condensed for PUBLIC OPINION

THE international entanglement identified with the "French shore" of Newfoundland is taking on an acute phase just now, through the lapsing at New Year of the *modus vivendi* governing the fishery on the coast, which arrangement the colonial ministry is unwilling to renew, throwing the responsibility for further action upon the British and French governments, which are at present engaged in an endeavor to compass a settlement of the whole difficulty that has now existed for nearly two hundred years. The right to participate in the fisheries on the western foreshore of Newfoundland is enjoyed by three nations, Great Britain, France, and the United States—a condition of things which is without a parallel in the world today. Great Britain, in the first place, claims not alone the widest and most comprehensive rights as to fishing, but also, as owner of the island, the power to develop the hinterland of this western slope, the resources of which are said to be both varied and valuable. Her claim does not seem an extravagant one, when her title to the ownership of the territory is taken into consideration. But right at this juncture arises the much-vexed question of "French rights." As previously explained, the French have the right to catch fish in the territorial waters of the coast (the off-shore waters being free to all), and to dry it on the strand, maintain temporary structures on the coast for the latter purpose, and cut wood in the forests to construct these erections. It would seem that no ambiguity could be possible in this respect, for the provisions are clear; but, strangely enough, the key to the gravity of the problem now taxing the statesmanship of England and France is afforded by the simple query: "What is meant by the word fish, as used in the treaties?" "Codfish," say the British; "the only fish known, caught and of value in the region at the time the treaties were made, and therefore the only fish which could have been meant by those who framed the treaties; furthermore, the only fish which is dried and cured by exposure on stages on the beach, as the process is detailed in the treaties." The French repudiate this construction and maintain that every fish or marine animal found on the coast comes within the meaning of the treaty terms. On the strength of their contention they have set up substantial permanent factories and gone into the business of canning lobsters, an enlargement of the treaty privileges which the British maintain is altogether unwarranted by the language of the instruments. But that represents only the first issue upon which there is a disagreement. The second lies in the French contention that their fishery privileges are exclusive, or to be enjoyed by them alone, while the British argument is that these rights are merely concurrent, with the colonists participating on the same basis, saving only that they are not to interfere with the Frenchmen.

Repeated attempts have been made to settle the question, but as they have always been characterized by a sacrifice of the colony's rights by the British plenipotentiaries, and as the colony is entitled to decide whether the terms are satisfactory or not, she has invariably rejected them. Not until Mr. Chamberlain took charge of the colonial office was there a

British minister who seemed to realize what was due by him and his colleagues to the oldest colony of the empire; and one of his first acts was to despatch to this island a royal commission of inquiry to investigate the whole question of French rights and obtain official data as to the actual condition of affairs on the treaty coast. As soon as the commissioners returned to England and laid before him an outline of their work and findings, he began a vigorous platform crusade against the intolerable conditions created by the French occupation of the coast. Instead of enunciating diplomatic platitudes, he strongly and aggressively outlined the case for the two countries, and warned France that she must be prepared to quit ere long, on a basis of compensation in money or territory elsewhere. The British idea is to effect an agreement with France for a renunciation of her rights in this region, France to be paid in cash for giving up her treaty coast liberties, and to be granted some territorial equivalent elsewhere for ceding up to England the Miquelon isles, which form the base of operations for the whole Gallic fishing industry in North America.

It now becomes proper to consider the rights which the Americans possess on the west coast. These are quite clear and well defined, for, profiting by the bitter experience which the ambiguity of the treaties with France caused, the first article of the convention of 1818 stipulated that "the inhabitants of the United States shall have, forever, in common with the subjects of his Britannic majesty, the liberty to take *fish of every kind* on that part of the coast of Newfoundland, etc." The American right is therefore "concurrent," it exists for all time, and it applies to every kind of fish. It is a concession of rare commercial value, and if the fisheries were conducted upon any kind of scientific basis, and with judicious regulations calculated to perpetuate the fish life of the north Atlantic, it would provide an unflinching mine of wealth for the New England fishermen.

Did Russia Instigate the Chinese Outbreak?

THE Paris correspondent of the *London Times* says he has received from Dr. Ular an important communication, based on confidential documents. These give evidence that the events in China during the last few years were not only foreseen, but even prepared, with a view to the execution of a great political scheme for the establishment of Russia's preponderancy in the far east. Dr. Ular recently returned to Europe after a journey in Manchuria and Mongolia. He is regarded as one of the greatest authorities on Chinese affairs in Europe.

The documents consist of a code telegram from the taotai at Canton to his son, the chief manager of the telegraph office at Maimachin, near the Russian frontier; a letter in Chinese from the same writer to the same address, and an inclosure in Russian, destined for a high Russian official of the Amur district. The documents, it is asserted, clearly prove an agree-

ment between China and Russia before the beginning of the boxer outbreak. The agreement may not have been a formal treaty, but the effect, it is declared, was the same.

The *Times* says that "Price-Woo," mentioned in the documents, stands for Prince Oukhtomski, the well-known Russian statesman. "Koo" is presumably M. Vongrot, formerly in the employ of the Chinese imperial maritime customs service under Sir Robert Hart, and now holding a high position in the Russo-Chinese bank. "Soo" is presumably Sulvoski, the Russian commander on the Mongolian border. The alleged bargain was that the boxer movement was to be encouraged; that Russia would protect the dowager empress against the vengeance of the powers, and that, in return, Russia was to be allowed to occupy Manchuria and Mongolia.

Russia, France, and the Sultan

LIGHT ON RUSSIAN POLICY TOWARD TURKEY

THE *Revue de Paris* of December 15 contained the first of a series of articles on foreign affairs by Victor Bérard, a distinguished professor, who has gained international fame on account of his studies of Armenian and Turkish subjects. The first article dealt with the recent Franco-Turkish dispute. In this article M. Bérard set himself a problem—How was it that Sultan Abdul Hamid showed so firm a front throughout the whole dispute? The answer was that the sultan found, quite unknown to his counsellors, tacit or formal encouragement to resist France. It was not, however, from Germany, for William II urged Abdul Hamid to yield; nor from Austria, who was delighted to see a lesson given to him; nor from Great Britain, who was too busy elsewhere to heed his appeals; nor from Italy, who facilitated in every way the initiative of France. From whom, then? "One power alone," says M. Bérard, "appeared to hesitate, and for two months of the ten weeks of the Turk's obstinacy withheld its opinion. It was not till early in November that we learned from an official note that M. Zinovieff had in person urgently advised the palace and the porte to yield to the French injunctions." M. Bérard recalls the circumstance that M. Zinovieff was once director of Asiatic affairs of the Russian foreign office, and asserted that Russia ultimately means to secure control of Greater Armenia. Consequently, she was afraid of what might happen as a consequence of the sending of the French fleet to Mytilene.

The London *Spectator* has a long article on the papers of M. Bérard, which the *Spectator* regards as an indication of a French awakening to the emptiness of the Russian alliance. As to Russia's relations with the sultan, the London *Journal* says: "No doubt for some time past the policy of Russia toward Turkey has worn a very cynical air. She is the natural protector of the eastern Christians, and before now she has intervened in their behalf at great cost to herself. Why, then, does she pose with something like ostentation as the friend of their oppressor, and make the maintenance of the present state of things in Turkey a distinct feature of her foreign policy. It is not hard to imagine the sort of reply which a Russian might give to this inquiry. 'Even if our zeal for the Christians has grown cold, it does not,' he would say, 'rest with the other great powers to blame us. You have done exactly the

same thing yourselves. You professed a great deal of compassion for the sufferings of the Christian subjects of the porte, but you did nothing to help them. We, on the contrary, did our utmost to help them. We carried war up to the gates of Constantinople, and concluded a treaty which would have made the sultan a dependent of Russia and Russian influence all-powerful in the palace. Then, for the first time, you resorted to action. You had done nothing to help the Christians, but you could, and did, interfere to tie the hands of their deliverer. We are not going to give you the chance of playing the same part a second time. Our eastern policy will be directed to the same ends, but it will be carried out by different methods. The powers would not permit us to help the Turkish Christians in our own way because they dreaded our reaping some reward from what we had done on their behalf. We, in our turn, shall not permit anyone else to step in to do what is our own proper work. The great powers found the independence and integrity of the Ottoman empire a convenient cry for their own purposes. They will now see that it can be used equally well to prevent them from advancing their own interests to the detriment of ours.'

"We do not see what answer could be given to a Russian who should speak in this way. What Europe did in reference to the treaty of San Stefano was first to forbid Russia to give any effectual aid to the Turkish Christians, next to substitute a treaty which purported to place them under the protection of Europe, and finally to leave this substituted treaty absolutely unexecuted. That is not a pleasant record for any of the powers to look back upon, and as long as it remains uneffaced we had better, perhaps, say nothing about the indifference of Russia to the condition of Armenia."

The *Français* accuses M. Zinovieff, Russian ambassador at Constantinople, of deliberately meddling to the detriment of France at the time of the recent dispute with Turkey. It is declared that M. Zinovieff did not maintain either a friendly or a neutral attitude, and that he snubbed M. Bapst (councillor of the French embassy). The *Français* also accuses Russia of permitting M. Zinovieff's conduct.

"Morning" in South Africa

THE RESTORATION OF NORMAL CONDITIONS

OF more significance than the news of guerrilla skirmishes is a dispatch from Pretoria, published recently, telling of the resumption of active business in and about the capital of the Transvaal. "The entire district between Pretoria and Johannesburg and for miles around," says the correspondent, "is almost as safe as Piccadilly in London or Broadway in New York." The local markets, he adds, are booming, sales of land at advancing prices are of daily occurrence, new industrial and commercial enterprises are being promoted, and work at the mines is maintained unbroken. So great is the change in this respect since last year that even the burghers who were morose and sullen are now taking part in the activities of the towns, and are apparently much less moved by the hostilities in the outlying country than are the residents of London.

London *Sunday Sun*

"The night cometh and also the morning." Never since the exodus of the Uitlanders from Johannes-

burg in the dark days preceding the outbreak of war in October, 1899, have there been such evident signs as there are at present of the dawn of a new era in the Transvaal. In the course of a few months the Rand gold-mining industry will have attained something like its old dimensions, and the streets of Johannesburg, long deserted, or peopled mainly by military, will again present those scenes of activity so familiar before the launching of Mr. Krüger's ultimatum. It is good news indeed that peace should be so far restored as to enable the mines to resume work; but were every mine on the Witwatersrand in full operation tomorrow, comparatively little advance would have been made toward the re-settlement of the country. It was not on behalf of the capitalists that England went to war, and it remains as true today as when Lord Salisbury uttered the words, "We seek no goldfields; we seek no territory." Our object in 1899 was to right the wrong under which our fellow-subjects suffered; our object now is to secure equal justice and perfect freedom for all men throughout South Africa. The fortune of the stricken field having placed the Boer territories under our sovereignty, it becomes our bounden duty to make of them prosperous, contented colonies. This object will not be attained merely by the re-starting of the mines; of far

greater importance is the general trade and agricultural development of the country. As to general trade, we have most encouraging returns. Notwithstanding that the railways, mines, dynamite, and other revenue-producers are still unremunerative, the customs receipts have been increasing rapidly, and are now not far short of totals reached three years ago.

Various Topics

THE GERMAN TARIFF BILL again came up for discussion when the reichstag met January 8. Russia's threats of reprisals have given pause to the advocates of the bill in its present form, but a vote of 290 to 110 is still claimed for it.

THE TRIPLE ALLIANCE does not constitute in our eyes a permanent arrangement. International politics are made up of contingencies, and the triple alliance would lose for us all *raison d'être* the day it ceased to represent economic friendship and full liberty for the development of Italian interests in the Adriatic. We mean that the triple alliance, which does not exclude treaties of reinsurance and admits of other friendships, represents at the present moment the only serious guarantee of methodical Italian action amid the imbroglio of international politics. We must be the more on our guard against changes immediately and certainly advantageous only to third parties, inasmuch as experience has proved that we ought, practically, to count solely upon our own energy and foresight.—*La Tribuna*, Rome.

SOCIOLOGICAL

Is Housewifery a Not Gainful Pursuit?

FLORA M. THOMPSON, in the January *Arena*, Boston
Condensed for PUBLIC OPINION

THE United States census of 1900 bears evidence that all but twelve per cent of the women of the country have not a gainful pursuit. With statistics thus defining the economic status of woman's labor performed under the terms of the marriage contract, the American woman is compelled to believe either that matrimony is not a sound business proposition, so far as she is concerned, or that there is a mistake in the logic that establishes the wife's occupation as a "not gainful pursuit." The assumption is that the work a woman does for her husband without wages is not gainful for the reason that it is not pursued to the end of the money thus to be made. The whole matter is supposed to be disposed of in the understanding that love is the animating principle and all-satisfying return of the wife's work in the household. In a sense and under normal conditions, this is true; and still the lofty spirit of devotion in which a woman may cook, scrub, wash, and sew (keep house and do housework) does not dispel—it does not even sublimate—the economic relations of this work. Nor does love correct the errors arising from failure to appreciate the economic value of this work. On the contrary, failure to consider a housewife's wage in the science of household economy—failure to attach economic value to the labor performed by the wife for the family—is a source of confusion in problems pertaining to men's business gains and losses and of all the hardships, injustice, and the inequalities to which the paid labor of woman is subject; it is also the unsuspected source of much social evil. Here is the origin of a vast number of divorce cases that are set down in court records as attributable to secondary causes.

It has been estimated that the American people are poorer each year by \$1,000,000,000 because housewife-

ly pursuits are not followed more economically. This includes waste incurred by extravagant expenditures of money—also waste of human energy attendant upon bad cooking and unsanitary housekeeping. If this estimate be even approximately correct, the "not gainful" pursuit of the housewife is thus seen to restrict materially the gain of men's pursuits. Again, no value attaching to the industrial pursuits of the wife, no business obligation of excellence in these pursuits, is imposed upon her. The wife has not the economic incentive to the right performance of her labor that competition provides; neither is she subject to any legal obligation in this matter. According to her temperament, circumstances, and ability, therefore, she is logically free to neglect the work devolving upon her in the domestic relation and to be an idle good-for-nothing, or else to find occupation outside the home that is gainful in a simple business sense.

I am convinced that to attach the dollar sign to this unpaid labor of wives would have the effect of so elevating it from its present submerged status that much good would result to society as well as much gain to the wealth of the nation. If the law defined a percentage of a man's income as the wife's wage in recognition of the service she accords him in the family, justice in this matter would acquire a measure by which intelligence could then proceed to make all necessary terms insuring order and progression of the social good involved. Thus the wife's right to the worth of the work she performs under the bond of matrimony would be created, and there would then exist economic cause compelling business accountability in the performance of this labor, which, besides tending to improve the marriage relation, would tend also to improve both the labor and the character of women.

Hangings and Lynchings of 1901

CHICAGO (Ill.) Tribune

THE dark records of hanging and lynching are made up for the year 1901. The former shows a gleam of encouragement. The latter, in some respects, is distinctly discouraging. There were 118 legal executions during the year, one less than those during 1900. Of those executed, seventy-one were Negroes and forty-seven whites. The crimes which led up to these executions were as follows: Murder, 107; criminal assault, 9; attempted criminal assault, 1; train robbery, 1. In 1900 only five were hanged for criminal assault. This increase in executions for criminal assault would apparently indicate that this crime, which is falsely assigned as "the customary crime" in the south, is coming more and more to be punished by the law instead of by the mob, but the increase of lynching for the year makes it difficult to determine this with absolute correctness.

The lynchings for the year number 135, as compared with 115 in 1900, an increase of 20. Of these, 121 occurred in the south and 14 in the north, as compared with 107 in the south and 8 in the north in 1900, an increase which is not creditable to the five northern states, California, Idaho, Montana, Kansas, and Indiana. The number of Negroes lynched in 1901 was 107, the same number as in 1900. Besides these, one Indian and one Chinaman were victims. Curiously enough, the principal crimes which led to these lynchings are almost the same in the two years, being 39 for murder in 1901 and 39 for murder in 1900; 19 for criminal assault in 1901 and 18 for criminal assault in 1900. The six southern states which have the largest number of mob murders are: Mississippi, 16; Louisiana, 15; Alabama, 15; Georgia, 14; Tennessee, 12; Texas, 11. Three of these states, however, show improvement, Mississippi having 4, Louisiana 5, and Georgia 2 less than last year; but Alabama has increased 7; Tennessee, 5; and Texas, 7. Discouraging as the figures appear, there are many causes at work in the south which promise improvement. It is not encouraging that the number of lynchings in the north should have increased as much.

Where Temperance Is Enforced

THE DISCIPLINE OF RAILROAD EMPLOYEES

A WRITER in *Harper's Weekly* says that the railroad force of our country has become stronger in its example and power for good than all the temperance organizations.

"The discipline of the railroad employees of the country is probably stricter, and better enforced, than in any other line of work. A number of years ago temperance was not strictly enforced on trainmen, but the engineers were compelled to report for business in a perfectly sober condition. There were some lax rules in regard to the trainmen, and it was not uncommon to see many of them drinking at the public houses along the route when their train was waiting for orders. But today not only temperance, but almost teetotalism, is enforced on our leading railroads, especially among engineers, firemen, switchmen, and train dispatchers and conductors. The managers of the railroads found that many of the accidents were due to drink among the employees, and, after considering

the problem for a few years, the man who could not get along without drinking was gradually forced from the ranks of the railroad employees. Today these workmen represent the largest and strongest army of upright, sober, industrious men in the world."

This writer says that dismissal for drinking is the worst possible thing that could happen to a railroad man in any position. "If he applies to another road he must furnish reference or tell where he was last employed. His record is then looked up, and each road furnishes another with the correct data required. If the dismissal has been for drinking, the applicant is very naturally turned down. Yet allowances are made for human weakness, and if an otherwise good employee falls once, unless he is an engineer or train-dispatcher, he may receive a reprimand and warning. He is then placed on trial, and if he does not repeat his offence he may be retained indefinitely. Indeed, many men have been reformed from drink in this very way. Realizing that their positions depended upon their sobriety, they have steadily refused to touch liquor at all. In this effort to reform they are mightily helped by their associates. These are all railroad men who are placed in the same position; they must live a sober life. Consequently the weak man in the number is encouraged rather than tempted, and his battle is rendered much easier."

Too Much Parent

January Atlantic Monthly, Boston. Excerpt

IN these days of strenuous parentage, it may not be amiss to suggest mildly that there may be, in the constitution of a family, such a thing as too much parent. Time was when being a parent was incidental to other business in life. Our grandfathers brought up children, a dozen at a time, with a careless familiarity that takes away the modern breath. Each of the dozen was disciplined and duly chastened. They were whipped when they told lies, and occasionally when they did not. They learned to read at four; were put to work at five, as a matter of course; and developed, in due time, the stuff that men are made of. There was never any particular fuss about it. The larger the family, the more whippings it took. But there were always enough to go around, and no one the worse for it. The advertisement, "Boy missing. Run away from home," was not an uncommon feature of the weekly newspaper. But of the remnant who had the courage to stay at home and grow up, it may be said that they made admirable citizens. They had the rare privilege of passing their childhood and youth in the presence of men and women who had other and more important business in life than that of being parent to offspring. They grew up with a chastened sense of their own unimportance in the scheme of being, and a philosophic expectation of taking the hard knocks of life as they came.

We have changed all that. We have listened to the voice of Froebel, "Let us play with our children;" and to the educational moralist, "A father should be his boy's best friend"; and to our most famous and most unpractical poet, "The child is father to the man"; and the whole business of child-raising is turned other end to. We no longer raise them by the dozen. One or two at a time is as much as we dare venture, and very cautiously at that. We study the development and take notes on the bumps, phrenological; the other kind the modern child is never allowed to have. We agonize over our relation to his moral growth, and

drop tentative, trembling seeds into the ground of his being, and exchange specimens if anything comes of it. The result, as a whole, is not, it must be admitted, altogether unpleasing. There is something about the well-born, well-bred, wholesome child of today that makes glad the eye and the heart. But the poor parent! We protest that he has never had a chance in life. Ten to one his own parents belonged to the old school, and disciplined him within an inch of life. And now his children belong to the new. He is ground between the upper and the nether stone. Only in scattered, precious moments does he dare call himself his own. Late in the evening, perhaps, when the all-important child has been adequately played with and encouraged and developed and put to bed on his hygienic pillow, there comes a moment when the exhausted parent may sit down before the fire and draw a comfortable, grown-up breath, and gather strength and wisdom for the morrow.

A Model City

A SUGGESTION FOR THE ST. LOUIS EXPOSITION

A SCHEME for a model city has been submitted to the commissioners of the St. Louis exposition by the New York Municipal Art society. Mr. William S. Crandall thus outlines the plan for the latest issue of *Municipal Affairs*:

Its general purpose is to show (1) the progress already made in every phase of municipal development, (2) the most successful methods of solving each and every municipal problem, beginning with the laying out of a city (streets, avenues, parks, etc.) and ending with the public baths, laundries, theaters, and telephones, having run the entire gamut of municipal problems and city conditions, and (3) how art may be combined with utility so as to make the city not only the most effective industrial, commercial, and social unit, but also the most attractive and the most beautiful. To this end plans, photographs, and sketches should be secured from the most progressive cities of the world, and, wherever possible, the machinery actually used should be displayed. For instance, Chicago should send a working model of the sanitary canal by which it disposes of its sewage. Paris should exhibit its system of sewers. Glasgow might be called upon to portray its well-developed system of garbage disposal and utilization. New York would explain the rapid transit subway it is now building—the most extensive system in the world.

Private companies would gladly display the various kinds of machinery and manufactured products used by cities or private corporations doing municipal work, such as fire apparatus, garbage incinerators, paving materials, water meters, filters, hydrants, etc., sewer appliances, lighting systems, voting machines, etc., etc. Wherever possible this display would be supplemented by practical illustration. Fire companies from various cities could give drills showing latest and most approved methods of fighting fires and saving life. The streets of the exposition would be cleaned in the best possible way, and garbage disposal works erected upon the grounds. In other instances, where it is impossible, owing to lack of space or of facilities for doing the work, stereopticon views and moving pictures could be used very effectively, and the visitor to the exposition thus enabled to see what the cities of the world were doing for their citizens, without visiting them personally.

The Social Conscience in Germany

Professor GEORG SIMMEL, in the January *International Monthly*, Burlington, Vt. Condensed for PUBLIC OPINION

THE lack that men felt of a final object, and consequently of an ideal that should dominate the whole of life, was supplied in the eighties by the almost instantaneous rise of the ideal of social justice. Suddenly men became aware of the miserable estate, crying almost to heaven, of the proletariat, the plundered condition of the working classes, the injustice done them, the destruction of their family life, their physical and mental degeneration, consequent particularly upon the labor of women and children—all of which had hitherto remained as unknown to the upper classes as though all this had taken place on another planet; it was as though the soul of man had acquired an organ that up to this time it had not possessed, and that reacted upon these conceptions with entirely new feelings, and with the suggestion of entirely new social ends. The social conscience awoke, and seemed to supply to existence a new and definite purpose, a new evangel, that might become a center round which should cluster all the ideals of life. Practical and ethical, as well as theoretical, forces were intermingled in this field. For all at once, it was seen that it was society, the sum of all social groups, from which we derived every inner and outer good as a loan, that the individual was but the crossing-point of social threads, and that he, by a devotion to the interests of all, merely discharged an obligation of the most fundamental character—by a devotion that had as its primary object the most oppressed and undeveloped portion of society, which, nevertheless, through its labor supported the whole.

Men suddenly recognized the absolute frivolity and falsity of the principles of the social "laissez aller"; the principles, namely, that, through the natural harmony of interests, society, as a whole, will pursue the right path if the individual looks after his own welfare absolutely without regard to others; that the oppressed deserves to be oppressed, since the very fact of his being so proves his unfitness for a higher condition; that the difference in station between rulers and ruled corresponds closely and correctly to the amount of energy that each person contributes to life. Now it was perceived how completely the accidents of history, the chances of birth and of environment, the great advantage possessed by the capitalist over him who has only the strength of his hands, convert this apparent justice into a very caricature of justice. In short, the watchword, "the social question a moral question"—supported, on the other hand, by a scientific understanding of the overwhelming importance that social forces have, even as regards the life of the individual, and on the other, by the great political-social measures that relate to the protection of the aged or infirm laborer—possessed itself even of those who were enemies of socialism, as well as of those who stood aloof from it, and seemed to provide us, not with an ideal, but with the ideal itself. The depth and passion with which this ideal was seized upon, however, appear to have been due to that state of the inner life which we have already described, and which reached its climax in the reception accorded to Schopenhauer; the absence of an ultimate end, of an absolute ideal of life, the thirst for a definitive value that should sum up in itself all the details of existence—such an ideal as just this conception of Socialists furnished, by virtue of its all-embracing extent and its vague boundaries.

LETTERS & ART

Verestchagin's War Pictures

A REMARKABLE COLLECTION ON EXHIBITION IN CHICAGO

THE celebrated Russian artist, Vassali Verestchagin, has been in Chicago superintending an exhibition of some of his recent works. Five galleries of the art institute were needed to accommodate the vast collection. Lena M. McCauley thus describes the exhibit for the Boston *Transcript*: "As one enters the doorway to the first gallery the impression is that the snow-clad summit of Kanchinga rising 28,000 feet above the plain starts from the jungle of green at your feet. These mountain pictures are tremendously impressive, outlined against a sky of clearest blue. Popular interest is attracted by the twenty large canvases illustrating the burning of Moscow, the retreat of Napoleon and other incidents of the Russian cam-

the scene is within the dark shadows of a room. As might be expected the collection contains works of different degrees of merit. The painting is frankly done; there is neither hesitation nor sentimentality; the artist aims to paint literally and to tell stories, and he succeeds. It has been said that Verestchagin is to art what Tolstoy is to literature. He aims at truth, and he has no taint of morbidness to work an under-current in his realism."

Verestchagin's passion for realism has met with violent opposition. His pictures have more than once been destroyed by the mob, condemned by the military, or forbidden by the church. A writer in the *St. James's Gazette* says: "He defied tradition and convention when, after an exhaustive tour in Palestine, he painted Christ climbing out of the tomb as, according to Verestchagin, he must have done, and the picture was destroyed as it hung in the gallery. When, again, he painted Christ among his brothers and sisters Verestchagin again passed under the ban of the church, and the archbishops on the continent forbade the people to attend his exhibitions. Von Moltke, too, pro-

NAPOLEON AT BORODINO

paign. The artist had written a book on the subject long before he painted the pictures. Historically the series begins with the council of war before Borodino. During the battle the emperor is indifferent. Seated on a camp chair with his arms folded, his head sunk forward on his breast, and one foot lifted and resting on a drum, he is the object of curious questionings of his officers behind him, who have been anxiously watching the progress of the battle. Taking the Great Redoubt represents a mass of struggling men, the wounded and dying in great confusion. In the distance is seen the white horse of the emperor. The faithful soldiers strive to rise and cheer because victory has been won.

"In an adjoining room are the eleven large pictures of the war in the Philippines. The only battle scene is that of Santanna near Manila, with General Atkinson in command. General Lawton in charge of the bridge during a battle and General MacArthur in the Spanish cemetery are shown in the largest pictures. 'The Spy' is a tableau before an American officer's tent, where a captured Filipino has been brought for judgment. 'The Deserter' is a similar picture, but

THE BATTLE OF ZAPOTE BRIDGE

(This painting, valued at \$10,000, was irreparably damaged in being removed from the art institute.)—From the *Chicago Chronicle*

hibited his troops from going to see Verestchagin's vivid pictures of war as it is, although the Emperor William spent some time a year or two ago in the artist's studio, and, after gazing silently on 'The Retreat from Moscow,' said to Verestchagin: 'And yet there will be men who will want to rule the world.'"

While realistic battle scenes and the tragic side of war are the themes of his most celebrated pictures, they are but one phase of Verestchagin's art. In the present exhibition there are several hundred canvases depicting landscapes, character studies, and portraits. This versatile artist is, moreover, a soldier, traveler, mountain climber, writer of books, philosopher, and poet. His sixty years have not chilled his enthusiasm.

Recent Italian Fiction

NOTABLE NOVELS OF THE YEAR—MILAN AS THE LITERARY CENTER OF ITALY

ACCORDING to the Rome correspondent of the New York *Nation*, the most notable recent contributions to Italian fiction have been made by Matilde Serao, Luigi Capuana, Carlo Del Bazo, Arturo Graf, Marquis Filippo Crispolti, and Grazia Deledda. This writer says that Matilde Serao is almost at her very best in "Suor Giovanna della Croce," the story, simple but deeply pathetic, of a nun thrown with needless brutality upon the world by the suppression of the convents, and sinking gradually into the most abject misery. This year, too, Luigi Capuana has made good his reputation of being one of the best among Italian novelists. His "Il Marchese di Roccaverdina" is a powerful and convincing story of the Nemesis that pursues the murderer. Carlo Del Bazo, whose picture of the incredible corruption of the clergy in "Gente di Chiesa" created such a furore, has published a novel of political life called "Le Oestriche." This reviewer says: "Sig. Del Balzo is a deputy who sits on the extreme left of the chamber, and it is simply his *metier* to represent the church as a putrefying mass in a world that has great need of being made over by reformers of his way of thinking. This time he has fallen foul of Crispi and the bank scandals. We should not wish to imply that Sig. Del Balzo is altogether wrong in his views; but what his novels gain in intensity of coloring from the heat and force of his convictions, they lose as works of art. Still, in spite of bad construction, of clumsiness, and ingenuousness, they are readable even to those who can not see things as does a deputy of the left."

Arturo Graf has made a hit with a novel, "delicate, charming in form, full of poetry and clean." His "Il Riscatto" is the autobiography of a man, still young, who has inherited from a long line of ancestors a tendency to suicide, and who is redeemed by love at the moment when, by irresistible force, he seemed about to follow the example of his forefathers.

One of the most discussed novels of the year was the Marquis Filippo Crispolti's "Un Duello," an exhaustive treatment of the practise of duelling. According to this writer the novel is an exceedingly good one, marked by an unusual distinction of tone, and, among other merits, giving a striking picture of Roman society.

Grazia Deledda receives high praise for her delineations of life in Sardinia. "The first chapter of 'Elias Portolu,' if we were to go no further than that, conveys a notion of the state of mind as to right and wrong, as to duty, property, and human life, of the rude population of the mountain region about Nuoro. The witchery, however, is not so much in them as in the hand that has drawn their portrait. Grazia Deledda has the poet's gift; her touch converts what she sees and feels into a thing of beauty. And she loves her Sardinia even to the remotest recesses of its mountains, and its inhabitants, especially the lowly; and she knows the processes of their minds, the cravings of their hearts."

Other novelists favorably mentioned for their work during the past year as Signors Giacomo, Novaro, and Avancini.

In connection with his review of the year's fiction this writer makes an interesting note of the fact that Milan is fast becoming the literary center of Italy. In the days when the peninsula was cut up into a

number of states, it was no more than natural that there should be several literary, scientific, or artistic centers. After the unification of Italy these cities remained as centers, and, notwithstanding occasional jealousies, this dispersion of intellectual forces had the advantage that in none of the larger cities was there the dull provincialism of which people complain in the cities of France outside of Paris. The fact that of all the works enumerated in this communication, only one was not published in Milan, would indicate that the old order of things is passing away. Their authors, Sicilian, Neapolitan, Tuscan, seem more and more to gravitate to the Lombard capital, which more and more becomes the city of initiative, the city of Italian intelligence. And this without as yet deadening the life of other centers. Rome is not merely in name a capital; Turin has a strong independent existence, an admirable alert intelligence, a power of originating and carrying out good ideas that makes it hard to say that she is second to any other city; Florence, Naples, Venice—they are all instinct with new life. It is only that Milan is acquiring a sort of primacy.

The Curse of British Music

ERNEST NEWMAN, in the London *Speaker*. Condensed for PUBLIC OPINION

THE festival is the curse of British music; and, if a concrete example is needed to support this proposition, I will instance the case of Dr. Edward Elgar, whose rare musical gift the festivals have done their best to spoil. What is "a festival work"? It is an attempt to breathe the breath of life into the stalest, most pedantic, most unhappy form that was ever known in music. In its worst mode, the English festival cantata or oratorio is bad verse set to bad music; in its intermediate mode it is good music hampered by passable words; in its best form it is good music and good poetry, each doing its utmost to cut the other's throat—we get neither the poet at his best nor the musician at his best. There is at present only one first-rate festival oratorio, Dr. Elgar's "Dream of Gerontius," and the trail of the provincial festival is visible even there. My complaint against the form is that it is positively the greatest shackle on a modern composer that his most fiendish enemy could devise. Has a musician a dramatic gift? He must adapt it to the needs of a chorus soddened with the stupid old oratorio tradition. Is the lyric or the elegiac his strong point? He must keep it strictly within limits, for again there is the antiquated choral tradition to be considered. Is his temperament remote as the stars from the ways of all his festival predecessors? He must, nevertheless, conform more or less to their ways, no matter what may be his subject—dramatic or epic, sacred or secular.

If the road to success lies at present through the bog of the festivals, a composer must needs take that path; but he can not do so without wasting a good deal of his time and strength as an artist, and without a quantity of undesirable substance clinging to him for some time after. Of course, even within the narrow limits of the festival forms Dr. Elgar has done magnificent work. Of the "Gerontius" one can only say that no music so thrillingly spiritual, so beautiful with the beauty of refined thought and noble feeling, has been written since "Parsifal." There is fine writing, again, in all the other choral works; and every now and then Dr. Elgar achieves a superb triumph in spite of the limitations imposed on him by his

predecessors. But the strongest men of all decline to allow themselves to be fettered by nincompoops and academicians. One could not imagine Wagner, for instance, ever consenting to write an English festival cantata, even if his refusal meant his waiting another twenty years for recognition. There is nothing, except the influence of the old tradition, to hinder Dr. Elgar from being in every way the leading representative of a quite new school of English music. His music suggests a broad and open relation to life, a moral purpose deep, steady, and universal—something peculiarly characteristic, one loves to think, of English poetry at its best, from Shakespeare to Wordsworth. "This is the best of me," he has written at the end of the full score of his "Gerontius"; "for the rest, I ate, and drank, and slept, loved and hated, like another; my life was as the vapor, and is not; but *this* I saw and knew; this, if anything of mine, is worth your memory."

The Literature of the West

WILLIAM R. LIGHTON, in the Boston (Mass.) Transcript
Condensed for PUBLIC OPINION

OF the many charges that have been laid at the door of the west, none is more true than this: that it has no literature of its own—none which makes even a decent pretense of reflecting its real life. To be sure, many writers, both natives and aliens to the soil, have fashioned saleable and readable stuff out of odds and ends of raw material gathered from the Missouri to the Pacific, and have earned a cheerful, afternoon-tea sort of reputation thereby; but their material has been mostly only drift pebbles; they have not yet touched the rock quarries. It will avail nothing to cite Bret Harte or Mark Twain or Owen Wister, or any other name on the list, in refutation. Their work was true and vital enough in relation to the phases of life they sought to portray; but those phases were transient, merely momentary. Briefly, the literature of the west has been only the literature of the mining-camp and the cowboy. If a writer, hardier than his fellows, has ventured to lay hold upon new matter, pricking at it tentatively with his penpoint, he has not yet dared to ignore the popular clamor for picturesqueness.

So far as I can now recall, there is extant only one big, worthy example of what the literature of the west must be if it respects the truth: Mr. E. W. Howe's "Story of a Country Town." If you care for any sidelight on the meaning of what I am saying go to that book for it. Thank heaven, it is still to be had! For the rest, what have we? Not much but a hopeless tangle of tinsel and crimson rubbish—some of it exquisitely written—"good literature," if you like that phrase, but mostly untrue, and therefore rubbish. The best of it is only as the first low foothills away below and out of sight of the mountains. Two books stand out above the rest, not so much by reason of accomplishment as because of their indicating better tendencies. These are Francis Lynde's "The Helpers" and Frank Norris's "The Octopus."

I want to engage for a time in the entrancing business of prophecy. One of these days a man will arise and offer to the world a western book that will be likely to set a new fashion—many new fashions—in literature. He is nameless as yet; but I feel sure that he is now alive and that his offering will not be long delayed. When it comes, it will compel wonder that it did not come long ago—its meanings will be so big, so obvious, so simple. It will not concern it-

self very much with traditions of the literary workshop; it will go its own way like a god, justifying itself at every step as it goes. It will not give much heed to the preconceived tastes of those who are to buy; yet it will find its way straight to the national heart and stay there. A daring prophecy, perhaps; but it is bound to be fulfilled. And I feel safe in going a step farther. This book will come from and relate to the prairies and their people; for that is where the vital life of the west is throbbing. These are the men and women who are to shape western destiny. Their life is in no sense histrionic; they do not know the meaning of that word. There the life is sustained by first relations with heaven; there the men are doing the things which really count; theirs is the real courage. Dull, you say, and earthy? Dull enough, truly, for the beholder who can not see; but the book that is to come will turn that dullness into a radiant glory. The idea that the prairies are raw, and that, therefore, the soul of the man who turns over their sod must be raw too, is very foolish. The meanings of soil and sky are not subject to change. When this great western novel comes, you will know it by this sign—it will declare and establish the immutable sanity of the mother-earth; it will be large with the truth that the blessed old mother never betrays the heart that loves her. And the western farmer loves his prairies to the point of adoration. That is his faith, his salvation, his immortality.

Various Topics

WILLIAM ELLERY CHANNING, the last of the brotherhood including also Thoreau, Hawthorne, and Emerson, which made Concord famous, died December 23. He was an author of marked originality and poetic power, though less disciplined than his three contemporaries. His published volumes number nine, and he left copious manuscript, from which selections will be made for publication later. Mr. Channing was married in 1842 to Miss Ellen Fuller, sister of Margaret.

THE ROYAL THEATER OF MUNICH is one of the signs that show that the Wagnerian idea is destined to spread in the world not by a servile imitation of Bayreuth, but by adaptations to diverse mediums and by transformation and development according to the genius of races and nations. It proves that with energy, devotion, and willingness one can free himself from the debasing servitude of the contemporary theater, the tyranny of custom and that of gold, and think of nothing but of a great art and of its civilizing mission.—Translated from *La Revue*.

D'ANNUNZIO AND THE CENSOR: The production of Gabriele D'Annunzio's tragedy, "Francesca da Rimini," has been prohibited in Rome on grounds of morality. The first night assumed the character of a great national event, cables the Rome correspondent of the *Sun*. Many ministers, senators, and deputies, almost all the diplomatic corps, and a large number of men distinguished in literature and art, including Mascagni and the aged Tommaso Salvini, were present. Opinions of D'Annunzio's play are divided. Some of the critics complain that it is tedious, some find the action impetuous and feverish, while others regret that everything is sacrificed to action and theatrical effect. It is perhaps true, as some assert, that the play would have been a failure but for Mme. Duse's impersonation of Francesca and Gustave Salvini's acting as Paolo. D'Annunzio has challenged one adverse critic to a duel.

SCIENTIFIC

How Incandescent Light Filaments Are Made

B. V. SWENSON, in the January *Cassier's Magazine*, New York. Condensed for PUBLIC OPINION

ALTHOUGH used so universally, very few, even of those who have spent years in the electrical business, have ever seen an incandescent lamp in process of manufacture. The best absorbent cotton is generally used as the basis of the filament. The raw cotton is placed in a pot or vessel, treated with zinc chloride, and worked to a pulpy mass which permits of filtration, and is then carefully filtered through fine-mesh platinum filters.

After being filtered several times the density is brought to the desired value for what is known as the squirting process. The "mass," as the pulpy material is called, is then placed in spheroidal-shaped vessels, which are provided with openings at both top and bottom. The lower ends are provided with platinum dies, the openings in which are of sufficient size to permit the passage of the mass and form it into a thread of a certain diameter, dependent upon the kind of lamp desired. This is accomplished by subjecting the mass to air pressure which varies from four to twelve pounds per square inch, depending upon the condition of the mass, temperature, atmospheric conditions, etc. The temperature of the water-bath in which the vessels are placed at the time of squirting is about 90 degrees, C.

The filament passes from the die into a glass jar which is filled with methyl alcohol containing a ten per cent solution of hydrochloric acid. It immediately hardens in this solution, and the acid neutralizes any alkaline effect which may have been retained from the zinc chloride treatment. At this point the filament is of a yellowish-white color, and as it slowly passes through the die and coils itself in the alcoholic solution it looks very much like vermicelli. After remaining in this solution for three or four hours, the filament is washed in acid solutions, in pure distilled water, and finally in a bath of methyl alcohol, the entire washing process taking about twenty-four hours. It is then wound upon velveteen drums which are about 18 inches in diameter, and is allowed to dry. When thoroughly dried, it is cut to the desired lengths, and the individual filaments are made up in bunches of ten or more. They are next wrapped around carbon forms to produce the desired shape.

These forms, each accommodating a number of filaments, are placed in a crucible and packed in graphite, there being first a layer of graphite, then a number of forms, etc., the top layer being graphite. The cover is then placed on the crucible and the whole is sealed, small openings being left for the escape of the gases which are driven off in the carbonizing process. The crucible is placed in the carbonizing furnace and the temperature is gradually raised to about 2500° F. and maintained at this point for about twenty-four hours. The temperature is then raised to about 4500° F. and kept at this point for several hours longer, after which the crucibles are allowed to cool slowly. The time occupied in the carbonizing process depends upon the size of the filaments, and for very large filaments may be much longer than the just-mentioned period. The crucible is finally unpacked and the filaments are removed, the graphite and forms being preserved for further use.

After having been sorted the filaments are again classified according to their electrical resistance, and are then ready for the "flashing process."

The earlier forms of filaments were far from being of uniform cross section, and the flashing process was introduced to render them more uniform. The process consists essentially in placing the filaments in a jar containing hydrocarbon vapor,—generally gasoline or pentane,—and raising them to incandescence by sending an electric current through them. The high temperature decomposes the hydrocarbon vapor, and pure graphitic carbon is deposited upon the surface of the filament. If the latter is uniform the deposit occurs equally over all portions. If, however, the electrical resistance is abnormally large in some portions, a greater temperature results in those portions,

STAGES IN THE MANUFACTURE OF INCANDESCENT LAMPS

After the preparation of the filaments, as described in this article, they are inserted in the base of the lamp; the base is then cemented into the lower part of the bulb from which the air is exhausted through the tubes shown at top.

due to the increased expenditure of energy at these points, and a larger deposit of carbon occurs there, the filament becoming more uniform.

When the flashing of filaments was introduced the general method used was a step-by-step process, first treating, then measuring the resistance, treating and measuring until the proper resistance was obtained. At the present time the flashing process is automatically cut off at the moment when the filament resistance is correct. It is done under a partial vacuum, and the voltage used is about 40 per cent above the normal value. The operation lasts about ten seconds, depending upon the size and kind of filament as well as upon the practise of the manufacturer. Since the resistance of the filament is generally reduced to less than 50 per cent of its former value by the flashing process, it is necessary to automatically regulate the voltage during the process.

A Study of Plant Sleep

MAUD GOING, in the January *Popular Science News*, New York

SOON after sundown, or in early twilight, the foliage of many plants alters its position, till it has assumed an aspect differing markedly from that which is presented to the sun. To these movements of leaves, under the influence of approaching night, Linnæus gave the name of sleep. A good example of it is shown by the leaves of common lawn clover. Soon after sundown, or even earlier if the plants are growing in shadow, the two side leaflets of each cluster of three turn forward till they have assumed the position of the covers of a closed book. Then the middle leaflet bends downward till it touches the edges of the pair so that their nocturnal position suggests the fancy that the clover leaves are saying vespers, with heads bowed low above folded palms.

Some other members of the great bean family sleep almost as markedly as do the clovers. In the common locust, or false acacia, and in the wisteria, the end leaflet of each cluster hangs like a plummet, with its point towards the earth, and the side leaflets dangle in two rows, back to back. The leaves of the garden string beans assume a like position, while those of the honey locust are raised upright. But the bean family plants are not the only ones which settle themselves for the night into positions seldom assumed during the day. The willow twists its foliage into a nearly vertical position. The leaves of the cornel and of the grape are slightly raised at their edges and depressed towards the middle.

All sleeping foliage is curiously rigid, and obstinately refuses to be twisted into any position save that which it has itself chosen to take. The rigidity of sleeping leaves is due to the presence of water in their tissues. And their position is invariably such as to bring the surface of the leaf into or towards a vertical position. When morning breaks the plant awakens, and its leaves assume their work-a-day attitude. In our climate, mature and waking foliage spreads its green surface so as to intercept and catch the light as it falls from the sky. All day, during the growing season, water ascends from the roots of the plant, into its leaves, and there it evaporates slowly during the sunlit hours, giving up its mineral and chemical treasures. These are appropriated by the vital forces of the plant, to enter into the composition of cell walls and living protoplasm. Some of the gases which have come up as the constituents of the water are used in starch-making and tissue building. The gases and watery vapor which are left over from this process are breathed away mainly through the stomata,—minute orifices which exist in great numbers on the lower surface of leaves. More water comes up from the roots to supply the loss of that which has been withdrawn from the leaves by transpiration, and this, in turn, gives up some of its constituents to feed the plant.

But starch and protoplasm can be made only in the presence of light. So, as soon as light is withdrawn, whatever moisture is exhaled from stems and leaves passes out into the air without yielding up its treasures, and the plant thus parts with its fluids and gains nothing by the process. Hence, when sunlight has vanished nature checks plant transpiration. This checking is brought about in part by the action of the stomata, which remain open in daylight and close at nightfall. But the closing of the stomata does not

completely check transpiration, which can go on, to some extent, through the skin of the leaf. The so-called "sleep" of foliage seems an effort of nature to bring the leaf surface into a vertical position and thus to put a further check on transpiration. The leaf may be folded along the middle, or raised upright, it may turn over sidewise, or dangle with its point towards the earth. But in all these positions it is the edge of the green blade, not its surface, which is presented to the sky.

I have observed that in October and early November the foliage of many native plants inclines towards its sleeping position even in the sunniest hours of a sunny day. Perhaps these old leaves, whose forces are nearly spent, are unable to carry on the work of starch making and tissue building. So, there is no longer a reason why fluids should pass into their tissues and out again, and economical nature checks transpiration by turning the leaf-surface edgewise toward the sky.

Secrets of the Nerves

THE INVESTIGATIONS OF LOEB AND MATHEWS

THERE was announced to the American physiological society, at their annual meeting at Chicago last week, the discovery of the secret of nerve and muscle stimulus and of the manner in which nerve impulses are carried from part to part of the body, and that in which muscles contract and expand in response to these impulses. Involving as it does the explanation of the rhythmic beat of the heart and many other problems directly connected with vital processes, this is regarded by Professor Jacques Loeb and Dr. A. F. Mathews, of the University of Chicago, as the most nearly fundamental physiological generalization in fifty years.

It has for some time been a matter of surmise among scientific men that the proteid molecules of nerve and muscular tissues are colloidal, that the contractibility of muscle fiber is due to some sort of stiffening or coagulation, that nerve-cells retract their processes in some such way, and that neuron energy is a form of electrical energy. These have been matters of surmise heretofore; now Professor Loeb puts them in the form of an hypothesis, and it is expected that the investigator and his colleague will, as soon as possible, give to the public, in scientific form, data in support of the preliminary statement, substantially as follows:

First—Motor nerves contain or consist of a colloidal solution the colloidal particles of which carry positive electrical charges.

Second—Nerve-protoplasm is stimulated by the passage of the colloidal particles from a condition of a solution to that of gelation, or jellying.

Third.—This change is brought about by the action of ions, electrically charged atoms or groups of atoms, which bear negative charges. The stimulating action of any chemical compound depends on these negative charges. These ions (anions) having one charge, are less efficient than those with two or three. In other words, the stimulating action of any ion is proportional to the number of negative charges it bears.

Fourth.—The colloidal particles of the nerves are held in solution by positively charged ions, sodium, potassium, calcium, hydrogen, etc., and the effectiveness of these ions in preventing stimulation varies directly with the number of positive charges they bear. A one-charged ion, such as sodium, is less poisonous than a three charged, such as iron.

Fifth.—By these facts chemical stimulation is shown to be identical with electrical. Whenever in any part of a nerve

negative charges are in excess the nerve is stimulated, that is, the colloids pass from a solution to a jelly. The stimulus always arises at the kathode or negative electrode.

Sixth.—The irritability of a nerve is diminished whenever the solution of the colloids is rendered more permanent. It increases as the nerve approaches the gelation state. All positively charged ions thus diminish irritability, negative increase it. This explains electrotonus, as the irritability of the nerve is increased near the kathode and reduced at the anode.

Seventh.—Heat diminishes the irritability of the nerve by rendering the solution more stable; cold increases it by rendering it less stable. At high temperatures gelation takes place and the nerve is stimulated.

Eighth.—The nerve is stimulated mechanically because the colloidal particles are forced together. As they coalesce their surface becomes less. Less positive charges can reside on it and part of the negative charges previously induced in the surrounding water are set free and immediately precipitate the next group of colloids.

Nine.—These in their turn set free negatives which precipitate the next group, and so the nerve impulse is carried. Technically these negative charges are called the negative variation, and this stimulates each successive element of the nerve.

Ten.—Anæsthetics all dissolve fat. They reduce the irritability of the nerve or protoplasm because the colloids in the nerve are largely fat compounds and more soluble in a mixture of ether and water than in water alone. All anæsthetics render the colloidal solution more permanent and prevent gelation.

The Cure of Snake Bite

FURTHER SUCCESSSES OF THE CALMETTE REMEDY ANNOUNCED

IN an article just published in Paris on the prevention of deaths from snake bites, M. Henri de Parville cites several well authenticated cases in which the anti-venomous serum of Dr. Calmette, head of the Pasteur institute at Lille, has been the means of saving life. Dr. Calmette, it may be remembered, was himself bitten on the hand by a cobra when experimenting in his laboratory a short time ago, and only escaped death by the application of the serum discovered by himself. A mining engineer, in a letter to the writer from Australia, also relates how he was bitten in October by a deadly serpent and an hour afterwards was fast losing consciousness, when the timely intervention of Dr. Calmette's antidote brought him back to life.

But the most striking testimony to the value of the French professor's serum comes from India, where a woman was recently bitten by a venomous snake of unusually large dimensions, and cured when she was at the point of death. To prepare the serum the venom has to be procured from living serpents, and it was while engaged in this risky operation that Dr. Calmette came near losing his life.

RELIGIOUS

Women in the Methodist Church

THEY ARE GIVEN THE RIGHT TO SIT IN THE GENERAL CONFERENCE

THE new constitution of the Methodist Episcopal church, adopted by the general conference of that body at Chicago, in May, 1900, has been ratified by the necessary three-quarters vote of the annual conferences. The important changes are three in number: women are given the right to sit as delegates in the general conference; laymen's electoral meetings acquire the right to vote upon constitutional questions, and a two-thirds vote is substituted for a three-fourths in amending the constitution. Most of the newspaper comment is upon the admission of women to the general conference.

The Kansas City *Star* calls attention to the different character of the vote in different localities. "It is surprising to see that the strongest opposition came from the eastern New York conference, which gave 73 votes for and 140 against the new constitution. The next strongest protest came from the Baltimore conference, with 70 votes for and 104 against. It might have been expected that New England would be most tenacious of traditional usages, but the conference reported from that section gave 168 for and only 9 against. On the other hand it would have been supposed that the extreme west would have been particularly liberal. But the California conference voted 66 against and 78 for. A strange conflict among the Scandinavians is shown in the fact that Sweden supported the new constitution with 6 votes and cast 71 against it, while Norway gave its 44 votes for a more liberal law."

The Salt Lake City *Deseret Evening News*, the official organ of the Mormon church, dwells upon the equality of ages, sexes, and conditions that has prevailed in the organization of the "latter-day saints" from the beginning, and considers the recent conces-

sion of the Methodist churches "a mark of the progress of the present age in reference to women. The reluctance to permit, in Methodist church councils, direct representation from at least one-half of its members, was not a sign of that Christian liberality of sentiment entertained in the early Christian church."

The Pittsburg *Times* voices the common opinion when it says that the women are doing the greater part of the work of churches of all denominations today. "Upon them devolve, as a rule, the chief task of meeting the financial exigencies, the care and education of the children who are to make the future church members, and the charitable work of the congregation, and they constitute the larger number of attendants upon the services. This being the case, it is no wonder that many of them should deem it no more than right that they should have some voice in defining the creed of the institution of which they are the bulwark. That this is a reasonable request has been recognized by a large majority of the men of the Methodist church acting as delegates in its various conferences, and their example is likely to be followed by other church bodies if the result of their action comes up to present expectations."

"It requires no prophetic gift to foresee that this widespread and general recognition of woman in this militant church means ultimately more than sitting as delegates in the general conference," says the Chicago *Chronicle*. "The privilege of voting sooner or later generates the privilege of holding office. Without ordination women have long been modestly exercising in several communions the predicatorial office, despite the Paulist injunction that the sex shall be silent in the temples. That to sit as delegates in the general conference means in due time ordination to the ministerial rank, consecration to the episcopal dignity is rendered

probable by the universal trend of progress as irresistibly initiated in the new century."

It is interesting to read in the Rochester (N. Y.) *Democrat and Chronicle* that the admission of women was accomplished "against the judgment of many of the ablest and most influential men in the church. Some stood on the narrow Pauline ground concerning the matter, and simply cited Scripture against the innovation. Others took broader views and, while conceding the vast importance and usefulness of women in religious activities, held that they should not be called upon to take part in the work of legislation and administration. But all opposition had to give way before the sentiment that, as women were doing most of the work of the churches, their sex should be represented in the great legislative council of the denomination."

Is Prohibition Immoral?

BISHOP POTTER AND DR. RAINSFORD ATTACK PROHIBITIONISTS

AT a meeting of the Church club in this city, December 30, Bishop Potter and the Rev. Dr. W. S. Rainsford, Mayor Low's pastor, took a firm stand for Sunday opening of saloons. This was surprising in itself, but still more of a revelation was the attack which they made on prohibition as a false and harmful doctrine. Bishop Potter first arraigned the teaching of John B. Gough as vicious sentiment in that he always pictured the drunkard as a helpless martyr. He then paid his respects to prohibition: "Wherever it has triumphed it has educated a race of frauds and hypocrites. In Maine, New Hampshire, and Vermont today, by actual statistics, the consumption of certain preparations is larger than anywhere else in the country. One of these is a sarsaparilla which has 17 per cent of alcohol, another is a compound with 27 per cent of alcohol, another is a bitters with 61 per cent of alcohol. Besides that, everybody who knows anything about the administration of the law knows that it is a grotesque farce. It has been a huge failure in the city of New York. We are going to persist in this policy, to screw up all the front doors on Sunday and open the back door; we are going to nurse a race of hypocrites, to furnish an opportunity to the police to exact a bonus, and to close the door to the manly and Christian method of dealing with intemperance. Prohibition is an impudent fraud and an impudent failure. Education, elevation, transformation are notes which the church should learn to strike."

Dr. Rainsford described the saloon as the poor man's club, and after advising his hearers to visit one to see the sort of men that frequent it, said: "The trouble is, the reformers want to make the people right by law. Then they leave the law to carry out itself. On the committee of fifty, I wish you could have heard the reports of the women, representing the Woman's Christian Temperance union, all good women, but doing the devil's work. It was appalling."

As was to be expected, these remarks have raised a perfect storm of protests from the temperance reformers. William T. Wardwell, a well-known advocate of prohibition, denied the contention that prohibition produces hypocrites, and declared that the statements of both Bishop Potter and Dr. Rainsford were "unfair and entirely untrue." Mrs. Ella A. Boole, New York state president of the W. C. T. U.,

said: "As to our doing the devil's work, it seems a strange thing for a minister of the Gospel to say about thirty thousand Christian women, who are known to be trying to do the Lord's work. Dr. Rainsford may not agree with us, but he should be able to recognize the character of our efforts."

Mrs. Clara Hoffman, of Missouri, acting as spokesman for the national officers of the W. C. T. U., said: "Bishop Potter has arrayed himself with the saloon element. When he opposes prohibition he takes the part of the rum-seller and places himself on a level with the people of the saloon, which he champions. There is a Sunday-closing law in New York, and when he opposes Sunday closing, as he did in his address, he becomes a lawbreaker as well as an equal of the criminal who frequents the saloon."

The opinion of the *New York Times* is that the view of Bishop Potter is one "with which sensible men generally can agree, and its advocacy by a prelate of such high standing and such singular devotion and earnestness must go far toward dissipating the prejudice based on a misconception of the demands of religion. The abuses should be corrected and the bad saloons, as far as possible, should be driven from business, or restrained. But to try to close the saloons of all sorts on Sunday, in order to accomplish the reform of evils common to only a part of them, is a fearful blunder. The sooner the really pious people of the city understand this fact, the better for all concerned."

The *Chicago Record-Herald* agrees with the bishop's criticism of John B. Gough's picture of the drunkard: "If we excuse him for his defects of will and character, we must excuse all the wrong-doing in the world in the same way, sanction every indulgence of self, repudiate all discipline, deny the freedom of the will. But the world is not so generous to other faults, and the fact is that the drunkard is too often coddled and his abuse is too often coaxed into a repetition by kind treatment when he should be abandoned to his own resources and literally left alone."

Religion in 1901

The New York Tribune

THE old saying that prosperity is bad for religion seems to be borne out in the year just closing. The three larger Baptist benevolent societies report a decline in contributions. The Congregationalists have held their own, but can report no great forward movement. The Episcopal missionary board faces a deficit of \$80,000, all the more embarrassing because it is expanding its missionary effort. The Methodists have done well in raising \$15,000,000 as a twentieth century fund, but there are indications that it has been done at the expense of some other interests. The Presbyterians and Roman Catholics appear to have done well. In all these bodies there has been a growth in membership, but the denominational organs seem to think that it ought to have been greater. Evangelism has made an unsatisfactory showing. Various twentieth century revival movements were started at the beginning of the year, but not one of them fulfilled expectations. Even church members appear to be out of sympathy with the purely emotional appeals to sinners that were once so potent.

One of the most important events of the year affecting religion was the passage of the Associations

law by France and the resulting expulsion of about eleven thousand members of religious orders, a few of whom came to this country. The Presbyterian church decided to put forth a statement explaining but not superseding its creed. The Baptist societies held meetings largely devoted to the discussion of ways and means. The Episcopal general convention appointed bishops for Porto Rico, and the Philippines, but otherwise took no action on burning questions submitted to it. The Roman Catholics have effected a federation of their lay societies; but the year has witnessed a notable increase of Protestant missionary activity in Cuba, Porto Rico, and the Philippines at the expense of that body. All the larger Protestant bodies report the erection of churches and school houses and many accessions to their membership. The fact has just been announced that the Roman church in this country is alive to the need of holding its own in these new possessions, and with that end in view will train American priests to take the place of native priests. At a recent conference all the sects of the Quakers met and declared for arbitration instead of war. The tendency toward liturgical worship and ceremonial has been developed in the non-liturgical churches. Lent and Holy Week are looming up larger than the Week of Prayer, and vested choirs have increased among the Methodists. On the other hand, extreme ritualism in the Anglican and Episcopal churches has received a distinct setback, and it is believed that it will soon cease to be a vital issue in these churches.

While there have been no large benefactions to religion during the year, many millions of dollars have been given to secular objects, in some cases by church members who declined to give anything to meet the urgent needs of their denomination. Hardly less marked than the interest in education has been the quickening of the church's interest in social betterment, which manifests itself sometimes in the broadening of parochial activities, but quite as often in the creation of purely secular agencies, testifying to the sense of sympathy and brotherhood. Whether or not this impulse of brotherhood was originally inspired by religion, it is no longer coterminous with religion. Many men and women not religious feel the uplift of its inspiration, and labor with passionate zeal for the regeneration of the downmost man.

Various Topics

MOSLEM UNIVERSITY FOR INDIA: A dispatch from Madras to the London *Times* says that at the Mohammedan Anglo-Oriental Educational conference recently steps were taken to found a central residential Mohammedan university for India.

RELIGION IN AUSTRIA is in a state of turmoil. The Evangelical alliance of Halle, Germany, has voted 500,000 marks (\$119,000) in support of the "Emancipation from Rome" movement. An establishment of eighty Jesuits is to be founded at Agram, Hungary, next July. Its object is said to be to secure "a basis of operations for a far-reaching invasion."

PAPAL BIBLE STUDY COMMITTEE: The London *Tablet* announces that Pope Leo XIII. has appointed a special pontifical commission for the consideration of all questions connected with Biblical studies. Catholic scholars all the world over will have the fullest opportunity of stating their views and difficulties and bringing them to the direct notice of the Holy See. Cardinal Parocchi, a high authority on all questions connected with Biblical exegesis, will act as president of the commission. Cardinal Segna and Cardinal Vives will be assessors and Father David Fleming secretary. There will also be eleven consultants, chosen from different countries of the world.

The Death of Religion in England

R. BRIMLEY JOHNSON, in the January *Atlantic Monthly*
Boston. Excerpt

WE Englishmen have largely ceased to be a religious people. The arrogant assumption of nineteenth century science, that spiritual values were proved non-existent, has been formally abandoned by the learned; but its effects on daily thought and conduct are no less powerful. And they have received most unexpected and dangerous support from the fashionable Christian virtues of tenderness and tolerance. Having discovered, to his own entire satisfaction, that nothing is really anybody's own fault; having noticed, with pardonable pride, that the genius of the English race is invincible; having arranged with complacent foresight, that his hospitals and what not shall prevent any serious personal privations, the Anglo-Saxon householder turns contentedly to his newspaper, at once the priest and the Bible of his generation, and tickles his appetite by grumbling over the incapacity of all officialdom. Meanwhile, the souls and bodies of men are left to the tender mercies of the officials.

Granted, certainly, that the "conditions of life" make the influence of the ideal non-existent for the majority; yet it becomes the reformer to herald some more strenuous ideal than the extension of material well-being, whose summons must ever remain powerless to shake the "seats of the mighty," or even to "flutter the dovescots" of Suburbia, whence should come the helping hand. If the Paradise of the future is to be consciously hand-made, not God-given, let us see to it that the architect thereof is an artist in spiritualities, and no mere cunning craftsman, a seer of visions, a dreamer of dreams. The jingo imperialist is not only a poor diplomatist, but the missionary of barbarism; the exploiter of home labor is not only economically and socially, but morally decadent. Further progress along the paths followed by the Victorian age will infallibly lead us to moral and economic chaos. The standards by which we have prospered in growth exceedingly are yet proved dangerous for our own manhood, and are manifestly unfit to elevate the world. And in the meantime, if we can so far improve the social conditions of life that each man shall be free to worship an ideal, let us remember to have ready an ideal for him to worship.

We are haunted to-day by self-consciousness, a blind respect for sanity and balance, a stupid craving for measuring the proportions of things, which makes it seem almost ridiculous for a man to go on his knees before the God in whom he is not quite certain of believing, since he knows that other Gods as great have been worshiped by other men as wise. Today we must raise a plea for reflection and a little holding of the breath in silence. Reticence is needed in thought, speech, and action. The power of vision must be recovered. Stepping aside from the glare and noise of daily life, turning our back a while on the accumulation of coin, we must seek, till happily we find it, for some genuinely spiritual ideal of sufficient ethical power to inspire enthusiasm. The problem will be to discover a faith which is consistent with tolerance and charity, yet strong enough to govern life. For the most zealous belief in humanity, the very widest tolerance, the most profound learning, will avail nothing without the conviction of right and wrong, the consciousness of struggle, and the assurance of victory over evil.

MISCELLANY

Floral Art in Japan

P. HARIOT, in *La Nature*, Paris. Translated and Condensed for PUBLIC OPINION

F the art of the florist is highly honored among us, it is still more so in Japan. In this latter country nothing is left to chance in connection with the arrangement of flowers, everything being done according to laws. Vases for flowers and bouquets differ with the conditions of the environment and with circumstances. There are flowers which must be used for this anniversary; for that fête, others, on the contrary, which are absolutely prohibited.

Each of the styles used in the floral art has a name. The first and most ancient is called Shin-no-hana, which consists in a methodic composition of branches and varied leaves around a central stem which is straight and vertical. The Rikkwa style differs only in the fact that the central stem is always curved and is never in the center. These two simple and primitive styles have been replaced by others much more complicated.

The introduction of a more modern art is due to a celebrated philosopher, Sen-no-Rikiu, who was the creator of real floral schools. Each of them possesses certain secret conditions, conserved with a jealous care, and known alone by the adepts.

The vases are extremely variable in form and character and the matter which composes them is equally different. Some are of bronze, richly ornamented, others are derived from the vegetable kingdom, as the bamboo flower tubes. Further, all are used in special circumstances, the formula being master and harmony being necessary between the flowers and the vases which hold them. Thus for the Yugen-tei which symbolize sympathy and tranquillity, one should employ the Iris in a vase of bamboo with two compartments; for the Yushin-tei characterizing affectionate attachment, a vase of bronze called Suna-bachi with a branch of pine around which is twined a bough of Glycine; for the Uraraka-tei which represents serenity, a vase of bronze containing white chrysanthemums, etc. Severity demands the Eulalia japonica, an ornamental plant cultivated in European gardens, and the Patrinia scabiosaefolia arranged in a small bronze vase called Nozame. Security has for emblem an aquatic plant, and veneration a pine or other evergreen tree.

Each month has its flower and each circumstance happy or unhappy. Felicity is expressed in February by the Ardisia japonica, etc. Thus it is a serious mistake to offer the wrong flower, and further certain

FOUR CHARACTERISTIC FLORAL ARRANGEMENTS

Branches of pine and prune in bamboo vase—Japanica in circular vase—Lespedeza suspended in a crescent—Clematis suspended iron vase

combinations of flowers are permitted but others are rigorously prohibited, and to each plant is attached a symbolic signification. Special bouquets are made for birthdays, deaths, for the first day of the eighth month, on the occasion of entering a religious life, and for numerous ceremonies.

The place a bouquet occupies in a room is also important. A bouquet has its proper place before the Kakemono or painting which ornaments every well-furnished room of a Japanese house. Between this painting and the bouquet there should exist a harmony based on conventions and traditions. Thus before every painting of the famous artist To-em-mei, who loved chrysanthemums, one should always place a bouquet of chrysanthemums. The manner in which a floral composition should be examined is also fixed. One should remain respectfully at a distance of three feet. Only after

showing his admiration for the painting may one express admiration for the bouquet, which it is impolite to regard too attentively or too long. The first thing said should be of the color of the flowers, spoken simply and quietly in a soft voice, approbation being expressed by different words suited to different tints.

The Paris Cemetery for Animals

EDOUARD CHARLES, in the *January Strand Magazine*, London. Condensed for PUBLIC OPINION

LONDON has its burial ground for the pet dogs and cats of the wealthy close to Hyde park; Brussels has one in Laeken park; but Paris has the finest of all,—a cemetery for dogs, cats, and domestic pets generally, from a canary to a monkey.

La Nécropole Zoologique, as the spot is named, is situated some short distance outside the capital itself, at Asnières, in the center of the river Seine. The canine population of Paris runs into 150,000. The average life of a dog is eight years, and the death-rate is 12 per cent, or 18,000 yearly. By law they should each be interred; an act of parliament passed in 1850 rendered it a punishable offense to dispose of a dead dog other than by burial. But it did not provide a public burial ground. Consequently the waters of the Seine became polluted, and in the gutters of the city itself and outside the fortifications the dead were deposited by night. It is a difficulty the municipal au-

thorities have done nothing to cope with even to-day, but they pay annually a sum of no less than 4,000 francs for the recovery of dogs' bodies. With a view to ameliorating this sad condition of affairs and providing for those whose sentiments prompted them to give animals that had perhaps been their life-long companions decent interment, M. George Harmois, a well-known French littérateur, philanthropist, and lover of animals, proposed the Nécropole Zoologique. The suggestion received moral and financial support from many prominent persons, both in literary and sporting circles; Emile Zola expressed himself as particularly in favor of the proposition, while Madame Durand, proprietor and editor of the only daily newspaper in the world run by women for women, interested the ladies of France in the scheme. So the "Dogs' Burial Company" was formed with a quarter of a million of francs capital, divided into shares of 100 francs each, and the first step was the purchase from the city authorities of the Ile des Ravageurs.

Today it is quite a beautiful little park, decorated with innumerable tombs and gravestones, and resplendent with beautiful blooms, and as an object of curiosity certainly well repays a visit. The largest and most imposing example of the sculptor's art to be found in the grounds was erected shortly after the opening of the cemetery to Barry, a great St. Bernard, the most celebrated of all the rescue dogs that have worked in the hospice on Mount Bernard. This noble animal saved in his time the lives of no fewer than forty persons who had been caught in storms on the mountain, and to the great regret of the monks sacrificed his own life in attempting to save the forty-first.

Concerning the graves of the cats, canaries, parrots, etc., there is little to say, though the felines are represented in goodly number. Funerals here vary in price just as with the undertaker who caters for our custom. An animal can be buried as cheaply as 5 francs, or as much as 500 to 1,000 francs can be paid, and this is merely for interment and includes no monument. From 25 francs upwards the charge also includes the transport of the deceased from the house to the cemetery in the official carrier-tricycle, ridden by a uniformed cyclist. At moderate prices the company also supplies coffins, takes photographs and disinfects the apartments wherein the animal expired, and knowing that few people care to keep defunct creatures near them, the company has also provided a place where the corpse can await interment at a charge of 3 francs per day.

The Day and the Deed

FREE WILL

Marquis de La Mothe-Fenelon, Born Aug. 6, 1651. Died Jan. 7, 1715

One can only be doubtful of the greatest good when one sees it imperfectly. Superficial knowledge degrades it to the level of benefits which are infinitely inferior. Then the shadows that obscure it, and the distance that divides us from it, seem to equalize it with the finite things we touch and know. It is this false equality which allows man to hesitate and choose, and exert his freedom of selection between advantages that can not really be compared. But if the greatest good should suddenly become evident, its infinite, all-powerful enchantment would overwhelm all desire of free-will, and every other attraction would disappear as the shadows of night disappear before the light of day. We know that most of the delights of this life are so unsatisfactory in them-

selves, or so insecure, that we can easily draw comparisons. As we compare, we weigh them that we may choose, and as we weigh them our inmost consciousness tells that we are free to choose, because the claim of those things is never so strong as to destroy all balance and absolutely force our will. It is in this balancing that free-will is exercised. Take away free-will, and you take away all vice, all virtue, and all merit.

AMERICA

By BAYARD TAYLOR, Born January 11, 1825, Died December 19, 1878

Foreseen in the vision of sages,
Foretold when martyrs bled,
She was born of the longing of ages,
By the truth of the noble dead
And the faith of the living fed!
No blood in her lightest veins
Frets at remembered chains,
Nor shame of bondage has bowed her head.
In her form and features still
The unblenching Puritan will,
Cavalier honor, Huguenot grace,
The Quaker truth and sweetness,
And the strength of the danger-girdled race
Of Holland, blend in a proud completeness.
From the homes of all, where her being began,
She took what she gave to Man;
Justice, that knew no station,
Belief, as soul decreed,
Free air for aspiration,
Free force for independent deed!
She takes, but to give again,
As the sea returns the rivers in rain;
And gathers the chosen of her seed
From the hunted of every crown and creed.

Various Topics

TO UNLOAD PASSENGERS FROM MOVING TRAINS: Among the patents which have been recently granted in the United States may be mentioned one issued to Mr. John W. Jenkins, New York city, for an interesting system whereby passengers are to be discharged from a train without the necessity of stopping at stations. The characteristic feature of the invention resides in the employment of a number of "saddle cars," which are successively taken up and dropped from the moving train and through the medium of which passengers may enter or leave a train without interrupting its movement.—*Scientific American*.

WOMEN NOT WANTED IN THE FRENCH POST OFFICE: M. Millerand has presented a report to the president of the French Republic in which he proposes the gradual elimination of women from the service of the French post office. Since the initiation of the feminine service the department has been very carefully watched, and the experience of eight years has demonstrated numerous shortcomings, notably the physical inaptitude of the majority of women for certain parts of the work. During the year 1897 the working female staff, numbering 5,470, received 161,013 days' leave, or an average of thirty days per employee.

FEMALE IMMORTALS: Under the auspices of Adolphe Brisson, the *Temps* and the *Annales Politiques et Littéraires*, a plebiscite has been organized, the voters being requested to propose the names of forty women to constitute a French female academy. In the final classification places have been made for five queens or princesses, sixteen writers, scientists or philosophers, two musicians, five painters, and eight dramatic or lyric artists. Queen Wilhelmina heads the list with 5,212 votes; Carmen Sylva, Queen of Roumania, comes next with 4,150 votes; the Empress of Russia secures 3,240; Sarah Bernhardt, 4,010; Mme. Augusta Holmes, 3,996; Mme. Bartet, 3,913; Mme. Adam, 3,433; Mme. Gyp (whose real name is Comtesse de Martel, and who is a grand niece of Mirabeau), 3,040; Mme. Edmond Rostand, 2,862. Emma Calvé is thirty-ninth, with 2,830 votes, and the fortieth on the list is Ellen Terry, with 1,875 votes.

THE NEWS OF THE WORLD

MONDAY, DECEMBER 30

DOMESTIC.—The cruiser *Prairie* sailed from Norfolk for Port of Spain, Trinidad, near the coast of Venezuela.... Hugh J. Bonner, of New York, accepted an appointment as chief of the fire department of Manila.... The transport *Grant* arrived at Nagasaki on her way to San Francisco; Governor Taft is a passenger on this vessel.... A new movement was made in the Northern Pacific matter by securing an injunction to prevent retirement of preferred stock.... The navy department has decided to establish wireless telegraphy plants at the Washington navy yard and at Annapolis.

FOREIGN.—A small German cruiser has been ordered from Kiel to Venezuelan waters; diplomatic relations continue between Germany and Venezuela; Venezuela has demanded the dismissal of Herr Knoop, manager of the German railway in Venezuela.... General Baron Yamaguchi, who commanded the Japanese troops in China, has resigned from the Japanese army, because public charges of looting had been brought against him.... Religious rioters in the island of Lewis, in the Hebrides, attacked and drove police from the island.... A telegram from Tokio has been received announcing that the government budget has passed the house of representatives of the diet substantially in the form in which it was presented.

TUESDAY, DECEMBER 31

DOMESTIC.—The Cuban election passed off quietly, the Nationalist ticket, headed by Señor T. Estrada Palma being the only one in the field.... The cabinet selected the International banking corporation as fiscal agent of the United States in China.... The governors and attorney-generals of seven northwestern states agreed on a plan of action in opposition to the Northern Pacific-Great Northern-Burlington merger.... Judge Lochren, of the United States circuit court, in Minneapolis, dissolved the temporary injunction against the retirement of Northern Pacific preferred stock.

FOREIGN.—The total reduction of the effective Boer fighting force in the last year, according to official reports, is 21,800, and Englishmen believe the prospect of a speedy ending of the war is much brighter than a year ago.... It was stated at Copenhagen that the information was given on the best authority that the treaty between the United States and Denmark for the sale of the Danish West Indies will be signed, in spite of the agitation against it.... The Anglo-French modus vivendi covering the fisheries on the French shore of Newfoundland, expired.... The municipal authorities of Paris voted 150,000,-

000 francs toward the completion of the works of the metropolitan tramways.

WEDNESDAY, JANUARY 1

DOMESTIC.—President Roosevelt's New Year's reception was the most largely attended affair of the kind in many years, over eight thousand people passing through the White House and shaking the president's hand.... Emperor William at the New Year's reception of the ambassadors requested the American ambassador, Andrew D. White, to ask the president to permit his daughter, Miss Alice Roosevelt, to name the kaiser's yacht, being built in this country.... A new code of laws went into effect in the District of Columbia.... The New York state legislature assembled at Albany, and the appropriation bill, for the first time in New York's history, was introduced on the opening day; in his message to the legislature, Governor Odell takes strong ground against open Sunday saloons in New York city.... Mayor Seth Low was inaugurated, and almost the entire government of New York city changed hands from Tammany to the reformers.

FOREIGN.—Czar Nicholas and President Loubet exchanged friendly greetings, the czar referring to France as an ally.... M. Camille Barrere, French ambassador at Rome, made a speech, saying there was no longer any Mediterranean problem between France and Italy.... President Koch, of the reichsbank, says the business situation in Germany is improving.

THURSDAY, JANUARY 2

DOMESTIC.—Governor Hunt, of Porto Rico, sent his message to the legislature; he reported marked prosperity and progress.... The national debt of the United States at the close of business December 31, 1901, less cash in the treasury, was \$1,011,628,286; the cash balance was \$321,603,278.... The transport *Crook*, carrying troops to the Philippines, arrived at Port Said.... Governor Crane, of Massachusetts, took the oath of office.

FOREIGN.—General Matos, with three hundred revolutionists, set out from Fort de France, Martinique, on the steamer *Ban Righ*, converted into a war vessel, to attack Venezuela and overthrow President Castro; he issued a bitter manifesto against Castro, and called upon all patriots to support the revolt.... On the initiative of the British representative, the foreign embassies at Constantinople are preparing a collective note protesting against the exaction of Salonika quay dues, without the previous approval of the powers.... King Edward received a gift of £200,000, which is to be used for a sanitarium for consumptives.... The eleventh congress of Russian naturalists opened at St. Petersburg, with 3,000 persons in attendance.

FRIDAY, JANUARY 3

DOMESTIC.—The board of directors of the Panama Canal company in Paris decided to offer the canal property and franchises to the United States at the price named by the Isthmian commission, \$40,000,000.... The steamship *Walla Walla* was sunk by a collision with the French bark *Mar* off Cape Mendocino, Cal., and 42 persons are missing.

FOREIGN.—The German charge d'affaires at Caracas has handed to President Castro a note in which the German claims in Venezuela are defined, and a time limit is set for President Castro's answer thereto; the note is not intended as an ultimatum from Germany.... The Marquis Ito was entertained at the mansion house, London, by the lord mayor, many prominent Englishmen being present to meet him.... Lord Strathcona has given £25,000 to Aberdeen university.... The strike situation at Barcelona is so alarming that large reinforcements of troops have been concentrated in and about the city.

SATURDAY, JANUARY 4

DOMESTIC.—Secretary Hay and a number of men interested in the Carnegie project of a national university met at the state department and formed a corporation known as the "Carnegie Institution," the legal obstacles to the acceptance of the gift having been removed.... In the Ohio legislature, the Hanna men secured control of the house and the Foraker men of the senate.... The Crude Rubber company, organized by Charles R. Flint and incorporated under the laws of Virginia in 1897, passed into the hands of a receiver, the liabilities are \$2,000,000 in excess of assets.... The managers of the St. Louis exposition announced the offer of a prize of \$200,000 for a dirigible airship.

FOREIGN.—The Chinese empress dowager issued an edict announcing that the emperor would grant an audience to the foreign ministers at an early date.... Gen. Matos, the rebel leader, who sailed from Martinique on the *Ban Righ* landed in Venezuela.

SUNDAY, JANUARY 5

DOMESTIC.—The bark *Doris* went ashore at Boynton Beach, Fla., and proved a total wreck.... Three trainmen were killed in a head-on collision between two freight trains near Rex, Ga.... Bishop Brent, of the Philippine islands, will try to raise \$100,000 for Protestant Episcopal church work there.

FOREIGN.—Six men of the Scots Grays were killed and thirteen wounded by Boers in ambush forty miles east of Pretoria.... Princess Louise, the daughter of King Leopold, of Belgium, has been pronounced insane.

BOOK REVIEWS

Thompson's "Eugene Field" "New England Society Orations" "The Millionaire Mystery"

EUGENE FIELD. By Slason Thompson. Cloth, 2 vols., \$3. New York: Chas. Scribner's Sons.

MR. THOMPSON has written the life of his friend in accordance with Field's own idea of a perfect memoir, namely, that it should contain no facts that might interfere with its being novel and interesting reading. If we accept this standard we must admit that this work comes very near the mark of perfection; it is lively reading from first to last—a collection of some of the most amusing anecdotes that ever clustered about the life of one man and a reflection of one of the oddest personalities in the hall of literary fame. Yet while we have been entertained and amused we can not help feeling that we have seen too much of Field, the buffoon, and too little of Field, the dreamer. Mr. Thompson, however, warns us in the beginning that he is going to write of the man, not the author. He holds that what was deepest and sweetest in Field's nature found expression in lullaby and song or in the life *intime* of the home, that for his friends and the world at large he played the clown and jester; consequently throughout these pages he wears the motley. Mr. Thompson, then, writes only of the Eugene that "he knew and loved," with a frankness and candor that would delight Mr. Henley. He knew his subject intimately, both as boon companion and as fellow worker on the *Chicago Daily News*, and is prepared to sift for us much of the accepted Fieldiana. Field's self-revelations were not to be trusted, and if he had undertaken to write his autobiography it would probably have been, as his biographer avers, the most remarkable work of fiction in American literature. The nearest he came to it was in his "Auto-Analysis," in which he so cleverly dovetailed fact and fancy that it was widely accepted for the truth. That one line, "I do not smoke," used to be written on the blackboards of public schools along with quotations from his poems, whereas Field was known among his friends as an inveterate smoker. His "Auto-Analysis" was not the only hoax in which he indulged. In 1893 Hamlin Garland contributed an article to *McClure's Magazine*, entitled "A Dialogue between Eugene Field and Hamlin Garland," in which Field talked in an approach to illiterate dialect, such as he never employed and cordially detested, and discussed social and economic problems in which he took not the slightest interest. The whole interview was a serious piece of business to the serious-minded realist. To Field, at the time, and for months after, it was a huge and memorable joke. Yet there are probably thousands who accept the Field of the "Auto-Analysis" and the Garland dialogue as the true presentment of the man, just as there are many

in London who believe the confession made at an English dinner that P. T. Barnum discovered him in a semi-savage state in the wild west. Field had no thought of playing the impostor; it amused him to baffle a curious public, and besides, the whole business of an author, or any man, "turning himself inside out before a gaping world" was so sickening to him that he preferred to tell anything about himself rather than the truth.

Mr. Thompson calls his work "a study in heredity and contradictions." The "heredity" chapters we find quite as interesting as the others. None of Field's forbears were commonplace, and his father, Roswell Martin Field, supplies a romance that is one of the features of the first volume. The *denouement* of the story, which is too long to outline here, was that Vermont lost the most brilliant young advocate of his day, and Missouri gained the lawyer who instituted the proceedings for the manumission of Dred Scott. This is how Eugene happened to be born in "poor old Miz-zoorah," as he so often wrote it. His education was mostly acquired in New England, where he spent his youth. He was a student at three colleges—Williams, Knox, and Columbia (Mo.)—and a graduate from none. In his "Auto-Analysis" he says: "In 1872 I visited Europe, spending six months and my patrimony in France, Italy, Ireland, and England." This was as near the sober truth as anything Field ever wrote about himself. On coming of age he came into possession of \$8,000, which he squandered as stated. Returning penniless to St. Louis, almost his first step was to marry the sister of his college chum, Julia Comstock, who at that time was barely sixteen years old. His first attempt to earn a livelihood was as a reporter on the *St. Louis Evening Journal*. One of his most important assignments was that of reporting Carl Schurz when he stumped Missouri in 1874 as a candidate for re-election to the United States senate. It was evidently a case of misreporting, as Mr. Schurz more than once remonstrated, "Field, why will you lie so outrageously?" Among a series of snares laid by the reporter for the senator, Mr. Thompson relates that on one occasion when there was a momentary delay on the part of the gentleman who was to introduce Mr. Schurz, Field stepped to the front, and with a strong German accent addressed the gathering as follows:

Ladies and Shentlemen: I haf such a pad colt dot et vas not possible for me to make you a speedge to-night, but I haf die bleasure to introduce to you my prilliant chournalistic frient Eugene Fiel, who will spoke you in my place.

It was in Denver, as managing editor of the *Tribune* (1881-1883), that Eugene Field entered upon and completed the

final stage of what may be called the hobble-de-hoy period in his life and literary career. Mr. Thompson says: "He went to the capital of Colorado the most indefatigable merry-maker that ever turned night into day, a past master in the art of mimicry, the most inveterate practical joker that ever violated the proprieties of friendship, time, and occasion to raise a laugh or puncture a fraud." It was during this period that he formed a life-long friendship with Bill Nye, Madame Modjeska, and Charles A. Dana of the *New York Sun*. Mr. Thompson says that for a number of years Mr. Dana made Field an annual offer of a position on the *Sun* at twice the salary he received in Denver or Chicago, which the latter repeatedly declined on the ground that "he could not and would not write for the east." During this period Field wrote the "Tribune Primer," which was copied far and wide throughout the United States. His only attempts at serious work he attributed to others. To Madame Modjeska he credited that exquisite bit of fancy "The Wanderer." The part he took in the political affairs of Denver was one to make all public characters quake. For example, his biographer relates that during one campaign, as chairman of the Republican committee, a certain Mr. Londoner was delegated to work up enthusiasm among the colored voters of Denver, and in an unguarded moment he took Field into his confidence and boasted of his flattering progress. The next morning the following advertisement, displayed with all the prominence of glaring scare-heads, appeared in the *Tribune*:

Wanted!! Every colored man in the city to call at Jack Londoner's store. A carload of Georgia watermelons just received for special distribution among his colored friends. Call early and get your melon!!

How Mr. Londoner fed and appeased the hungry multitude that blocked the street that morning is another story.

On taking up his new work in Chicago in 1883, Field's abilities were diverted into a new and deeper channel. In his "Sharps and Flats" column in the *Daily News* there began to appear along with the trivialities things of an enduring nature. Field then began his literary education. "Sir John Maundeville, Kt.," was his prototype, and Father Prout was his patron saint. "The one introduced him to the study of British balladry, the other led him to the classic groves of Horace." For three years Mallory's "History of King Arthur" was the delight of his soul and the text-book for his conversation and letters. Field's method of work, the nature of his daily work and life, how he became an incurable bibliomaniac, the animating spirit of the "Saints and Sinners' Corner" in McClurg's bookstore, the idol of stage folk and of all folk, in fact, who love good

fellowship—are some of the themes of the entertaining chapters that treat of Field's later life. We pass over this period more hurriedly because we have already dwelt at length upon it in our review of "Sharps and Flats." It is, however, the period of greatest interest from every point of view. In the closing chapters Field begins to reveal himself as something more than a bundle of contradictions and irresponsibility. The man seems more akin to the poet, and the long list of the good and great who delighted to call him friend testifies that the masque of jester did not conceal a true heart and a gentle spirit. Mr. Thompson's estimate of the value of Field's work is undoubtedly the correct one: "His art was to magnify what is little. Sense of earthly grandeur he had little or none. Sense of the minor sympathies of life—those minor sympathies that are common to all and finally swell into the major song of life—of this sense he was compact. It was the meat and marrow of his life and mind, of his song and story."

THE SHIP OF SILENCE AND OTHER POEMS. By Edward Uffington Valentine. Cloth, pp. 161. Indianapolis: Bowen-Merrill Co.

The title poem of this collection was well chosen; it is one of the best both in thought and versification, having an almost majestic quality that appears again in King Herod's Son. Between these and the collection of miscellaneous sonnets at the close of the volume there are some love poems of fair quality and some nature poems that are better. The poem we quote below fairly illustrates the author's gift for imagery as well as his limitations as regards versification:

THE CRYPTS OF THE HEART

Down o'er the winding stairs of self,
Down through the inner dark,
With fearful feet I go;
Slippery the way and damp
With old forgotten tears.
I groping go alone,
Unto the silent crypts that keep
Youth in a meet sarcophagus,
Where winged forms are gathered,
With fingers on their lips,
Watching the shrouded biers
Of the dead things within the heart;
No sounds disturb their sleep;
And there I count the dead,
Behold their faces sleeping;
The cere-cloth from the lips
Of some old sin I draw;
Or kiss the brow of some chill faith;
And envious I grow of the pale past
And of the deeds of death.
"O Morning's hope!" I cry,
"Art thou no more for me?"
Or thou, once-dear companion-wraith?"
The blood-blot on the breast
Of some fair faith I slew,
I consecrate with tears.
"Live, live again!" I say,
"Art thou so dead?"
Thou wast no born to die!"
And lo, a war of words,
The sound of answering voices!
"I died in giving life
Unto a greater need—
Mourn not my fate!"
And one that smiled in sleep:
"Not wholly dead! I keep
My sweetness for a future time,
My light for other days!"
And one: "Not yet!"
When alien ills betray,
My face and hand for help!"
Then from the lips of sin:
"Thy garden-hour of agonies
Will know my feet, my cup
Will comfort on a sterner cross!"
Then once more silence,
Darkness and the pale faces
Of the mute watchers,
With fingers on their lips.

NEW ENGLAND SOCIETY ORATIONS. Collected and Edited by Cephas Brainerd and Eveline Walker Brainerd. Cloth, 2 vols., pp. 466-418, \$5 net. New York: The Century Company.

"We whose names are herewith subscribed, convinced that it is the duty of all men to promote the happiness and welfare of each other, witnessing the advantages which have arisen from the voluntary associations of individuals, allied to each other by a similarity of habits and education, and being desirous of diffusing and extending the like benefits, do hereby associate ourselves under the name of the 'New England Society of the City and State of New York.'" So runs the original record of the first meeting of the society that assembles annually in New York to commemorate the landing of the Pilgrims at Plymouth. The organization was consummated in 1805, with James Watson for its first president; but the records of the meetings before 1820 are very scanty and contain none of the addresses or poems. But beginning with the latter date, with the exception of the orations delivered in 1823, 1826, and 1834, the present collection in the possession of the society is complete. From this collection the volumes now published have been compiled, evidently with a view to presenting only those which possess a national and lasting value and significance. The list of the orators is long and contains many honored names. There is scarcely a man among them who has not played an important and manly part in our national history. Daniel Webster, Rufus Choate, Mark Hopkins, Ralph Waldo Emerson, Oliver Wendell Holmes, William Cullen Bryant, William M. Evarts, and George William Curtis have each been honored by the society, and have honored it in turn by the vigor and wisdom of their utterances. The prevailing tone of the orations is naturally the glorification of New England, but coupled with this tendency is a broad and sincere patriotism and a deep and thorough appreciation of national interests and affairs that betokens how well the speakers realized that New England was not great in and of herself alone but as the nucleus and a component part of the United States. Whether by accident or design, the period from 1857 to 1870 is unrepresented by a single oration. It can not be that the orators of the New England society were silent during that time of national storm and stress. It was not their wont to steer clear of questions of contemporaneous interest. Quotations might be made at great length, but we must content ourselves with a single paragraph from a speech of William M. Evarts, delivered in 1854, and having a strange and pertinent application to the attitudes of certain New Englanders of today. "Nor did our Puritan fathers teach, either by lesson or example, that all men are capable of political self-government. Their doctrine and their practise alike reject such folly, and give this as the demonstration and the truth—that men capable of governing themselves as men are able to maintain a free civil state as citizens. While they knew

that a strong people neither need, nor will endure, a strong government, they no less knew that strength must be somewhere, in people or government, to hold any political society together and their practical politics were directed by this conviction."

THE MILLIONAIRE MYSTERY. By Fergus Hume. Cloth, pp. 287, \$1.25. New York: F. M. Buckles & Co.

A DETECTIVE STORY with many complications and a successful ending. Richard Marlow fleeing from a false charge of murder feigns death. His body is removed from the vault by his physician and a faithful servant. The blackmailer, whom Marlow was seeking to escape, discovers the men in the act of removing the body and kills the doctor. Then he appears in the village as the real father of Marlow's supposed daughter. But in the end all the crooked ways are made straight, the real murderer of the girl's father is discovered to be none other than her pretended father, from whom Marlow was fleeing. The dead man comes to life, the guilty one flees the country, and the girl marries her lover, the young squire.

THE AMERICAN CHURCH DICTIONARY AND CYCLOPEDIA. By William James Miller. Cloth, pp. 296, \$1. New York: Thomas Whittaker.

A GLOSSARY of religious terms and usages of especial value to Episcopalians. The origin of the feasts and sacraments of the church, the meaning of various conventional words and phrases, and the source of religious customs, ancient as well as modern, are explained in full.

ALPHONSE DAUDET. Selected stories, including *La Belle-Nivernaise*. Cloth, pp. 185, 50 cents. New York: American Book Co.

THIS little book contains six of Daudet's best stories carefully edited by Professor T. Atkinson Jenkins. There is no doubt that the best results are obtained in the study of French when the text is in dialogue, thus permitting the student to observe the infinite shades and distinctions of which French is susceptible. The present stories are substantially all dialogue, and are therefore to be recommended for the above reasons.

THE FIELD OF CLOVER. By Laurence Housman. Cloth, pp. 148, \$1.25. New York: John Lane: The Bodley Head. A FASCINATING book of fairy tales, full of original conceits and bewildering fancies. There is something of the charm of genuine folk lore in the six parts of "The Bound Princess," and the four remaining stories are far from commonplace. The wood engravings by Clarence Housman give a distinct artistic value to the book.

TEN COMMON TREES. By Susan Stokes. Cloth, pp. 108, 40 cents. New York: American Book Co.

THE latest addition to the "Eclectic School Readings" series and a valuable book for children. The life of the tree, its structure, needs, adaptations to environment, etc., are simply and accurately described, and the tree and its flower are both well illustrated.

FIFTEENTH ANNUAL REPORT OF THE FACTORY INSPECTOR OF THE STATE OF NEW YORK. By John Williams. Cloth, pp. 928. Fourteenth Annual Report of the Board of Mediation and Arbitration. By Thomas A. Braniff. Cloth, pp. 272. Eighteenth Annual Report of the Bureau of Labor Statistics. Part I. The Eight-Hour Movement. Part II. Social Settlements. Part III. The Economic Condition of Organized Labor. Part IV. The State Free Employment Bureau. By John McMackin. Cloth, pp. 1,072. Albany: James B. Lyon, State Printer.

THE FOUNDATIONS OF THE REPUBLIC. By Mara L. Pratt. Cloth, pp. 172. Boston: D. C. Heath & Co.

"**AMERICA'S Story for America's Children,**" in this, the fifth volume, is brought down to the close of the Revolution. The narrative is clear, concise, and accurate, which, together with numerous illustrations, commends the series as an excellent one for children.

DER PROZESS By Roderick Benedix. Einer Musz Heiraten. By A. Wilhelm. Cloth, pp. 112, 30 cents. New York: American Book Co.

Two sprightly comedies sufficiently idiomatic for elementary reading, and supplemented by exercises in translating English into German based on the text. The vocabulary is complete and the notes thorough and clear.

A WALK WITH JESUS. By W. H. Nelson. Cloth, pp. 463, \$1. Cincinnati: Jennings & Pye.

AN EXCELLENT, popular story of the life of Christ, told in a simple and comprehensible manner. The theology of the book is conservative, and relies entirely for argument and evidence upon the authority of the Bible.

OUR LAY OFFICE-BEARERS. By G. F. Oliver. Cloth, pp. 98, 25 cents. Cincinnati: Jennings & Pye.

A DISCUSSION of church societies, their needs and methods.

UGLY, A HOSPITAL DOG. By George H. R. Dabbs, M. D. Cloth. London: Charles W. Deacon & Co.

A VERY good collection of dog stories, the narrator being the animal himself.

THE TEACHERS' COMMENTARY, credited to Longmans, Green & Co. in our issue of January 2, should have been credited to the American Branch of the Oxford University Press.

THE LETTERS OF MILDRED'S MOTHER TO MILDRED. By E. D. Price. Cloth, pp. 153, \$1. New York: J. S. Ogilvie Pub. Co.

ESTHER MATHER. By Emma Louise Orcutt. Cloth, pp. 298. New York: The Grafton Press.

AN IDOL OF BRONZE. By Louise Palmer Heaven. Cloth, pp. 244. New York: The Grafton Press.

TURQUOISE AND IRON. By Lionel Joseph. Cloth, pp. 104, \$1.20. San Francisco: A. M. Robertson.

By Anna Katharine Green

"A reader once started in this absorbing book will not lay it down until he has solved the mystery. 'One of My Sons' is one of the author's best."—*Times Sat. Review*, (Phila.).

One of My Sons

By the author of "THE LEAVENWORTH CASE," etc. 12mo. \$1.50.

"This is one of Miss Green's best productions both in conception and in execution."—*N. Y. Tribune*.

"It is a very thrilling story."—*Boston Times*.

G. P. PUTNAM'S SONS, New York and London.

THE TRUTH ABOUT THE TRUSTS

Moody's Manual of Corporation Securities, 1901 Edition

gives more practical information regarding corporate industry in this country than all the essays, treatises, reports of investigating committees, hearings of industrial commissions, gropings of college professors, journalistic misstatements of facts, or any other literature of the "trust problem" which has appeared in a decade. The book is an encyclopaedia of American industrial progress.

Price bound in cloth, \$7.50 per copy

In flexible leather \$10.00 per copy

For sale by leading booksellers, or will be sent prepaid by the publishers

John Moody & Co., Publishers, 35 Nassau St., New York

Bausch & Lomb Plastigmat f-6.8

The Perfect Photo Lens, as the picture above shows, is rapid enough for the fastest snapshots, dark-day photography, and interior work. Each system having four lenses, eight lenses in all, giving perfect optical correction, each system may be used separately for distant landscapes or portraiture. Plastigmat f-6.8 is suitable for every kind of work. It is the best symmetrical anastigmat ever produced. Buy your camera with it. Buy it for your camera.

BUSINESS AND FINANCE

Commerce and Finance in 1901

Dun's Review, New York, Jan. 4

Superlatives of the most emphatic kind are needed in delineating the financial and commercial progress of this nation during 1901, which was productive of many new high records of prices, output, and distribution. It was in this last respect that results were most satisfactory, for prices have often been inflated beyond reason, and heavy production exceeded needs until accumulated stocks caused disastrous reactions. In the year just ended, however, the unparalleled output of manufactured goods did not result disastrously, consumptive demand not only keeping pace with, but often running far ahead of, available supplies. Phenomenal shipments brought the greatest railway earnings ever attained, yet the year closed with congestion at many points because transporting facilities were utterly inadequate. Bank ex-

SURRENDERED

To Hot Biscuits and Warm Pie

Bombarding a stomach with hot biscuits and warm pie, plenty of butter, bacon, greasy potatoes, and a few other choice delicacies will finally cause the fortification to give way. Then how to build back on good food is worth knowing.

A man in Factoryville, Pa., attacked his stomach in about this way and says: "The sign of surrender was plain in my white, colorless face. At that time every article of food distressed me, and heartburn kept me in continued misery. I liked all sorts of breakfast foods but they did not agree with me. Of course, much of the food that I ate contained nourishment but my stomach could not get the nourishment out. I tried pepsin and other aids to digestion which worked for a time and then gave out.

Finally I reasoned, when in an extremity, that if the stomach could not digest the food why not take some food that was already digested like Grape-Nuts. So I started in on Grape-Nuts and the new food won my palate straight away and agreed with me beautifully.

The heavy, oppressive feeling disappeared and I became thoroughly impressed with the new food and began to improve at once. Little by little my strength came back and slowly and surely I gained my lost weight. The wasted tissues and muscles built up, and to-day I am well, buoyant and strong.

I unreservedly give the chief credit to Grape-Nuts which met me in a crisis and brought me over the dark period of despondency. Nothing else did it for nothing else could be endured.

Please withhold my name." Name can be given upon application to the Postum Co., Battle Creek, Mich.

changes, the best measure of trade after making due allowance for speculative activity, far surpassed all previous records.

With labor well employed at the highest wages ever paid, the cost of living logically moved to a higher level. *Dun's* index number on January 1, 1902, shows that the prices of all commodities, when multiplied by the amount annually consumed per capita, aggregated \$101.58, surpassing all recent records by a large margin. Notwithstanding the greatly increased demand, all manufactured articles rose only about 20 per cent, and wearing apparel alone but 11 per cent. The most striking gains over the lowest point on record were 90 per cent in breadstuffs, 75 per cent in dairy and garden products, and 30 per cent in meats.

Failures during 1901 were larger in number than in 1900, which was to be expected in view of the many new firms organized. These do not materially affect the volume of liabilities, however, nor are they calculated to disturb the general situation by involving stronger houses. Thus, while the 11,002 commercial failures in 1901 exceeded the 10,774 in the previous year, there was a most gratifying decrease in amount of defaulted indebtedness to \$113,092,376, against \$138,495,673 in 1900.

In the leading manufacturing industry there was most phenomenal activity, blast furnaces reaching a new high record of weekly capacity at 324,761 tons of pig iron, while of all finished steel products the output was remarkable. Two months' interruption by a strike put the domestic demand so far ahead of supplies that foreign orders have since received scanty attention. Instead of violent inflation of prices there is a degree of conservatism never before witnessed, giving the best reasons for anticipating continued activity. Textile mills began the year rather unsteadily, but gradually shared in the improvement, closing 1901 with much business in sight. Footwear factories increased rapidly outside New England, yet shipments from Boston for the year surpassed all records.

Wall street enjoyed an even greater degree of activity than the industries. Sales of stocks exceeded those of 1900 by 44 per cent in number of shares, while in value the increase was much heavier. Bond dealings expanded nearly 60 per cent, and the cost of a membership in the stock exchange rose to \$80,000, against \$50,000 at the top point of 1900. Abundance of money seeking investment and unequalled railway earnings brought a much higher range of prices, the sixty most active railway shares closing at an average of \$102.99, against \$84.87 at the end of 1900.

Staple products experienced the most remarkable variations in prices, owing

to the severe heat and drouth in the southwest. From a preliminary estimate indicating over two billion bushels of corn, there was a reduction of over a third, and quotations responded by rising to the highest point in many years. Wheat and flour established a new high record in August for a single month's exports at 34,130,380 bushels, but corn prices reduced foreign buying to insignificant figures. Of the leading imported staples, sugar declined almost a cent during the year, closing little above the bottom, while coffee was reduced to within a sixteenth of the lowest price ever recorded, but recovered sharply on reports of drouth in Brazil, despite unequaled supplies.

Foreign commerce made another splendid exhibit. Full returns are not yet available, but the official report for eleven months and weekly statements for December indicate that total exports will be about the same as in the unprecedented year 1900, while imports will be considerably larger, putting the total value of foreign trade at a new high record of about \$2,343,000,000. The international balance in favor of this country will be close to \$600,000,000 on merchandise account, to which must be added nearly \$25,000,000 net exports of silver. The movement of gold has about balanced.

A LITTLE THING

Changes the Home Feeling

Coffee blots out the sunshine from many a home by making the mother, or some other member of the household, dyspeptic, nervous and irritable. There are thousands of cases where the proof is absolutely undeniable. Here is one.

Mrs. C. K. Larzelere, Antigo, Wis., says, "I was taught to drink coffee at an early age, and also at an early age I became a victim to headaches, and as I grew to womanhood these headaches became a part of me, as I was scarcely ever free from one.

About five years ago a friend urged me to try Postum Food Coffee. I made the trial and the result was so satisfactory that we have used it ever since.

My husband and little daughter were subject to bilious attacks, but they have both been entirely free from them since we began using Postum instead of coffee. I no longer have any headaches and my health is perfect.

If some of these nervous, tired, irritable women would only leave off coffee absolutely and try Postum Food Coffee, they would find a wonderful change in their life. It would then be filled with sunshine and happiness rather than weariness and discontent. And think what an effect it would have on the family, for the mood of the mother is largely responsible for the temper of the children."

ness with stock exchange borrowers was done at 8@10 per cent. Time money was again offered with some freedom on Thursday and Friday, and 5@5½ per cent were the rates offered for all periods, though the demand at these figures is comparatively small. Commercial paper is quiet, the rates being based upon 5@5½ per cent for double names, though the supply is small, and no immediate increase is looked for.

Large investment demands and renewed speculative buying gave a strong tone to the market for securities in New York in the last days of the old and the initial ones of the new year. In the face of very firm money rates speculative interests seem inclined to discount the probability of easier conditions as to loans and the continuance of investment buying. The practical completion of the Northern Pacific preferred stock retirement and the completion of the Northern Securities deal without further delay also had a good effect. Public participation in the market increased considerably, although a disposition to take profits has shown itself and affected values. The anthracite coal stocks have been very strong, and the granger and Pacific shares show improvement, while considerable rises are shown in the steel stocks. Bonds are strong and active, with a large investment demand. Foreign exchange has been dull, but strengthened on the prospect of easier money, demand sterling rising to 4.87.

Clearings for the week ending Thursday aggregate \$2,093,634,278, a gain of 13.7 per cent on last week, but a decline of 9.4 per cent from a year ago, when stock speculation was active.

Various Topics

A decree reducing the Cuban railroad tariff on sugar and tobacco, an average of 25 per cent, has been issued by Governor-General Wood.

The national debt of the United States at the close of business December 31, 1901, less cash in the treasury, was \$1,011,628,286. The cash balance was \$321,603,278.

New issues of loans and securities in London during 1901 have reached £159,600,000, comparing with £165,499,224 in 1900, £133,169,724 in 1899, £150,173,365 in 1898, £157,299,000 in 1897, and £152,806,791 in 1896. Of this year's issue, £60,000,000 was in consols.

The government of New Zealand has decided in the future to order all steel bridges from the United States. This decision comes as a result of the recent experience of the Manawatu railway company, when the American bid on a big steel viaduct amounted to one-quarter of the price bid by English firms.

A comparative statement of the receipts from the war revenue act of June 13, 1898, and the war revenue reduction act of March 2, 1901, shows that the former act produced between July 1, 1900, and November 30, 1900, \$46,629,308. The revenue reduction act of the latter date produced in the corresponding period in 1901 \$29,429,642, a decrease of \$17,199,666.

WIT AND HUMOR

The Daughters of the Multi-Millionaire

There was once a multi-millionaire who had two daughters. Of these, the elder was a vain, frivolous creature, who thought of nothing but building orphan asylums, visiting the sick, giving alms to indigent cripples, and the like. The youngest daughter was of a more serious turn of mind and devoted all her spare time to mastering the intricacies of bridge whist.

An impecunious nobleman from beyond the sea, hearing of the exceeding great wealth of this multi-millionaire, determined to contract a matrimonial alliance with the family. The father of the girls made no objection to the match, and it remained for the nobleman to choose between the two. As might naturally be expected, he was attracted by the lighter accomplishments of the elder daughter, rather than by the more substantial attainments of her sister. Accordingly he proposed for the hand of the former, and the engagement was announced amid great rejoicing.

About this time the country was plunged into a financial panic, in which the multi-millionaire lost all his property except what was in his wife's name. Now, the nobleman had no desire to take a penniless bride, so he promptly broke the engagement. He might have broken his fiancée's heart into the bargain had she not been so grieved over losing the means of indulging in her favorite amusements that she had no time for minor sorrows.

Meanwhile the younger daughter had left the paternal roof and set up a bachelor-girl establishment of her own, where she supported herself in luxury by her earnings at the whist table. Learning of this, the nobleman sought her out and laid his title and his debts at her feet. He was accepted before he had time to finish his declaration, and the wedding was celebrated with great éclat. And they lived happily ever after; or, at least, as happily as was consistent with the custom of the higher circles in which they moved.—*Isaac Anderson, in Puck.*

Somehow, we always want to steer clear of the people who claim that they never enjoy themselves except when they are trying to make others happy.—*Atchison Globe.*

It is believed that the Lord didn't make Yankees at the beginning for fear they would annoy Him with their suggestions.—*Washington Post.*

"Yes," said the Fairy Prince, "you may have whatever you want for a Christmas present."

"I will choose," said the Fortunate Person, "either a wife or an automobile."

"How foolish!" exclaimed the Fairy Prince. "Why do you not select something that you can manage?"—*Baltimore American.*

Accident Insurance at Half Price

It is the Unexpected that Happens

The \$1,000 PURITAN Accident Policy (covering nine classes of accidents) protects you and yours at less than half the cost of similar insurance. The PURITAN policy may be issued to any healthy person over 16 and under 65 years of age. It costs but 25 cents per month; \$3.00 by the year.

Send your first payment (25 cents) and receive your policy and protection for one month; monthly payments of 25 cents each continue your protection thereafter. Sample policy sent on request.

Some Adjusted Losses Paid Under Puritan Accident Policies:

PUBLIC OPINION

Number 3
Volume XXXII

The Week

Thursday
January 16, 1902

IN the affairs of the world the most conspicuous incident of the week has been the exchange of compliments between President Roosevelt and Emperor William, occasioned by the president's consent that his daughter should christen the emperor's yacht, now building in an American ship yard. William is "most gratified" and announces that his brother is coming over to "express my sincere feelings and friendship for the United States and their illustrious head." His majesty's intentions are the source of no less satisfaction to President Roosevelt, who will personally convey to Prince Henry "sincere feelings of esteem" for the emperor, "as well as best wishes for the welfare of the German people."

EMPEROR WILLIAM evidently intends to be on good terms with us if this can be accomplished by courtesy; he has been ostentatiously friendly toward Ambassador White, and extremely considerate of American sensibilities in dealing with the Venezuela matter, all of which will doubtless tend to do away with the "intermittent bad feeling between portions of both peoples"—a happy phrase used by one correspondent to describe the actual condition of feeling entertained by Americans and Germans, and which, it may be remarked, will continue, despite exchanges of handsome compliments, so long as our interests are opposed at any point.

FOR thirty years, or ever since the Grand Central station was established at Forty-second street, the tunnel through which trains reach that station has been a menace to the health and safety of every passenger who passed through it. It has been the subject of bitter but useless complaints against the New York Central railway, and now the management of that road have to answer for the loss, last week, of nearly a score of lives—lives that might have been saved but for the neglect, parsimony, or incapability of the New York Central officials. What better illustration could there be of the indifference of these "corporate entities" to the rights of the public, or of the extent to which the average American will allow himself to be abused by public servants?

M. R. CROKER for the third time has surrendered the leadership of Tammany Hall. It has been his custom when there was "nothin' doin'" to give up the boss-ship to a dummy, returning when he thought there was a chance to again return to power. This time, however, the leadership is turned over to a man of force and high character, Lewis Nixon, the ship-builder, who is expected to bring back to the organization some of its lost prestige. What he will do with the tough element which remains within the organization is yet to be seen. Everyone will wish Mr. Nixon success, but we can not help realizing the prophetic quality of the remark made by a spokesman of the divekeeping faction that "He'll have troubles of his own, without meddlin' with ours."

ONE of the latest exhibitions of American enterprise abroad is the acquisition of 5,000 miles of canals in England and on the continent through concessions to the Erie canal traction company for the operation of the canals by electricity. If the deal is as comprehensive as it is reported to be, it will make it possible to ship by water on one bill of lading a cargo from one of our inland ports, say Duluth, to Brussels, Cologne, and many points in England, France, Germany, and Italy. The quiet manner in which this scheme has been carried out is likely to give another shock to those foreigners who view with alarm the encroachments of American capital.

A SOFT answer does not always turn away wrath. The Germans were greatly outraged by Mr. Chamberlain's remark that the alleged brutalities of British soldiers in South Africa were no worse than the conduct of German soldiers in France; the German chancellor felt obliged to notice the incident, and mildly suggested that when a minister found it necessary to justify his policy, it was not advisable for him to drag others into the discussion. What could have been milder, colder, ruder, or, in short, more English! It must be that London is stung because the German prime minister usurped the Englishman's biting cleverness in retort, and left to Mr. Chamberlain only the clumsy German method.

M. R. CHAMBERLAIN, it would seem, might well still, instead of adding to, this teapot tempest. But he returned to it again on Saturday in a speech at Birmingham, declaring that "no British minister has ever served his country faithfully, and at the same time been popular abroad"; he did not want to give lessons to any foreign minister, nor would he accept any lessons himself; he declined to be made a scapegoat by those who charged him with responsibility for foreign hostility toward Great Britain. The colonial secretary appealed, in short, from the criticisms of foreigners to the patriotism of his countrymen, an appeal which is usually successful, but which does not place the minister who resorts to it in a very heroic light.

PEKING witnessed a great show last week when their majesties, the emperor and empress-dowager, returned to the northern capital from their enforced sequestration at Hsian. The old dowager's spirit must be somewhat chastened; if it is not now, it will be shortly, when the new rules governing intercourse with the representatives of the powers are put into effect. For, of course, nothing could be more humiliating than being compelled to treat a foreign devil with ordinary courtesy. And then there are the defiled palaces and temples, and the fortress erected around the ministers' residences, considerably called the legation compound, but none the less a fortified, loop-holed, and garrisoned stronghold. Amid such surroundings it will not be possible for the dowager to carry things with the high hand of yore.

HOW the powers will stand with the re-established court need not be the subject of much doubt. Russia retains her ascendancy, Japan is openly quiescent, but privately watchful, Germany has about all she wants, the United States wants nothing, England is a negligible quantity—a situation which must give Englishmen a matter for bitter reflection, but which is directly due to their trustful policy. When they permitted Germany to share in the advantages of their position in southern China, the supposition, doubtless, was that the kaiser would in return oppose the designs of Russia in the north. No such thing happened. Germany lost interest in Manchuria, leaving England helpless and Russia free to work her sweet will.

IN view of this experience, among others, it is easy to believe that Great Britain has not warmly responded to Germany's invitation to join the alliance composed of Germany, Austria, and Italy—easier to believe that England has declined the invitation than to believe that it was ever sent. This, however, is the story that comes from London, and if it is true there is no difficulty in understanding the position of the British government, such alliances being only useful between two powers who are afraid of each other or who need artificial bonds to hold them together in time of danger.

AMERICAN

A Plea for Relief of the President

WM. E. CHANDLER, in the *Washington Post*. Condensed for
PUBLIC OPINION

WHAT is wanted in the person of Mr. Roosevelt, and in every other person whom the twentieth century may see in the White House, is a president who will be allowed to serve the whole people with all his heart and strength, with all his mind and body, in the discharge of his official duties, unhindered by the pressure upon him of so many thousands of his countrymen as have in recent years encroached upon the time and patience of our presidents and kept them from their public work, or compelled them to do it by impairing their physical health and overstraining their mental powers. The time has come when access to the president, except at public receptions, should be limited to the cabinet ministers, senators, representatives, and ambassadors, and to such other persons only as are given interviews for public purposes after written applications have been received and carefully considered. The public receptions of the president should be few, and there should be no intrusions upon his social life, which he should be allowed to regulate according to his own will and pleasure, and no person should take offense because not invited to his presence or find fault with his selection of his company, whatever may be its race or color.

This needed change of custom will at first, no doubt, be unpopular. It will be condemned as un-republican exclusiveness. It will require, to begin the new rule, a president who has been a man of the people, who is known to be at heart thoroughly democratic in all his ideas and ways, and who is also strong in his convictions and fearless in his actions. Is not Mr. Roosevelt such a president? Will he inaugurate the reform? Once started, it will never be reversed. Four-fifths of the private visitors to Washington who see the president only go because others do. Groups of constituents are introduced by congressmen because other congressmen are doing the same thing. Stop them all and no one will complain.

According to my long-continued and careful observation of many administrations, a president, in a four years' term, is expected to pursue three objects: 1 Receive 20,000 callers; 2 Do 2,000 little things; 3 Try to do 200 great things. Receiving the callers and doing the little things tend to unfit him for doing, after the very best fashion, the 200 great things. 'It is not any one of the callers or any one of the little things which wearies him. It is their constant unintermitting succession, the dropping of the water wearing away the stone.

It will not be, I have already assumed, a popular act to advocate, as I now do, the seclusion of the president from public view; but the real need of the country is such seclusion, which is necessary to enable him to give all his powers and faculties, reasonably exerted, without destroying his temper or health, to the important work of government to which the people have called him—to work for them, but not to be worked by them to decrepitude or death in one or two terms of service. After all, comparatively few persons, not more than 20,000 of our 75,000,000 of people, can manage to have interviews with the president, even if he wears himself out in his efforts to gratify them.

The seventy-five millions (less the twenty thousand), most of them living remote from Washington and not likely to come here, ought to take up arms against a custom in which they can not participate; and they ought to create a public sentiment in favor of a rational system which will preserve the health and lives of their presidents, enable them to do the nation's real work with comfort and safety, and thus properly protect the vast interests of our mighty government.

Press Comment

Commenting upon the article which appeared in its pages, the *Washington Post* truly says that it "has attracted widespread attention and received the warm approval of all thoughtful men." The *Post* also continues Mr. Chandler's argument, saying: "The work of a president of the United States, if it be done largely and broadly and beneficently, can not be performed at odd times—in moments snatched from petty cares and insignificant anxieties. The chief magistrate of the greatest and most powerful nation in the world can not give his clear mind and his most enlightened solicitude to matters affecting the republic's honor and prosperity after ten hours of trumpery gossip, sordid solicitation, and ridiculous and contemptible garrulity. Mr. Roosevelt is a strong man, an earnest man, a patriotic, impulsive, emotional man. We recognize his high purpose and his splendid enthusiasm. But even he, strong and eager as he is, can not waste himself, hour after hour, day after day, on petty things and men and still preserve intact for the nation—for the silent, hopeful, unselfish, patriotic millions—the vigilance, the devotion, the clear prevision that he owes them. It is possible that the president may dismiss Mr. Chandler's protest with an indulgent smile. We hope not, however. Mr. Chandler has told the truth, and Mr. Roosevelt will recognize it before his term expires." "The truth is," says the *Philadelphia Times*, "that spoils politics have done more to wear out our presidents than any other evil. The fact that a man is a member of the senate or of the house gives him certain rights at the White House, and he generally demands all that he can get. When it is a question of serving an importunate office-seeker or saving a president, the congressman does not hesitate in his choice. The people give little troubles sometimes, but the great ones come from the senators and representatives and the district patronage. When better methods prevail in these things, and when the government gives the president an office separate from his dwelling-place, the problem will be solved."

The *Philadelphia Press* also thinks that a separate executive office would better the president's position: "Mr. Chandler has struck at a serious evil. It is difficult for a president to stop this abuse without subjecting himself to a good deal of criticism from the class of persons, mostly congressmen and politicians, who take up so much of his time. But, as Mr. Chandler says, what is wanted in the president is a man who will serve the whole people to the very best of his ability, and that is impossible under the present methods at the White House. If a separate building were constructed, as proposed by Senator Lodge, to be used exclusively for executive offices, and the president to

receive callers only at specified hours at his office, there might be some improvement." The New York *Tribune* also subscribes to Mr. Chandler's plea for reform in the manner in which our presidents are treated: "Whether or not we accept ex-Senator Chandler's contention that the president of the United States should be relieved of the great weight of the pressure for office, that burden to devolve upon the members of his cabinet, it is impossible not to agree with him that the president should be allowed to serve

the necessity for the change and approving the action of the president who should make it."

The Cleveland *Plain Dealer* sees "serious difficulties in the way of the change Mr. Chandler suggests. There will be, in the first place, a suspicion that it would not tend to improve the quality of the appointments and might make the return to the system of political spoils more easy. Mr. Chandler was a strong partisan. He has been a member of the cabinet and a United States senator. As member of

the whole people with all his powers, unhampered by the irritating and distracting exactions of the great mass of people who want to 'see the president.' The objections to a general reform of the sort contemplated by Mr. Chandler are easily met. There might be a little grumbling at first on the part of those individuals who look upon the president as the country's hired man; but the executives of other republics are put to no such strain, and the common sense of the American people would not be long in recognizing

the cabinet he no doubt, at times, wished he had a freer hand in the disposition of offices. As senator he knew the continuous effort of members of the senate to control appointments in their several states and those for whose confirmation the action of the senate was necessary. The fight between president and senate on this matter has been going on for many administrations, and for the most part the effort of the senators has been to use appointments for the strengthening of their individual positions and their power in the

party. Evidently Mr. Chandler thinks the 'strenuous' president will injure himself and the party by too much personal attention to details and he wants him to sit back in more dignity, leaving the hard work to others. But the advice will fall on deaf ears." "Plain common sense" is the *Chicago News's* opinion of Mr. Chandler's recommendations.

Consular Reform

THE TWO MEASURES BEFORE CONGRESS

THE national committee on consular reorganization has framed a bill for the reform of the consular service, which is said to be an improvement on the Morgan bill of 1894, the Lodge bill, and the Adams bill of 1900. "It is based," says Mr. J. Collin Vincent, of the committee, "on more businesslike methods, with a view of appointing men of education, ability, and integrity, who, if they show merit, shall have a chance of promotion, and are not liable to be dropped with every change of administration. The salaries are to be fixed on a basis commensurate to the work, as it is recognized that talent in any business can not be secured without adequate compensation. All fees will then go to the treasury department. A system of inspection and supervision is also provided, by which the consuls will get advice and information as to what methods have been productive of good in other places."

The bill introduced by Senator Lodge establishes a classified service, with salaries ranging all the way from \$1,800 to \$10,000 a year. Entrance to the service is by way of the lowest or sixth class, admission to which can be secured only by examination before a duly constituted commission. Once admitted to the list and assigned to duty, the candidate will be eligible without further examination to higher positions. The fee system is abolished, except for minor consular agents. Consular officers proper are to be divided into four grades of consuls-general and six grades of consuls. Vice-consuls-general, deputy consuls-general, vice-consuls, and deputy consuls are to be appointed as heretofore, and with these lesser places the spoils mongers must fain be content. Elaborate provisions are made throughout the bill for control of the consular service by strict civil-service methods, to the end that it may become recognized as a dignified and remunerative profession.

"Something of this sort," says the *Philadelphia Record*, referring to the Lodge bill, "with as strong an infusion of business sense and as little as possible of political sentiment, is urgently demanded in every commercial quarter where attempts are being made to deal in foreign markets. It needs scarcely a glance at the drivel, rhodomontade, and ancient history palmed off on the state department as proper matter for consular reports to convince the intelligent American public that reorganization and reform are necessary in this branch of federal public service. There was a time when no serious harm could have come of turning loose broken political hacks or pampered pets of power in the field of international commerce to represent American commercial and industrial interests. But this practise, once comparatively innocuous, is highly mischievous under existing conditions of trade development. Sooner or later it must be stopped; and the Lodge bill makes a fair beginning to that end." The *Philadelphia Ledger* also asserts

that "under the old system the consular system, which has so close a connection with our foreign trade and relations, has been too much the plaything of aggressive politicians. There has been no fixity of tenure which would offer a career to the right kind of men, and senators, instead of selecting the best material available, have tossed consulships as spoils to politicians like Saylor. The Lodge bill is designed to change this evil and foolish system and to bring the consular service to a high degree of efficiency and usefulness on the basis of merit."

The *New York Times* "greatly hopes that Senator Lodge will succeed in securing the enactment of the bill he has introduced for the reform of the consular service. It is sound in principle. It is sorely needed. It is supported earnestly by the representatives of the most influential and authoritative commercial bodies in the country. It relates to a subject long agitated and discussed as to which nothing has been done because the greed for spoils in both parties has been stronger than the desire to promote the efficiency of the service or the interests of commerce. The plan of Senator Lodge is one of the greatest importance to the whole country, and we are glad that it has enlisted the active support of so influential a senator."

Our "Plain Duty" to Cuba

THE DISCUSSION OF CUBAN RECIPROCITY

COMMENTING upon the present status of the campaign for reciprocity with Cuba, the *Boston Transcript* (Ind. Rep.) says: "The decision of our government to reduce the garrison in Cuba to a total of 3,000 troops concentrated at Havana under the immediate personal command of General Wood, suggests that it sees the probability of the 'missionary work' it has been undoubtedly doing in the recess of congress resulting in tariff concessions that will guarantee tranquillity in the island. Washington advises indicate that there has been a notable recession in congress from the ruthless and extreme opposition which the first recommendation for tariff concessions encountered. There is talk of compromise, always a hopeful sign, and there is a manifest disposition on the part of the opponents of any concession to Cuba to make terms. This disposition has increased since the very cool reception accorded to the Oxnard bounty project indicated that popular sentiment favored more direct aid to Cuba. As the opinion of the government was voiced by Secretary Root before it was uttered by President Roosevelt that a liberal tariff policy meant a prosperous and therefore tranquil Cuba, it is a reasonable assumption that the war department would not begin to withdraw troops if it thought that the conditions might shortly favor depression and possible disorder that would occasion their being sent back again." The threats of our "infant" sugar interests can not prevail against the conscience and the reason of the nation, the *Chicago Post* (Rep.) declares: "Cuba, we know, is face to face with bankruptcy and starvation. Her order, stability, and progress, the success of her government, absolutely depend upon her material condition. In the words of Palma, no people will endure hunger. And congress should remember, too, that he gives twice who gives quickly. The sugar and tobacco producers will be afforded an opportunity to present their objections, and Mr. Oxnard will picture the beauties

of his bounty plan. These formalities are unavoidable, but the case is pretty thoroughly known already, and there should be no needless delays. Reciprocity at the earliest possible moment is the desire of the overwhelming majority of the American people."

The two leading Republican newspapers of New York city are at odds over Cuban reciprocity. The *Tribune* thinks "a true note is sounded by Senator Gallinger when he says that while he is a protection-

right to govern themselves. That is, all of us except the sugar trust. We believe, also, that the Cubans should support themselves—all, again, except the sugar trust. We have gained their independence for the Cubans. We rescued them from pillage and butchery and conscription, and set them up as farmers, manufacturers, merchants, and wage-earners. And at our expense. But the sugar trust says we should do more for them. It says we should remove

ist and opposed to revision of the Dingley tariff, he is in favor of reciprocity with Cuba. Some of his fellow-protectionists may be less 'thick and thin' than he, and may take a more favorable view than he of reciprocity treaties with other lands. That, however, is apart from the Cuban question. Upon the latter there is really no room for disagreement. As Senator Gallinger says, both justice and wise statesmanship demand the establishment of reciprocal trade relations with Cuba." The *Press* entertains quite different views: "We are conceding to the Cubans the

the duties on raw sugar, so that they may sell to us what we gave them back from the Spaniards, on better terms than they can sell them now. The sugar trust and its literary bureaus say the Cubans are starving; that they are on the verge of anarchy; that we, the American people, are responsible for their property and misery and suffering, because we will not remove our sugar tariff so that the sugar trust may make its sugar more cheaply, and, having ruined the American cane and beet-sugar industry, sell at thirty or forty millions a year more profit!"

The Cleveland *Plain Dealer* (Dem.) notes that "the positions of the United States administration and of the coming Cuban administration are evidently in perfect accord on the subject of liberal reciprocity arrangements between the two countries. The reports of the position of the political majority in congress on the subject are of a different character. The opposition to any reduction of the sugar and tobacco duties is strong. If the administration is determined on forcing the issue, there is probability of its defeat unless a combination of Democrats and administration Republicans can be made to put the measure through. Will President Roosevelt make a fight under such conditions, or will he, disregarding 'every consideration of honor and expediency,' back down through 'considerations of party loyalty?'"

Filipino Views of American Rule

WHAT THE UNITED STATES HAS DONE AND SHOULD DO
FOR THE PHILIPPINES

THE *North American Review* (New York) has obtained from three eminent Filipinos frank expressions of opinion regarding the influence of American rule, in reply to the following questions:

"Has the presence of the United States in the Philippine islands resulted in the improvement of the political and economic conditions as compared with those existing under the Spanish rule? What good results have followed the presence of the United States in the islands? What form of government ought to be established in the islands by the congress of the United States?" The answers appear in the January number of the *Review*.

Dr. T. H. Pardo de Tavera makes lengthy reply, from which we quote:

The principal benefit resulting from American sovereignty in the Philippine islands has been the liberation of the Filipinos from the sad and hated political intervention of the friars. The centralizing policy of Spain was evil for us. Men who were ignorant of our necessities, our customs, and our situation, and who had no reason to occupy themselves with such details, legislated for our country in Madrid. Now, although the Filipinos do not legislate in their own country, we have succeeded in having legislation carried on among ourselves. Municipal organization is another of the great benefits which we all recognize.

The law of *habeas corpus*, the power to assemble, the freedom of speech and of the press, the abrogation of obligatory military service and of the execrable system which but recently lent itself to so many outrageous abuses, and the abolition of banishment, imprisonment, and military executions on account of political beliefs, are real benefits which American sovereignty has brought about in the Philippines.

We supporters of the federal party aspire to see the Filipinos constitute themselves some day into a state like those which form the union. Until we are in a condition to obtain this final desire, we hope that, gradually and in accordance with the capacity and situation of our people, the government of the Philippines may go on acquiring a state of autonomy more and more nearly complete, approaching the definite form of its final development. For the present, it seems to me that congress should approve the provisional form of government established here, maintaining it during one, two, or perhaps three years in such a way that, when partisan feelings have been calmed, when a certain lack of confidence between Americans and Filipinos has disappeared, the time will have arrived for giving us a territorial government.

Benito Legarda cites the "autonomy now enjoyed by the pueblos organized under the provisions of the municipal code," equal individual rights, and the right of suffrage as the chief political improvements result-

ing from American rule. In addition to the establishment of trust companies and mortgage-loan banks suggested by Dr. de Tavera, he refers to the need for the "regulation of the sale and the development of public lands, which would encourage a large immigration of American laborers and farmers, who would teach the Filipinos the inadequacy of their primitive system of agriculture. Other benefits would be gained by the establishment of experimental agricultural stations similar to those in the United States."

He also expresses the hope of the Filipinos to have at some time a legislative chamber of representatives, elected from each province, and says, further: "It would also be well to allow a delegation, composed of several persons elected from within the chamber, to represent it in an informative character in congress at Washington, so that the Filipinos might have an opportunity of learning and later exercising political functions."

Señor José Ruiz de Luzuriaga contributes no new information of benefits received, but says: "In order to attain commercial progress in these islands it is necessary to place our commerce under the strongest protection, so that it may be raised from the state of prostration which now prevails, after suffering the effects of a titanic struggle against the evils of war and the ravages of the locust and the rinderpest."

In the matter of a form of government, he thinks "that it might perhaps be well to establish here a form of government similar to that of Hawaii or Porto Rico. Only when hostilities shall have completely ceased, when the popular mind is less perturbed, ought there to be thought of forming a popular chamber of representatives, elected by suffrage under an election law which, by its wise restrictions, shall offer a safe guarantee that such representatives shall be wisely chosen."

Congressional Summary

CONGRESS DAY BY DAY

JANUARY 6.—The senate and the house resumed their sessions after the holiday recess, but no business was transacted, both branches adjourning upon the announcement of the death of Senator Sewell.

JANUARY 7.—In the senate Mr. Morgan (Dem. Ala.) secured the adoption of a resolution aiming to disclose the relations alleged to exist between the transcontinental railroads and the Panama canal company. The house took up the Nicaragua canal bill, Mr. Hepburn (Rep. Ia.) holding the floor for two hours and replying to a volley of questions from other members regarding the offer of the Panama canal company to sell its property for \$40,000,000.

JANUARY 8.—The senate passed a number of bills, most of them being appropriations for private pensions. The house continued the debate on the Nicaragua canal bill.

JANUARY 9.—In executive session, the senate confirmed the nominations of Henry C. Payne to be postmaster-general and Leslie M. Shaw to be secretary of the treasury. The house passed the Nicaragua canal bill by a vote of 308 to 2.

JANUARY 10.—The senate was not in session. The house considered the bill to establish a permanent census bureau, which was finally committed, with directions to report a bill putting the employees of the bureau under civil-service law; a bill granting the franking privilege to Mrs. McKinley was passed.

FOREIGN

The Sugar Congress

THE QUESTION OF BOUNTIES

THE Brussels sugar congress reconvened on the 6th. This congress was called by the powers for the purpose of discussing the question of continuing, abolishing, or modifying the bounty paid to the producers of sugar. The movement, as it is outlined in *Harper's Weekly*, is in response to the complaints of the consumers of the bounty-paying nations. The consumers, of course, pay the tax, which is turned over by the government to the producers of beet sugar, and the sugar is sold abroad less the bounty. The consequence is that the English, admitting sugar free, receive the benefit of the sugar bounties paid on the continent of Europe. In this country we meet the bounty by a countervailing duty, so that our American consumers do not get the benefit which the English enjoy. The complainants are loudest in Belgium, where the consumers pay the whole of the bounty in the increased price of sugar. The Belgian system is very like that of Russia. On the sugar exported from Belgium a drawback is allowed, and the surplus sugar is taxed. The producers practically collect this tax from the home purchasers of Belgian sugar, hence the clamor of the Belgians against the bounty system. It is not expected that the congress will recommend the abolition of bounties, but that it will propose a modification which will result in cheaper sugar to the home consumer. The powers represented at the congress are Germany, France, Belgium, the Netherlands, and Austria-Hungary.

Yves Guyot, discussing, in the January *North American Review*, the sugar question in Europe, says: "When we consider the consumption of the different countries in relation to their production, we find that neither France, Germany, Austria, Belgium, nor Holland consumes half of its production. Exportation is a necessity to them. The situation of the sugar industry in Europe becomes more dangerous as its outlets close, and as the production of sugar increases. In 1899-1900 Egypt produced 100,000 tons; Italy now has 29 factories producing 20,000 tons. Roumania produced 25,000 tons; it is calculated that Spain will produce 160,000 tons, or twice its own consumption. Doubtless the cost of production in these countries will not allow them to enter the universal market, but their production closes the outlet of the old exporting countries.

"For a long time the manufacturers of the continent have supposed that they would always be protected from countervailing duties. The supplementary duty established in the United States on August 27, 1894, and the law of July, 1897, have begun to undeceive them, and the Indian tariff act of 1899 has continued the process. Sir Neville Lubbock, president of the London chamber of commerce, said at the reunion on December 20, 1899, 'We demand a countervailing duty to protect the countries that reject the system of bounties against the combination of the countries which retain it.' From one day to the next, England can wipe out the sugar industry of the continent. Far-seeing friends of the sugar industry, like M. Dureau, editor of *Le Journal des Fabricants de Sucre*, recognize and appreciate this fact. According

to the report given by *Le Siecle* of the dinner of the London chamber of commerce, on December 20, he said: 'In principle we are in accord with M. Yves Guyot: the system of bounties is absurd, and its general abolition would certainly be desirable for the producers as well as for the consumers.' In 1900 our exports of sugar amounted to 61 per cent of our production and importation; that is, a quantity greater than was consumed at home. While in 1900 we exported 159,000,000 francs worth of sugar, we paid nearly 100,000,000 in bounties, rebates, and taxes.

"The system of bounties subjects industry to all the uncertainties which affect political assemblies. An industry dependent on bounties is subject to danger from legislative changes not only in its own country, but in others. Bounties stimulate production, encourage foreign consumption, establish industries founded on privileges, always threatened by crises. The sugar industry in Europe is the most striking demonstration of this. We hope the Brussels conference will end this absurd system."

English Trade Unions and a Restricted Output

A CONSIDERABLE share of the responsibility for the industrial decadence of England is being laid upon the shoulders of the trade unionists. The *New York Commercial Advertiser* calls attention editorially to the "accomplishment of the Westinghouse electric company in erecting vast works at Manchester. Buildings which were estimated by English standards to take five years in construction were actually completed in one. The work was done by British workmen under American supervision. There were some changed conditions attending it which were quite new to British trade-union methods. Instead of 450 bricks to be laid each day, according to the trade-union average, each workman laid an average of 1,800 bricks, with 2,500 for the very plain work. That is to say, each workman under American supervision in this job did four times as much as he usually does under British trade-union rules. If this does not pierce the hide of the toughest British trade union and let in light and conviction, we fail to see what would. There is no complaint that the men were overworked. They were paid according to their merit. Union men were employed; but they were told that if they did not work at the pace set for them by their manager from St. Louis, and agreed to by the most enterprising of the workmen, other men would be brought to supply their places. At first it was uphill work. But the best workmen set a fast pace and steadily and surely pulled the others after them. The job was done four years' time ahead of the calculated period of doing it according to the British trade-union way. The employer's part in hampering industry was just as signally illustrated. The American manager of this job did only what the commonplaces of anti-British criticism have been beating on a gong. He simply varied the style. The question now is, Can the British employer take this

hint and get more and better work out of his men? It has been seen what they can do, and the fact is happy confirmation of Sir Hiram Maxim's recent observation that the individual British workman is not at fault; it is the trade union's handling of him and also the timid conservatism of his employer."

Mr. Frank Broadbent discusses the same subject in the London *Electrical Review* under the head of "Ca' Canny"-ism.

"Electrical engineers, who have had much experience with the trade-union workman, will find little or nothing new in the recent correspondence in the *Times* and other papers on the methods of the brick-laying unionists. The principle of 'Ca' Canny,' defined as 'go easy,' which, translated into the vernacular, means 'work at half speed,' is not confined to the brick-laying trade. Every engineering works manager and foreman is familiar with it. The principle is all right for the man who was born tired, but, to the born 'hustler,' it is worse than hard work. Many papers, in commenting upon this feature of what is called the 'newer unionism,' think there is a lot of humanity in the argument underlying the principle of 'Ca' Canny,' which some writers prefer to call 'restricting the output.' The argument is that if one man works at half speed it gives another man a chance. So it may. Logically, then, if he works 'dead slow,' or does no work at all, he will make room for two other men, and it only remains for everybody to do nothing at all to find work for each other! There is absolutely nothing new in this idea; the fallacy has been shown over and over again, but still workmen believe in it."

Return of the Court to Peking

"SORRY PAGEANTRY"

THE emperor and empress dowager of China returned to Peking on the 7th. The imperial court made its entrance into the Forbidden City, and Peking, it is said, never saw such a sight. A thousand noblemen on gayly caparisoned steeds were the *avant couriers*, while the emperor and the empress dowager and other princes rode in yellow chairs borne by faithful subjects. Their escorts carried gay banners and umbrellas, while the Chinese army, kneeling, lined the route of the procession from the railway to the palaces.

"Probably," says the *New York Times*, "there never was before, in the history of the world, so melancholy a 'triumphal return' of a ruler to his capital as that which has just been executed by the majesty of China. Whether we take the majesty to be incarnated in the emperor or the empress dowager, the humiliation of the dynasty was not to be disguised from any individual of the kneeling crowd of Pekingese. For every Pekingese knew that the return and the reinstatement were done purely on the sufferance of the foreigner. Doubtless the humiliated court has come back to Peking with a change of policy, if not with a change of heart." "The triumphal home-coming, with its sorry pageantry, is such an egregious sham, so far as the court is concerned, that it has about the same significance as the humiliating flight from the capital," in the view of the *Chicago Record-Herald*. "The fugitive dowager and emperor, who started without military escort, who went on disguised as peasants, and who were taken for impostors when they revealed their identity to the people, had

scarcely less reason to lament their feebleness and fatuity than they have now as they reënter their wrecked capital. Court and people may, however, take comfort that though the foreigners may invade the country they still find the Chinese puzzle as perplexing as ever."

The experience China's rulers have passed through has been useful, the *Baltimore Sun* thinks, "in that it has taught the Chinese how weak they are in comparison with the western powers, and will tend to reduce their conceit. China will be brought within the circle of civilized powers, along with Japan, and will see the necessity of reforms such as have made Japan successful. On the other hand, the Chinese have learned their strength and how to play off one power against another. They perceive at last that Russia can not do whatever she likes with Chinese

EMPEROR KUANG HSU

territory, other powers being jealous of her and disposed to thwart her schemes in Manchuria and elsewhere. So well learned is the lesson that the reformed Chinese foreign office has dared to ask modifications of the new Manchurian treaty proposed by Russia and is not frightened, as formerly, by the high tone of the Russian ambassador. The 'open-door' policy, in short, is now understood at Peking in its length and breadth, and gives courage to the celestials." "Perhaps," remarks the *Baltimore American*, "if the powers will keep their meddling hands out it may prove to be the harbinger of a brighter day for China."

The Friendliness of France and Italy

THE following comment discloses the fact that two members of the triple alliance, Austria and Germany, do not look unkindly upon the agreement concluded between France and Italy regarding Tripoli. The *Reichwehr* thinks that "it would be libelling M.

Delcassé to imagine that he would voluntarily relinquish all claims to Tripoli. If he has been so generous, we shall soon learn the reason. M. Delcassé is one of those persons who act on the *quid pro quo* principle, and consequently Signor Prinetti must have given something on his side. The recognition of this fact is not exactly gratifying for Austria-Hungary and Germany, since every inclination of Italy to France implies, involuntarily, an edging away from the triple alliance, and good friendship is only to be maintained when no tricks are played with the accounts. If Italy will not take part with us any longer, no one can compel her friendship, but it must be one thing or the other. A door must either be open or shut." Other comments are even more mildly expressed. Italy, says the *Pester Lloyd*, "only entered the triple alliance after mature consideration, and following exclusively her own interests. The truth is that she has found in this alliance a means of securing her position as a great power as regards foreign politics, and security for the undisturbed pursuit of her internal welfare; a feeling of safety which she could not have obtained either in any other combination or in isolation. This alliance, in which she maintains an imposing position as an equal among equals, prevented her *prestige* in Europe being damaged by the numerous political, economic, and social crises she has passed through. While the kingdom has gained such inestimable guarantees, it has not given up the right to freely cultivate good relations with any other power. If Italy now lives on friendly terms with France, she will be properly fulfilling the object of the triple alliance, which is not to bring about the *casus fœderis*, but rather to stave it off. On the other hand, Italy would run counter to her own vital interests were she

to swerve a hair's breadth from the lines of her foreign policy for the sake of Tripoli, a conquest of very dubious value."

The *Allgemeine Zeitung* (Vienna) says that "as France and England alone are directly interested in the fate of Tripoli, in consequence of the Anglo-French agreement of 1899 about the hinterland of that country, the declaration of an Italian protectorate over it will probably meet with no opposition in any quarter." The *Politische Correspondenz* touches upon Turkey's interest in the Tripoli agreement: "Although it is doubtful whether there is any foundation for the rumor that the Turkish council of ministers has already met to deliberate on a counter-demonstration, it appears probable, to well-informed persons in the Turkish capital, that the sultan's ambassadors in Rome and Paris will be instructed to ask for explanations."

RUSSIA'S NEW FREE PORT: A recent issue of the London *Daily News* gives an interesting account of Dalny, the new Russian free port at the eastern terminus of the Siberian railway, which was to have been opened for general traffic on the first of last month. Few persons have ever heard of this city, and only on the very latest maps is it possible to find it, yet we are told that it contains 50,000 inhabitants, a splendid system of docks, and public buildings in the way of churches, administrative offices, schools, clubs and theaters are rapidly building. It is a most significant monument of the quiet thoroughness with which Russia accomplishes great projects that have to do with the development of her empire. Already 12,000,000 roubles have been spent on harbor works and that before the town is finished, that is the part of it which the government is building, 23,000,000 more will be expended. Russia's policy is to make Dalny the principal seaport of the far east by making it the most economical one.

SOCIOLOGICAL

The Rescue of a Neighborhood

THE CO-OPERATION OF THE PAULIST FATHERS
AND THE POLICE

ONE of the Paulist fathers, the Rev. A. P. Doyle, contributes to the *Outlook* of Jan. 11 an account of the regeneration of that portion of the upper West Side of New York known as the New Tenderloin. His paper indicates both the practicability of measures for the enforcement of the law against open, flagrant, and contaminating vice, and what such measures, to be efficient, involve. In this instance, they involved, first, a vigorous effort by the church, not in a direct attack on saloons or even on intemperance, but in unceasing effort with individual men and women "so to purify the heart that the hatred of vice and the avoidance of its occasions would follow as a necessary consequence." Father Doyle says that when the Paulists located in this section of the city and invited the people to come and settle within the shadow of the church the fathers felt that they had entered into an implicit contract with the people to protect them in their homes, so that they might live uncontaminated by vice and that they might bring their children up in innocence. "The people were with them from the start. Ten thousand people assembled every Sunday in their church, and, while little was said, for prudential reasons, pertinent to the contest that was going on, still all the agencies making for decent homes, clean lives, and release from companionship with sin were intensified. Sermons that were calculated to arouse the conscience and awaken the sense of religion were preached. All this powerful exhortation, joined with direct talks in the confessionals and frequent visitation in the homes, sharpened the spiritual sense of the people, so that they became ready and most powerful allies in the struggle with vicious conditions."

Having thus enlisted the people under the guidance of the church on the side of decency, the next step was to secure the coöperation of the police. Father Doyle says: "By the aid of the police captain of this district, the disreputable women who intended to live here were soon put to flight. Whenever the character of certain newcomers was discovered, notice was served that by the morrow they must be off again, and if they did not go the patrol-wagon was ready to give them a free ride to the lockup. This method of vigilant surveillance was persistently kept up month after month, through the summer-time as well as in the winter, until finally it came to be understood among all the fraternity of evil that for them there was no abiding resting-place in all that district. The crusade was carried on quietly yet persistently. There was no newspaper notoriety about it, nor any spectacular display. It was simply a triumph of law over crime; of good citizenship over vice; of decency and good homes over indecency and the social evil."

An interesting aftermath of the contest is related by Father Doyle: "Mr. Billy McGlory, of Hester street fame, determined to build a dance-hall on west Fifty-ninth street contiguous to the beautiful Columbus circle. He put not less than \$60,000 in a new building, fitted it with most gorgeous furnishings, with plate-glass mirrors, and well-appointed stage, and a soft, inviting carpet on the floor. It was to be the crowning effort of his life. The place was

shrewdly contrived to be the very plague-spot of the city—externally very respectable, on one of the principal avenues of traffic, on a street by which women and children must pass in going to church, or to school, or to the Central park, but internally a hall with a stage for continuous performance of indecent vaudeville, with tables about for men and women to sit while drinking, and on the gallery certain smaller retiring-rooms for evil purposes. He had no difficulty in obtaining a Raines-law license. The opening day was well announced, and a corps of police were on hand ready to see that no stage performance was given. A certain number of dissipated characters—men and women—entered the place and sat down to the tables to drink. In a short while it happened that an ambulance came through the street, with its bell clanging, and some tricky individual passed word about that the patrol-wagon was coming, and in a twinkling of the eye the hall was cleared. After the fiasco of the first night the place continued to do business under the Raines-law license. Captain Kear stationed his bluecoats at the door, night and day, and, without saying a word or making an arrest, the business fell off as a tree withers when a ligature is put on its trunk. A short time after this the furnishings were removed, the door was closed and padlocked, and Billy McGlory went away, a wiser if not a better man."

Father Doyle concludes his story as follows: "There is no more wholesome section of the city today than this. The police department deserves the credit. Without exception, from the commissioner down to the vigilant patrolman, they stood by the law-abiding citizens of the district. The moral of it all is that if the best citizenship holds up the arms of the police, they can always be counted on to do their full duty."

New Marriage Laws

IN THE DISTRICT OF COLUMBIA, PENNSYLVANIA, AND NEW YORK

THERE is apparently a general tendency in favor of stricter laws relating to marriage. A new law has just gone into effect in the District of Columbia making infidelity the only cause for divorce. A new law in Pennsylvania, enacted at the instance of physicians, prohibits the marriage of first cousins, and a new law relating to common-law marriages has just gone into effect in the state of New York. Under this law, as heretofore, a man and a woman may be married by mutually agreeing to live together as man and wife; but a certificate of such marriage must be filed with the county clerk within six months. This certificate must set forth that a civil contract has been entered into, and there must be appended to it the signatures of two witnesses and the seal of a notary. The object of this new provision is to put an end to blackmailing suits by women setting up the fact of a so-called common-law marriage by mutual consent, as evidenced by the persons in question having lived together as man and wife. Hereafter it will be impossible to establish such a claim unless the

agreement has been legally recorded. It is also said that the new law will prevent men from betraying women on the pretense that a common-law marriage has taken place. The *Tribune* calls attention to the fact that "a man could get around the law by neglecting to file the certificate within the required six months, in which case the woman could not prove any marriage." It is also held by some lawyers that under the new law there can be marriages for a short period anywhere from one day to six months. A couple could thus be legally married for six months and then cease to be married by failing to file any certificate. Should these criticisms of the law prove to be well founded, the legislature will undoubtedly be asked to amend it." The *Outlook* says: "The law appears to have been very carefully drawn, and it seems to us quite legitimate. That is, it seems just that a contract involving the responsibilities and obligations involved by a marriage should require not less evidence to attest it than is required in the case of a contract conveying real estate."

How the British Workman Is Handicapped

UNFAVORABLE CONDITIONS OF HIS HOME AND WORKSHOP

MR. PERCY LONGMUIR contributes to the January *Engineering Magazine* a study of the environment—social, workshop, and educational—of the British workman. He first depicts the social life of the lower stratum of artisans and mechanics, which forms the greater part of the population in our large industrial centers. He says:

"Bred and born for the most part in what thirty years hence, it is hoped, will be regarded as congested slums, the child grows or, more correctly speaking, is allowed to grow, in the same rut as its parents and grandparents. The street is its nursery, a crowded kitchen its dining room, and for sleeping accommodation it has a share of a bed in a room crowded to excess. Is it a wonder that, reared in an atmosphere of this kind, the coming artisan lacks originality, and that stamina and vital forces alike are low?"

"Conditions similar to those described are not familiar to the smaller manufacturing areas, but in the larger ones, and also in the larger coal-mining and iron-working communities existing as semi-towns in various parts of the country, these conditions are very real. An examination of four typical cities—say Glasgow, Manchester, Birmingham, and Sheffield—will bear out this assertion."

Mr. Longmuir says that the education the children receive, good in its way and given in fairly well-equipped schools, by efficiently trained teachers, is seriously discounted by the home surroundings, and especially by parental interference.

"The future working man of Britain in the majority of cases is handicapped from the day of his birth, left—if a younger child—to the care of elder brothers or sisters, allowed to get his moral training in the streets, and put to work as an errand boy or shop lad just at the time his school training is beginning to be effective. At fourteen or fifteen he is placed in works and put to a trade for which in nine cases out of ten he has no aptitude or inclination. At eighteen or twenty little remains of his early and somewhat limited education. He marries early, rears a family, in which his own training is repeated, and generally follows in the steps of his forbears. If he has any guide at all, tradition is the only one followed. There-

fore, as it is traditional to regard the capitalist from an antagonistic point of view, he follows his guide most blindly in this respect, and improvements effecting increased or more economical production he regards as an indication of future lack of employment to himself or his children, and therefore does his best to minimize what to him may seem a personal injury. His interests and amusements are few and do not tend to widen his scope of observation. At the theater maudlin sentimental plays giving a false estimate of life are his favorites; the one afternoon he has free he gives to football, and that unfortunately as a spectator and not a player. Horse racing and various forms of betting complete the list. It therefore happens that the page of a daily paper most familiar to him is the sporting one, and if of a slightly developed type he may follow the police court news; but in very few cases is an attempt made to follow the policy or real progress of his own country or others. Even at an election time he makes little effort to analyze the policy of contending parties, and his vote is recorded purely on the result of emotional or traditional environment. Earnest thought or the just recognition of any particular policy are absent factors in his composition at such times."

The workshop environment, says Mr. Longmuir, offers much scope for improvement. Important factors, such as heating and ventilation, receive but little attention, and in the majority of cases are ignored entirely. The present tendency among large establishments to migrate to less crowded or suburban districts is, from the writer's point of view, highly commendable. Though as yet in its infancy, this plan has already proved entirely successful with several large firms in Britain. Land in abundance, new and up-to-date workshops of one story only, heating and ventilation well planned, ample convenience for the worker's comfort—such conditions are, in contrast with those commonly existing, almost Utopian.

London's Municipal Muddle

LEISURELY DELIBERATION AND LACK OF SYSTEM

LONDONERS are suffering just now from a prolonged siege of municipal improvement. The London correspondent of the New York *Evening Post* says that in the process three British characteristics are brought into high relief—a leisurely deliberation, an entire absence of anything like a systematic plan, and puzzling alternations between the utilitarian and the sentimental. The delay in putting down the subterranean telephone wires has, this writer declares, been nothing short of a public scandal, and citizens are up in arms against the result. "After having tamely submitted for the best part of two years to their thoroughfares being made impassable, they now find that from the breeches-pocket point of view, they are to be no better off than when the national telephone company had the monopoly in its own hands. Everywhere you go you find the same opinion expressed—namely, that the public has been 'sold' and that London's lagging and inefficient telephone service—a byword in the past—is to continue so in the future."

Another case of leisurely deliberation is supplied by the London water question. "The five or six million inhabitants of the metropolis depend for their daily supply of water on eight private companies, several of which, almost systematically, come dangerously near the point of a breakdown whenever there is

a spell of hot summer weather. Monopolists by act of parliament, the companies' proceedings are in many respects extremely arbitrary. In a word, they have outstayed their welcome. But the vexed question is, What is to replace them? On and off, the problem has been under consideration for a quarter of a century or more; but it appears to be as fruitful of controversy as ever. The government has foreshadowed a bill for next session for the creation of a water trust, but Londoners are already nervous as to what form the proposals for compensation to the companies are likely to take. That anxiety has been accentuated within the past few weeks by the new telephone arrangement, which some of the most staid and influential of the papers do not hesitate to call 'the telephone betrayal.' Moreover, Lord Salisbury and his cabinet make no attempt to disguise their prejudice against the county council, although, strangely enough, it is one of their own creations."

In face of such a spirit, it is not surprising that the absence of systematic plan should be such a marked feature of the new London. "The county council has certain general powers over the whole area. But these are mixed up in almost inextricable confusion with the powers possessed by the local areas—governed by the recently established municipal boroughs, formerly known as vestries. In addition, the subject of pauperism is in the hands of various boards of guardians, the primary education of Greater London is controlled by the school board, the hospitals for infectious diseases are managed by the metropolitan asylums board, the Thames conservancy wields large, if vague, powers over the river and its traffic, and so on. It would be an amusing muddle of the Gilbertian variety did it not touch the daily life of the Londoners at every point. But it does not by any means end here. Even a non-resident can form some idea of the confusion when it is added that the county council is responsible for sanitation, though not for the hospitals; for a slab of technical education, though not of primary; for the cure of certain lunatics and imbeciles, though not for all; that it is allowed to manage the fire brigade, though not the police; that it collects various groups of rates which it has no voice in levying, and that the general task of governmental overseeing a multifarious business is distributed haphazard among three of the state departments—the local government board, the home office, and the board of trade, assisted by a *quasi* state department known as Trinity House."

Residents of College Settlements

THE WOMEN WHO BATTLE WITH THE SLUMS

IN the twelfth annual report of the college settlements association, Helen Annan Scribner gives the following data concerning the residents of the women's settlements of New York, Philadelphia, and Boston:

"Of the 169 residents that have sent replies to a circular sent to all whose addresses could be obtained, 100 or nearly 60 per cent were college women, showing that the college settlements have remained largely the practical expression of the effort on the part of college men and women to bring the privileges of a few into the possession of the many. Incidentally the fact has been brought out of the increase of migration of residents from settlement to settlement. Migration, as we know, is encouraged in the universities

by graduate students, and it is of interest to note the same movement on the part of students in the settlements. Out of 169, 50, or over 29 per cent, have lived in more than one settlement, and the records range from residence in two settlements to the record of one resident, a former "scholar," who has spent from six months to a year and a half in six different settlements. This, it seems to me, shows an encouraging vitality and flexibility in the settlement life, provided, of course, that the term of residence in each settlement does not become increasingly short, of which I think there appears to be no danger. And naturally those who become permanent settlement workers eventually remain in one chosen settlement, and their experience in other settlements can not fail to be of value. According to the answers given in response to the question, "What is your present occupation?" we learn that of former residents 37 are teachers, of whom three are college professors; 6 are physicians; 4 are nurses; 27 are occupied in home duties; 26 have no occupation; 29 form a miscellaneous group, of whom 5 are doing literary work, 2 are superintendents, one of an industrial school and one of a reformatory; 2 are heads of college halls; 44 are occupied in philanthropic or settlement work, and 37 are, in addition to other occupations, doing philanthropic work, or are in touch with settlement work, making a total number of 81, or nearly 48 per cent, that since their first residence have continued the work begun in the settlements. Of this number 23 have held the position of head worker, of whom 15 at present are head workers."

Various Topics

SPECIAL SCHOOLS FOR CRIPPLED CHILDREN:

An effort is now being made by the London school board to provide special schools for crippled children. Since 1892 special classes for mentally and physically defective children have been in operation, but the mingling of the mentally defective with the crippled children had a most unfortunate effect upon the latter. Chiefly through the instrumentality of Mrs. Humphry Ward, who is connected with a settlement at which a very successful school for crippled children has been maintained, the law was amended so as to permit the board to establish separate schools for crippled children.

MUNICIPAL KITCHENS IN NANTES: The United States consul to Nantes, Joseph I. Brittain, has sent an interesting report to Washington on how the city of Nantes supplies food to the destitute. For several years Nantes has managed a system of municipal kitchens known as "Les Fourneaux Alimentaires Municipaux," where persons who had no money could procure substantial meals by just presenting a ticket. It has erected recently a building having in connection therewith a dormitory, with beds for the accommodation of about fifty persons, which are free for three nights, when the occupants are obliged to make room for others. The sick are sent to the hospital. During the stay each person receives two meal tickets a day, which are the only ones served—one at noon and the second in the evening, from 5 to 7.30.

ANOTHER MODEL TOWN is claiming the attention of sociologists. It is Vandergrift, some thirty-eight miles from Pittsburg, and its creation is the work of the American Sheet Steel company. Desiring to secure a high grade of workmen for its new mill, the company planned a most attractive residential town. The streets are wide, and form arcs of circles, curving with the contour of the ground, and liberal provision of flowers and shrubbery was made. Lots were sold at the prices prevailing in a neighboring town, the only restriction being that liquor should not be sold. Ground was given for four churches, with a stipulation that each was to cost at least \$15,000, the company giving one-half of that amount, and a site and \$14,000 was given towards a \$32,000 casino, used for public assemblies, and containing a free library of 2,500 volumes. The town is self-governing, the company furnishing water, gas, and electric lighting.

LETTERS & ART

The National Academy of Design

THE SEVENTY-SEVENTH ANNUAL EXHIBITION

THREE hundred and eighty-nine pictures and sixteen pieces of statuary were chosen this year by the jury of selection appointed by the National Academy of Design. The prizes were distributed as follows: The Thomas B. Clarke prize of \$300 for "the best American figure composition painted in the United States by an American citizen" was awarded to Elliott Daingerfield for his painting, "The Story of the Madonna." The three Julius Hallgarten prizes of \$300, \$200, and \$100, respectively, were awarded, the first to E. Irving Couse for his picture, called "The Peace Pipe"; the second to Louis Loeb, for his picture of "The Mother"; and the third to Will Howe Foote for "The Blue Vase." The Hallgarten prizes are for "the three best pictures in oil colors painted in the United States by American citizens under thirty-five years of age." The Inness gold medal, which is presented by George Inness, Jr., in memory of his father, and is awarded to the best landscape in the exhibition, was won this year by the painting called "Gloucester Harbor," by Walter Clark, A. N. A.

Most of the art critics seem to regard this year's display as distinctly in the line of advancement. The *Commercial Advertiser* says: "Despite the many things that have no right to be present, there are others by the younger men clever, artistic, and healthy. Irving Couse, who obtains the first Hallgarten prize with his "The Peace Pipe," has given a serious study of the North American Indian, painting a group of three braves seated on the ground, smoking. It is a thoughtfully considered work, excellent in color and valuable historically, for few men have given the picturesque Indian attention. Walter Clark has done nothing more serious, nor has he been more successful than with his 'Gloucester Harbor,' which has

been awarded the gold medal given in memory of the late George Inness. Upon quite a large canvas he has arranged a twilight view of the port, diffusing over the place a tender, sentimental light, enveloping the whole in an atmosphere of much poetry."

The *Tribune* says that Mr. Elliott Daingerfield's "The Story of the Madonna" is anything but a perfect work. "In the arrangement of his figures and in the character of the architecture with which he has partly filled the background, Mr. Daingerfield seems to be aiming at some such formal arrangement as we associate with the earlier Tuscan painters, but the spirit of the portraiture here is essentially modern, the rolling landscape seen beyond the building in the design is also more naturalistic than conventional in treatment, and so we get an unfortunately mixed impression, where the motive of the composition should have imposed a certain unity upon the scheme. The latter should have been either ancient or modern, not tinctured with the flavors of both the past and the present. There is genuine feeling in this work; it has dignity and tenderness; it is painstaking and meritorious if not brilliant."

One of the most striking canvases, according to the *Times*, is Mr. Irving R. Wiles's portrait of Julia Marlowe. "This may be held to be the masterpiece of the painter, whether regarded as a portrait or a piece of technical work. The popular actress is seated on a sofa looking intently straight out of the canvas. The textures of gown and sofa are remarkable, and the expression is perfectly true to life, giving the individuality of the sitter as nearly to perfection as any one could wish. Mr. Wiles has known how to bring the portrait to a high finish without making it tiresome, and to carry the still life in it to a high point without making it tawdry." The *Tribune*, on the other hand,

From the Tribune

THE PEACE PIPE, BY E. IRVING COUSE

ONE OF MY FRIENDS
BY CLARA MCCHESENEY

calls this portrait "cheap, tawdry, and lacking in distinction." The *Evening Post* says that the place of honor is appropriately given to this portrait, adding: "A few years ago that distinction would not have been of especial artistic import, but with the raising of the standard of that conservative body, so increasingly noticeable since they began exhibiting in their present quarters, it is an honor to be coveted. In the matter of facility Mr. Wiles has distinctly beaten the popular portrait painters on their own grounds, and unto that he adds a human quality which they, for the most, seem to ignore. The sitter is alive, blood flows through her veins, and one feels that she could, nay, will, stand up and come forward to greet you as you enter the room. It is the woman and not the actress Mr. Wiles has painted. She looks no part, is not posing, but seems to be enjoying the privilege of being a private citizen like the rest of us, leading her own life for the moment, and thinking her own thoughts."

From the Tribune

THE MIRROR, BY FRANCIS C. JONES

The Outlook for Art

THE GROWING APPRECIATION OF ART—THE TRIUMPH OF THE LANDSCAPE

IN the January *Art Interchange* we find two hopeful views of the outlook for art, one by Mr. William Ordway Partridge, the other by Mr. Rafaelli. The former says that the most encouraging thing is the growing appreciation of really fine, aspiring art work among our people.

"Where a generation ago there was little recognition of its educational value or refining influence, today we see and feel a public appreciation on every hand. Millions are now becoming critical. The love of the fine and the beautiful is coming to have a place in the hearts of all our people, who in former years too frequently either looked on art and beauty with indifference, as of no practical value, or as something enervating and injurious, instead of a perpetual inspiration to higher life and thought. The transforming influence of art is very marked. A man comes to love the beautiful, and his neglected garden receives his attention; his home is beautified; by and by art works come into it, and a new delight grows in his soul. He has been helped into a fuller and richer life and at the same time he has helped those about him. The presence of this spirit is rapidly transforming our land, and it is also calling for great public works and noble statues, memorials, and art creations. The past quarter of a century has been almost revolutionary in its influence on the public mind, touching art and its value as a real living force in our midst—a force for manhood and for progress."

Mr. Rafaelli states what he believes will be some of the specific characteristics of the art of the future:

"The future of art will be in the expression of life. We are all searching for life. We artists go out to nature to find movement, to find life. An artist can

always give a logical reason for what he does. I have changed the scenes of my pictures. I paint city scenes—and why? Because there is more visible life in the city. Life will be the watchword for art in the twentieth century!"

Mr. Rafaelli goes on to say that the twentieth century will see the triumph of the oil painting, especially the landscape.

"The present shape of the picture and oil painting dates from the fifteenth century. The Japanese, the Chinese—all the Asiatic people—did

not know oil painting. Today every man of moderate means has a picture, or pictures, hung on his wall. The pictures are transportable. It amuses the owner to contemplate them in different lights—to give them a new life. The oil painting also tells a tale, leads the imagination to create scenes of life. The picture of the future is the landscape—the landscape with the moving world. Every future picture will have the spark of life which makes life vibrate. Our great artists have their works teeming with life, although humanity plays no part in them. Life is in the atmosphere, life is in the constant change of color—in color itself. Nothing in life is inanimate, and the artist who gives us the spark of life in what we choose to call inanimate life is the artist of the future. The school of landscapes in the century which has just ended has been admirable. The artist has found his inspiration in landscapes. It has expressed his thirst for liberty, his thirst for individuality."

Sully-Prudhomme, Idealist

HIS MOST POPULAR POEM—AN ANALYSIS OF HIS GENIUS

SULLY-PRUDHOMME has expressed his intention of applying the \$40,000 Nobel prize recently awarded him to the purpose of aiding young poets of promise to publish their works. A contributor to the *Figaro* imagines the embarrassments which this benefaction might carry with it. Since a single poem of Sully-Prudhomme's, "The Broken Vase," represents to the general public his poetic accomplishment, much as Longfellow was to many the author only of "The Village Blacksmith" or "Excelsior," the *Figaro* writer pictures Sully-Prudhomme beset by readers of "The Broken Vase"—this one for a publisher, that one for ten francs. The skit closes with the winner of the Prix-Nobel falling upon the first vase at hand and smashing it to pieces, as he says: "That does me good, at any rate, now I've really broken one." The famous *Vase Brise* also suggested the boulevard witicism on the award of the Nobel prize: "*Tiens!* Sully has now wherewithal to mend his broken vase."

The London *Academy* expresses its dissatisfaction with the award of the Nobel prize as follows:

How, we ask ourselves in wonder and dismay, was Tolstoy passed over? For, after all, the prize was intended as the acknowledgment of genius endorsed by all Europe. It was also intended to reward a sustained strife after the ideal.

And who today answers to the description of European, of mighty genius, and of sustained ideal aim but Tolstoy? Ah, but in all things we must reckon with human cowardice, with political interests, with the terrors of the little of the angers of the great, and with intrigue. Sweden could not afford to offend the czar, and Tolstoy is not a figure of delight to the imperial gaze.

However, since Tolstoy could not have the prize, the *Academy* is pleased that it has been awarded, "if not to a colossal genius, at least to real genius, instead of to a trumpety Rostand or a cheap Echegaray, which might have happened."

For Sully-Prudhomme is a poet of delicate and exquisite genius. His aim is consistently towards the ideal. He is never likely to reach the ear of the multitudes, even in his own country, for the tones of his lyre are too deep and intimate; of a tenderness too unfathomable and too opposed to the fragility and coarseness of common human sentiment. He is too spiritual, too lofty, too remote from the average meannesses of mankind, and the essential quality of his poetry is the profound and absolute expression of the inexpressible, of the intangible, of the unuttered intimacies of the heart. The lesson of life he holds to be disenchantment and discouragement, and our only sustenance lies in the exercise of thought, of strife toward the ideal, strife after virtue, lofty moral ethics, in the intangible joys of the mind and the soul.

According to this writer, the most charming part of Sully-Prudhomme's work is not contained in those lofty or intellectual flights which constitute his greatest achievement, but in his delicate and lovely little songs, and his perfect sonnets, in *Stances et Poems*, *Vaines Tendresses*, *Les Epreuves*, *Solitude*. Although his poetry is distinctly personal, this writer says it is only in the very discreetest way autobiographical. "What he seeks to express are the sufferings and joys common to us all. Never was poet less noisily sentimental, more suggestively intimate, and never was a French poet more chaste, more innocently romantic. His sole conception of love is marriage; it is the young girl he hymns, and only sees in her the wife and the mother. All other kinds of love, adulterous or venal, inspire an invincible repugnance."

Modern German Poetry

CARL BUSSE, in *Deutsche Monatschrift*, Berlin. Translated and Condensed for PUBLIC OPINION

THREE periods are easily discernible in our modern literature, the first in the seventies, which was generally pessimistic and materialistic. It was a period of organization and "culture-struggle," while the pessimism of Schopenhauer and the materialism of Büchner on the one hand, and the revived songs of Tannhäuser and Offenbach's pieces of senseless music on the other hand, held sway in Berlin. In the eighties there was the non-German naturalism and the eternal worshiping of Zola, Dostoevsky, Ibsen, and other divinities. At the end of the century German poetry fell once more, through the influence of Nietzsche's naturalism, the standpoint of *l'art pour l'art* gained upperhand, mysticism and symbolism was strengthened, while Baudelaire, Verlaine, Maeterlinck, and D'Annunzio encouraged it all. It is also questionable whether in the present monarchical régime poetry has in any way improved.

Considering that all German verse must be directed toward the unification and strengthening of the empire, for the glorification of the Fatherland, it may be argued that no age has as yet brought forward entirely satisfactory poetry. An uninterrupted national poetry will then be established when the national spirit

among the people is complete and all indifference done away with. To this end literature itself should strive, for in helping thereto it will help itself. A thousand-fold would she receive of what she would at present give. But shall this national literature engage itself with Bismarck songs, with the army and the tri-colored navy? In other words, shall it become what is ordinarily termed patriotic? Nothing but short-sighted folly could expect it. What is wanted is a poetry strongly moral, which could also strengthen the morals of the country, a poetry which, peculiar to ourselves, could bring us a distinct national character. This and only this would be a national poetry in the higher sense of the word. Such a national enthusiasm, the inspiration of which begets more inspiration, can be found in Kreis von Heidelberger. Grimms and Uhland, Eichendorff, and Achim von Arnim well exemplify the work of national poetry.

Whoever forsakes this high standard of morality has nothing but the grave in view, and, like Kleist, the pistol-shot to end his life. For the same reason Hebbel wrote in his diary on March 19, 1842, "I have developed my talent at the expense of my manhood, and what appears in my dramas as flaming sufferings of life really occurred in my own life as a terrible unholy fire which destroyed me and all that were dear to me." Thus it is with all who forsake the national ideal and betake themselves to selfish ways.

Various Topics

A FRENCH THEATER IN NEW YORK: The proposal to establish a French theater in New York has aroused more comment in Paris than over here. M. Antoine, of the celebrated Theater Antoine, said in a recent interview: "I feel sure that the keen, impressionable, and, above all, logical instincts of Americans will enable them to appreciate and enjoy what is wholesome, sterling and humanitarian in the character of the French stage, of which our younger school of authors and actors are so bravely working out the evolution. There is plenty of young blood and vigorous talent among our young authors, our young actors, and especially among the young actresses, to make the enterprise a success."

OUT WEST: Under this new title Mr. Charles F. Lummis's magazine, *The Land of Sunshine*, begins its sixteenth volume, enlarged in size and scope. The January number opens with a poem by Sharlot M. Hall, in praise of the west, from which we quote the following:

The wanderers of earth turned to her—outcast of the older lands—
With a promise and hope in their pleading, and she reached them pitying hands;
And she cried to the Old-World cities that drowse by the Eastern main;
"Send me your weary, house-worn broods and I'll send you Men again!
Lo, here in my wind-swept reaches, by my marshalled peaks of snow,
Is room for a larger reaping than your o'er-tilled fields can grow.
Seed of the Main-Seed springing to stature and strength in my sun,
Free with a limitless freedom no battles of men have won."

For men, like the grain of the cornfields, grow small in the huddled crowd,
And weak for the breath of spaces where a soul may speak aloud;
For hills, like stairways to heaven, shaming the level track,
And sick with the clang of pavements and the marts of the trafficking pack.
Greatness is born of greatness, and breadth of a breadth profound;
The old Antæan fable of strength renewed from the ground
Was a human truth for the ages; since the hour of the Eden-birth
That man among men was strongest who stood with his feet on the earth!

SCIENTIFIC

The Eyes of Mammals

London Spectator. Condensed for PUBLIC OPINION

S eyes are the only part of the body built, not only on mechanical principles, but with the geometric outline of lenses and curves which we see in purely mechanical inventions like the telescope, great variations in different eyes are rather in the nature of the unexpected. The long and careful research and examination of the eyes of mammals by Dr. George Lindsay Johnson, M.D., F.R.C.S.—“The Comparative Anatomy of the Mammalian Eye”—the results of which form one of the most interesting of recent contributions to the Philosophical Transactions of the royal society, disclose variations in the fundamental parts of the mammalian eye of the most striking and suggestive kind. The part of the organ on which he has concentrated his attention is what is called the *fundus oculi*, or so much of the back of the eye as can be seen with the ophthalmoscope. The retina lies behind the eyeball much as the cup of an acorn lies behind the acorn itself. The optic nerve enters this as the stalk connects with the acorn cup, and the part at which this juncture takes place is called the “blind spot,” for there the little sensitive cones and points are absent. Close by is another spot called the macula, or “yellow spot,” which is extraordinarily sensitive, and the only seat of exactly true images. The pattern and colors of this *fundus oculi* vary from scarlet in European to chocolate in the Nubian. In the lower orders it appears as orange, yellow, salmon-pink, black with scarlet patternings, green and gold. It is pale yellow in the skunk; slate color in the “meerkat”; greenish yellow veined with red in the common jennet; and salmon pink spotted with black in the Australian fruit bat. But orange and red are the main colors, though the arrangement of these is varied.

The mere collection of facts is most remarkable, and not less so the skill, which overcame the difficulties in the way of examining with an instrument like the ophthalmoscope, which must often be almost in contact with the most sensitive of organs, the eyes of no less than a hundred and eighty-two species of mammals, including the large carnivora. Nine out of eleven orders were examined, only the whales and manatees being omitted. The total catalogued amounts to a hundred and three genera and forty-seven families.

The result may be summed up as follows: It was found that the type was constant in the different orders, and though no classification is trustworthy if based only on one organ, the correspondence of this background with the latest classification of mammals was very close. The carnivora have the same type, so have the various races of man, though the color varies. The different races of monkey agree in this part of the organ, and where in other families or orders there are differences, these differences correspond very closely with doubts already existing as to their classification.

From the point of view of the evolution of eyes and their form in early and late types, the elephant takes an archaic place, and the ant-eaters possess a still less developed eye. The bats, which are often placed very high in the list of mammals, have an eye corresponding in low development to their apparently

“prehistoric” place. So far from being of “very limited interest,” as Haeckel remarked, it is clear that the story and development of the vertebrate eye is full of interest and suggestion.

Many and curious are the points noted on the way in this inquiry. Many of the lower animals have the power of drawing in and sticking out their eyes. Moles, for instance, can protrude their tiny eyes (which nevertheless enable them to see) three diameters. Yet a mole’s eyes are so insignificant in the general structure that if the mole is flayed they come off with the skin. The *fundus oculi* of the European, which heads the list of illustrations, is of a brilliant scarlet, curiously veined. That of the Negro is chocolate color, and is so like that of the chimpanzee that one might be mistaken for the other. There is as much difference between these and the background of the European eye as between a red coral and a cocoa-bean.

In the center of the line of vision in the eye of man is the “macula,” or yellow spot. All parts of the retinal image which fall on this are exact and sharp. It is the point where exact discrimination of distance is made. It appears that this seat of accurate images bounded by a reflex ring is present only in man and in all the apes. In the other mammals this absence is made up by an increased sensitive area. Some views as to the means of color perception follow naturally from the discovery of these very various tints in the *fundus oculi*. Dr. Johnson sees a similarity in the device used by Lippmann, and the conditions he finds in the eye. Lippmann obtained negatives in natural colors by placing a reflecting mirror or trough of mercury behind, and in direct contact with the sensitive film of the plate, thus reflecting the light which had passed through the translucent film on to the particles of silver bromide, the color effect being obtained through “interference.”

“If we may venture to carry our analogy farther,” says Dr. Johnson, “we may presume that we owe our color sense to interference also. The difference between Lippmann’s method and that of nature is that in the latter the reflecting surface is always colored, and reflects incident light of different wave-lengths unequally. In ourselves red and orange are the colors reflected to a greater extent than others, and they are certainly the colors which we see fullest and best.” Observations on the powers of animal vision are found incidentally throughout the more structural notes. The greater number have long sight. Short sight is very rare; but astigmatism is common and adapted to a definite end. Thus in the seals the eye is astigmatic, and the refraction varies according to whether the eye is adjusted for seeing in air or in water. Domesticated animals show no such constancy in the *fundus oculi* as the wild fixed species. It differs from the color of the same part in the wild species from which they are derived, and from that in others of the same tame race. Domesticated dogs show variations in every individual, but they all have round pupils like wolves and jackals, not contracted pupils like foxes, and only the raccoon dog of the wild breeds has the foxy eye. The chow dog has an eye unlike any other of the carnivora.

The Smallest Known Vertebrate

H. M. SMITH, in *Science*, New York

THE United States has borne the distinction of having, in certain cyprinodont fishes of the southern states, the smallest known fishes and at the same time the smallest known vertebrates. Thus, *Heterandria formosa* (Agassiz), found from South Carolina to Florida, has an average length of 25 mm. for females and 18 to 19 mm. for males. *Lucania om-mata* (Jordan), recorded only from Florida, probably never exceeds an inch in length; two males, the only ones thus far found, measured 19.5 and 20 mm., and two females from the same locality were 20 and 22 mm. long, exclusive of caudal fin. Another diminutive member of the cyprinodontids is the well-known viviparous *Gambusia affinis*, the adult males of which sometimes barely exceed 12.5 mm. in length, although the females reach a length of 50 mm. The pigmy per-coidean, *Elassoma evergladei* (Jordan) of the swamps of Georgia and Florida, ranges from less than 20 mm. to a maximum of about 33 mm. in standard length, and several of the darters are no longer.

The United States fish commission has recently received from the Philippine islands numerous specimens of a species of fish now to be described which has a maximum size less than the minimum adult size of most of the foregoing species, while the minimum and average sizes for mature individuals are thought to be less than those of any other known fish or other vertebrate. The specimens were obtained, through the courtesy of the surgeon-general of the army, by medical officers connected with the military hospital at Buhi, southern Luzon, in the department of Camarines Sur; and were collected in Lake Buhi, to which the species is said to be peculiar. The fish is a member of the great cosmopolitan goby family, of which upwards of 600 species are known; and exhibits peculiar characters which necessitate the creation of a new genus for its reception. The diagnostic features of this genus, for which the name *Mistichthys* (the smallest) is proposed, are coalescent ventral fins not adnate to the abdomen, two well-separated dorsal fins of which the anterior contains three weak spines, a single series of conical teeth in each jaw, body covered with large ctenoid scales, and an elongated genital papilla by the shape of which the sexes may readily be distinguished.

This species, to which the name *Mistichthys luzonensis* is given, is apparently nearly transparent in life, with a black chin, a black median line behind the anal fin, and a few black spots on the back. It is probably viviparous or ovo-viviparous; but while many of the specimens contain ripe ovarian eggs, no eggs exhibiting evidences of development have been found. The females are slightly larger than the males, and average 13.5 mm. in length; the maximum for egg-bearing fish is 15 mm. and the minimum less than 12 mm. The average length of males is about 12.5 mm., the maximum is 13.5 mm., and the minimum is under 10 mm. The average length of 50 specimens taken at random, both sexes about equally represented, was 12.9 mm.

A fact of more than ordinary interest in connection with this diminutive species is that it is a food-fish of considerable importance. Dr. George A. Zeller, acting assistant surgeon U.S.A., writing from the military hospital at Buhi, says:

"I enclose herewith samples of a strange article of diet greatly relished by the Bicolos, among whom I have been stationed for the past eighteen months. Rice and fish are the staple articles of diet for most Filipinos, and in the provinces of the Camarines there is little variation from these two. Fishes of every size and many varieties are prepared in every conceivable form, but the samples enclosed are unique in that they are found here and nowhere else. Many varieties of fish abound in the lake, but by far the most numerous are these minute specimens. They are called in the native Bicol tongue *sinarapan*, and when dried in the sun on a leaf are called *badi*. They are caught by a large sheet of close web, which is dipped under wherever a school congregates. They are put into tightly woven baskets from which the water soon drains, leaving a compact mass of fish. They are not minnows or immature fish. They are adults and attain no greater size."

A Study of Bridge Deflection

January Engineering Magazine

AMONG the numerous valuable papers presented at the mechanical congress at Paris was one by M. Rabut, chief engineer of the ponts et chaussées, upon the experimental study of bridge deflections. This paper, together with the discussion, is now made generally accessible in the pages of the *Revue Generale des Chemins de Fer*, and will be found to contain much of interest. It is not unusual to determine the total deflection of a bridge-girder or truss under a maximum loading, but M. Rabut goes much farther, and employs an automatic recording device, which enables not only the extent but the duration, and general nature of the deflections to be obtained in form for permanent study and preservation.

The design of such a recording device is simple, but its construction involves a number of minor details which must be considered if satisfactory results are to be obtained. In the various forms of apparatus suggested by M. Rabut, and made by such accomplished mechanicians as Bourdon, Usteri, Schroeder van der Kalk, and Kist, the deflections are multiplied by levers, and recorded upon drums moving with a determinate velocity, so that the time-sequence of the deflections is recorded on a scale sufficiently great to be clearly intelligible. Without going too fully into the details of the method and apparatus, it will be of interest to examine some of the results which are attained.

When a bridge is subjected to a continual traffic consisting of a variety of loads and impacts, it is in a continual state of tremor. This is the case with the city bridges over which is pouring the multitude of omnibuses, carts, wagons, carriages, and foot passengers. In such instances the diagram is practically uniform, consisting of a definite number of vibrations per second, varying occasionally in amplitude, but sinusoidal in form, and representing, undoubtedly, the period of vibration of the span or beam, just as the string of a musical instrument has its note. This is clearly seen in the diagram made by the application of the recording instrument to the Saints Pères bridge in Paris. The vibrations are seen to be regularly four every second, and are almost as uniform as those of a tuning fork. When a highway bridge is subjected to a heavy moving load, concentrated within a limited length, the action is clearly indicated in the dia-

gram. Thus the passage of a heavy road roller over the Lépine bridge shows the manner in which the deflections increase in amplitude, and change in character as the weight moves across the span. The recording apparatus shows also very clearly the effect of a small number of men keeping military step. A diagram produced by the passage of sixteen men in military step over the Lépine bridge at Paris shows a far greater amplitude in vibration than that produced by a heavy road roller, the period of vibrations remaining practically unchanged, although the amplitude was increased.

The effect of the passage of a railway train is naturally altogether different from that of the loads on a highway bridge. The sudden impact of the train is followed by a rapid recovery, and this again by successive undulations, gradually passing away as the train passes on. The periodicity of the bridge itself is practically lost in the heavy external forces and the extent and nature of the record depends upon the magnitude and suddenness of the impact. M. Rabut gives a number of such diagrams, showing the effect of various speeds and loads, and his researches enable the action of moving loads on bridges to be studied intelligently.

The Hygiene of the Bed

"THE BED FOR HEALTH"

AN article by Anton Leister, in *Good Health*, gives the results of the author's observation of and investigation into what sort of bed and bedding is most conducive to health. Following is part of the article in question:

The chief function of a bed is to keep the proper bodily temperature during the night—just as the day clothing regulates that temperature during the day. If this principle be admitted, then follow certain deductions: 1 The amount of bedding, as of clothing, must change with the seasons and with the extremes of temperature from day to day. 2 The bedding, like the clothing, should be porous, to admit air to the skin and to emit skin emanations. 3 Bedding must not be excessive in quantity, or, like excessive clothing, it will debilitate the skin and weaken the body. 4 The bedding, like the clothing, must be distributed over the body, not equally in amount, but according to the physiologic needs of the different parts of the body as to temperature, and circulatory and respiratory stimulation.

This last is the most important point of all, but also the point that has been altogether disregarded. The bed, as usually made with heavy mattress, quilts, etc., absorbs and retains all the body-heat, and before morning becomes practically a dry "hot pack," applied to the spine and cerebellum. Even if the covering blankets are light and porous, the heated mass of material below acts as would a heavy pad of wool or felt worn on the spine during the day—greatly overheating that important part of the body.

From this nightly unequal heating of the parts of the body, from the constant overheating of the spine, there result various temporary or chronic physiologic disturbances. Broken sleep, increased rate and tension of the pulse, a general weakening of the system from cerebral and spinal congestion and debilitation, and other bad effects. Theory points to a bed of the same texture and thickness below as above. Actual

practise has shown that this desired result is best attained by a spring wire bottom (sheet, not the upright evils), with porous blankets laid on it—just enough thickness to prevent chilling from below. In this way the heat from below can be regulated as well as from above. The overheating of spinal and cerebral nerve-centers, with resulting injurious unbalanced circulation, is prevented.

Four Questions Regarding the Sun

ALBERT BATANDIER, in *Cosmos*. Excerpt

WE ask regarding the sun a fourfold question: What is the quantity of heat that it sends to the earth; what is the quantity that it sends out into space; what is its temperature, that enables it to produce such enormous effects; and, finally, how is its heat kept up and preserved? It is not difficult to measure the quantity of heat that the sun pours on the earth. Herschel found, at the Cape of Good Hope, that in one minute a vertical sun could melt a layer of ice 0.1915 millimeter (about 1-125-inch) thick. Pouillet, trying the same experiment at Paris, obtained the figures 0.1786. There is a difference between the two, but it is easy to explain it by the difference of permeability of the atmosphere and by local conditions. If we take the average, or 0.1850, we reach the result that in one hour the sun's heat is capable of melting a layer of ice 1.11 centimeters (about 1/2-inch) thick. But this value is much below the truth. We measure thus only the effect produced by the sun's heat on the surface of the ground; now to reach us the rays must traverse the atmosphere, which abstracts a great part of the heat. This is shown by experiments made at various heights. . . . If, then, we could do away with the atmosphere, the earth would receive on its surface almost twice as much heat as it does now. If we could distribute this uniformly, the amount received in one year would be sufficient to liquefy a shell of ice 30 meters (nearly 100 feet) thick around the entire globe.

A Trolley Omnibus

Electricity, New York

RECENTLY an electric trolley omnibus line was placed in operation in Germany which has given exceedingly good satisfaction for the purpose it was intended. The line is nearly 12 kilometers long and extends through the beautiful valley of Bielabach, from the village known as Konigstein to Hutten and Konigsbrunn. In passing another electric bus it is, of course, necessary to remove the trolley poles, while in passing other vehicles it is only necessary to steer to one side, as the poles are of sufficient length to allow a side movement of three meters from the trolley line. The controller is similar to that used for street cars of small size. The storage battery was suggested, but given up as being too heavy and costly, both in first cost and maintenance, all things considered. A speed of 12 kilometers per hour is usually maintained, and the vehicles will hold twenty-one persons. The under-running trolley was decided upon as the most advantageous from past experience, and for country use this is claimed to be an ideal construction where a cheap means of transportation of passengers and freight is desired. Trailers for freight have been used with good results.

RELIGIOUS

The Passing of Evangelism

THOMAS CHALMERS, in the January *Bibliotheca Sacra*, Oberlin, Ohio
Condensed for PUBLIC OPINION

THERE are indications that the era of evangelism is passing, and it is natural that it should. Some form of evangelism must have a perpetual place, but it will not determine, as it has done, the character of our Christianity. Among the indications of a transition, we mention the general apprehension that the days of the great revivals are gone. Mr. Moody's successor is not looked for. Denominations that have depended most exclusively on evangelism express alarm that they have ceased to progress or are losing ground. The denominations, on the other hand, like the Lutherans and Episcopalians, that depend more on parochial than on evangelistic efficiency, are in the ascendant. Greater attention is being given by all our churches to the care of the local parish. This is shown by the awakening interest in the catechumenate. Some two dozen catechisms of various types have been prepared by Congregational pastors alone, and pastors' classes for the moral and religious instruction of the young are becoming general. Efforts have been made on a considerable scale for a decade past by institutional churches to meet the social and spiritual needs of the parish. These churches have been so far—at least in the cities—the best exponents of the parish idea. They have ignored denominational lines and have sought to serve the community. There is no churchless Roman Catholic population in this country worth speaking of. The parochial efficiency of the Roman church prevents it. The heathenism of this country is ours, and it is judging the Protestant church.

That our American Christianity in its parochial efficiency falls far behind that of Protestant Europe is no matter of surprise. We have been engaged hitherto in another, and in many respects greater, task—the evangelization of a continent. We have been gathering congregations, awakening the memories of past religious teaching in men who have abandoned Christianity. We have been building churches in towns that had none, and planting Sunday-schools where there were no churches. The work that needed doing was a work that hurried us, and we have had little patience with quiet and more permanent methods. We have had to have immediate results, because we have feared, and with some justice, that if we did not get immediate results we would get none.

Inasmuch as the difficulties bequeathed to us by an age of denominationalism are so great that we can not hope for a parochial efficiency equal to that of other days and other lands, what do we mean by parochialization as applied to the United States? We will summarize our conclusions:

1 There should be an assumption of responsibility for territory that every Protestant family will find itself, with or without its consent, under the kindly persistent watch-care of a parish minister. 2 One of the laws that should go forth through our jungle should be that no denomination shall deliberately break into the well-cared-for parish dominions of another. Any doctrine, for instance, like that of apostolic succession, which serves as an excuse by which one denomination frees itself from the laws which govern others, and tramples without scruple upon their rights, is a grievous practical heresy, and the denomination that holds

it, is, to that extent, guilty of ecclesiastical sin. 3 Every church should guarantee the careful religious instruction, at some time in his life, of every child in its parish, and it should not rely upon the Sunday-school or the Christian Endeavor society for this instruction. 4 Some systematic means should be adopted by which the parish pastor may exercise what Professor Achelis calls the function of spiritual diagnosis; that he may become in the fullest sense what his name implies—the shepherd of a flock.

If, to what I propose, the objection is raised, that what might be done in a homogeneous Protestantism like that of Saxony would be folly if attempted in a heterogeneous Protestantism like that of New England, I answer, that the reason why the original homogeneous Protestantism of New England has become so heterogeneous is, because it has never fully valued the conserving qualities of careful parochialization.

The Week of Prayer

THE EVANGELICAL ALLIANCE OBSERVES THE FIRST WEEK OF THE YEAR

THE practise of setting aside one week of the year to be observed as a week of prayer was inaugurated by the Evangelical alliance formed in London in 1845. In the United States the week beginning with the first Sunday of the year has been named this year, although some of the churches have decided to change it to the week before Easter. We go to press too early to say much of the meetings in the different churches, nor is it likely that there will be anything of specific importance to chronicle. The noteworthy point is the fact that such services should continue to be arranged year after year. Of this phase of the subject, the *Advance* (Chicago) says:

"There are good reasons for continuing the old practise; it brings the members together in a union of prayer at the beginning of the year; it directs attention to our dependence upon God; should any special interest develop, there is a longer time in which to work before the annual summer break-up; it is in harmony with that spirit in men which seeks to make a new beginning with the opening of the year; it brings to our attention the wide and varied activities of the churches. The interest in such a season of prayer will depend very much upon the attention paid to it, and the preparation made for it. If there is little or no enthusiasm manifested over it, little can be expected from it."

"As the year opens, the urgency of national decisions and the penalty of national sins appear to every thoughtful Christian," says the *Congregationalist and Christian World* (Boston). "We have great responsibilities abroad which we can not lay down. At home we have difficult questions of race relation and growing social distinction to meet and solve. Large wealth, unfairly won in many cases, and quite unconsecrated in many more, threatens our domestic peace. The contest of good and evil in our cities can not safely be neglected. Various forms of mission work in which by gift or prayer or effort we have part make large demands upon us. There is much to

be done before we can fairly claim America as a Christian land. In the world at large it is still true that by mere increment of birth the non-Christian bodies are growing faster in proportion than the church by birth and by evangelism."

The indifference with which the week of prayer is now regarded is the theme of an editorial in the *New York Sun*, and that there is some reason for this view of the situation is indicated by the general lack of editorial comment in the secular papers. "Very few people know that this is that week; and it is probable that the attendance at the devotional meetings which will distinguish it will be small in this and all the other countries where it is celebrated. It has proved to be of little influence, and has been only a very minor agency in generating and cultivating the more fraternal spirit which now prevails among the so-called 'evangelical' denominations of Protestantism after a long period of rivalry sometimes acrimonious in its exhibitions. We hear from many parts of the country, perhaps from New England, more particularly, that this institution of the past is keeping up only a languid existence. Religious revivals of great intensity once received their impulse from the 'evangelical' prayer-meeting, and the time was when the week of prayer on which we have now entered proved to be such a stimulus especially; but we hear no more of 'great awakenings.'"

The Friars in South America

The Interior, Chicago. Excerpt

WHEN the American army took possession of Manila there were about seventeen hundred Catholic friars upon the various islands of the Philippine group. Of this number more than twelve hundred have emigrated, most of them going to South America, where they were more confident of a cordial welcome than in Europe. Happening just as the religious associations were exiled from France, they felt they were likely to find brief rest in Spain or even in Italy should they attempt to carry out their peculiar convictions of ecclesiastical privilege in either. Having for many years dealt with an ignorant and submissive people, they chose to make a home in such countries as afforded a clientele most resembling that which they had lost.

They are now busier than ever, especially in Brazil, forming new orders, organizing new societies, and by a thousand well-known devices separating the natives from their slender accumulations. They distribute showy medals and various insignia, each suspended by a gaudy ribbon from the neck or fastened in the buttonhole; and the disposition of such favors becomes a marked source of revenue. In Brazil their course has already excited no little opposition on account of their pronounced hostility to the free institutions of any country. They are especially denunciatory of civil marriage, obligatory though it is by the laws of the land; and in many places they have forced to live apart husbands and wives who have been married for years, because not married by a priest. And the most unreasonable thing is that when those compelled to put away their conjugal companions desire to avoid the boycott to which the friars subject them, they are not permitted to marry each other but are forced to select other mates. Such at least is the statement made by D. Leolinda Daltro in one of the Rio journals. It is even asserted in some of the papers pub-

lished in South American cities that the present disturbed conditions in many of these Latin republics are due to the intermeddling of these friars from the Philippines, who preach a crusade against all that is identified with democratic institutions or founded upon respect for popular authority.

An Australian Revival

WILLIAM EDWARD GEIL, in the *Christian Work*, Boston
Condensed for PUBLIC OPINION

JUST at this time, when the whole Christian church needs to have the inspiring news of a great revival, and as great an awakening, it occurs. That the present simultaneous mission, as it is termed by the central committee, is the most remarkable movement of its kind in the history of this commonwealth, there is no doubt. And the final visible result will likely be a new enthusiasm in all the churches of the city and the organizing of similar work throughout the whole continent. That such an effect is possible, including as it does about all the Protestant churches, is evidence of a change in the relationship of the churches to one another during the last few years. The somewhat similar campaign in England was originated by the national council of the federated free churches, under altogether different circumstances. There almost all the Nonconformist churches united to resist the progress of sacerdotalism in the churches. Here the Episcopal equally with the non-Episcopal go hand in hand.

Individual churches have increased the number of prayer services, then there have come together in the several districts (the city was divided into fifty sections) frequent gatherings for more interdenominational worship. Probably 50,000 homes have been visited, and nearly 100,000 printed pamphlets distributed in the residences of the city. A prominent feature of the mission is that while it is a united effort of the churches it is carried on largely outside of church buildings. As the chief aim is to reach the non-churchgoers, in most centers the churches have been abandoned in favor of other buildings. Halls have been leased, tents erected, open-air arrangements provided, and remembering the newness of the project and lack of practise on the part of the promoters, the preparatory work has been fairly well done. Every night preachers are heard in all sorts of unlikely places by all sorts of unlikely people. The open-air work is extensive; probably nearly two hundred meetings are held every night on the streets, and these gatherings attract more than the ordinary amount of attention because of the class of men conducting them.

The churches are throwing themselves into the work with unprecedented earnestness and zeal, not alone in the metropolitan area, but also in the immediate vicinity of the city. The largest of the tents is that at Hyde Park, where over two thousand get in and nearly as many stand packed under the edges. Services especially for children have been held with every evidence of success. The factories and warehouses away from the noon meeting places are to have services of their own, and the Y. M. C. A. has now a tent for a night meeting.

A PAPAL COUNTESS: Miss Annie Leary, of New York city, has been made a countess by order of Pope Leo XIII in recognition, not alone of her munificence along educational and charitable lines and her personal piety, but because of her unceasing efforts in behalf of the Church of Rome in America.

MISCELLANY

The Latin Quarter of Today

New York *Harper's Weekly*. Condensed for
PUBLIC OPINION

WAS sitting, the other night, at a little iron table in front of the Café d'Harcourt, which is, as everyone knows, in the Boulevard St. Michel, that artery of the Latin quarter. The sidewalks were crowded—long-haired art students in baggy velveteen trousers and impossible coats; bearded young fellows, of law or medicine, swinging along, three by three, like Dumas's eternal trio; the old, merry woman who sells newspapers—she was an opera-singer in the days gone—and *Bibi-la-Puree*, that draggled, half-mad old "student" of sixty; the lolling policemen; and always students, students—youth flaunting by with beauty hanging to its arm.

Will you make a little journey with me through the Latin quarter of today? We shall see how these

young men work, as well as play. If we dance with them for an hour at the Bal Bullier, we shall also accompany them to the schools and studios; and if we loiter under the stars that shine down into the Luxembourg gardens, with I know not what Mimi Pinson, we shall go, too, into one of those darkly serious clubs where very young men discuss very serious problems of sociology and politics and religion.

And when we come away and cross the river into the flutter of a brighter Paris, we shall have gained, perhaps, a little in wisdom and something in gayety. First of all, then, let us clearly understand that the Latin quarter is a place for study. It is a city of colleges and schools, where every possible subject may be studied, where the last word in every science and every art may be acquired. The burghers of this city are not school-boys. They are not as you and I were when we wore away our freshness at Princeton; they are not like the cribbed and cabined young fellows of Oxford or Cambridge. They have emerged from that period. They are no longer lyceans—*les potaches*, as the good slang goes—for they have assumed the toga. Like the student of the universities of Germany and Italy, they are men who have come up to perfect themselves in the knowledge of a chosen profession—be it law or medicine, literature, engineering, art, or

any one of a score of special fields of learning. Every year they come up from the cities and hamlets and green country-places of France in their thousands.

In addition to the French students, there are, of course, many hundreds of foreigners who enter these open doors—for he who will may study here. The Jew from Galicia may take a course in the Talmud, if he will; the Chinese may study their own language; the Calvinist may instruct himself in Protestant theology. And all this is free, with the exception of a few slight tolls too insignificant to mention—at most six dollars a year for certain recondite courses. So the young men gather from Greece and Italy, from Roumanian lands, from the Orient, from all Europe, England, and the Americas. Once they have entered themselves as students they are rightful burghers of the Latin quarter. The students form a state within a state. They have a photographic "card of identity," which is an "open sesame" in all Paris and in all France. By showing this card the student may enter all the subsidized theaters free, and the others at half-price; this card vouches for his credit at his butcher's or his baker's or his tailor's, and entitles him to a tolerably big reduction on the price-current; it gives him a half-rate on the state railways—in fact, it gives him almost the "freedom of the city." When Mon-

sieur le Président or Monsieur le Ministre de la Guerre gives his reception, you and I, who are by no means insignificant persons, will have to nobble all sorts of officials to get cards, but the good student goes in as though he were an ambassador. The doors of the salon swing wide to him. He is a privileged person, indeed. Your Roumanian, Scot, Greek, Englishman, or smiling black from Hayti becomes forthwith a burgher of the Latin quarter; he is of it; he patters the slang of the students, and wears the neckties of the Boul' Mich; but few of the Americans who enter themselves as students in the books of the schools ever enter the real life of the quarter. They walk around the edge of it, taking snapshots with American-made cameras. They do not live in garrets under the stars. They live in the boarding-houses of the Rue Léopold-Robert. Some of them ride boldly in cabs—think of it!

British Coronation Robes

PRECEDENTS FOR KING EDWARD, VII

HOWEVER far back we trace the history of the coronation robe, we find the same importance attached to its splendor. A writer in the *London World* thus describes some of the coronation robes of Britain's sovereigns: "From a very early period purple appears to have been the favorite color for the royal apparel. Its introduction into this country dates far back, and we find Witlaf, king of Mercia, directing the secretary of Croyland abbey to make the purple mantle which he wore at his coronation into a cope, 'to be used by those who minister at the holy altar'; and when Athelstan was crowned at Kingston-upon-Thames he was arrayed in a purple vestment. One of the coronation robes of Henry III is ordered to be of 'the best purple samite, embroidered with three little leopards in front and three behind'; and in the 'Device' for the coronation of Henry VII details are given of the surcoat of 'purpill velwett close or open' to be worn by his majesty. The coronation dress of Queen Mary, royal consort of James II, was of purple velvet, furred with ermine, and looped with ropes and tassels of pearls; and in the ceremonies to be observed at the coronation of her late majesty Queen Victoria it is directed that at the conclusion of the service she shall be 'disrobed of her royal imperial mantle, or robe of state, and arrayed in her royal robe of purple velvet by the lord great chamberlain.' But Edward I, making a precedent for himself, never wore his crown after the day of his coronation, and preferred to the royal garments of purple the dress of a common citizen. Whether by accident or from it being the proper color for the day, Charles I changed the usual purple robe for one of white satin, which was regarded as ominous of his having drawn upon him the misfortunes predicted in days of old for the 'white king.'"

The royal vestments worn by Richard III were on a gorgeous scale, in a measure due, perhaps, to his love of finery. Planché records how Queen Mary, at her coronation ceremony, was attired in a corset of purple velvet, and after being anointed was clad in a robe of white taffeta and a mantle of purple velvet furred with ermine; and the same source gives a full account of Elizabeth's coronation robes, which were most costly, one consisting of cloth of gold, trimmed with gold and silver, furred with powdered ermines, with an embroidered mantle of silk and gold.

The Day and the Deed

By BENJAMIN FRANKLIN, Born January, 16, 1706

"Pride that dines on vanity sups on contempt. Pride breakfasted with Plenty, dined with Poverty, and supped with Infamy," so Poor Richard says. And, after all, of what use is this pride of appearance, for which so much is risked, so much is suffered? It can not promote health nor ease pain; it makes no increase of merit in the person; it creates envy; it hastens misfortune. And what madness it must be to run in debt for superfluities! You give to another power over your liberty. If you can not pay at the time, you will be ashamed to see your creditor; you will be in fear when you speak to him; you will make poor, pitiful, sneaking excuses, and by degrees sink into downright base lying; for "Lying rides upon Debt's back," as poor Richard says. But poverty often deprives a man of all spirit and virtue. "It is hard for an empty bag to stand upright." "Those have a short Lent who owe money to be paid at Easter." Gain may be temporary and certain, but ever while you live expense is constant and certain. "Rather go supperless to bed than rise in Debt." This doctrine, my friend, is reason and wisdom; but, after all, do not depend too much upon your own industry and frugality and prudence, though excellent things, for they may all be blasted without the blessing of heaven; and therefore ask that blessing humbly, and be not uncharitable to those that at present seem to want it, but comfort and help them. Remember, Job suffered and was afterwards prosperous.—From "Poor Richard's Almanack."

Various Topics

"TO EXCHANGE ANYTHING FOR ANYTHING," is the motto and purpose of the *National Exchanger*, a paper just started in Washington, D. C., as a medium for barter. For example, if Jones has an incubator which he wishes to exchange for a bicycle, he is here given an opportunity to communicate with Smith, who has grown tired of his wheel and is yearning for chickens.

CHILD-SETTLERS FOR SOUTH AFRICA: A writer in the current *Nineteenth Century* thinks it both possible and advisable for England to do in South Africa on a large scale what Dr. Barnardo has been successfully doing in Canada for many years, i. e., to transfer as many as possible of the destitute children, who are physically fit and of suitable age, to South Africa, there to be educated and trained for colonial life.

THE NEXT HEIR TO THE DUTCH THRONE is the young grand duke of Saxe-Weimar, one of the richest royal personages in Europe. He is the grandson of the late Grand Duchess Sophia. Next comes Prince Albert of Prussia, the regent of Brunswick, who is also exceedingly wealthy, as, in addition to his father's fortune and large estates, he inherited about eighty millions of marks from his mother, the Princess Marianne of the Netherlands. Prince Albert has three sons, so there is really no prospect of a failure in the male line of the house of Orange.

"YOU CAN'T MAKE A DOCTOR OF A WOMAN," is the opinion of one of the trustees of Northwestern university, expressed in connection with the announcement that the Woman's College of Medicine is to be abandoned and that its buildings are for sale. Trustee Raymond continued: "It is impossible to make a doctor of a woman. Women cannot grasp the chemical and pharmaceutical laboratory work, the intricacies of surgery, or the minute work of dissecting. In our women's medical department we do not get as high a class of scholarship as is set by the other colleges in the university."

THE NEWS OF THE WORLD

MONDAY, JANUARY 6

DOMESTIC.—Both houses of congress reassembled after the holiday recess, but transacted no business, adjourning immediately after the announcement of the death of Senator Sewell....The president accepted the resignations of Secretary Gage and Postmaster-General Smith....The United States supreme court decided that the Gaynors must be taken to Georgia for trial, and refused to grant the writ of habeas corpus asked by Oberlin M. Carter....Dr. Nicholas Murray Butler was elected president of Columbia university to succeed Mayor Seth Low.

FOREIGN.—It was reported from Curacao that General Riera, men, arms, and ammunition were landed on the Venezuelan coast....British troops near Bloemfontein killed eleven and captured thirty-five men of a Boer commando....In a collision of the British steamer *Alfonso* and the Spanish steamer *Vilela* off Aveiro, Portugal, 19 lives were lost....King Edward conferred the order of knight, grand cross of the bath upon Marquis Ito, the Japanese statesman....Lieutenant Thieme, a German army officer, killed in a duel at Jena Herr Held, a student who slapped his face.

TUESDAY, JANUARY 7

DOMESTIC.—The president granted Admiral Schley's request to consider an appeal from the verdict of the court of inquiry....The attorney-general of Minnesota filed a bill of complaint against the Northern Securities company in the United States supreme court....The navy department was informed of serious fighting between sailors from the gunboat *Vicksburg* and Russian soldiers at New-Chwang, China.

FOREIGN.—The emperor and empress-dowager of China returned to Peking; the entire route to the entrance of the palace was lined with troops....In an engagement at Ameersfoort, in the Transvaal, the British lost 19 killed and 33 wounded....Jean de Block, a Russian peace advocate of international reputation and the author of the "Future of War," died at Warsaw.

WEDNESDAY, JANUARY 8

DOMESTIC.—President Roosevelt made a large number of appointments, including those of Governor Leslie M. Shaw, of Iowa, to be secretary of the treasury, and Henry C. Payne, of Wisconsin, to be postmaster-general....Two cars of a New Haven accommodation train were wrecked in a rear end collision with a Harlem train in the Park avenue tunnel, New York city, and fifteen persons were killed and thirty-six seriously injured....Pending an investigation, which is now being instituted by Senor Nunez, the civil governor of Havana, General Wood has suspended Miguel Gener, the mayor of Havana.

FOREIGN.—At the opening of the Prussian diet and reichstag, the emperor and Baron von Thielmann took gloomy views of German trade....Sir Thomas Holdick, one of the members of the tribunal to determine the Argentine-Chilean dispute, has been ordered to South America....Zelaya was again elected president of Nicaragua for a term of four years....The dowager-empress of China granted an audience to M. Jadot, manager of the Belgian railway.

THURSDAY, JANUARY 9

DOMESTIC.—The Nicaragua canal bill passed the house by a vote of 308 to 2, all amendments being rejected....In executive session of the senate the nominations of Leslie M. Shaw and Henry C. Payne to be secretary of the treasury and postmaster-general were confirmed....Ex-Governor McCreery was chosen for United States senator by Kentucky Democrats in caucus....The steamer *Bristol*, in the coal trade between Juneau, Alaska, and Oyster Harbor, was wrecked, and the captain and six of the crew were drowned....The purposes of the Carnegie institution and the names of the trustees were announced in Washington.

FOREIGN.—The German budget for 1902 shows a deficit of 70,000,000 marks; Herr Richter in the reichstag attacked the government's colonial policy as wasteful....The Chilean delegates at the Pan-American conference delivered a memorandum to the Mexican finance minister and to the United States delegation, announcing their purpose to withdraw if compulsory arbitration is voted by the conference....The British war office issued a call for volunteers to replace troops in South Africa....Dr. Poole, who was attached to the American legation at Peking as surgeon, died there of typhoid fever.

FRIDAY, JANUARY 10

DOMESTIC.—Colonel Frank L. Denny, quartermaster in the marine corps, has been ordered to the Philippines to make an inspection of marine posts and affairs....The Mississippi state senate passed a joint resolution endorsing the decision of Admiral Dewey in the Schley court of inquiry, and declaring that no text books should be used in the schools in that state "that give to any other officer than Admiral Schley credit for the victory off Santiago"....Admiral Walker, chairman of the Isthmian canal commission, received a cablegram from the officers of the Panama canal company in Paris, making a formal offer to sell all their property to the United States for \$40,000,000....Captain Joseph W. Collins has been appointed honorary representative of the United States in the organization committee of the fisheries congress, at St. Petersburg.

FOREIGN.—In the reichstag a Radical

Anti-Semite deputy made a violent attack on Secretary Chamberlain and the British army, for which he was rebuked by Count von Bülow, the imperial chancellor....Herr Krupp, the gunmaker, is shown by the income returns to be the richest man in Germany, having an income of 20,000,000 marks or more.

SATURDAY, JANUARY 11

DOMESTIC.—The Erie canal traction company, an American concern, has secured control of a number of canals in England and on the continent, and will equip them electrically, with the expectation of shipping cargoes from lake ports of America to inland European cities....M. Lampré, secretary of the Panama canal company, testified before the senate committee on inter-oceanic canals that the offer of his company to the government was made in perfect good faith....At the meeting of the Tammany Hall executive committee, Richard Croker retired, and was succeeded by Lewis Nixon as chairman of the finance committee.

FOREIGN.—Prince Henry of Prussia, it was announced, will come here on the German imperial yacht *Hohenzollern* to be present at the naming of the emperor's new yacht by Miss Roosevelt....Hermann Schneider, a Swiss-American, is accused in Lima, Peru, of negotiating forged drafts in Mexico, Central and South America, using the names of well-known New York houses.

SUNDAY, JANUARY 12

DOMESTIC.—The American squadron sailed from Villefranche for Geneva to await the arrival of Rear-Admiral Cromwell....T. C. Platt again announced that he would be a candidate for United States senator....It was unofficially reported that the United States Steel corporation has bought the Fox works at Joliet, Ill....A family of seven persons in this city was killed by a fire supposed to be incendiary.

FOREIGN.—At St. Etienne, France, Prime Minister Waldeck-Rousseau unveiled the statue of Captain Garnier, a French explorer, and at a banquet later reviewed the progress of the republic under the present government, and outlined its future policy....The leading railways of England propose to adopt American methods of transportation, and heavier freight cars have been ordered....The German cruiser *Gaselle* sailed from Kiel for Venezuelan waters....The presidents of Nicaragua, Honduras, and Salvador have gone to Corinto, Nicaragua, to attend the conference of Central American presidents, alleged to be for the preservation of peace....General Alban, Colombian commander, has seized the South American steamship company's steamer *Lantaro*; cannon is being placed aboard her, and she will sail from Panama to attack the fleet of the Colombian Liberals.

The Books of The Week

THE ROYAL NAVY. A History from the Earliest Times to the present. 7 vols. Vol. VI. By William Laird Clowes. Cloth, pp. 592, \$6. Boston: Little, Brown & Co.

THIS great work has again been extended, still another volume being added in order that the history of the royal navy may be brought down to the end of the Victorian era. The present volume covers the war of 1812-1815 between Great Britain and the United States, and the development and work of the navy from that time to the end of the war with Russia, 1856. The editor, Mr. Clowes, and Sir Clements R. Markham, are responsible for all the chapters except those concerned with the war of 1812, which are by President Roosevelt. When he promised to write this history, the editor explains, Mr. Roosevelt was president of the board of police commissioners of New York city; when he corrected the proof sheets, he was assistant secretary of the United States navy department.

Mr. Roosevelt's well-known "The Naval War of 1812" was published when he was twenty-four years of age; it dealt with the war from a purely American point of view. Now he approaches the subject in an entirely different way, analysis and criticism from every point of view being his object. It can not be said the American side of the controversy profits very much from such an examination. We had ample cause for declaring war, the impressment of American seamen and the alleged right of search having been carried to such a point that war or loss of self respect were the only alternatives. But our lack of preparation—our refusal to prepare for this or any other struggle—comes in for the sort of criticism that Mr. Roosevelt can so trenchantly express when he is in the humor. "Mean and ignoble" is the least harsh characterization of Jefferson's policy of peace at any price, and the "timid folly" not only of Jefferson and Madison, but of the whole people is unsparingly condemned. Speaking of the destruction of Washington, Mr. Roosevelt says that "It is nonsense to denounce the act in the language that has so often been applied to it. Cockburn and Ross undoubtedly treated the capital of the American nation in a way which justified an eager desire for revenge; but Americans should keep the full weight of their indignation for the government whose supineness and shortsightedness rendered such an outrage possible." Rebukes of this tenor are of frequent occurrence throughout the narrative. Nor is there left to us much cause for pride in the early naval successes.

The American victories in the battles of the *President* and the *Belvidera*, the *Essex* and the *Alert*, the *Constitution*

and the *Guerriere*, the *Wasp* and the *Frolic*, the *United States* and the *Macedonian*, the *Constitution* and the *Java*, and the *Hornet* and the *Peacock*—these engagements as they are described in the school histories reflect immense credit upon the valor and skill of American seamen, but as their history is written by Mr. Roosevelt, the credit is that of having heavier ships and better gunners. In other words, they were not conflicts between combatants of equal strength. After the first seven months of the war, the tide was almost always against us except at the battle of Lake Erie. Nor could we ever hope to gain a decisive advantage over Great Britain because of her immensely superior naval strength. The single ship victories did not materially affect the formidableness of the English navy, and for this reason the war was bound to be what Mr. Roosevelt calls "a drawn quarrel"—except for the fact that Great Britain was never likely again to assert the right to enslave American seamen and to search even the war ships of the United States.

"The one lesson," Mr. Roosevelt tells us, "which should be most clearly taught by this war is the folly of a nation's relying for safety upon anything but its own readiness to repel attack; and, in the case of a power with an extended seaboard, this readiness implies the possession of a great fighting navy. The utter failure of Jefferson's embargo and his other measures of what he called "peaceful coercion," teach their part of the lesson so plainly that it would seem impossible to misread it; but the glory won by their little navy has tended to blind Americans to the fact that this navy was too small to do anything except win glory. It lacked the power to harm anything but Britain's pride, and it was too weak to parry a single blow delivered by the British along the coast, when once they realized that their task was serious, and set about it in earnest. Twenty ships-of-the-line, as good of their kind as were the frigates and sloops, would have rendered the blockade impossible, even if they had not prevented the war; and, judged merely from the monetary standpoint, they would have repaid to the nation their cost a thousand times over, by the commerce they would have saved, and the business losses they would have averted."

"The truth seems to be," continues Mr. Roosevelt, "that, in naval matters especially, nothing can supply the lack of adequate preparation and training before the outbreak of war. . . . There is more chance of remedying defective preparation on land than on sea, merely because the fighting machinery for use on sea is so delicate and complicated that ample opportunity must be given, not merely to produce it, but to learn to use it aright. This was true in the days of the American and French revolutions; it is infinitely truer now."

It goes without saying that the elaborate illustrative features and the thoroughness, extending to the smallest details, which have already been mentioned in reviews of the former volumes of this

work, also characterize the volume before us, naturally, because of its subject matter and authorship, to Americans, the most interesting of all the volumes.

THE NEW CENTURY BIBLE. St. John; edited by J. A. McClymont, D.D.; Romans, by Alfred E. Garvie; The General Epistles, by W. H. Bennett; The Pastoral Epistles, by R. F. Horton, D.D. Cloth, 75 cents each. New York: Henry Froude.

WE have already spoken of the general excellence of the New Century Bible, and we find that each succeeding volume gives additional testimony to its completeness and to its great service to the Biblical student. The list of editors cited above is of itself a sufficient endorsement of the accuracy of notes and expositions, each man having made a specialty of the book or books assigned him. Dr. McClymont, in his introduction to the volume of St. John, contributes an interesting and comprehensive account of the long debate upon the authorship of this gospel. The higher criticism, he says, now admits its unity and symmetry, and even the destructive Schmiedel acknowledges that in the end we shall have to concur in the judgment of Strauss, that "the fourth gospel is, like the seamless coat, not to be divided, but to be taken as it is."

THE DOWDEN SHAKESPEARE. The Tragedy of King Lear. Edited by W. J. Craig. Cloth, pp. 249, \$1.25. Indianapolis: Bowen-Merrill Co.

THE third volume of the Dowden edition of Shakespeare gives us a very satisfactory test of the plan of King Lear, supplemented with a very complete list of comparative readings from earlier texts. In his introduction, Mr. Craig has collected and quoted from the chronicles that were the sources of the play, and has given a history of the interpretations of the play by the greatest Shakespearean scholars down to the present day. The excellent features of make-up and arrangement noticed in the first two volumes are repeated here.

THE PASSENGER TRAFFIC OF RAILWAYS. Publications of the University of Pennsylvania. Series in Political Economy and Public Law. By Walter E. Weyl. Paper, pp. 249. Boston: Ginn & Co.

MR. WEYL has made a careful statistical study of the passenger traffic in all countries with a view to discovering the relation of that branch of the railway service to the hauling of freight, and the steps that have been taken by the railways of the world toward solving the problems connected with it. The discussion has a decided value from the sociological side inasmuch as the cheapening of transportation is both the indication and the cause of an increased democratization of society. The mobility of labor has been increased, international relations have been modified, and the growth of cities has been at once quickened and rendered more toler-

able by improved suburban routes. Another result arising from improved methods of land transportation that may not seem so desirable is the more rapid mobilization of armies, although the possibility thus presented of placing large armies on the frontier of a hostile state at short notice may have the effect of making wars more infrequent. In point of amount of passenger traffic, not only absolutely, but in proportion to population, Great Britain leads the world.

FLOATING TREASURE. By Harry Castlemon. Cloth, pp. 403. Philadelphia: Henry T. Coates & Co.

A WELL told story of boyish adventure in which a barrel of ambergris, a pair of poachers, an honest old sailor, and two poor but honest boys, who find the ambergris, are the principal dramatis personae. The treasure is fished out of the sea with a boathook, hidden in a cellar, stolen by the poachers, thrown overboard in New York harbor, found again off the shore of Long Island, restored to its proper owner, and finally turned into good hard cash.

THE STATE HISTORICAL SOCIETY OF WISCONSIN. Exercises at the Dedication of its New Building, October 19, 1900; together with a Description of the Building, Accounts of the Several Libraries contained therein, and a brief History of the Society. Edited by Reuben Gold Thwaites. Cloth, pp. 139. Madison, Wis.: Democrat Printing Company, State Printers.

CONTAINS many good photographs of the new library building, both exterior and interior, and a verbatim account of the addresses at the dedication, many of which are full of interest.

FROM FAIR HAWAIIAND. By P. Maurice MacMahon. Cloth, pp. 115. San Francisco: The Stanley-Taylor Company.

HAD we not been taught of late by various and sundry poets of empire that metrical consistency is not an essential element in poetry, we should say that the poems in this collection are very lame indeed. As it is, we can only remark that the poet has the courage of his ideals and boldly presses on despite his all too evident limitations in the technique of verse-making. There is ample evidence of his possession of the artist's eye for color and the poet's appreciation of truth and harmony, but the power of expression lags far behind.

THE CHRIST IDEAL. By Horatio W. Dresser. Cloth, pp. 150, 75 cents. New York: G. P. Putnam's Sons.

THIS little volume is an interpretation of the most essential and prominent points in the life and teachings of Christ. The sacrifice of Christ upon the cross, the atonement, is made of small account in comparison with the practical force of his work and the lessons that he taught during his life. The style is a little heavy for the average reader, but to the close student it will be a treasury of good things.

BUSINESS AND FINANCE

The Business Situation

Dun's Review, New York, Jan. 11

With the unprecedented holiday business ended, transporting facilities are more nearly adequate for regular requirements. Merchandise moves to consumers more promptly, and in the iron region there is less interruption to work because of insufficient fuel. Normal conditions have by no means returned, however, and it will be some time before shippers can safely guarantee deliveries on a specified date. Buying of staple commodities is on a large scale, fully sustaining quotations at a high level, except in the few instances where efforts were made to hold prices above the point warranted by the ratio of needs to supplies. Fictitious values cannot be maintained indefinitely, and the commercial system benefits by a return to the position where distribution is facilitated. Labor controversies are few and unimportant, while the new year has brought advances in the rate of wages at many points.

Holiday idleness, inventories, and annual overhauls were all cut down to the lowest possible limit at iron and steel plants in the effort to meet urgent demands from consumers. Coke was delivered more promptly, relieving the pressure for fuel, reducing the premium commanded for immediate supplies, and making Bessemer pig iron more nearly sufficient for needs at Pittsburg. Foundry iron at the east is still scarce,

BUILT A MONUMENT

The Best Sort in the World

"A monument built by and from Postum," is the way Mr. J. G. Casey of Ayers, Ill. describes himself. He says, "For years I was a coffee drinker until at last I became a terrible sufferer from dyspepsia, constipation, headaches and indigestion, and was a physical wreck.

The different kinds of medicines I tried did not cure me, but finally some one told me I must leave off coffee and take up Postum Food Coffee. I was fortunate in having the new coffee made strictly according to directions, so that, from the start, I liked it. It has a rich flavor and I made the change from coffee to Postum without any trouble.

Gradually my condition changed. The old troubles disappeared and I began to get well again. My appetite became good and I could digest food. Now I have been restored to strength and health. Can sleep sound all night and awake with a fresh and rested body. Everyone who meets me comments on my getting so fat and rosy.

I am really a monument built by Postum, for I was a physical wreck, distressed in body and mind, and am now a strong, healthy man. I know exactly what made the change, it was leaving off coffee and using Postum."

high prices being quoted at Philadelphia, and Chicago mills can not secure material in desired quantities. Moderate imports have resulted from the domestic deficiency, but this will not become a factor of importance if the situation continues to improve at the present rate. Although railways largely augmented supplies of rolling stock during 1901, contracts for this year's delivery already aggregate many months' full capacity of shops, and in structural shapes there is no prospect of a surplus in the near future. Weakness continues in the minor metals, copper selling 5 cents below the inflated price of a month ago, and the annual reports of output, consumption, and exports indicate that the reduction was fully warranted.

Activity continues at cotton mills, although domestic buying is on a moderate scale. Exporters are bidding freely for heavy goods, but as a rule fall short of holders' views, and little new business is recorded. Home buyers of goods are influenced by the weaker tone of the raw material, but sellers make no concessions owing to the well sold condition of the mills. Jobbing trade in woollens gradually expands, new lines selling fairly at moderate advances over prices prevailing a year ago. Worsteds yarns are scarce and firm. A further slight rise has occurred in the average of wool prices, and the tone is strong, but there is a tendency to await the London sale ten days hence, before making further changes. Imports would be stimulated if this market were advanced much beyond the foreign parity. Footwear factories are well engaged on spring and summer lines, with prices showing a firmer tone.

Reports of unfavorable weather in winter wheat regions stimulate prices, and there was further support in the general resumption of activity at flour mills, together with added inquiry for foreign account. Total exports of wheat from the United States for the week, flour included, were 4,179,262 bushels, which fell short of the unusually free outgo of 5,159,795 bushels a year ago, but compare most satisfactorily considering the 10 per cent higher prices now prevailing. The combination of many supporting influences took quotations above the highest point last year. Corn was fairly well held in sympathy with wheat, but some soft spots developed, as was natural, in view of the fact that the price is now more than 50 per cent higher than a year ago, while Atlantic exports for the week were 212,741 bushels, against 4,543,149 in 1901. Cotton was depressed by liberal receipts, though foreign conditions have improved, and the quotation is almost \$10 a bale lower than at this time last year. Increased statistics of visible supply and receipts at Brazil ports brought further concessions in coffee.

Losses in railway earnings during the third week of December by storms and washouts were more than balanced by gains in the other weeks, and the month's total shows an increase of 6.1 per cent over 1900, and 17.0 per cent over 1899.

Failures for the week numbered 373 in the United States against 324 last year, and 27 in Canada against 37 last year.

HILL BROOK FARM

The Owner Comments on Grape-Nuts

A farmer with his out of door work might have reason to expect more than the average of good health if he would use proper food and have it well cooked, but many of them, in middle age suffer torments from dyspepsia, and following that a weakened nervous system.

To show the value of a change in food we quote from a letter written by L. Flagler, owner of Hill Brook Farm, Charlottesville, Va.

"I have spent a very considerable amount of money in trying to cure my stomach trouble with medicines, and have changed climate several times. About two years ago I was taken worse. My heart and kidneys gave me much trouble. I could not sleep nights. Was very nervous, thin, and discouraged. Finally I changed my food and began taking Grape-Nuts Breakfast Food. This agreed with me and I thought I could see my way out, so I have stuck to Grape-Nuts for a year and a half and gradually the old troubles have disappeared.

I have made splendid progress in health and strength, sleep well and can now do a good day's work for a man of fifty years.

I know that Grape-Nuts caused the change, and although I am now able to use other food as I like, still I stick to Grape-Nuts because I know how it nourished me, and besides, wife and I both like the food.

She says nothing has helped her nervous system like Grape-Nuts. We buy the food by the case and are very enthusiastic in regard to it."

It is plain that nervous, worn out people can be brought back to health by using Grape-Nuts.

Financial

Bradstreet's, New York, Jan. 11

Although small shipments of currency to southern points continue, the New York banks gained cash this week to an amount estimated at nearly \$9,000,000. The supply of money in the loan market was larger and the tone decidedly easier. The belief that large gold shipments may soon occur produces little or no effect, being offset by expected large receipts of cash from the interior. The offerings of call money are large, and the extremes for the week on rates were 4 and 6 per cent, most of the stock-market borrowing being at 5 per cent. Time money is offered with freedom, and there is a moderate inquiry, the rates on mixed collateral being 4 1/2 per cent for thirty to ninety days and for longer arrangements. Commercial paper is quiet, with only moderate offerings of prime names, the rates being based on 4 3/4@5 per cent for indorsed bills receivable.

The New York stock market is dull, with a depressed tone. Professional operators furnish the activity, and public interest is lacking in speculation, though bonds and investment stocks are the objects of a fair buying demand. Uncertainty about the outcome of the Northern securities litigation and disappointment because the Steel corporation's December quarterly earnings were not as large as expected are considered adverse factors, as are also the expectations of renewed gold exports. The steel stocks have been sold by foreign and local speculative holders, and the anthracite group has merely been firm, despite an increase in the Jersey Central dividend rate. Manipulative strength was shown in a few stocks, notably Manhattan, which was bulled on renewed reports of a deal with New York Central. Bonds are active, strong and advancing on investment buying.

Foreign exchange is higher under buying induced by easier money, and, inclusive of last Saturday, about \$1,000,000 gold has been sent to Europe from New York on special orders. Demand sterling, however, eased off a little on a better supply of cotton bills, the current quotations being 4.87 1/2.

Clearings for the week ending Thursday aggregate \$2,816,461,897, a gain of 34.5 per cent on last week, and an increase of 6.4 per cent over a year ago, when stock speculation was active. Outside of New York the gain over last week was 28 per cent and over last year 16.5 per cent.

If the December output equals that of last December, as it will probably do, according to the estimates of the *Western Tobacco Journal*, the year's output will approximate about as follows: Tobacco, 290,000,000 pounds, a gain of 6,250,000 pounds over 1900; cigars, 5,900,000,000, a gain of nearly 370,000,000; small cigars, 745,000,000, a gain of 125,000,000; cigarettes, 2,345,000,000, a loss of 230,000,000; snuff, 17,350,000 pounds, a gain of 3,725,000 pounds.

WIT AND HUMOR

[An Encouraging Trade Outlook

It was in the morning hours of "bake day" in the little out-of-the-way village. The mingled odors of fresh bread, pies, and cookies floated out of the open kitchen windows.

From one of the smaller cottages at the end of the street came a barefooted child in a colorless calico dress and slat sun-bonnet. With the important air of a heavy buyer she entered the village store, and handed across the counter a blue teacup. The proprietor took the cup, and said, in brisk tones:

"Well, Emmy, what does your ma want to-day?"

"Please, sir, ma wants an egg's worth of molasses," and she carefully placed a large white egg on the counter.

From a stone jug a little molasses was poured, and the cup set before the customer.

"Mr. Smif," she said, as she took her purchase, "I'll be back in a little while for some ginger. Ma said to tell you the black hen was on."

And the buyer walked with dignity out the store door and up the village street to her home.—*M. M., in Harper's Magazine.*

In South America

"Gentlemen," said the South American statesman, "do we revolute tomorrow?"

"Why not?" queried the short senor.

"Why not, indeed?" echoed the statesman. "Shall we make it before or after breakfast?"

"After," replied the stout senor. "I find that it doesn't agree with me when I try it on an empty stomach."

"Very well," said the statesman. "If we are all agreed we will overturn the government at 10 o'clock tomorrow morning. How is it with you, Pablo?"

"I am referee in a cockfight at 11," said the man addressed, "but I'll try and get around in time to see you through."—*Cleveland Plain Dealer.*

A Trick of the Trade

There's many of our magazines, and papers not a few, who will not buy my poetry, no matter what I do; I can't sell them a line of verse, no matter what I write, a ballad in bad dialect, or dashing, classic quite. And so, to buy my daily bread, some tricks I have to play, and send my poems out as prose, like this I send today. And when I send them out like this, I fool them every time, because they think they're printing prose, instead of printing rhyme!—*Puck.*

Buckeye.—What does a member of the legislature get in your state?

Keystone.—That depends. Sometimes one is sentenced for a year or two, but more frequently he gets off scot-free.—*Catholic Standard and Times.*

GOOD HOUSEKEEPING

For the Higher Life of the Household

Monthly—FOR ALL THE FAMILY—Magazine

GOOD HOUSEKEEPING is bright and newsy—bristling with new ideas. It tells not only how the every-day affairs of life may be conducted, but also appeals to the craving for the new and helpful in household duties. Practice and inspiration is its motto. Its departments, regular and special, are as numerous as the varied phases of the life of the household. It appeals to either sex, whether of young or of advancing years, and not only helps but gratifies the physical, mental and æsthetic natures of all its readers. Its unparalleled Cooking Service, its Unique Health Department, its bright Stories, Sketches, Paragraphs and Verses, are supplemented by special articles from the most noted writers of the day. It is beautifully illustrated.

The CHARIOT RACE From BEN HUR

The publishers of Good Housekeeping have recently secured exclusive control of a beautiful reproduction of Checa's masterpiece, **THE CHARIOT RACE**, in all the colors of the original painting, which is valued at \$50,000. The subject, which General Lew Wallace has made so well known through his immortal work, "Ben Hur," is the thrilling race scene at the exciting climax of the story. Every detail of the artist's brush is faithfully brought out by the twelve distinct color printings. The picture is on heavy plate paper, with suitable margin, and measures 22x30 inches.

A WONDERFUL OFFER

To introduce Good Housekeeping into every home where it is not now taken, we will send the magazine for three months upon receipt of only 25 cents, in silver or stamps. We will further send without cost to all ordering immediately a copy of **THE CHARIOT RACE** (as above described), the same as is given to all yearly subscribers at \$1.00 per year. Address, mentioning this paper, all orders to

PUBLIC OPINION

Number 4
Volume XXXII

The Week

Thursday
January 23, 1902

MEASURING the public's interest by the volume of newspaper discussion, the visit of Prince Henry to the United States is found to be the topic of greatest interest to Americans. Preparations are making to receive the prince in a manner worthy of the respect due to him, to his brother, Emperor William, and to ourselves. "The representative citizen" with his tiresome address of welcome, and the visits to such points of interest as jails, alms-houses, and city halls with which in former times we entertained distinguished visitors, will be eliminated, and in place of such entertainment the prince will receive a suitably dignified reception of a military character from officials or deputies of the national government—such a reception in short as can not reflect discredit upon us or give occasion for foreign sneers even if it does not measure up to the scale of regal magnificence with which we are happily unfamiliar.

IF it is true, as reported from Washington, that "the kaiser has intimated his desire for as little as possible of German-Americanism in the reception of Prince Henry," then we owe him a debt of gratitude for his tact and good sense. It would be most unfortunate if the attentions which the American people as a whole wish to show the prince should be monopolized by any one class, and the German societies which are preparing to make themselves conspicuous in his honor would do well to curb their natural desire to play a distinctive part in the ceremonies and incidentally to advertise their members. Otherwise whatever good results might follow the visit of the emperor's brother will be lost in a feeling that he has been chiefly the guest of former German subjects.

A "STEAMSHIP TRUST" or ocean freight pool of some kind is, according to various accounts, being formed under the leadership of Mr. Morgan, but not enough is known of the plans of those interested to make any intelligent comment upon them. It has been reported for some time that the Morgan-Hill-Rockefeller interests had been considering the formation of a close traffic union between the American, Leyland, White Star, and Atlantic transport lines and the southwestern and western railways with their eastern connections. Now it is said that the Cunard, Anchor, Allan State, and Wilson lines are also to be "merged," placing under one control a million tons of ocean shipping valued at half a billion dollars. But this is pure speculation so far as anyone can now say—anyone except those interested, and they will say nothing.

THE isthmian canal commission, like the general public, have been at sea ever since the Panama company showed a disposition to make reasonable terms for the transfer of their property. Whatever the faults of the Nicaragua route, it had come to be the one approved by the majority of congress and the people generally, and now the subject is so confused that canal legislation of any kind is rendered extremely doubtful. If we correctly understood the last report of the commission, its decision in favor of the Nicaragua route was based mainly upon the greater cost of the Panama canal on the basis of the valuation then insisted upon by the French company. At \$40,000,000 for the Panama property, however, there is a difference of cost in favor of this route of \$5,000,000, so that the whole subject will have to be gone over again before any conclusion is reached.

"WE must do something for Cuba." This is said to have been the word sent to the leaders in both houses of congress by President Roosevelt. It means, of course, that in the president's opinion reciprocity must be granted to the island, and it is hard to see how any but the most selfish

motives can actuate those who antagonize this step. Senator Proctor, of Vermont, is certainly a good protectionist, but he has plainly warned his colleagues of the moral revulsion that will be visited upon the party that rejects Cuba's plea as well as the danger of an outbreak in the island if her people are starved into a violent frame of mind. A rock-ribbed Republican paper of New York asserts that "the Republican press of the country is practically a unit for Cuba," a situation which places those who oppose reciprocity in the position of caring more for their private interests than for "plain duty" and party honor.

CONTRARY to all expectations, the Pan-American congress has reached an agreement regarding the arbitration of international disputes, both The Hague convention and the compulsory arbitration plan drawn up by the congress itself having been suddenly adopted. This result appears to have been largely due to the interposition of a member of the American delegation, who deserves honor for his achievement. It is not to be supposed that this agreement will do away with frequent warlike differences between the South American states, but the facility with which wars may be started is somewhat diminished.

PARLIAMENT, adapting itself to the tone of the king's speech, has opened very tamely indeed. The speech was so colorless as to afford hardly a morsel of discussion, but one important thing was developed in the parliamentary discussion that followed it. This is the fairly clear alignment of government and opposition as to the ending of the Boer war. The Liberals appear to be unanimous in standing for the opening of peace negotiations on British initiative if Boer initiative is not forthcoming. Opposed to this position is the ministerial demand that the Boers must take the first step. Even if this radical difference of opinion were composed, there would still remain the question of the terms of peace, but it is something to know where Englishmen stand regarding preliminaries.

WHAT the Liberal leader, Sir H. Campbell-Bannerman, meant when he said in parliament on Thursday that he was "convinced of the wisdom of that policy toward Ireland and the Irish government, which had been and is the remedy approved by the Liberal party," will, we hope, appear later. If the home rule flag has again been nailed to the Liberal mast, it is in violent opposition to the recent policy of the party, and totally at variance with the Liberal creed as expounded in Lord Rosebery's Chesterfield speech. Furthermore, the Irish Nationals have given notice repeatedly that they should make no alliance with, and expect nothing from, any other political party. What object, then, can the Liberal leader have in dragging out home rule in defiance of a large section of his party?

GENERAL CHAFFEE'S last annual report reads so much like those that have preceded it as to suggest that he used some old document for a model. The provinces of Batangas and Laguna, in southern Luzon, and the islands of Samar, Mindoro, and Cebu constitute the area in which the insurgents are still in force. Elsewhere municipal and provisional governments are being organized, but "these governments have not yet received a practical trial." The continuation of guerilla warfare is due, we are again told, to the physical character of the country, the advantage which the insurgents take of the humanity of the American troops, and the fear with which insurgent natives inspire those who are disposed to be friendly. These explanations are doubtless as good as they ever were (that is to say, very good), but some fresh explanations would have been more convincing.

AMERICAN

The New Tammany

COMMENT UPON THE ACCESSION OF LEWIS NIXON TO THE LEADERSHIP

RICHARD CROKER

and whatever is done there will work to the advantage of the national party." Mr. Bryan is also pleased with "Croker's choice." Tammany, he says, "will be a powerful instrument for good in the hands of a man like Nixon, who will work for the welfare of the people. The choice will be applauded by Democrats all over the country."

There is much difference of opinion on the effect of Croker's retirement in the leadership of the state Democracy. As is well known, Croker and Hill are bitter enemies, and one report now has it that the state Democrats under the leadership of Hill and his friends, will be on excellent terms with Tammany, while another story is to the effect that Mr. Hill's friends in New York city will remain aloof from the organization and take their chances with the state Democrats against the leadership of Mr. Nixon. In this connection may be mentioned the report from Chicago that the anti-Bryan Democrats had agreed upon a ticket composed of Hill and Carter Harrison for the presidential contest of 1904.

In taking charge of Tammany, Mr. Nixon announced that he would be the actual head of it, and that his policy would be to let bygones be bygones, only demanding good conduct for the future. The New York papers are skeptical of Mr. Croker's sincerity in resigning the leadership, and the *Post* and *Commercial Advertiser* expect to see him back as soon as there is an opportunity of political success. Time alone can show whether the change is "a reform or a ruse," the *Brooklyn Eagle* says, while the *Journal* thinks that "the career and character of Mr. Nixon forbid the assumption that he would lend himself to a fraud upon his party and the public in the interest of Mr. Croker, or of anybody else." All the New York papers grant without question the high character of

RICHARD CROKER'S resignation from the leadership of Tammany Hall and the promotion of Mr. Lewis Nixon to the position is naturally the subject of lively comment. The bearing of the event upon national politics is recognized on all sides; Chairman Jones, of the Democratic national committee, saying that "Mr. Nixon has a great opportunity. Calmness and a good judgment on his part will do much for the Democracy in New York,

Mr. Nixon—all of them except the *Times*: "Mr. Croker was responsible for the vileness of Tammany. Mr. Nixon, though not directly responsible for it, is indirectly so. He knew about it. He investigated it and discovered its extent and the men engaged in it. He partially exposed it, but only far enough to become chargeable with knowledge of it, and with fear to fight it. He drew out when Croker gave the word, and the word was given when the power of Mr. Croker was threatened. That is not the record of a man, fearless, honest, and capable. If Mr. Nixon desires the reputation of being that sort of man, he has yet to do something to deserve it." The *World* is not enthusiastic, but grants that "it was a case where change is almost certain to mean improvement. With corruption stopped in the city government and Crokerism ended in the control of Tammany, the outlook is indeed hopeful." The *Tribune* can not see the case in this light: "Doubtless Mr. Nixon hopes to recruit the waning strength of Tammany, not merely by covering its repulsive features with a mask of decency,

but by as large an exercise of moral discipline as the men who made and can unmake him will stand. But in the very nature of things he can not go far. The sow that is washed returns to her wallowing in the mire, and the sow that is only whitewashed is certainly not more particular." If, says the *Elmira Gazette*, Croker has actually retired and Nixon is to be loyally supported, "Tammany may be expected to recover repute and power. The state Democracy will welcome a leadership disposed to be reasonable. Tammany's unsmirched and strongest man is placed at the helm. It ought to be the beginning of better things."

Permission of Leslie's Weekly
LEWIS NIXON

Skepticism also appears in the comment of papers outside of New York. The *Hartford Times* (Dem.) thinks that "Croker will have as perfect control of the finances while he is away as if he were here, and will be found directing affairs as usual when the municipal campaign opens in New York next year." The *Philadelphia Record* (Dem.) examines the change of leaders in the light of the "frequent cry for the scholar in politics," and observes that it is a misapprehension to suppose that "the scholar"—of whom it takes Mr. Nixon as a type—"can not shed his scruples. The principal effect of the

DAVID B. HILL

scholar in politics is to bring to the service of the machine whatever shrewdness a university course may develop." From all of which it does not appear that the *Record* sees a very bright prospect of reform in Mr. Nixon's leadership.

"If," says the *Chicago Chronicle* (Dem.), "New York is now entering upon a new and hopeful era of cleaner municipal administration, it is due mainly to the patriotic and independent Democratic voters who repudiated Croker at the polls and sounded the death knell of Crokerism. Tammany, too, comes in for a beneficial share in this wave of public spirit. Its lessons of deserved defeat may well inspire its new leaders to keep closer to the people in future and to look with disfavor on every attempt to make its powerful organization machinery an adjunct or aid to corruption and betrayal of the public welfare."

The *Chicago News* (Ind.) seems to think the task of making Tammany a wholesome force in politics is foredoomed to failure, "but Mr. Nixon has the opportunity to try. If he means to succeed in resuscitating that organization and making it tolerable to the people of New York he must recognize that he can not afford to compromise with the Tammany leaders of the past. If his purposes are honest, where in the corrupt Tammany of today will he find the support which he must have? Decidedly, if he is not to follow in the footsteps of his predecessor the experiment upon which he is about to embark will be worth watching." This opinion is shared by the *Cleveland Plain Dealer* (Dem.): "In this age of wonders it is presumptive to say that anything is impossible, but a thoroughly reformed Tammany will appear to many persons as near an impossibility as anything conceivable." The *Detroit Free Press* thinks Mr. Nixon is too good to be Tammany's boss.

Southern opinion is hopeful of excellent results from Mr. Nixon's leadership, the following editorial from the *Chattanooga Times* (Dem.) being fairly representative: "The country will watch the course of this vigorous young Virginian, in his efforts at giving Tammany the right to go on living, with much interest and curiosity. That he will attempt to gradually clean the Augean stable, and bring forth a reformed and rehabilitated Tammany, that shall be worthy of the early history and good works of the ancient society, we have no doubt. It will be generally conceded that this undertaking is one of great difficulty, involves gigantic labor and sacrifice. The country wishes him Godspeed in converting the 'hall' from its state of degradation, to which it has descended under Croker and his allies, into a strong and steady power for good. Wielded by a really good and fearless man, that organization would be irresistible in the work of municipal reform." The *Tacoma Ledger* says "Croker has placed himself in the position of holding on only while there was profit in it. Tammany on top, and Tammany with things in general atop of it, are two different things."

The Visit of Prince Henry

COMMENT ON THE COMING OF EMPEROR WILLIAM'S BROTHER

THE recent exchange of courtesies between President Roosevelt and Emperor William, detailed in our last issue, and the announcement that Prince Henry is to be present at the christening of the emperor's yacht by Miss Roosevelt are looked upon as incidents of much importance, as the following comment shows. The *New York Herald* is somewhat contradictory in its comments. "A sincere desire," it says, "to promote friendly relations between Germany and the United States undoubtedly lies at the root of the

kaiser's recent acts of courtesy." But "as for the overtures of the kaiser, they change nothing. They constitute a personal profession of good-will and desire for friendly relations. Apart from this they have no import. No one doubted, no one does doubt, that the German people, considered as a nation, entertains as friendly a sentiment for the United States as is compatible with keen commercial and industrial rivalry." The *Brooklyn Citizen* looks upon the coming of Prince Henry as "the very acme of courtesy"—the occasion will be "momentous and important, and will be made historic." "That the kaiser intends to recognize the Monroe doctrine, that he is earnest in his desire to strengthen friendly relations which have been seriously strained since 1898, should be a source of satisfaction to the people of the United States," the *Albany Press-Knickerbocker* thinks.

The *Boston Advertiser* raises "the question whether our English friends will altogether relish an outburst of enthusiastic welcome for the coming prince of the house of Hohenzollern. Another question is whether the good feelings which the expected visit will bring to the surface are going to be strong enough wholly to remove the last vestige of commercial and political irritation between the United States and the German empire. Let us all hope for the best, and that the best will be very good indeed. The world wants peace, not war. That it may have peace, it wants kindly feelings and an end of the strife of words." The *Washington Star* says: "It is unnecessary to point out how thoroughly this correspondence, with its graceful meaning, contradicts those yarns about the kaiser's implacable prejudice against America and everything American. He could not have testified to his respect for us in a way better to impress us with his sincerity or with the value of his friendship. And remembering this, we shall be prepared for the fakirs engaged in making war by rumor and invention when they resume their industry, as they are likely soon to do, of kiting guff across the Atlantic." The *Pittsburg Gazette* thinks "the emperor or designs his friendly advances to be a guarantee of his good intent with regard to the Monroe doctrine

PRINCE HENRY
(From a Recent Photograph)

in the settlement of his difficulties with Venezuela, and they are therefore doubly welcome. As a matter of fact, no one will imagine the kaiser's manifestations of friendship entirely disinterested, but it is none the less gratifying to our national self-esteem that he considers American good-will worth cultivating in this way."

The opinion last quoted is shared by the Cincinnati *Times-Star*: "William has chosen a most opportune time for putting an end to the thoughtless chatter of sensation-loving jingoes in both countries. In no other way could he better have shown his utter unwillingness to regard actual trouble as a result of the Venezuelan dispute as one of the possibilities of the future than by the course he has actually pursued." Still another journal, the Chicago *Chronicle*, voices the same idea: "There is a genuine timeliness," it says, "in Emperor William's evident sincerity in branding as unjust and absurd the reports that there is a widespread antipathy in his empire to everything American. We have heard many prophecies of trouble between the United States and Germany as a result of present complications in Venezuela. We have also been told that Germany's commercial leaders are insisting on a war of trade reprisals against this nation. Whatever foundation these reports may have, it is at least evident that the emperor of Germany is not to be stampeded into any exhibition of unfriendliness toward the United States. His personal and official expressions in the present exchange of amenities have a distinctly opposite tone." And "it will be a distinct pleasure," the Chicago *News* declares, "for the people of this country to show their regard for this remarkable ruler and the great people whom he governs by according a warm welcome to Prince Henry."

Senatorial Elections

FOUR REGULAR AND TWO SPECIAL ELECTIONS FOR UNITED STATES SENATORS

THE four states holding regular elections for United States senator are Iowa, Kentucky, Maryland, and Ohio, while one of the two special elections is also in Iowa and the second is in New Jersey. Three elections have been held already. James B. McCreary has been elected in Kentucky to the seat now occupied by William J. Deboe, whose

JOHN F. DRYDEN

term expires March 4, 1903; Arthur Pue Gorman has been elected in Maryland to the seat now occupied by George L. Wellington, and his term will begin March 4, 1903, and Senator Foraker, of Ohio, has been elected to succeed himself. The result of the two elections in Iowa is also a foregone conclusion. Senator Allison will be reelected and Senator Dolliver will

be chosen to fill out the term to which he received a temporary appointment from the governor. The only seat in doubt is the one from New Jersey left vacant by the death of Senator Sewell.

For the last-named seat there are eight candidates, of whom, *Harper's Weekly* says, "the most likely to be

chosen is John F. Dryden, president of the Prudential Insurance company, who is the foremost business man of the state, and whose reputation for integrity, capacity, and mental breadth is unexcelled." The New York *Tribune* believes that Mr. Dryden "measures up to senatorial standards," and his candidacy is viewed very favorably by the New York Republican press generally. In his own state Mr. Dryden appears to have a majority of the press on his side, and in addition he has received the endorsement of the Essex delegation and of Governor Murphy, who says that "he is a man qualified by natural ability and wide experience to fill that important position (the senatorship) with credit to the state and nation." The Newark *Evening News* thinks that the governor's support gives Mr. Dryden the best chance for the office. Mr. Dryden was born at Farmington, Maine, in 1839, and was educated for the legal profession, which he abandoned in 1875 for the insurance business.

The election of Mr. Gorman after the first boasts of his opponents was generally conceded and now excites little comment. The *Herald* and *American*, of Baltimore, console themselves with the reflection that Mr. Gorman will be an active advocate of Maryland in the national senate. The *Herald* "has no fresh tears to shed," although it still "adheres to a higher standard of political morale" than Mr. Gorman represents. The *American* is doubly consoled by the reflection that "no man could do worse, any man might do a little better, and Mr. Gorman may be depended upon to do infinitely better as the state's representative than Senator Wellington has done." The *Sun* makes no comment, while stalwart Democratic papers like the Pittsburgh *Post* and Brooklyn *Citizen* rejoice in the return of "this eminent Democratic statesman" to the senate.

The New Chinese Exclusion Bill

THE new Chinese exclusion bill prepared by Pacific coast senators and representatives to cure defects in the Geary law developed by experience and to close more securely the gates against surreptitious immigration, does not please everyone. Several Washington correspondents have criticized the drastic provisions of the bill, and one says that "the country

A. P. GORMAN

is not ready to make any such concessions to the Pacific coast." The Philadelphia *North American*, however, charges that opposition to the bill is "inspired" by the interests seeking a supply of cheap and docile labor. The *North American* is apparently unwilling to grant any honest motive whatever to the opponents of the bill, of which it says:

The features of the bill which most disturb the inspired organs are those designed to make evasions of the law difficult and its enforcement in spirit as well as letter more certain. Privileges extended to certain classes by the Geary law are continued, but it is provided that Chinese claiming exemption must prove their right to make such claim and establish their identity in a manner to preclude fraud. That provision seems to be regarded as an outrage by the coolie organs because by implication it questions the veracity of Chinese pretending to be merchants and hurts their feelings. Another clause, designed to evict coolies obtaining entrance under false pretenses, is especially obnoxious to the journalistic allies of the transportation companies. It provides that any Chinaman who gains admission to the United States under the exempting clause of the bill and afterward engages in any other occupation than that upon which he was admitted shall be deported. Any Chinese convicted of a crime is to be deported. Chinese persons ordered out of the country are to be held in custody and not admitted to bail.

That, say the reporter-statesmen, is drastic and not to be endured. But the future of the proposed law most alarming and odious to the cheap-labor corporations and the trusts back of the anti-exclusion lobby is the exclusion of coolies from the island possessions of the United States. That hits the would-be degraders of American industry a solar plexus blow. They would concede almost any measure of restriction applying to the continent for the sake of the privilege of filling the islands with contract coolies and enriching themselves by exploiting the resources of our expanded territory. Altogether, the character of the opposition to the new exclusion bill is a certificate of the adequacy of its provisions for the protection of American labor from degrading competition and Anglo-Saxon civilization from Asiatic influences.

Philadelphia (Pa.) *Record*

OUR relations with China from the Burlingame treaty down to the Geary law form a chapter in our history which no American possessed of a sense of honor, and who values fair dealing, can read with pride. The fears inspired by the possibility of an influx of Asiatics, however, will doubtless override all other considerations, and the new law on the subject of Chinese immigration, which congress must pass at the present session in order to continue the existing statutes in force, will probably be even more rigidly exclusive and less regardful of treaty stipulations than its predecessors.

The object of the Geary law is to keep out coolie labor; its effect, however, is to prevent the landing even of Chinese artists who might teach our artisans the methods employed in the production of the exquisite lacquers, glazes on porcelain, and other high-class work in which their countrymen excel. As interpreted by the treasury officials the word "laborer" in the exclusion law includes physicians, and the eighty-odd thousands of Chinese in this country are thus deprived of the aid of medical attendants who could converse with and, therefore, understandingly treat them. It is held by the immigration inspectors that the mention by name of certain classes of Chinese as being permitted to land excludes all others not expressly described. Thus the provision that "merchants" may enter excludes bankers, factors, and brokers, of whom there are many in China conducting business that runs up into millions per annum. For such absurdities there is neither reason nor excuse. Whatever else may be left undone, the law should at least be shorn of these minor blemishes.

The Coronation Embassy

THE REPRESENTATIVES OF THE UNITED STATES AT THE CORONATION OF KING EDWARD

GENERALLY speaking, the appointment of Whitelaw Reid, General James H. Wilson, and Captain Charles E. Clark to represent the United States at the coronation of King Edward has been well received by the press. "While the American people," says the *Chicago Post*, "are but mildly interested in the coronation of King Edward—a ceremony without real significance—they acknowledge that a certain courtesy is due from one government to another, and particularly to one with which we are on exceedingly friendly terms. And they do not doubt that in this instance the three men selected will be in every way worthy of the occasion and of the great republic they will represent." The *Philadelphia Press* expresses especial gratification over the honor done Captain Clark, formerly of the *Oregon*, and all the representatives "have had a training and experience which render it certain that the country will be worthily represented on an occasion whose duties are ceremonial but none the less weighty and important." These are typical of most of the comments upon the appointment of the embassy. But there is some criticism. The *Springfield Republican* objects to Mr. Reid because he "has been the leading journalistic apologist in America for the crime being perpetrated against republican institutions in South Africa," a few papers like the *New York Journal* object to the sending of any special representative to the coronation, and the *Chicago Chronicle*, with some other papers, criticize the appointment of General Wilson and Captain Clark, claiming that these honors should have gone to General Miles and Admiral Dewey. To those who object to "the participation of the republic in this royalist affair" the *Brooklyn Eagle* says: "Neither educated men nor educated readers of newspapers need to be told that the appointment of a special embassy to the coronation is a proper thing on the part of this government. The other governments of the world will be similarly represented on the occasion, and the United States, as a great world power, and as historically and sympathetically in very close relations to Great Britain, should also be represented there.

Those who sincerely think otherwise think ignorantly. Those who say otherwise, without thinking so, exploit a demagoguery which in this period of the intelligence of the world is a losing business, whether in politics, in oratory, or in journalism." Three secretaries accompany Mr. Reid.

The Danish West Indies

POSITION OF THE PEOPLE REGARDING ANNEXATION TO THE UNITED STATES

MR. THOMAS C. NOYES, of the Washington *Star*, a correspondent in whom one may place perfect confidence, has been investigating the state of feeling in the Danish West Indies regarding the annexation of those islands to the United States, and reports the results of his inquiry in the paper named. "The United States government and people need have no fear as to the acceptance by the people of the Danish West Indies islands of annexation," Mr. Noyes says: "With only a small minority in opposition, they are today earnest in their desire to join their fortunes with the great republic of the north. We needed but a few moments' stay at St. Thomas to discover that to the inhabitants ships had lost their interest, sugar-growing was not worth talking about, and the question of hurricanes only worth a moment's passing remark. The great, the burning question was whether or not the island was going to be annexed to the United States. Every second man on the street, every storekeeper, your driver and your boatman would all ask your opinion of the probabilities and express his own. It was likewise easy to see that with very few exceptions the community was earnestly in favor of annexation. Our driver said that the people 'were praying day and night to see the stars and stripes go up on the island'; and from this magnified opinion the statements in favor of the island joining its fortunes to the United States ranged all the way down to mild approval."

Mr. Noyes found that such opposition as there was, was based upon the fears of office and monopoly holders from the Danish government. The press is divided. "There are two little daily newspapers published here, both of them about as big as the ordinary handbills that are scattered around the streets. One of them is *Lightbourn's Mail Notes*. The editor is Mr. John N. Lightbourn, and he has spent a good deal of his time in the United States, and is familiar with the big republic, and is an earnest advocate of annexation.

"The other paper is the *Bulletin*, published by Mr. LeRoy Nolte. He also prints a large paper twice a week called the *Tidende*. All these papers are published in English. Nolte's papers are strongly opposed to annexation. After walking through a garden and climbing a steep pair of steps I invaded Mr. Nolte's editorial headquarters and asked him why he was opposed to annexation to the United States."

"What we want is to have this question settled," he said to Mr. Noyes, "settled one way or the other. The present uncertainty is bad for business and bad for everything else. These islands have offered themselves once to the United States and their offer was rejected. Now the talk comes up again and we have no idea where we stand. We feel sure of our condition under Denmark, but we can not tell what would happen if we were under the United States. This port is purely a maritime port, and its prosperity depends upon its being a free port. We are comparatively sure that Denmark will not get into any trouble, nor have any war that will close St. Thomas to the ships of the world. We are not so sure that this will be the case under the United States, just branching out as it is as a world power, and feeling its success in that rôle. We are not sure, then, that under the United States the port of St. Thomas would be a neutral port, and we know that it would not remain a free port. Then, again, you must remember that the people here have never been taxed directly. They hardly know what the thing means. We hear now of the taxes being placed in Porto Rico and of the strong native opposition there. We see these things coming closer to us and we state our objections before they are accomplished. We think this is the time to do so, because if annexation becomes an accomplished thing, we will all of us become loyal Americans as today we are loyal Danes."

Mr. Noyes is in no doubt as to the value of the islands to us: "The harbor of St. Thomas is a beautiful one from the picturesque standpoint, and a magnificent one from the practical. The entrance is safe and easy and the harbor itself is almost entirely landlocked, the hills rising around three sides of it. Two hundred vessels of large size can rest in safety here, let the storm rage as it will outside. The harbor could be made, with proper fortifications, absolutely impregnable, and with its situation in regard to Porto Rico, the proposed Nicaraguan canal, and even the entire West Indies, and the additional fact that it is practically the only safe harbor in all this section, it is easy to see why the United States government is willing to pay Denmark four or five millions of dollars for the purchase of these islands. Here is the ideal coaling and naval station for our government. St. Croix is a larger island than St. Thomas, and contains about 25,000 or 30,000 people. It has large sugar-growing industries, and is susceptible of much development on that line. St. John's, the third of the Danish islands, is a smaller body and not important.

"There should be no question about our government acquiring this place. After traveling through

the West Indies, it seems essential to our navy and to our commerce. It is practically the only safe harbor which can be defended in the islands, and with proper defenses, from here all the West Indies and all the traffic through the proposed Nicaragua canal can be commanded."

Congressional Summary

CONGRESS DAY BY DAY

JANUARY 13.—The senate considered a bill for the establishment of a department of commerce; Mr. Hoar (Rep. Mass.) introduced a resolution providing for the appointment of a committee of seven senators to examine into the conduct of the war in the Philippines. The house spent the day in discussion of the pension appropriation bill.

JANUARY 14.—Mr. Hoar spoke in support of the Philippine resolution; Senator Mason (Rep. Ill.) made a speech on the subject of reciprocity with Cuba. The pension appropriation bill was again under consideration by the house, the proposition to admit ex-confederate soldiers to soldiers' homes playing a large part in the discussion.

JANUARY 15.—There was a spirited debate on the naval reserve bills, during which the value of the militia forces came up for heated discussion; a resolution was adopted asking the state department for information as to whether or not the British government had collected duties on goods sent to Boer pris-

oners at Bermuda. The house passed the pension appropriation bill and a resolution providing for McKinley memorial services on February 27.

JANUARY 16.—The session of the senate was devoted to routine business; the department of commerce bill met with considerable opposition; Mr. Hoar recalled his resolution regarding the treatment of Boer prisoners at Bermuda. The house was not in session.

JANUARY 18.—The senate was not in session. In the house only routine business was transacted; an urgent deficiency bill and the Chinese exclusion bill were introduced.

The minority members of the senate committee on the Philippines agreed to a program of opposition to the Philippine revenue bill; they will propose the relinquishment of American sovereignty over the islands and declare them to be foreign territory, imports from which would, of course, be subject to regular tariff duties; during our "temporary occupation," however, trade is to be free between the islands and the United States. When a state government has been formed by the Filipinos, and sufficient guarantees have been obtained for the safety of foreigners and inhabitants loyal to the United States, "it is declared to be the purpose of the United States to withdraw from the Philippines and leave the government, control and sovereignty thereof to the inhabitants, retaining only such military, naval, and coaling stations as may be designated by the government of the United States."

The Opening of Parliament

KING EDWARD'S SPEECH AND COMMENT THEREON

THE pomp and ceremony which characterized the opening of parliament last year were again in evidence last Thursday, when King Edward for the second time opened the British parliament. The speech from the throne opened with a reference to the tour of the Prince and Princess of Wales: "They were everywhere received with demonstrations of the liveliest affection, and I am convinced their presence served to rivet more closely the bonds of mutual regard and loyalty by which the vigor of the empire is maintained."

"I regret," said his majesty, "that the war in South Africa is not yet concluded, though the course of the operations has been favorable to our arms, the area of war largely reduced, and industries are being resumed in my new colonies. In spite of the tedious character of the campaign, my soldiers throughout have displayed a cheerfulness in the endurance of the hardships incident to guerilla warfare, and a humanity, even to their own detriment, in their treatment of the enemy, which are deserving of the highest praise. The necessity for relieving those of my troops who have most felt the strain of war has afforded me the opportunity of again availing myself of the loyal and patriotic offers of my colonies, and further contingents will shortly reach South Africa from the Dominion of Canada, the Commonwealth of Australia, and New Zealand."

In regard to the sugar conference, the speech says: "I trust its decision may lead to the abandonment of the system by which the sugar-producing colonies and home manufacturers of sugar have been unfairly weighted in the prosecution of this important industry." Then came the following clause: "I have concluded with the president of the United States a treaty the provisions of which will facilitate the construction of an interoceanic canal, under guarantees that its neutrality will be maintained and that it will be open to the commerce and shipping of all nations."

After announcing that the estimates have "been framed as economically as due regard for their efficiency renders possible in the special circumstances of the present exigency," the speech concluded with mentioning proposed legislation, of solely domestic interest, with the exception of a bill to facilitate the sale and purchase of land in Ireland. The debate on the speech was hardly more interesting than the speech itself. Lord Salisbury agreed with the first Liberal speaker that it was impossible to grant independence to the Boers. Neither was it the government's business, after being gratuitously attacked, to inform the Boers on what terms they would be forgiven, especially since the Boers had not yet expressed a wish to be forgiven. Replying to the premier, Lord Rosebery, who described the speech from the throne as the most jejune document ever placed on the lips of a monarch, said he favored a passive policy of peace which would receive overtures when these were made. Irish affairs and the Boer war occupied the attention of the house. Sir Henry Campbell-Bannerman, the Liberal leader, spoke in general terms against the course of the government in South Africa, urging conciliation in place of brute force. He said the

same, to a large measure, was true of Ireland, where the government at present was "floundering between concession and coercion," and urged the adoption of the most liberal program toward Ireland. Mr. Chamberlain defended the government with his usual skill.

The London correspondent of the *New York Tribune* says that "The government is in much stronger form than its supporters had expected. The ministers are standing together, and an armistice between Mr. Chamberlain and Sir Michael Hicks-Beach has been arranged. The government has been greatly strengthened by the resolute attitude toward Germany, and it has become a patriotic duty for the solid men of the city to fling garlands in the path of Mr. Chamberlain." The *Times's* correspondent sees no prospect of anything coming of the present session of parliament except "the flood of purposeless talk which in later years has chiefly distinguished that ancient body. Lord Rosebery continues to occupy his anomalous, isolated position in the house of lords, and in the commons Sir Henry Campbell-Bannerman continues to try to hold together the various utterly discordant branches of the Opposition in his usual bungling way. Lord Rosebery's speech on the first day was a delight to hear, and reads well, as all his speeches do; but it was not the sort of utterance likely to produce anything advantageous to his party."

Readers of the article in this department last week on The Sugar Congress will realize the importance of the question of the London correspondent of the *New York Evening Post*, Does the British government mean to threaten the powers with a countervailing duty on bounty-fed sugar, following the example of India and the United States? The question is being asked in consequence of the pointed expressions of hope in the king's speech that the sugar bounties conference at Brussels might lead to the abandonment of the bounty system, by which the British colonies and British refiners were unfairly weighted. If England can at will wipe out the continental sugar industry, it is, of course, very important to know what new position, if any, she intends to take.

Spain's Problems and Politics

S. L. BENSUSAN, in the January *New Liberal Review*, London
Condensed for PUBLIC OPINION

ON May 17, 1886, Señor Sagasta announced to the Spanish people the birth of their new king, Alfonso XIII, who, in accordance with the Spanish constitution, comes of age on May 17, 1902. If the tasks and responsibilities of the queen regent, Maria Cristina of Austria, have been heavy, she has acquitted herself admirably, earning the gratitude and admiration of many Spaniards who called her "the Austrian" in the early days following her husband's death, and found no abuse too scurrilous when it was applied to her. Alfonso XIII succeeds to an inheritance whose administration would puzzle a strong man accustomed to rule, for Spain is beset by difficulties and dangers on all sides. Financial depression, Carlism, Republicanism, Clericalism are a few of the

questions the king must handle; and, though he will find wise counselors in the queen mother, Señor Sagasta, and the Duke of Tetuan, his work will be the more difficult because he will be held responsible for all mistakes.

If Carlism is to remain a force, some movement may be expected before May, 1902; and if Don Carlos, who seems to like Venetian security, is too old, indifferent, or incapable to take the field, Don Jaime, his son, will do so. It is thought in England that Don Carlos has resigned his claims in his son's favor. But this is not the case; he is still waiting to become king of Spain, and if waiting could achieve his aims his success would be assured. Republicanism and Carlism find their one bond of union in hatred of the Alfonsists, and the break-up of the reigning party would shatter the bond and set Republican and Carlist fighting for the spoils. Many enlightened Spaniards, who find no satisfaction in the work of Liberals or Conservatives, are well aware that a change could only be arrived at through another period of civil war, and that Republicanism has been an honest failure. The Republicans will not deal with the government on any terms, but some prominent Carlists are pledged to inactivity so long as the government does nothing to despoil the church.

A country's ability to maintain any form of internal rule or external policy is dependent upon its military and naval resources. Turning to the consideration of Spain's resources for offense or defense, it is to be noted that she possesses too many soldiers for a poor country to support, and not enough in these days of great armies to go far in the direction of effecting European alliances. The war strength of the regular army is under 200,000 men, while even little Portugal has nearly 150,000—on paper. The cost of supporting the Spanish army is very great, and the campaigns in Cuba and the Philippines returned many men to the mother country quite unable to support themselves.

The question of alliance is one to which Spanish statesmen have given their serious attention since the American war, though long before that time some prominent politicians and publicists had warned their countrymen of the danger attendant upon unsupported action in matters of world-wide importance. It is interesting to note a very friendly feeling towards Great Britain in many quarters where it would not be expected, and during my last visit to Spain I was assured by gentlemen holding positions of trust and importance that a better understanding with Great Britain would be welcomed heartily. It is felt in Spain that France as an ally would only repeat the treatment that Napoleon inflicted upon the country in the last years of the eighteenth and early years of the nineteenth century, and that the French designs in north-west Africa are incompatible with a lasting Franco-Spanish understanding. The one hope of Spain outside her own country is fixed upon Morocco, and if she can not seek a recompense there for her many losses in other parts of the world, she wishes at least to see the *status quo* preserved, and to have no foreign power facing her across the narrow waters of the Straits of Gibraltar.

The Alfonsists are the one party well disposed to England, and in the unforeseen and unlikely event of their downfall through a successful Carlist or Republican rising, the danger to our position at Gibraltar would be increased considerably. British and Spanish policy in the Mediterranean are not in conflict; each country desires to see the Moroccan empire pre-

served, and if it had to change hands Spanish possession would suit Great Britain better than French. When Spain was a great world power, every inducement was offered to her sons to colonize, and Spain itself was comparatively overlooked. The times have changed, and Spain is looking at home to discover many sources of national wealth unsuspected and unexplored. Another advantage of an Anglo-Spanish understanding is that it would not commit this country to any great political movement, because Spain has forsaken the paths of empire and can not return to them for some years, when the great outstanding questions of expansion have been settled one way or another. It is possible, though not likely, that the next few months will afford this country an opportunity of supporting the Alfonsist rule if it is the intention of our statesmen to do so; since, unless the history of Spain is going to take a very decided change for the better, it is safe to say that the first few years of the young king's reign will not pass without trouble.

Anglo-French Friction in the New Hebrides

London Times. Condensed for PUBLIC OPINION

THE present position of affairs in the New Hebrides is attracting considerable attention in Australia. The question is believed to be engaging the serious consideration of the federal government, and it is not impossible that some proof may be demanded of the official assurances from this side that "the protection of British interests in the Pacific is an object of anxious solicitude to the government." The position in the New Hebrides is regulated by the Anglo-French convention of November 16, 1887, supplemented by the agreement of January 26, 1888. The protection of persons and property was entrusted to a joint naval commission composed of two English and two French officers, and a president who, in alternate months, was to be the French or English commanding officer on the station. Some one has said that the use of an agreement is to pick holes in it. Certainly experience has shown that the New Hebrides convention is far from perfect.

The British and French settlers in the islands are about equal in number, but, owing to the energy of the Baptist and Presbyterian missionaries, there are far more Protestants among the native converts than Roman Catholics, and it is declared that the French have the reputation of not treating native labor as well as the British. Australian opinion has become exasperated because in face of equality of interest the French are considered to have adopted a course of continuous encroachment that must, if unchecked, make the New Hebrides a French possession. The process adopted is very simple. It consists in buying land from the natives at insignificant rates, which are rendered attractive by the fact that they are paid in arms and spirits. This would be irritating enough if it were carried out exclusively at the expense of the natives, and if it did not produce collision between the two white races. But the French have in some cases claimed land which British subjects declared that they had already purchased, and not only claimed but seized it in a very high-handed fashion. This may prove a serious question, as feeling between the two nationalities throughout the islands is one of great jealousy.

If they are examined with care and impartiality, it

will be found that the root difficulty is the continued importation of arms, ammunition, and alcohol—the three A's they might be called—into the New Hebrides by the French. Our foreign office has made several representations to the French government on this subject, but all its efforts have been barren of result. The French government is apparently reluctant to stop proceedings which, however indefensible on moral grounds, promise to result in the establishment of French predominance in at least the two principal islands of the New Hebrides group. Here the matter would probably be left to stand over indefinitely if it rested with the British and French governments alone, but it is impossible to ignore the increasing irritation of the Australians. Restraint can not be expected to endure forever, and, unless the situation is cleared up, a renewal of the agitation that broke out in 1883 in favor of annexing the New Hebrides may be looked for in Australia before long.

Another Fashoda?

London Sunday Sun

NEWS of considerable gravity has been received from West Africa, involving, it may be, another period of tension between England and France, such as, not to mention Fashoda, existed in 1897, regarding the control of the Lower Niger. At that time French and British posts were in several instances established in the same towns, and it was only by the exercise of great firmness, as well as forbearance, by the British officials, that an armed conflict was avoided. The situation today on the northern and western frontiers of Nigeria is equally unsatisfactory. Violations of the northern frontier by French columns have been frequent, and necessarily detrimental to British prestige among the native rulers and peoples. These incursions have been justified by the French authorities on the spot on the ground that no practicable route to Lake Chad from the west exists through French territory, which in this district is nothing else than the southern fringe of the Sahara. If these incursions stood alone, the matter would be capable of fairly satisfactory adjustment. Unfortunately they do not.

On the western shore of Lake Chad is situated the Mohammedan state of Bornu. This, by international agreement with France and Germany, falls within the British dominions. Yet, in despite of such agreements, French columns have entered Bornu, and have slain Fadel Allah, a chieftain whom the high commissioner, General Lugard, was on the point of recognizing as emir of the country. The gravity of such action is obvious. Moreover, it must be borne in mind that the importance of Bornu in the commercial development of our West African possessions can hardly be over-stated. From its capital, Kuku, start many of the great caravan routes which traverse the Sahara; thence come gum, rubber, ostrich feathers, nuts, and other tropical produce. Without Bornu our position in Nigeria would be gravely imperilled, and we should never be able to develop it into the second India which under proper conditions it would become, and that in course of a single generation. Without Bornu we should have to give up the scheme, so brilliantly foreshadowed by Sir William Macgregor, of not stopping the career of the Iron Horse—now well on its way from Lagos to the Niger—"until it drinks the waters of Lake Chad." In short, Bornu must be regarded as an integral part of British Nigeria.

It is necessary to say this because the French colonial party are busily engaged in endeavoring to show that Bornu, "by a rectification of the Niger convention," and for some slight compensation elsewhere, should be handed over to France; and they have even advanced as an argument in favor of their contention the fact that the French columns have penetrated into British territory—a proceeding they justify on the ground that in "chastizing" the natives they are acting as the policemen of Europe! This article reveals at once the strength and the weakness of our position. Legally we have an unassailable title, and have had these ten years past; in practice we have done nothing to make effective our sovereignty, and have been unable to prevent either the late sultan, Rabali, from making Bornu the base of operations against the French, or the French in their turn from waging war on a chieftain who had placed himself unreservedly under British protection. It is neither useful nor dignified to complain about French aggression whilst allowing the richest native state under our (nominal) control to remain in a state of anarchy. The time has come when this period of unmasterly inactivity should end, and effective steps be taken not only to guard our frontiers but to secure peace and good government to the sorely tried Bornuese.

Fortunately the high commissioner has recently returned to Nigeria intent on devoting his chief energies to the solution of this very question. It was largely to General Lugard's dispositions that we owed the pacific solution of the Niger controversy, and he may be trusted to do nothing to unnecessarily ruffle French susceptibilities. He possesses the complete confidence of the colonial office, and is assured beforehand of the support of the secretary of state in any action he may deem essential. What is needed, however, is a clear intimation to France that the policy of "pin-pricks" in West Africa must cease. The colonial ministry in Paris is naturally loth to disavow the action of its subordinates, especially remembering what success has attended in former years the "unauthorized" expeditions of French officers, but we do not believe that there is any wish at the Quai d'Orsay to provoke a conflict with England over West Africa.

THEY DON'T SEEM TO LIKE EACH OTHER'S BROTH
—Chicago News

SOCIOLOGICAL

California Women as Farmers

EMMA SHAFTER HOWARD, in the January *Country Life*, New York. Condensed for PUBLIC OPINION

A CALL for the representation of women's work upon the lines of agriculture and horticulture was made in 1899 by the international council of women held in London.

This led to efforts to register the names and to gather concrete statements of the work of women throughout California. As a result, the records of forty women were taken to London and presented with those of ten different countries through the delegates of their national councils. Out of this representation and at the suggestion of the California delegate, a Women's International Agricultural and Horticultural union was agreed upon, each country pledging itself to its own registration and union within its own borders as the basis of economic representation in the world's work and influence: first for the benefit of each separate country and its workers; second, to circulate useful information and to compare methods of different districts and countries; third, to encourage and stimulate farming, dairying, stock-breeding, bee-keeping, poultry-raising, etc.; fruit and flower-growing for profit; landscape gardening, arboriculture, forestry, and the management of estates as employers and employed; the encouragement of working amateurs.

There being no registration in California, and no representation of the economic value of women's work, it is a difficult task to gather the names and records. There are two women members of the state board of trade, Mrs. E. Shields and Mrs. A. L. Bancroft. The former has two hundred and fifty acres of land in the Sacramento valley, skirting the banks of the American river. In one of the beautiful sub-valleys made by the broken contours of the coast range lies the fruit and grain farm of Mrs. E. P. Buckingham. Long lines of orchard trees, heavy with fruitage, radiate in every direction from the homestead. These one thousand acres, lying near Vacaville, have been planted and developed by Mrs. Buckingham within the past sixteen years. Unlike the flat stretches of the Sacramento and San Joaquin valleys, those nearer the coast, like that of Vaca, are more broken and picturesque in their hill-slope settings, fast covering with verdure of vine and olive and giving an old-world look to the new acres. The season of gathering was coming, and tent villages were being set up for the fruit pickers, who assemble upon these farms, year by year, to spend vacation in work and play. Among these came a woman from the Bahamas, wishing to take active part in this object-lesson of picking and pac'-ing, that she might return to her own acres and profit by the experience.

In the hospitable home of Mrs. Sherman, at her model farm five miles from Fresno, the inspiration of necessity to meet the duty at hand, to hold fast to the home instinct and to keep its fires burning, has been the keynote to success. From small beginnings as a dairy and vineyard, the high quality and standard of its product came as a result of her determination to do everything well. She has kept records and statistics which are valuable contributions to the state archives. Success with dairy stock has led to the breeding of horses with equal success. She has branched out as a fruit-grower, and by the steady application of economical methods has brought about remarkable results.

The "Women's Silk Culture Organization of California" was formed in 1880. A number of patriotic and intelligent women foresaw that the culture of silk might be made a great industry. Their efforts, with those of others, have demonstrated that the production of silk in the form of the cocoon is an exceedingly simple thing; that in our regular dry summers, without rain, storm, or electricity, silk culture is reduced to a minimum of expense, and that it may inure largely to the benefit of women and children.

It is in the hope that a knowledge of the economic work of women throughout the state and comparison and exchange of basic facts and principles thus collected would lead to reciprocal relations between city and country homes, between producer and consumer, that the "Women's Agricultural and Horticultural union" is formed. The first practical result of this "union" might well be to widen the vision of the present clubwoman as to the possibilities and scientific methods of service, and the economic use of her means and time. The second practical result might be to broaden the definitions of home and society.

Convict Farms

SUCCESS OF THE LOUISIANA EXPERIMENT

THE New York *Tribune* comments editorially upon the success of Louisiana's experiment in state convict farms. The constitution adopted in 1898 provided that after the expiration of the leases then in force no convicts should be hired out to private contractors. The board of penitentiary commissioners bought lands and erected buildings for the housing of those convicts who could be employed outside the prison walls, and many of the able-bodied prisoners were set to work raising cotton, as well as corn and other food crops, and caring for cattle and hogs, all the results of their labor to be applied to the support of the penal institutions and their inmates. The legislature appropriated \$200,000 for the working out of the new plan, and the report of the first year's operations is now made public. From the two plantations which were established the total cash income for the first year is \$180,000. Besides this ready money, the board has several thousand tons of hay, forty thousand bushels of corn, and enough peas and potatoes to carry men and stock through the next crop year. One of the farms has a steam sawmill, which is run by the convicts. Some of them are employed in building levees, and others who are unable to perform such active labor are busied with light work in the prison at Baton Rouge. The good effect of the system upon the health of the prisoners themselves is shown by the fact that the mortality among Louisiana convicts has been reduced one-half. This writer says that conditions in the gulf states are more favorable for outdoor employment of convicts than they are in the north, but in view of the remarkable success of the Louisiana experiment, a proposition to utilize the labor of New York state's criminal wards in hard but healthy labor in the open air could hardly be termed utopian.

The Anglo-Saxon Society Woman

The January *Blackwood's Edinburgh Magazine*, Edinburgh
(New York: L. Scott Pub. Co.), Condensed for
PUBLIC OPINION

THE subject of these notes is not so much that unapproachable being, the woman who is "in society," as the phrase goes, but rather the woman who, whether she be a member of any privileged coterie or not, lives *for* society. She may, very possibly, be within the charmed circle; more probably she belongs to the multitudinous band of baffled but undiscouraged Peris who are forever knocking at the gate of that very indefinite paradise, the smart set. The large majority of people who live for society, and whose ideals, ambitions, and ethical code are regulated by it, are not members of any special caste.

Society, no longer, as of old, "the profession of pleasure-seeking," is now rather an ambition, a career which is pursued, not as a source of happiness or enjoyment, but as a means of self-advancement; and the present-day Anglo-Saxon society woman is the natural product of an age when placid joys have ceased to charm, and men and women of the world are fasters rather than drinkers of the wine of life, losing its finer flavors in the ceaseless rush and whirl and change, the idolatry of useless ostentation, and the struggle for social preferment. If a multiplicity of wants and desires, and a discontent that is not exactly divine, be the true test of civilization, then may the fashionable Eve of our day be regarded as the finest flower of these luxury-loving times; and if we follow the lines of her development, we shall find her symptomatic of much in the world around us. The two prime necessities of so-called smart people are excitement and money. Gambling affords a certain means of obtaining the first, while it holds out alluring promises of the second. In spite of the fascinations of "bridge," smart society probably gambles and bets less than in former days, but stock-exchange speculation has of late years enormously increased in favor with the fashionable *mondaine*.

To many people, society, as we understand the word, seems the very antithesis of sociability, and this chiefly on account of its terrific artificiality. Men and women who breathe habitually an atmosphere of social form and convention gradually lose all spontaneity. They are perpetually at war, as it were, with human nature. Sincerity, or what Stevenson calls "truth of intercourse," becomes an impossibility, until at last the artificial seems to be the only true natural. Hence the mincing accent now so common, the strange, apish antics, such as the ungainly shoulder-high handshake; the conversation adorned and garlanded with strange hothouse flowers of exotic speech, and all the other affectations practiced by those who wish to be regarded as the social *elite*.

In our growing mammon-worship and the consequent vulgarization of our social life trans-Atlantic influences are probably much greater than most people imagine. It is from the United States that we derive, not only our weather and the raw material for many of our noble-women, but also our growing love of luxury and extravagance, the craze for publicity, the rush and hurry of our social life, its loss of dignity and restraint, and the deification of mere money-bags. And the American woman of fashion, with her keen intelligence and masterful temperament, supreme in her own sphere and with the self-confidence of one accustomed to rule, sets the impress of her striking personality more and more upon our so-

ciety. More natural and freer from the trammels of social conventionalities than her British cousin, more direct in speech and action, equally self-conscious, yet, on the whole, less addicted to posturing, she is even more skeptical and more frankly cynical in her utilitarian views of existence.

For the existing state of things in society its women must be held mainly responsible. They are its rulers; it is for, and by virtue of them, that what is called the smart world exists. Their influence is supreme in social life, gives it its tone, regulates its amenities, and lowers or elevates its moral standard. It may not be always true that nations perish from the top downwards, but the frivolity and prodigality of the pleasure-seeking rich may go a good way towards undermining that national character which is the only solid foundation of our greatness, while they certainly deepen class hatreds and divisions.

Caste in Great Britain

London *Saturday Review*. Condensed for PUBLIC OPINION

IT is not necessary to go to India to hear curious stories of caste. Let us take a British example. In a professional man's household recently, a maid-servant fell ill of diphtheria. Her mistress nursed her herself through a tedious illness until she was quite well. When that happy result was established, the maid immediately informed the mistress that she intended to leave her service. Now here's comedy. The reason of the maid's departure had to be given, and it was this: "I could not live with a mistress who has been waiting on me herself." Quite evidently this is not mere indifference to kindness or ingratitude. It looks ungrateful, but it is something much more complex, and harder to understand, than that coarse kind of selfishness which mistress and maid have so frequently to complain of in each other, and which makes a large part of the servant problem. The girl was the slave of that mysterious influence of caste which splits up into minute sections every modern society, as it has split up every ancient society, and seems likely to split up any future society that it is possible to imagine. We may put the maid's feelings something like this, though she may not exactly have realized them herself: You have transformed by your services to me the caste relations of mistress and maid, which are customary, well understood, and legal, into a relation of obligation and gratitude. I had no difficulty in serving you before because we had a definite position towards one another. You have confused that simplicity and in the future neither you nor I will know what is involved in our relationship. It seems that if the girl thought, or at least felt, like this, as she quite possibly may have done, she was quite right. Also conceivably she may have taken the more vulgar view of the caste relation. She may only have had that snobbery of inferior minds which runs through all classes of society by which so many people estimate their own importance according to the social rank of those on whom they are parasites or dependents. Social rank in this connection must, however, be understood to mean now the display of superfluous wealth which in most cases confers the kind of distinction most widely appreciated. Had the lady we are speaking of been wealthy, she would have shown her kindness not by giving her personal services, but by providing nursing, and paying expenses. That would have only emphasized the distinction between mistress and maid.

LETTERS & ART

Prince Troubetzkoy, Sculptor

M. T. KLINGSTON, in *La Revue*, Paris. Translated and Condensed for PUBLIC OPINION

SHALL always remember the feeling of glad surprise and of inexpressible charm which I felt when I found myself for the first time before the works of Troubetzkoy.

Here was no superannuated, stereotyped, and vulgar copy of the pseudo-antique, nothing of the eccentric attempts or of the ostentatious originality of certain artists, but simply life in purest simplicity, the life of the subject, neither nymphs, nor satyrs, nor false gods, but only living beings, visible to each and every one of us.

False and incompetent artists have urged the want of the æsthetic in the modern costume to excuse their defects, but Paul Troubetzkoy, without any theory, without any revolutionary ideas, introduces this costume into a work of art simply because of his love for the truth. Thus, by the normal play of an extremely impressionable vision, a vision which is virgin of any dead education which could possibly hamper it, without imitation, without any effort but that of expressing most intensely his impression, he is one of the most remarkable individuals of the present time.

He does not regard beings simply as volumes which one should copy mechanically, he sees them as luminous plans of diverse values immersed in the atmosphere. He is the first to have the complete intelligence of this fact, that the sculptor translates by a monochrome image a polychrome model, the local tones of which are modified by the ambient air. It follows from this that an exact copy in clay of the model, to which the greater number of contemporary modelers hold, does not in any sense give the impression of this model, since one neglects the two prin-

cipal factors of the impression—the proper color and the atmospheric envelope. Rodin felt this confusedly, but without doubt Paul Troubetzkoy alone fully comprehends it.

We agree that the sculptor should not transport into his art the methods of a painter; the sculptor has

FIACRE IN THE SNOW, BY TROUBETZKOY

only to transform the colors into values; that is to say, into surfaces unequally illuminated. Now, there are two ways of modifying the illumination of a surface. The first is to vary the angle which the surface makes with the sun's rays, but this method deforms the profiles and cannot be employed except for the hollows or in works destined to be seen under one face, as in *bas-reliefs*. The second way is to divide the surface into a number of small plains which, without modifying the general direction of the surface, form as many points or lines of shade. It is exactly this simple method that Troubetzkoy uses. With this method he obtains the variety of effects which are possible from the character of the model, the local color, the luminous envelope and the distribution of black and white. To produce the texture of a robe, his procedure is very delicate; he makes the light shoot without check on the short folds of the cloth, giving thus the illusion of a soft stuff; to intensify the lace of the corsage or of a ruche, the sun's rays are caught everywhere by means of numberless fine ridges, and when the sculptor caresses the feminine head we see him discard every suggestion of harshness and make his subject appear bathed in a tender light. It is this method which permits him to render tangible that tie and that harmony existing between things. He does not see them with the dry eye of the analytical naturalist who distinguishes the elements one by one; he sees the things synthetically bathed in luminous light, which extinguishes the incongruities, fills the hollows and gives to the whole a large and eurythmical unity.

This method gives to the works of this artist the surprising expression of life which they possess. These are not the cold images of clay or of bronze, but cloths, velvets, and flesh bathed in color and light. At the same time the points of the profile which determine the contours, reliefs, and angles are placed with an astonishing exactitude by the sculptor, for his eye, which is endowed with an exceptional power for correct observation, permits him to construct forms with

From *La Revue*

THE PAINTER, SEGANTINI, BY TROUBETZKOY

a perfectly poised freedom and an incomparable liberty. The proportions of a figure, the projection of the bones, the shading of the forehead, the edge of the nose—all this is designed in the clay apparently without effort, with unequalled truth and with that power which shows that the artist has no need to fix his model in a false and fatiguing attitude, but that he has seized in a flash a natural movement entirely free from constraint.

In conclusion let us say that the entire work of Troubetzkoy shows that the art of today has no need to copy the art of yesterday; for strict imitation is an illusion, unproductive and absurd. Troubetzkoy shows above all that to create a new beauty there is no need to invent fantastic lucubration of the tortured and of demoniacs, it is only necessary to contemplate life; for this latter renews itself every day and the true art has only to follow its example.

The Art of Mrs. Patrick Campbell

MRS. PATRICK CAMPBELL, who occupies on the London stage a more important position than any other actress of her years, is now appearing in her leading rôles in New York, after a tour of our western cities. The *Commercial Advertiser* characterizes her as "the most intellectual person of prominence now acting on the British stage," adding: "She is also a woman whose temperament, appearance, voice, and manner are all so strange and vivid that, like all striking and unusual personalities, they stir up strong and opposite feelings in an audience. The *clientele* which Mrs. Campbell has made hers in London is composed in a flattering degree of the intellectual and literary classes. Her hold upon them grows from her gifts as an actress, her boldness and intelligence as a producer of plays which can not have a mob success, and the excellence which she always maintains in her company." The *Evening Post* says: "She has individuality, temperament, eloquence, power, and pathos, and a notable gift of irony. She is, it is tolerably safe to say, a born actress—that is to say, she has the power of giving full expression to any

mood suggested by her own instinct, but, trusting more to impulse than to calculation, she is not yet the consummate artist, and it is doubtful whether she ever will attain to the highest pitch of technical perfection, as she appears to have fallen already under the sway of mannerism."

The *Tribune's* characterization is as follows: "Tall, lithe, slender, alert in movement, nervous, restless, impetuous, possessed of an expressive countenance and of a voice that is singular rather than sympathetic, apt at posing, and proficient in sudden swirls of vehement motion and fervent loquacity, this actress readily imparts the impression of a nature that is peculiar, distinctive, energetic, and potential. Excessive sensibility seems to be the predominant attribute of her acting, and this is combined with a certain wild or strange self-absorption, as of a mind in which fancy exceeds reason and all volition is governed by impulsive feeling." The *Times* notes an imitation of Duse in her acting and complains of a touch of monotony in her elocution. The *Press* laconically remarks: "Mrs. Patrick Campbell is a Burne-Jones picture come to life. Great gifts but no genius."

Mrs. Campbell introduced herself to the New York public as "Magda," in Louis N. Parker's version of Sudermann's play, a part that has been acted by Mme. Bernhardt, Mme. Duse, Mme. Modjeska, Miss Nethersole, and Mrs. Fiske. Of all these interpretations, Mr. William Winter says that Mrs. Fiske's is the truest and best. The *Post*, on the other hand, says that Mrs. Campbell's performance is clearly superior to Mrs. Fiske's in every way save that of ingenious artifice, but distinctly inferior to Mme. Modjeska's in brilliancy, skill, and dramatic power. All the critics agree that Mrs. Campbell summons up her best energies in the scene in which Magda denounces her old lover and betrayer, von Keller. Here, says the *Post*, "her contemptuous scorn for her hypocritical seducer was expressed with extraordinary and withering force, and it increased in bitterness up to the supreme moment when she drove him finally from the house, heedless of all consequences to herself, when she attained a height of passion beyond the reach of any English-speaking actress on this side of the Atlantic. This was the climax of her art."

MRS. PATRICK CAMPBELL AS MRS. TANQUERAY, MRS. EBBSMITH, AND MAGDA

A Defense of Second-Rate Writers

The London Spectator. Condensed for PUBLIC OPINION

BY common consent there are more really good books being written at the present day in England than was the case ever before, even in the Elizabethan age. Those readers who are accustomed to hear the critic pronounce that this is an age of inferior literature, and that the literary plain is desolate from Dan to Beersheba, may hesitate for a moment to admit the truth of this assertion. Yet we think that a little consideration will change their opinion. Wherever we look it is impossible to deny the high level of accomplishment which our writers have attained. That it is not universally recognized is perhaps due to its very abundance producing a kind of mental dyspepsia in the reader, whose perceptions are further dulled by the hashish of the novelists and the bhang of the daily papers. We need only compare the average English book of today with that of the last two or three generations. As a rule, we make the comparison with the great books which alone have survived. Let us take the department which is often allowed to usurp the whole name of literature—fiction and poetry—as an instance. We have no Thackeray or Scott or Dickens, and Mr. Lang is entitled to that extent to maintain his preference for the novels written before 1860 to those published since. But if we think of the best dozen or so of our living novelists—Mr. Meredith, of course, is *hors concours*—we are inclined to challenge any one to produce their equal from a single year of the nineteenth century, bar first-class genius.

In poetry, again, we have no great writer; but we have sixty or seventy minor poets who would all have got into the collection of Chalmers if they had had the luck to be born a hundred and fifty years earlier. In other departments of literature the case is the same. Matthew Arnold used to complain, with great truth, of the miserable way in which the "journeyman-work" of literature, such as translation and newspaper work, was done in this country. Nowadays skill and conscience are brought to both tasks. We need only refer to such translations as that of Balzac which Mr. Saintsbury edited, or Dr. Rendall's Marcus Aurelius, or Mr. Frazer's Pausanias to show how great a change has taken place.

It remains to consider whether the great increase in literary ability of the second order is a good thing. One's first instinct is to say unhesitatingly "Yes." Since reading is practically universal among the rising generation, it is surely well that the greatest possible quantity of good, sound work should be given them to read. Good, wholesome writing is always better than the bad, sensational, and often noxious stuff which was so much more prevalent from the days when Sir Anthony Absolute banned the circulating library down to the last generation, but which is now almost killed by the greater popularity which—in the ultimate decency of things—attends on the better writers who now tell such good stories. We do not see how any one can seriously contend that an increasing percentage of good second-rate literary work can be harmful, but there is a good deal of cant still to be cleared out of some critics' minds on that subject.

The other reason given for the dislike of this dead-level of excellence is that it is likely to hinder the efflorescence of works of genius. This appears to rest on the curious theory that a man of genius will tend to

assimilate his work to that of the majority; but the usual practice of men of genius is just the reverse. Experience shows, furthermore, that great writers have appeared most freely—so far as there can be any classification of times and seasons—in the midst of a general literary movement of considerable excellence. To say that the general abundance of writers of talent is a hindrance to the appearance of geniuses is about as wise as to say that, because most women in France can cook, it must be peculiarly hard to get a supremely meritorious dinner in Paris.

Mrs. Gardner's Museum

TARIFF ON ART—OPENING PRIVATE COLLECTIONS TO THE PUBLIC

THE incorporation of Mrs. John L. Gardner's palace in the Fenway, near Boston, has given rise to the discussion of two questions of moment to art-lovers—the tariff on art and the advisability of opening private collections to the public. The structure is a fine *fac-simile* of a four-hundred-year-old Florentine palace, containing Mrs. Gardner's rich collection of art, including examples of Titian and Botticelli and Rembrandt, marbles and bronzes, a magnificent music-room, the already famous chapel, with all the residential quarters on the fourth floor. This palace is now incorporated as the "Isabella Stewart Gardner Museum," with \$50,000 in stock and a full board of officers. The *New York Times* says that by thus establishing a museum owned by a stock company she can avail herself of the exception made in favor of educational establishments and import works of art free of duty. "Mrs. Gardner's museum brings up again the absurd situation with regard to antiques. She can now, under cover of the museum, bring over the Botticelli which she bought through a London dealer from Prince Don Mario Chiigi, a Roman gentleman, who has been haled to the courts of law by the public prosecutor for thus disposing of his own without the permission of the nation. Mr. J. Pierpont Morgan, Senator Clark, and others have antiquities of great value which may one of these days become inmates of public museums, but do not reach America at present because it seems absurd to make the treasury a present of many thousand dollars because of a foolish, backward-looking law which has worked, and is continuing to work, to the detriment of the best interests of the public and our artists. Especially absurd is the duty on antique art. Last month a bill was introduced in congress to relieve of duty all works of art made prior to A.D. 1700; but so far there is no sign that it will prevail."

Mrs. Gardner's example has led Bishop Potter to urge upon those who possess art collections of educational value the desirability of opening them to the public. The *New York Evening Post* comments as follows on his remarks: "In London, a note to the private secretary of a great house will always meet with a courteous response; permission to 'see over' is rarely refused, except for reasonable cause. And so it should be, for no merely meddling person is likely to take this trouble. Several of our local collectors who were interviewed recently expressed their willingness to show their pictures to any interested person who would write them for permission, and it is to be hoped that many art-lovers will take them frankly at their word. It would be a great step in advance if all collectors who are thus well disposed would come out and express themselves for the good of the cause."

SCIENTIFIC

Regulating the Blood Supply

THE EFFECTS OF EXERCISE, MENTAL AND PHYSICAL, UPON
THE CIRCULATION

NEW HAVEN correspondent of the *Boston Transcript* asserts that Dr. William G. Anderson, director of the Yale gymnasium, has laid the foundation for a great variety of scientific discoveries by a series of experiments he has just completed relating to the blood supply of the body and its regulation. The experiments had their origin in the conviction of Dr. Anderson that physical culture is the proper means of treating all diseases which spring from improper blood supply, such as paralysis, apoplexy, and epilepsy. The theory on which he started was that if the blood supply were properly regulated, most of the cases of brain or body paralysis would be either prevented or cured.

As the blood and the nerve relations are most intimate, there is only the slightest difference between the experiments carried on by Dr. Anderson and those of Dr. Loeb, of the University of Chicago. They have worked along similar lines. Each has obtained results which bear out the other's theory, namely, that what has appeared to medical science to be decay or disease of an incurable nature can be checked, or perhaps cured. Dr. Anderson does not carry the result of his experiments to their logical conclusion, from a medical standpoint. He draws his general deductions and leaves the specific applications to the medical authorities. Dr. Anderson has devised what he terms "musclebed" for testing the distribution of the blood supply. All the experiments related to the study of the center of gravity of the human body when placed in a horizontal position. The experiments were to see whether the center fell or not, and, if it rose or fell, to estimate how great an amount of blood was sent to any given portion of the body by either physical or mental exercise, by muscular labor or thought.

In trying to solve these problems Dr. Adams has placed more than 150 undergraduates on his musclebed. The subject is placed prostrate on a table, balanced by compensating weights. The man, lying prostrate, can be rolled in any direction by a large or a fine adjustment. Levels, graduated scales, and an indicator for use in making records form a part of the apparatus. The bed rests on very accurately made knife-blades and is sensitive to the slightest pressure. The fact that it possesses sensitiveness in the highest degree is seen when it is stated that Dr. Anderson places on the table a subject, balances him exactly, and then tells him to answer some question which requires considerable thought. Although the student does not move a muscle, the rush of blood to his head, caused by his mental labor in thinking, causes the center of gravity to change. The subject is no longer balanced. His center of gravity has risen owing to the presence of the greater amount of blood. To show the extent to which the center of gravity will rise in cases of this kind, Dr. Anderson says that he examined several students before and then after they had taken their annual examinations in their studies. He found that under the stress of such conditions the center of gravity had risen from two to sixteen millimeters or from one-sixteenth to two and one-half inches. Little wonder that apoplexy or brain disease

of some kind follows continued mental strain when such an amount of extra blood supply is forced to the brain as is proved to be done in such cases as these.

Dr. Anderson has carried out his experiments by working from the opposite side of the question. He tried physical experiments to show that by exercise the blood supply is called from the brain and taken to the lower extremities. The tests were uniformly successful, the center of gravity being tremendously lowered by the exercises taken. A unique feature introduced by Dr. Anderson into this line of experimentation was for his subject to "think out" the gymnastic exercises, instead of actually going through them. Although the athlete did not move a muscle, the effect proved to be much the same, the blood rushing away from the head to the lower extremities. When the deductions made from these experiments are applied to medical problems affecting brain disorders, discoveries of a revolutionary nature are expected. A squad of athletes were examined who tried physical culture exercises in a mechanical manner and another who were given exercises which they took special delight in doing. Without exception the tests showed that the center of gravity changed slowly when the exercises were performed listlessly, while in the case of the others the blood supply to the legs and arms was rapidly increased and the center of gravity changed several inches. Another set of athletes was set at work performing exercises while seated and made to carry out the same set while standing.

In the case of every man who exercised, the center of gravity arose higher while he was sitting than standing. Another test was taken of a number of gymnasts who exercised before a looking-glass and then did the same set of exercises away from the glass. It was clearly demonstrated that the center of gravity arose more rapidly in cases where the exercises were taken in front of the glass than those when they were not.

Wireless Communication at Sea

THE *Kaiser Wilhelm* AND THE *Lucania* EXCHANGE
MESSAGES FOR THREE DAYS

CAPTAIN HOGEMANN, of the North German Lloyd steamship *Kaiser Wilhelm der Grosse*, which arrived last week from Bremen, Southampton, and Cherbourg, had the longest wireless sea talk on record with the Cunarder *Lucania* on her last trip to Bremen from this port. He says that the Marconi apparatus on both ships worked unusually well. This he attributes partly to the fact that the *Kaiser's* operator, Herr Kröken, was formerly on the *Lucania*, and the *Lucania's* operator was once on the *Kaiser*. Each thoroughly understands the peculiarities of both instruments. The ships held aerial converse for nearly three days, or until they were about half way across seas.

The *Lucania* sailed three hours before the *Kaiser*. Off the Hook, when the Cunarder was sixty miles ahead, the two ships began to exchange sentiments. The signalling was kept up all night long. At day-break the next day, Sunday, the ships were in sight of

each other. At 2 p. m. the *Kaiser* passed the *Lucania*, four miles to the southward. Twelve messages were sent by passengers in the *Lucania* to the *Kaiser* for transmission to the wireless station at the Lizard, and thence by land wire to the persons in England to whom they were addressed.

Just after nightfall on Sunday the lights of neither ship were visible from the other. They were still in touch telegraphically. At noon on Monday the liners exchanged positions and their commanders found that they were forty miles apart. Early in the evening, off the banks, the *Kaiser* ran into a thick fog. She struck into clear weather later and her Marconi operator sent this message to the ship astern: "Twenty-five miles east of banks. Clear weather." The Cunarder thus acknowledged the receipt of the dispatch: "Thanks. Am still in a thick fog."

The liners were then sixty miles apart. During the night the clicking aboard the *Kaiser* grew fainter and fainter, and finally, when there was about eighty-five miles of sea between the ships, the instruments stopped working. On the trip she finished, while in mid-ocean, the *Kaiser* passed but did not sight the *Kronprinz*, her sister ship, bound east. They swapped positions, and passengers sent messages across forty miles of water for two hours.

The Alcohol Motor

OFFICIAL FRENCH TESTS OF ITS EFFICIENCY

THE French minister of agriculture recently instituted a series of tests to discover the efficiency of alcohol as a motive agent. For the first time engineers are now supplied with accurate data which give them what they never had before—a trustworthy means of comparing alcohol with petroleum and other motive agents. For this reason alone the minister of agriculture's researches should receive their full meed of praise.

Compared with the gasoline motors, it cannot be denied that the alcohol engine seems at first distinctly inferior. When the price of alcohol and the greater consumption of fuel are considered, an automobilist is inclined to cling to his gasoline motor. Moreover, the *alcohol denature* has a calculated thermic value of only 5,297 calories per kilogram; while the calorific value of gasoline is 11,400. In order, therefore, to cheapen the alcohol and to increase its thermic value, rectified benzine is used as an enriching agent. Exactly what the proportions of the mixture of alcohol and benzine should be was no very easy matter to determine. It has now been definitely ascertained that a 50 per cent mixture (called "electrine"), the heat value of which is 7,479 calories per kilogram, is most serviceable. In the tests referred to the effective utilization of the alcohol was divided by the product of the amount of alcohol consumed per horsepower, and multiplied by the percentage of carbonizing liquids contained in the mixture. Consequently, the more alcohol and the less carbonizing liquid a motor consumed, the higher would it stand in the final lists. Many tests have shown that the consumption of 50 per cent carbureted alcohol is about equal to that of gasoline for the same power, despite the pronounced difference between the theoretical calorific values of the two.

A critical examination of the tables published by the *Scientific American* shows that in consumption the alcohol motor is more economical for higher than

for smaller powers. To be sure, economy increases with the power in all motors. Nevertheless, it is certainly remarkable that a 14-horse-power Gobron-Brillié two-cylinder motor, mounted on a 1,224-kilogram carriage, should consume only 125.07 cubic centimeters of 50 per cent alcohol per ton-kilometer; while a voiturette weighing 490 kilograms and driven by a single-cylinder 6-horse-power motor should consume, under the same conditions, 155.4 cubic centimeters per ton-kilometer. Perhaps the most satisfactory figures are those tabulated for cars of 650 to 1,000 kilos and over. In this class the efficiencies seem to have been exceptionally high. In compiling the tables effective normal operation, regularity and smoothness of running under variable loads, trustworthiness of ignition, ease of starting, general excellence of construction and simplicity were all considered. For that reason motors which, from the tables, would seem to have consumed a very small amount of alcohol, are nevertheless rated very low; the road tests evidently revealed some defect.

The relative high efficiency of alcohol is attributed to the expansion of the water-vapor contained or produced in the alcohol at the moment of explosion. The expansion imparts elasticity to the motive agent and reduces the shock of the explosion. In order to utilize this excellent property still further, a German manufacturer recommends a mixture containing 20 per cent water, and claims that by its use he has reduced the consumption to 0.375 kilograms per horse-power hour. In France, still better results have been obtained. There the consumption has even been cut down to 0.272 kilograms per horse-power hour.

As a result of the tests instituted by the minister of agriculture, inventors will probably seek to improve the alcohol motor. For improvement there is certainly much room. The longer expansion of carbureted alcohol will require a motor longer in stroke and heavier than the gasoline engine. But for automobile use motors can not be much increased either in volume or in weight. To devise a motor which will permit the most efficient utilization of alcohol without inordinately increasing the weight will be a rather nice problem to solve.

The Magnitude of the Visible Universe

January Popular Science Monthly, New York

AN interesting question which often occurs to the astronomer and the physicist is that of the magnitude and the material of the visible universe. While science is unable at present to give a decisive answer to this question, it is nevertheless competent to correlate the observed facts to such an extent that a possible, if not a probable, answer is already attainable. The latest contribution to this subject is due to the indefatigable labors of Lord Kelvin. In the *Philosophical Magazine* he attacks the question from the dynamical side in an article on Ether and Gravitational Matter Through Infinite Space; and at the meeting of the British association for the advancement of science he amplified his investigation in a paper on The Absolute Amount of Gravitational Matter in Any Large Volume of Interstellar Space.

The data for Kelvin's investigation are as follows: The part of the universe visible to us may be considered to lie within a sphere having a radius equal to the distance of a star whose parallax is one-thousandth of a second of arc. This distance is about

30,000 million million kilometers; a distance so great that light would require about three thousand years to traverse it. The number of stars, luminous and non-luminous, within this sphere, Kelvin estimates to be something like one thousand million. This agrees well with the figures of Newcomb and Young, who have estimated that the visible stars are fifty to one hundred millions in number. Assuming the average mass of these stars to be equal to the mass of our sun, the amount of mass in the visible universe is about 2×10^{36} metric tons.

Now, if these thousand million suns had been uniformly distributed within the sphere in question, and had started from rest twenty-five million years ago, they would have acquired, under the law of gravitation, about such velocities as the stars are now observed to possess; or, if thousands of millions of years ago they started from rest at mutual distances asunder, very great in comparison with the radius of the supposed sphere, and so distributed that they would now be temporarily equally spaced in that sphere, their mean velocities would be of the same order as that actually observed. A non-uniform initial distribution of the suns would give higher velocities for the stars than the observed values; and any great increase in the assumed number of suns would require far greater velocities than the observed values. Hence Kelvin infers that the amount of mass in our universe is greater than one hundred million times and less than two thousand million times our sun's mass.

That there would be plenty of room for a thousand million suns in the assumed sphere is shown by a striking calculation made by Kelvin. Thus, if the suns were placed severally at the centers of the thousand million cubes into which their enclosing sphere may be supposed to be divided, then each sun would be nearly fifty million million kilometers from each of its six nearest neighbors. This distance is a little greater than the distance of the nearest fixed stars from our solar system.

The "Nudity Cure"

A NEW PIECE OF QUACKERY

WHILE medical science is painfully and laboriously winning its way to the goal of exactitude, a large field of the partly known and of the unknown lies in possession of quacks. So far as the world at large is concerned, there appears to be no method of so-called "cure" too grotesque, too revolting, too meretricious to be swallowed—and paid for—in wholesale quantities by the vulgar. One pretender advertises to cure rheumatism by means of a magic ring, and straightway he vends his fraudulent wares by the bushel. Another puffs a "cure all" in the shape of a worthless belt, and money forthwith pours into his coffers, while the highly qualified university graduate works hard for a bare living. At any rate the qualified man has the satisfaction of knowing that the poverty is that of an honorable gentleman, remarks the *London Medical Press*, by way of preface to its observations on the "nudity cure." The "nudity cure" is a parasitic craze of Austrian origin. It is described as a method whereby neurasthenic patients are exposed to air and sun in a costume composed of "a hat and short trunks." Thickets are carefully arranged so as to separate the sexes, and the treatment is "completed" by a combination of baths, massage,

gymnastics, games, and vegetarianism. The scheme appears to be a gratuitously eccentric variation of the open-air treatment, which has been tricked out in the fantastic "nudity" fashion on strictly commercial lines. The attempt to attach a curative element to the fig-leaf garb of our first parents in the garden of Eden is well worthy of the businesslike ingenuity of the latter-day irregular medical practitioner.

A Neglected Factor in Domestic Engineering

THE FURNACE INTAKE

THERE are few things more neglected, and yet more important, in the whole range of what may be called domestic engineering than the means of supplying air for warming and ventilating dwelling-houses through the conventional type of hot-air furnace so widely used in the United States, says an editorial note in *Cassier's Magazine*. Unfortunately the exact way in which such a furnace operates is only dimly outlined in the mind of the average man or woman, and it therefore seems advisable to follow the example of the magazine named in reprinting the following statement by an inspector of heating apparatus: "It should need no argument to show that the air supply for a furnace should be clean, dry, as free as possible from dust, and as little as possible contaminated by the causes which, in cities, tend to vitiate air taken at or near the ground level. I have inspected a good many hundred furnace-heated houses, and almost without exception I have found the intake misplaced and the air-box in such condition that air drawn through it was as little fit for breathing as if strained through the wisps of a street-cleaner's broom. Sometimes I have found the air-box a club-house for cats; generally it has needed cleaning with a hoe and shovel. Not long ago I found a house with an air-intake consisting of a sort of combination air-chamber and area cesspool. It was covered with a grating of parallel iron bars, through which the storm water which fell into the area drained to the pocket below, and was led away to the sewer by an untrapped pipe communicating with the house-drain. This was, perhaps, the worst I have found, and my opinion is that the architect who planned this arrangement and the furnace-man who worked to the plan should both be indicted. The arrangement amounted practically to drawing air direct from the sewer, to be heated and passed up through the house.

"Sometimes one will find the air-intake in the coal vault. I have notes of probably fifty such arrangements. This is ingenious, at least, and must make it pleasant for the housekeeper. In one house thus built, the amount of dirt distributed through the house suggested to the mistress the very natural expedient of stuffing the mouth of the intake full of jute potato bags. Most people would be shocked if they should see what sort of a channel conveys the air which flows hot from the registers—still more so if they could be made to realize that most of this air is from the cellar, from which, once a year or so, in well-kept houses, barrels of dirt are removed, consisting of coal dust, ashes, sprouting potatoes, house rubbish of one kind or another, and moldy nondescript refuse, the origin of which can not be guessed. In the average dwelling heated with a furnace, millions of cubic feet of cellar-air are pumped up into living and sleeping-rooms every winter. What it carries, I leave it to the bacteriologists and the microscopists to say."

RELIGIOUS

The Search for Reality in Religion

TEUNIS S. HAMLIN, D. D., in the New York *Independent*
Condensed for PUBLIC OPINION

THE religious thought of our day is seeking more than anything else a note of reality. This is sadly lacking in our traditional theology, which is logical, metaphysical, largely brilliant and profound; but, in St. Paul's phrase about the law, does not "come"—i.e., "come home"—to the modern conscience. Much of it makes upon us the impression of being theoretical, imaginative, and artificial. It may be splendid as a structure of speculation, but we distrust it, because we doubt the solidity of the foundations on which it rests. And our distrust attaches precisely to the point of its reality. It is not true to the incontestable facts of daily life. For example, we who are ministers studied anthropology in the seminaries. Our teachers were scholars, acute of mind, devout of heart, earnest of purpose. But they were men of the study. Some of them had once been pastors; others professors only. But all had taken the professional point of view. They analyzed for us an ideal man, depicted his motives as they conceived them to be, taught us to appeal to this typical man in a fashion that they thought should reach and move him. But no sooner were we set to use this teaching than we discovered its unreality.

The same obtained as to our theology. We learned a God of metaphysical theories rather than of daily providence and the history of the world. His sovereignty was worked out to its conclusion regardless of his love, or his love regardless of his sovereignty. Either produced a God that fails utterly to account for human life as we see it. So, also, of the church. The *jure divino* form of government we failed to commend as real. When we referred men to the New Testament they returned to say that Jesus gave no instructions about church organization, and that the Apostles and early Christians worked out the problem under the guidance of circumstances and sanctified common sense. The claim that we are the only true church accordingly falls upon men's ears with no note of reality, and they promptly rule it out of the list of actualities upon which they propose to shape their lives.

This thirst for reality in religion, and profound dissatisfaction with anything else, is chiefly modern, and to be traced largely to the influence of science. It coincides, not only in time, but in cause also, with the decay of superstition. How much of the material world about us, that only a short time ago seemed mysterious and fanciful, now seems perfectly real! When we are ill we no longer speak of a "divine visitation," either in the sense of an inscrutable mystery on the one hand, or, on the other, of a display of vengeance on the part of God. We look for causes in defective plumbing, polluted water, adulterated food, filth in houses or streets, uncleanness of person, intemperance of all sorts. Such an attitude of mind in things secular naturally affects our views of things religious. The sin that is feared and repented of is "actual transgression," not theoretical offenses in hypothetical conditions. The salvation that is desired is moral, not forensic. Penalty that would stir the conscience must be proportioned to guilt. Rewards that incite to effort must appeal to present cravings.

Standards of conduct must commend themselves as attainable. In short, the religion that hopes to win and control men in our day must at no point lack the note of reality. This is not to say that the supernatural is to be eliminated from religion, which is to be brought down in all respects to our human level. The demand is not for "natural religion," but for supernatural, stated in terms that men can understand. The craving is to know, just as far as we can, how the supernatural deals with us in our daily life.

Vast good may be expected to flow from this modern state of mind. It tends mightily to the sifting of truth from error; the "proving of all things, and holding fast only what is good." It tends to Christian union, since the fine-spun distinctions upon which sects exist seem daily less and less real. It tends to the reduction of theology to simpler terms. The two great postulates of divine sovereignty and human freedom carry a convincing note of reality, as the distant conclusions to which they have been speculatively carried do not.

Is Our Sunday Being Europeanized?

SUNDAY OBSERVANCE STILL UNDER DISCUSSION

CONSIDERATION of the fit way to observe the first day of the week is not confined to New York city. In a sermon in the Presbyterian Church of the Covenant, in Washington, D. C., January 12, the Rev. Teunis S. Hamlin, whose article in the *Independent* we quote in another part of this department, took occasion to denounce the desecration of Sunday by certain ambassadors and ministers of foreign countries. The sermon gains point from the fact that it was delivered in the presence of Secretary of State Hay, Attorney-General Knox, Postmaster-General Smith, Secretary Hitchcock, of the interior department, and Secretary Wilson, of the agricultural department. According to the dispatches from Washington, "Latin-American and continental diplomats have followed their home customs and have visited and received their friends on Sunday repeatedly. In the last season, however, a rather startling innovation was introduced. Count Cassini, the Russian ambassador, opened the Russian embassy in the gayest whirl of the week on every Sunday since his return from Europe. Among the gayer members of the corps it has become the fashion to reserve a house or so every Sunday evening for these delightful affairs. Throughout the diplomatic corps, after Dr. Hamlin's sermon was delivered, it was suggested that so eloquent and scathing a denouncement could not have been delivered in the presence of the secretary of state and the majority of his official associates without some cognizance on their part. It is thought that it itself will be sufficient to put a damper on the practice."

An editorial in the New York *Tribune* on the same topic is occasioned by some recent resolutions of the Methodist preachers' association of Brooklyn and Long Island, denouncing Sunday saloons and asserting that "the law of the Sabbath is a part of the decalogue, and is thereby lifted above the franchise of any

people." "From the beginning of our government the state has always claimed and exercised the right to enact laws in regard to the observance of Sunday. It has forbidden certain things on that day, but not because they are forbidden by the fourth commandment of the decalogue. On the other hand, it has permitted certain things to be done on that day, but not, be it observed again, because they are permitted by the fourth commandment. It is undoubtedly true that in its legislation concerning Sunday the state has taken the wishes and beliefs of Christians into account, as, in point of fact, it ought to have done. But it has no right to declare or even assume that the fourth commandment is *per se* the perpetual law of the land, and, therefore, as the Methodist ministers say, 'lifted above the franchise of the people.' In the eyes of the state Sunday is simply a civil holiday, and its only concern is to see that it is observed by the citizens in such a way as will insure to every one, Christian, Jew, and atheist, its peaceable enjoyment."

Mormons Again Preach Polygamy

NEW MORMON CAMPAIGN IN THE WEST

A DISPATCH to the New York *Sun* announces the spread of the propaganda of polygamy by Mormon missionaries in Nebraska, Kansas, and South Dakota. "Formerly the missionaries were content simply to proselyte for their faith. They were careful, in order to overcome in part at least the antipathy to anything Mormon, to insist that the church had been re-organized and that polygamy was no longer one of its cardinal doctrines.

"The campaign now being prosecuted is a masked one. It is no longer insisted on that polygamy has been banished from the church. In a covert way it is stated that they are now seeking converts to the church because polygamy is possible in Utah and Idaho, where the Mormons are the dominant power in politics. One of these missionaries is quoted as having said recently in a talk with prospective converts that the true Mormons have never relinquished their polygamous beliefs, and that he expected to secure many converts, because most men are by instinct polygamous, and that in a church governed and run as a business organization a plurality of wives is not only not a burden, but a distinct help to worldly prosperity. These missionaries have been quoting leaders of the church as saying that the law of plural marriage is God-given, and that no Mormon need fear man-made laws. They are also accused of tempting their prospective converts with a picture of Mormon supremacy in the future by reason of the fact that plurality of wives means larger families, and that as the average non-Mormon family numbers no more than three children, in time the whole earth will be filled by the true believers. They seek to prove that in ancient days, according to both their Bible and that of the Christian church, polygamy was not regarded as a sin.

"In fact, these missionaries are preaching the old gospel according to Joseph Smith, but with more cunning and diplomacy. In the west it is recognized that the Mormon church holds the balance of political power in Wyoming, Nevada, and Idaho, which means that its very practical leaders find it easy to make bargains with the machine politicians, who, in return for votes, grant immunity from arrest and prosecution to those Mormons who discreetly desire to continue their old practices. Even in the most flagrant cases of violation of the anti-polygamy law only nominal fines are

assessed, and most of the offenders immediately return to their wives. The policy of the apostles, who have charge of all civil and religious matters, has been to bunch the believers in one part of the country, and when converts are secured in the east every inducement is held out to them to settle in Utah, Nevada, Idaho, or Wyoming. More recently the apostles have given orders to extend their domain a little further to the east, to include Colorado, New Mexico, and later, it is presumed, Kansas and Nebraska.

"The anti-polygamists in this region have only recently become aware of the extent of the movement, and they are now seeking to enlist eastern sympathy in their fight against the extension of Mormonism. They declare that the present missionary movement is intended, in part, to create a public sentiment that will not retard the Mormon church's growth, while at the same time every effort is being made to gain a membership that will in the future make it impossible ever to prohibit polygamy by amendment to the federal constitution."

Rollin Lynde Hartt, in the Boston *Transcript*, ascribes the boldness of the Mormon missionaries to the confidence of political and judicial security. "The law against polygamy remains largely unenforced because the enforcement of that law is left to a Mormon state. Do you fancy that a Mormon judge and a Mormon jury will convict and punish a Mormon polygamist in a Mormon town? Then what to do? Just this. Amend the constitution of the United States; forbid polygamy in all parts of the federal domain; throw all cases of polygamy upon the federal courts, where they belong. This is no new suggestion. It was made many a time during the recent Roberts affair. It was never acted upon. Its practicability, however, and the necessity for its adoption will yet bring it to the front. There is no other remedy. There is no other way by which a sovereign state can be made to behave. Given such an amendment to the federal constitution, and the Mormons may go on proselyting all they like. We shall still have our way."

The Growth of Churches

THE STANDING OF RELIGIOUS BODIES IN 1890 AND 1901
COMPARED

STATISTICS on the growth of the churches of the United States in 1890 and 1901, and the order of denominational rank in 1890 and 1901, have been completed by the Rev. Dr. H. K. Carroll, who was in charge of the religious statistics of the United States census of 1890. At the end of 1900 there were 27,360,610 members of all churches in the United States, according to Dr. Carroll's figures; and 28,090,637 at the end of 1901, a gain of 730,027 or 2.67 per cent, or greater than the gain in population, 2.18 per cent, the annual rate of increase in population from 1890 to 1900. Dr. Carroll rates the increase during the year of 468,083 in Roman Catholic membership as too high, and regards the figures as those of the growth of several years in a large proportion of the dioceses. The percentage of growth in the Protestant Episcopal church, 4 per cent, or 31,341, Dr. Carroll regards as large. It is next to the Roman Catholic the largest growth of the year, and was greatest in the eastern cities. The accessions to the Protestant Episcopal church were from Methodists, Presbyterians, Baptists, Congregationalists, and other denominations rather than from the non-church public.

The Disciples of Christ, whose membership is al-

most wholly in the middle west, has almost doubled its followers since 1890. Of Christian Scientists, whom he credits with 48,930, an increase during the year of 13,980, Dr. Carroll says that he took his statistics from the mother church at Boston, while his figures are much less than some Scientists claim. The statistician found twenty-two different kinds of Lutherans in the United States. The total Lutheran growth last year was 36,101, much of which was in the independent synods, that of Iowa alone being 21,000, while others lost heavily. Of his own body, the Methodists, he says that with a total membership of 2,762,691 the Methodist, north, increased but 16,500. Last year, however, many evangelical movements, in which the Methodists led, were undertaken, and it has been claimed that 600,000 new members were brought in. It is Dr. Carroll's belief that there are 300,000 Mormons in or about Utah, and it is stated that 65,000 converts were made last year by 1,400 missionaries in the east. Quakers lost last year 923 members.

A fact brought out by Dr. Carroll is the tenacity of religious bodies, no matter what the discouragement. There are twelve kinds of Presbyterians. In 1900 the twelfth kind had only one minister and a handful of members. Last year the minister died, but the handful of members are still faithful, and probably will remain so. They call themselves Reformed Presbyterians in the United States and Canada.

The following table, prepared by Dr. Carroll,

shows the denominational censuses and rank in 1890 and 1901:

Religious Body	Rank, 1901	Com- muni- cants	Rank, 1890	Com- muni- cants
Roman Catholic.....	1	9,158,741	1	6,231,417
Methodist Episcopal.....	2	2,762,291	2	2,240,354
Regular Baptist, south.....	3	1,664,108	4	1,280,000
Regular Baptist, colored.....	4	1,610,801	3	1,348,989
Meth. Epis., south.....	5	1,477,180	5	1,209,976
Disciples of Christ.....	6	1,179,541	8	641,051
Regular Baptist, north.....	7	1,005,613	6	800,450
Presbyterian, north.....	8	999,815	7	788,224
Protestant Episcopal.....	9	750,799	9	532,054
African Methodist.....	10	698,354	11	452,725
Congregationalist.....	11	634,835	10	512,771
Lutheran Synod, Con.....	12	566,375	12	357,153
African Meth., Zion.....	13	537,337	13	349,788
Lutheran general council.....	14	346,563	14	324,847
Latter Day Saints.....	15	300,000	19	144,532
Reformed German.....	16	248,929	15	204,018
United Brethren.....	17	240,007	16	202,474
Presbyterian, south.....	18	227,991	18	179,721
Colored Methodist.....	19	204,972	20	129,384
Lutheran general synod.....	20	204,098	17	187,432

The chief features of change are the colored Baptists going from third to fourth rank, and the southern Baptists taking their place in 1901. Disciples of Christ, in the eleven years, went from eighth to sixth rank. Latter-Day Saints went from the nineteenth to the fifteenth, and the Lutheran general synod from the seventeenth to the twentieth rank.

MISCELLANY

Mrs. Gallup's Cipher Story

LORD BACON'S SECRET HISTORY

MRS. GALLUP'S cipher story continues to stir up the ancient Shakespeare-Bacon feud. The two parties have rushed to print on the occasion of Mr. W. H. Mallock's taking up the cudgels for Mrs. Gallup and the use she makes of Lord Francis Bacon's "bilateral cipher," explained and illustrated in his "De Augmentis." By means thereof she claims to extract from passages in Shakespeare, Spenser, Burton, Ben Jonson, Peele, Greene, Marlowe, etc., the secret history of Bacon, written by himself and concealed in the works of other authors. He further is made (in the story) to declare implicitly that the "Anatomy of Melancholy," which common mortals have supposed was the production of Robert Burton, and our heritage of plays and poems usually ascribed to William Shakespeare, as well as other writings, were really his own. Furthermore, a writer in the *Nineteenth Century* says: "We are to believe that Elizabeth was privately married to Leicester in the Tower of London when they were both confined there, and that they had lawful issue (tremble, O Edward VII!), Francis Bacon and Robert Devereux, Earl of Essex. Thus the earl conspired against his mother and elder brother; the queen condemned her son to the block, and employed his elder brother to draw up the indictment against him; the fiery Essex never proclaimed his kinship, but went silently to execution; Bacon never contested his rights against the usurper, James I. We have to believe that the first Earl and Countess of Essex and Sir Nicholas and Lady Anne Bacon consented to have the children affiliated to them, with due succession as to lawful issue. And all this has escaped the minute researches of all our historians! Not, perhaps, surprising, so long as the statements

are still unsupported by any extant documents. We are further to believe that Bacon wrote the works usually ascribed to seven other writers, in seven wonderfully various styles."

"And to what end?" asks this writer. "How could such a conspiracy have been worked out between eight or nine authors, the type founders and setters, the printers of early editions? Has any such monstrous literary conspiracy ever been heard of before? To this add the court conspiracy, known, not only to men and women of repute, as the Essex and Bacon families, Sir Amyas Paulet, and Dr. Rowley, but to court ladies, who blurted out the secret to Bacon. And we are to suppose that this double conspiracy was not discovered, nor even guessed at, for nearly three hundred years after Bacon's death!"

Mrs. Gallup has been challenged to bring her alleged discovery to a decisive test by taking a few pages of the first folio of Shakespeare (the selection to be left to her); getting together a few men who know something about books, and adding to them a printer or two, familiar with types, new and old; then, if between them they extract a consecutive narrative founded on the bilateral cryptogram of Bacon, there is no more to be said. Mrs. Gallup's only reply to the challenge so far is to avow that "without extraordinary faculties and a kind of inspiration," none, save herself, need expect to perceive it.

The London *Times* has been the principal arena for the controversy. In its issue of January 3 no less than ten writers of note have something to say on the subject. Mr. Sidney Lee leads off for the Shakespeareans as follows: "I should like to state unmistakably that I hold there to be not the smallest jot of even *prima facie* justification, either in the preliminary

pages or in the text of the Shakespeare First Folio for the belief that a cipher is concealed in that volume. Italic and Roman types of different sizes appear in the preliminary pages, but they are employed separately, in different words. They are never intermingled in the manner which would be essential if the words embodied Bacon's biliteral cipher. As for the text of the plays, all but a minute fraction has been set up in a single font of Roman type, to which capital and small letters alike belong. Proper names figuring in the text of the plays alone appear in a different type—a single font of italic type, containing both capital and small letters. The two fonts, the Roman and the italic, are kept absolutely distinct. To assert that a biliteral cipher can or does adhere to a text printed as the First Folio is printed is a bold denial of plain fact." Mr. Lee adds: "Ignorance, vanity, inability to test evidence, lack of scholarly habits of mind are in each of these instances found to be the main causes predisposing half-educated members of the public to the acceptance of the delusion, and when any of the genuinely deluded victims have been narrowly examined they have invariably exhibited a tendency to monomania." Mr. W. H. Mallock, the leader of the Baconians, says that Mrs. Gallup's theory is sufficiently plausible to deserve to have its truth tested. "Regarded as a subject of inquiry, its great merit lies in the fact that its truth or falsehood can be ascertained by purely mechanical means, such as photographic enlargements of the text, coupled with a systematic examination of them." Pending such an examination, which Mr. Mallock says that he intends to undertake himself, he declines to consider other arguments.

Mr. Andrew Lang, who takes part in this symposium, is concerned chiefly with the statement that Bacon was the son of Queen Elizabeth. He writes: "Now what is the source of the statement, italicized by Mrs. Gallup's publishers, that Elizabeth was '*already a mother—January, 1560-61*'? I think it is the remark of De Silva, the Spanish ambassador, writing to Philip, on the very day of Bacon's birth (January 22, 1561). On that day De Silva reports his interview with Henry Sidney, who came from Robert Dudley, asking De Silva to induce Philip to support a marriage to be arranged between Dudley and Elizabeth. De Silva tells Philip that one public rumor credits Elizabeth with having some children already. 'Of this,' he says, 'I have seen no trace, and do not believe it.' De Silva was keeping a watchful eye on Elizabeth's appearance and behavior, but he found no trace of the advent of little Francis; while Elizabeth, at that period, as the state papers prove, was discharging her royal duties as usual, and sitting through long stage plays at Windsor (January 18, 1561)."

The Day and the Deed

THE IDEAL LIFE
By ROBERT GRANT, BORN JANUARY 24, 1852

The ideal life today is that which maintains the noblest aims of the aspiring past, cherishing unselfishness, purity, courage, truth, joy, existence, fineness of sentiment, and æsthetic beauty; but cherishes these in the spirit and for the purpose of a broader humanity than the melting soul has hitherto discerned in the sunset, the ocean, or the starry heavens. The serious energy of the best humanity, instead of pluming itself in the seductive contemplation of æsthetic beauty, seems rather to be celebrating the apotheosis of dirt.

It feels that the cleansing of the physical and moral filth from our slums, the relief of appalling ignorance and superstition, the combating of political dishonesty, and the checking of private greed are more to be desired at this time than great marbles or a great literature. Or, rather, it seems probable that great marbles and a great literature will not come to us until the haven of this new ideal expresses itself in the truths of art.

The Motives of Misers

FEAR OF FUTURE WANT—THE COLLECTING MANIA

THE London *Spectator* records the interesting case of a miser who died the other day from the effects of personal privations, while in possession of \$10,000. This Mr. Batchelor, with so much coin actually in the house, starved himself and went about ragged and barefoot to collect his rents. In attempting to account for the motives governing this man, and misers in general, the *Spectator* says: "We suspect that we get the best hint of the real truth from the gibe of the old laborer who told his master, 'I be a braver man, master, than you be, for I durst spend my last farden, and you dursen't.' In other words, the root of miserliness is fear—fear of the extreme poverty to avoid which at some indefinite future time the miser faces all its consequences in the present. That is a state of mind not uncommonly displayed in other directions, as when a man shoots himself in terror of being shot, an incident occasionally recorded in the barrack-rooms of almost all armies. The instinct is perceptible in many animals; dogs, for instance, accumulating and burying bones, and guarding them with hot jealousy, though they know that good meals are awaiting them inside. The root cause of thrift, which we all admire and preach because it is so convenient to the community, is fear—fear of future want; and that fear, we are convinced, when indulged over-much by pessimist minds, is the most frequent cause of miserliness. The man does not want the gold so much as protection from the danger of wanting it. His terror gradually increases until it nearly masters him—not quite, or he would steal—and until it actually, in a very singular way, sweeps away part of his avarice. It is a notorious fact in the lives of great misers that so acute is their terror of robbery that they will sacrifice willingly large sums obtainable in interest rather than suffer their accumulations out of their sight. Mr. Batchelor, for example, who knew well enough all about rents and interest, practically paid \$500 a year to keep his gold—more than \$10,000—within reach of his hands. It is an imaginative terror which makes the thrifty man into the miser, and induces him to postpone all wants, even the most necessary, to the pursuit of a safety from want which he can never reach."

The only other motive of misers which the *Spectator* recognizes is the passion for collecting. "Asiatics often hoard coin and jewels to their own hurt, knowing that their possession involves extreme danger; and there are two authentic stories of great accumulations of gold coin made by Englishmen who seemed to derive pleasure from its actual sight and touch. These are, however, rather illustrations of the collector mania, so often described and analyzed in the case of books and china, than instances of true miserliness, which is based, we are convinced, rather on fear than on the passion for hoarding."

THE NEWS OF THE WORLD

MONDAY, JANUARY 13

DOMESTIC.—Secretary Hay and Lord Paunceforte, the British ambassador, in Washington, signed a protocol extending for one year the time allowed British colonies to adhere to the treaty entered into between the United States and Great Britain defining the rights of inheritance of their subjects....Secretary Root sent to congress estimates of \$307,000 for the defenses of the island of Guam and \$526,000 for the defenses of Hawaii....The government of Chile adopted the extradition treaty as submitted by the United States.

FOREIGN.—While a train carrying workmen to repair a suspension bridge near Brindisi was passing over a bridge it collapsed and the train was precipitated into the River Callereges; several men were killed or injured....José Teoresa y Mirandt, the Mexican minister to Austria-Hungary, died at Vienna, after a surgical operation....Much hostility was displayed by the audience at a Liberal meeting in St. James's Hall, London, toward Lord Rosebery; Sir Henry Campbell-Bannerman, Earl Spencer, and Miss Hobhouse were enthusiastically received.

TUESDAY, JANUARY 14

DOMESTIC.—A large surrender of insurgent forces in Batangas province has occurred, twenty-two officers, 245 men and 223 rifles having been given up....President Roosevelt appointed Mr. Whitelaw Reid, of New York, special ambassador to represent the United States at the coronation of King Edward VII; Capt. C. E. Clark will represent the United States navy and Gen. J. H. Wilson the army....Arthur Pue Gorman was re-elected United States senator by the legislature of Maryland....George H. Phillips, the "ex-corn king," of Chicago, was again financially embarrassed, and his deals were closed out....John Howard Bryant, only remaining brother of William Cullen Bryant, died in Princeton, Ill.

FOREIGN.—The French parliament resumed its sessions; Paul Deschanel was re-elected president of the house....A stock exchange was inaugurated at Vladivostok, and it is expected this will considerably enhance the importance of the town....Forty-three men lost their lives through the flooding of a mine in Austria....William Fife received an order to build Sir Thomas Lipton's next challenger for the *America's* cup.

WEDNESDAY, JANUARY 15

DOMESTIC.—The pension appropriation bill passed the house of representatives, and a resolution providing for McKinley memorial services on February 27 was adopted....President Roosevelt reappointed Silas C. Croft surveyor of the port of New York....Henry C.

Payne took the oath of office and assumed charge of the postoffice department....Joseph B. Foraker, of Ohio, was re-elected to the United States senate....The New York Central railroad increased its capital stock from \$115,000,000 to \$150,000,000, and announced plans for the introduction of electricity as motive power on suburban trains through the Grand Central tunnel in this city.

FOREIGN.—The Venezuelan government refused to permit M. Cecrestat, who leased the estates of General Matos, the revolutionary leader, to land from the French steamer *La Guayra*, and the French consul there has energetically protested; the filibustering steamer *Libertador* arrived at Savanilla, Colombia, January 12, General Matos landing and taking the train for Baranquilla....The British foreign office issued the correspondence on the isthmian canal treaty in the form of a parliamentary paper....Admiral von Tirpitz, German minister of marine, will accompany Prince Henry to this country....Herr Wolf, Pan-German leader in the Austrian reichsrath, who was forced to resign on account of a scandal, has been re-elected.

THURSDAY, JANUARY 16

DOMESTIC.—The president and Mrs. Roosevelt gave a dinner in honor of the justices of the United States supreme court....Rear-Admiral Evans will command a squadron of five warships to welcome Prince Henry of Prussia on his arrival here....Governor A. B. Cummins was inaugurated at Des Moines, Iowa, as successor to Leslie M. Shaw, the new secretary of the treasury....John D. Rockefeller made a conditional gift of \$200,000 to Vassar college....Dr. J. L. M. Curry was appointed special envoy extraordinary and minister plenipotentiary to represent the president at the coming of age of the king of Spain; Dr. Curry was formerly minister to Spain.

FOREIGN.—King Edward opened his second parliament in person, the speech from the throne being well received by the two houses and the public....The French senate elected M. Fallieres president....Two forces of Colombian government troops fought near Rio Hacha, each thinking the other a band of insurgents....Lord Rookwood, for many years a prominent figure in British politics, is dead.

FRIDAY, JANUARY 17

DOMESTIC.—The senate committee on commerce ordered a favorable report on Senator Frye's ship subsidy bill, and Mr. Frye explained the provisions of his measure....Directors of the Louisiana Purchase exposition voted against postponing the opening of the St. Louis world's fair until 1904....At conferences

in Washington the launching of Emperor William's new yacht was set for February 25, and further arrangements for the reception and entertainment of Prince Henry were made.

FOREIGN.—It was reported from Mexico that three hundred persons had lost their lives and that a larger number were injured by an earthquake shock at Chilpancingo....The French chamber of deputies sustained General André's management of the war department.

SATURDAY, JANUARY 18

DOMESTIC.—The Isthmian canal commission presented to the president its supplemental report on the offer of the Panama canal company to sell its concession to the United States....Beet sugar growers, who told President Roosevelt they could not stand any reduction in Cuban sugar duties, were informed that the president still stood for relief for the Cubans without harming American producers....Through the mediation of W. I. Buchanan, a United States delegate to the Pan-American congress, Chile and Ecuador consented to the proposed plan for compulsory arbitration, which was therefore approved by the congress together with The Hague agreement.

FOREIGN.—The imperial yacht *Hohen-sollern* sailed from Kiel for New York....The trial of Dr. Krause, who was charged with inciting Cornelius Broecksman, of Johannesburg, to murder John Douglas Foster, an English lawyer on Lord Roberts' staff, was concluded by a verdict of guilty, and the prisoner was sentenced to two years' imprisonment....Emperor William received M. Coquelin, aîné, the eminent French actor, who is now playing at the Royal theater in Berlin....Philippe Marchetti, the Italian composer, is dead.

SUNDAY, JANUARY 19

DOMESTIC.—A noted female leader of the rebels in Laguna province, Luzon, has been captured by the American forces....The Globe yarn mills in Fall River, Mass., were damaged about \$200,000 by fire....Eleven prisoners escaped from the federal prison at McNeills, Wash., by burrowing through the cement floor into the air pipes....The report of the state prison commission shows that an army of ten thousand youths were sentenced to prisons last year.

FOREIGN.—Lord Kitchener confirmed the death sentence passed on the Boer Commandant Scheepers, who was captured last October....A renewal of active operations by Venezuelan insurgents is reported at Curacao; it is said that fighting has occurred in the streets of Maracaibo....The British steamer *Lagos*, ashore near Madeira, has become a total wreck....The Mexican volcano of Colima is again active.

The Books of The Week

MUSINGS BY CAMPFIRE AND, WAYSIDE.
By William C. Gray. Cloth, pp. 337.
\$1.50 net. New York: Fleming H. Revell Co.

It is not often nowadays that we find a man who has the time to sit down and think about the beautiful things of the world without considering in what way they may be made to add to his own income. To be sure, Dr. Gray wrote with the insistent printer always at his elbow, but he spoke of the things that he loved and that touched his fancy without inquiring whether they were the subjects about which the readers of the *Interior* wished to be informed, and apparently caring little whether they approved his choice or not so long as his own sense of truth and beauty was not offended. That his sketches were read and liked by hundreds of people speaks well for poor human nature, and it is to be hoped that their publication in book form will gain for them a no less hearty welcome. Nature in all her moods and forms appealed to him mightily, but never to such an extent as to shut the needs and weaknesses of mankind out of his field of vision. His philosophy of life was sane and simple. "One can have a happy life—happy as the day is long, by making happiness one of the main purposes of living. The foundation of this is good health—and anybody can have good health by starting out in time for it. It is to be had by the moderate eating of simple and wholesome food, which soon becomes a luxury to the palate; a clean skin; out-door exercise every day, without regard to the weather, except in the way of warm and dry clothing; keeping the mind cheerful, keeping the heart kindly; avoiding anxiety and longing about business affairs, contentment with one's lot." The range of his musings by his campfire was wide, but they were never abstruse or intangible. The ways of wild animals, the delights that only the fisherman knows, the harmonies and tragedies of life in the open are the subjects of his comment with bits of philosophy and poetry interspersed and constantly illuminated with gleams of humor and occasional flashes of kindly satire.

ADVENTURES IN TIBET. Including the Diary of Miss Annie R. Taylor's Remarkable Journey. By William Carey. Cloth, pp. 285, \$1.50 net. Boston: United Society of Christian Endeavor.

THE chief purpose of the author is to call attention to the journey of Miss Taylor into the interior of Tibet. The first part of the book, the product of his own pen, is compiled to all appearances from the accounts of other travelers, and is descriptive of the land and its people. In this he draws largely upon Huc, Bower, and Rockhill. Miss Taylor's journey was remarkable, not because of

"PERSONAL"
EDITION
OF ...

GEORGE ELIOT'S COMPLETE WORKS

With a
Year's Sub-
scription to
WORLD'S
WORK

(ILLUSTRATED)

At a Great Reduction

The Personal Edition of George Eliot 12 Handsome Octavo Vols.

Illustrated with 72 full-page plates, including a hitherto unpublished portrait of George Eliot, reproductions of the great novelist's manuscripts, pictures of her home, and of the originals of her characters and the scenes in which they lived. Each work has an introduction by Mrs. Esther Wood treating the author's life from the personal side, and giving many interesting side-lights on her remarkable career and her relations with George Henry Lewes. In fact, there is the highest interest for lovers of Eliot in this authentic information concerning the inner life of the novelist, now for the first time given to the public.

REGULAR PRICE

\$18.00

REGULAR PRICE

3.00

The World's Work

"THE WORLD'S WORK—A Magazine for people who do things." Every number contains The March of Events, by the Editor, a well-digested summary of the month with straightforward comment; Original Portraits of Men whose character and achievements are both interesting and important; New Achievements, whether in Industry, Commerce, Education, Social Progress, Literature—anything that makes for progress; the Illustrations, which are essential to the articles, show a new degree in photography, in engraving and in printing; and there are about one hundred in every number—more than twelve hundred a year. The type is large; the pages are 7½ x 9½ inches, to allow the printing of large pictures; the magazine is sewed, not stapled. Andrew Carnegie says of it: "THE WORLD'S WORK is really remarkable," and the most progressive and busiest men in the country rely upon it because it covers the ground quickly and with unique interest.

the new light she was able to shed upon the "Forbidden Land," for she tells little or nothing that was not already known, but because she was able to make the trip at all. That a woman accompanied only by Chinese servants and Tibetan guides, most of them untrustworthy and in league with the robbers who beset them at every turn, should have passed the mountain passes, overcome hunger and cold, gained the good will of the wild tribesmen among whom she was thrown, beat off or escaped the attacks of robbers, and penetrated almost to Lhasa, the sacred city, and finally returned to her starting point in good health after over seven months spent within the frontiers of Tibet is little short of marvelous. Nothing in the way of permanent mission work appears to have resulted from her explorations, but the demonstration of the fact that the country is not impossible of entry should count for something.

IN THE WYOMING VALLEY. A story of the Massacre in the Time of the Revolution. By Everett T. Tomlinson. Cloth, pp. 360, \$1 net. Philadelphia: The Griffith & Rowland Press.

MR. TOMLINSON fully sustains his reputation for combining instruction and entertainment in a manner most agreeable to his boy readers. The hero of the present story, Enos Baker, is a young man from Connecticut, who wanders down into the valley of the Wyoming during the Revolution and makes his home there with his uncle, a soldier in the Continental army. He is one of the little army defeated by the savage horde of Butler and Brandt, and is one of the few to escape from the battle field. Some account is given of the struggle between the "Pennymites," the Pennsylvania Germans and the settlers from Connecticut for the possession of the valley.

WHO'S WHO, 1902. An Annual Biographical Dictionary. Cloth, pp. 1,424, \$1.75. London: Adam and Charles Black. New York: The Macmillan Co.

THIS is the fifty-fourth annual issue of a book that has become indispensable to a large number of people, who, either from personal interest or in connection with their work, require the information here given about the celebrities of the world in all walks of life.

NEUROLOGICAL TECHNIQUE. By Irving Hardesty, Ph.D. Cloth, pp. 183, \$1.75. Chicago: University of Chicago Press.

A COMPREHENSIVE manual for use in the histological laboratory. Special attention is given to the details of investigation of the mammalian brain; an important feature is a copy of the neurological terms adapted from the German Anatomical society.

HELEN PARKER. By Charles Homer Steele. Cloth, pp. 357. Chicago: The Henneberry Co.

AN IMPROBABLE and commonplace story of a girl who leaves a social life in order to enter the Salvation Army.

BUSINESS AND FINANCE

The Business Situation

THE GENERAL SITUATION

Dun's Review, New York, Jan. 18

Readjustment of prices continued during the second week of January, and the general average reached a much lower point than prevailed when the year opened. Manufactured products were scarcely disturbed, but both staples and securities suffered. Business conditions are sound, liberal distribution and prompt payments being reported, except at a few southern cities. Transporting interests are less behind with deliveries, and railway earnings for the first week of January show gains of 7.4 per cent over last year's phenomenal figures, and 14.7 per cent over 1900.

IRON AND STEEL

Nothing has transpired to disturb the bright outlook in the iron and steel industry. Deliveries of fuel are less delayed and furnaces operate more fully, while mills receive material with a fair degree of promptness. Quotations are maintained firmly, especially for pig iron, which is in great demand. Large contracts have been placed for Bessemer at \$16.50 on Pittsburg deliveries in June. Spot sales in small quantities are much higher. Structural material is taken al-

most eagerly and more foreign bridge contracts are reported. Billets can not be had in sufficient bulk from domestic producers, so that imports from Germany are sold at Youngstown for \$27.50. Production of pig iron on January 1, according to the *Iron Age*, was 298,400 tons, against 324,761 at the high point on December 1. Sales of copper are made at 11 cents, which makes a somewhat striking comparison with the 50 per cent higher figures of a few weeks ago.

COTTON AND WOOL

Stocks of cotton goods are not burdensome, and demands gradually expand with the advancing season, especially for fine grades. Heavy brown goods move slowly, both on home and domestic orders. Woolen goods opened lower than expected, and purchases were retarded rather than stimulated by the declines. Changes were few and small, yet there had been such confidence in a higher level that the trade hesitated. Woolen and worsted yarns tend upward. Cotton still fails to command a price proportioned to the estimated crop, and as a consequence the return to growers is insufficient to sustain business established by the previous year's most profitable yield.

WHEAT AND CORN

Grain reacted sharply from the high point, and a large western operator was caught with more than he could carry. Forced liquidation of this long account facilitated the work of manipulators for a decline. Another unsatisfactory feature was the recent falling off in foreign demand, official figures for December showing smaller exports of wheat than for any month of the calendar year, although for six months of the crop year there still appears a gain of about fifty million bushels over the corresponding months of 1900 or 1899. This week exports were 4,348,431 bushels, against 3,408,725 a year ago. Corn declined sharply, but still remains about 20 cents a bushel above the price last year. Exports in December were only about 6 per cent of the outgo in the same month of 1900, while for the week Atlantic ports sent out 128,674 bushels against 4,695,330 bushels a year ago.

RAILWAY EARNINGS

Nineteen hundred and one was un-are general, the coal roads sending in one of 18 per cent, the southwestern 13.8 per cent, and the Pacific coast lines one doubtably the very best year ever experienced by the railways of the country. Partial returns give a total of \$1,423,283,295 as gross earnings for 1901, an increase of 10.4 per cent over 1900. Gains of 13.3 per cent. Granger lines show an increase of 9.5 per cent, trunk roads one of 9 per cent, and the central-western carriers an increase of 8.8 per cent. Southern roads, for reasons heretofore explained in these columns, report the smallest ratio of gain for the year, 6.3

FIXED THE FAMILY

Grape-Nuts Set Them Right

It is better to have a food epidemic in a family than an epidemic of sickness. A young lady out at Hibbing, Minn. tells about the way Grape-Nuts won her family. She says, "When recovering from typhoid fever my doctor ordered Grape-Nuts Breakfast Food. I gained four pounds the first week, and, as the package was kept on the table for me, the whole family started to eat the new food.

We soon noticed a difference in my younger brother's face, which had been pale and bloodless, and who had been suffering from chronic inflammation of the stomach. In a short time he began to eat so heartily that we all remarked about it, and before long he got so he could eat anything without the least bad effect.

We often eat Grape-Nuts dry as we would candy or nuts, and it has a richer taste than when soaked in water. The best way is to put on some good, rich cream.

My sister found that after we began eating Grape-Nuts she had a much greater supply of milk for her babe. We have quit eating hot bread and meat for the evening meal and take in place some nice Grape-Nuts, with cream, and a little fruit, and have all improved greatly in health.

Please don't publish my name." Name can be given by Postum Co., Battle Creek, Mich.

THE MONEY MARKET

Bradstreet's, New York, Jan. 18

According to current estimates, the New York banks during the present week have gained between \$7,000,000 and \$8,000,000 in cash, owing mainly to large receipts of funds from the interior. The loan market has accordingly been gaining in ease from day to day, and call money, which was quoted at 5 per cent last Saturday, has touched 3 per cent, the bulk of the business for the last two days having been done at about 4 per cent. Time money is also offered with increased freedom, although the inquiry for this species of accommodation is comparatively light. The rates quoted are 4@4½ per cent on mixed collateral, and borrowers are generally disposed to stand off and wait for lower figures, which are considered inevitable by many financial experts. Mercantile paper is in

BLACK AND RICH

Is the Way Postum Coffee Should Be

A liquid food that will help a person break a bad habit is worth knowing of. The president of one of the state associations of the W. C. T. U., who naturally does not want her name given, writes as follows: "Whenever I was obliged to go without coffee for breakfast a dull distracting headache would come on before noon. I discovered that, in reality, the nerves were crying out for their accustomed stimulant.

At evening dinner I had been taught by experience that I must refrain from coffee or pass a sleepless night. In the summer of 1900, while visiting a physician and his wife I was served with a most excellent coffee at their dainty and elegant table and, upon inquiry, discovered that this charming beverage was Postum Food Coffee, and that the family had been greatly benefited by leaving off coffee and using Postum.

I was so in love with it, and so pleased with the glimpse of freedom from my one bondage of habit and so thoroughly convinced that I ought to break with my captor, that upon my return home I at once began the use of Postum Food Coffee and have continued it ever since, now more than a year.

I don't know what sick headache is now, and my nerves are steady and I sleep sound generally eight hours regularly. I used to become bilious frequently and require physic, now seldom ever have that experience.

I have learned that long boiling is absolutely essential to furnish good Postum. That makes it clear, black and rich as any Mocha and Java blend. Please withhold my name, but you may use the letter for the good it may do."

better supply and there is a slight increase in the buying demand. Out-of-town buyers and local institutions are again in the market, prime indorsed bills receivable finding ready purchasers at from 4¼@4½ per cent.

THE STOCK MARKET.

Under the lead of the anthracite coal stocks, the New York share market shows strength, despite the prevalent inactivity and the lack of public interest in speculation. The uncertainty about the supreme court's decision in the Northern Securities company case, however, creates an unsettled feeling as to the granger and Pacific stocks. The Atchison issue of \$30,000,000 debentures caused selling of that company's stocks, and the New York Central's issue of \$17,250,000 new stock at 125 to improve its terminal facilities at New York in response to public criticism has not been favorably received. The boom in "Kaffir" mines engrosses the attention of the foreign markets, and London is bearish on Americans. Bonds are firm, though Atchison adjustment fours had a decline. Foreign exchange is dull and steady at 4.87½ for demand sterling and gold imports are not considered probable at present.

BANK CLEARINGS

Clearings aggregate \$2,443,461,023, a decrease of 13 per cent from last week, and of 6.7 per cent from a year ago, when stock speculation was active. Outside of New York the loss from last week was 5 per cent, while compared with last year there is a gain of 13 per cent.

*Pittsburg.

During the six months ended December 31, 1901, there were built in the United States and officially numbered by the bureau of navigation 717 rigged vessels of 154,073 gross tons, compared with 568 rigged vessels of 179,229 gross tons for the corresponding six months of 1900. Canal boats and unrigged barges are not included. The principal decline, 19,752 tons, is on the Atlantic seaboard, and is attributable to work on several large ocean steamers, which will be completed during the coming six months. Included in the six months' figures are thirty-eight vessels, each over 1,000 tons, and aggregating 103,832 tons. Of these fourteen steel steamers, aggregating 52,310 tons, were built on the great lakes.

WIT AND HUMOR

Man—Vain Man

He will give his seat in the street car to a feeble old woman—and be proud in the thought that the other passengers consider him the pink of gallantry.

He will give his seat in the street car to a pretty girl and wonder if she doesn't believe in love at first sight.

He will sit up until 1 a. m. at a penny ante game and rejoice more over a winning of 40 cents than he will next day over a business deal that nets him a thousand dollars.

He will lose 60 cents in the same poker game and be angrier with the other players than he would be with a man who sold him a \$40 horse for \$350.

He jibes at woman because of her vanity and spends an hour before the mirror when he is preparing to call on one of the fair sex.

He tells his wife just how the government should settle the canal question, and has to hire a laborer to map out a drain through his back yard.

He prates about the foolishness of courting public notice, but he never drives through vacant streets.—*Baltimore American.*

Men and Women

When Bishop Potter was asked, the other day, what he thought of woman suffrage, he made the diplomatic reply:

"My dear madam, I have got away beyond that; I am trying to make the best terms with the sex that I can obtain."

This brings to mind the *mot* of William M. Evarts when asked by a lady if he did not think that woman was the best judge of woman. He replied:

"Not only the best judge, madam, but the best executioner."—*San Francisco Argonaut.*

On the Ark

"This is tough luck," said Ham, mournfully, as he leaned out over the side of the ark.

"What's wrong now?" queried Shem.

"Why, all this water to fish in," replied Ham, "and only two fishin' worms on board."—*Ohio State Journal.*

On a Dog

PINEHURST

The Healthiest and Most Perfect Resort in the South
Located in the Highest and Dryest Section of the

LONG LEAF **N**ORTH CAROLINA
PINE REGION of

THE CAROLINA—PINEHURST—NORTH CAROLINA

In a climate which offers a happy medium between the malarial, enervating qualities of the more Southern States and the rigorous winter of the North.

Four Splendid Hotels, INCLUDING
THE CAROLINA the best appointed and one of the largest hotels in the South. All of these hotels are new, and are equipped with the most modern sanitary plumbing.

FIFTY MODERN COTTAGES PUBLIC CASINO
Two Splendid Golf Courses

One of Eighteen Holes (Six Thousand Yards). By common consent among players the best in the South. One of Nine Holes (equally good) for beginners. Handsome, well-appointed club house, with two professionals in charge.

PINEHURST is a private estate, about ten miles square, ranking second only among the estates in the South in size and attractiveness to Mr. George Vanderbilt's "Biltmore." It has an altitude of about 1,000 feet above sea level, and is, therefore, free from the cold wintry climate of higher points. Among its many natural charms is the large percentage of bright sunny days it enjoys during the winter months, and its absolute freedom from damp, penetrating winds. The best quail shooting in America is in the neighborhood of Pinehurst. The only village in the country where consumptives are excluded.

Through Pullman Service One night out from New York, Boston and Cincinnati Via the Southern Railway or Seaboard Air Line. Special Rates during December and January.

PUBLIC OPINION

Number 5
Volume XXXII

The Week

Thursday
January 30, 1902

A NUMBER of circumstances, outlined and discussed in another place, have brought the Philippines again to the fore. The disagreement as to matters of fact regarding actual conditions in the islands and the differences of opinion on the policy pursued by President McKinley and his successor, are as prominent now as ever, and will doubtless remain prominent. But two years' discussion has had one important result; it has brought about an abatement of the demands of the Democrats. It is no longer required that we shall at once abandon the islands, but only that we shall promise independence to its people as soon as they are fit for it. This is vague enough to suit men of all opinions, except the dwindling band of thick and thin "anti-imperialists," a phrase that was heard ten times a day a year ago, but which is dying the death of all over-fervent political tocsins.

PROBABLY a great many unnecessary tears have been shed over the concentration order of General Bell, in Batangas. The word "reconcentrado" has an ugly sound to our ears, and anything that savors of Weyler's policy in Cuba excites natural indignation. We are assured, however, that concentration as enforced in the Philippines results in nothing worse than inconvenience and financial loss to the natives. They are fed if necessary and provided with habitations—they are not herded in corrals and left to starve as the Cubans were. By confining in guarded zones all non-combatants on the island of Marinduque, Major Smith quickly reduced the insurgents there to terms by thus cutting off their sources of supplies, and the natives testified to their good treatment and returned to their homes in good health. The concentration policy may be wrong, our whole Philippine policy may be wrong, but it is absurd to compare anything done by our officers there to the inhumanities of Weyler's war on the Cubans.

THE hearings at Washington on the Cuban tariff have merely proved what every one knew, namely, that the opposition to a little charity to the island was inspired by the fear that imports of Cuban tobacco and sugar would cut down the profits of a few sugar and tobacco growers in this country. That these two industries would be "ruined" by Cuban reciprocity, no one who reads the testimony before the house committee will believe. Free trade might be disastrous, but a substantial reduction of the duties on Cuban sugar and tobacco would seriously injure no one. At all events, something will be done for Cuba, it seems probable, partly because the party in control of the government would not care to occupy again the same sort of pillory in which it was placed on account of the Porto Rican law.

IN spite of all the trouble we are having with the islands already on our hands, it is definitely reported that a treaty for the purchase of the Danish West Indies has at last been signed, Denmark agreeing to take about half the sum demanded thirty years ago, when Secretary Seward was willing (and senate unwilling) to pay \$7,000,000 for the islands. Probably the treaty will this time pass the senate, and the Republicans in the house can pass any bill they like, including an appropriation of the purchase price of St. Thomas, St. Croix, and St. Johns. If reliable observers, one of whom was lately quoted in PUBLIC OPINION, are not in error, the majority of the people of the islands are not opposed to their sale to this country, and St. Thomas alone being worth the money paid as a coaling station, it appears that we have made a good bargain.

EVERYONE, we are sure, must be gratified to discover that all the European powers were our fast friends and protectors at the outbreak of the war with Spain. There

has been a well-founded suspicion that one or two governments were not altogether friendly, and, such is the skepticism of mankind, that this suspicion will continue in the minds of some in spite of the disavowals which come in such positive tones from Paris, Berlin, Vienna, St. Petersburg, and London. The governments at these capitals have never entertained anything but the most amiable sentiments toward us, and never, no never, thought of annoying us in any way. This is a very pleasant state of affairs and should be enjoyed at once because it won't last very long.

WE wonder if it is true, as surmised by several London papers, that the Nicaragua canal report was merely a "bluff" to bring the Panama company to terms. This seems to be too good to be true—not that there is anything admirable in such shrewdness, but because, if the Panama people were deliberately bluffed into cutting their demands in half, it shows that the canal commission knows exactly what it wants, congress can be convinced that the Panama route is the best after all, and there will be a good prospect of some definite canal legislation at this session of congress. There is no such prospect now.

THE ballot in the house of commons last week on the amendment to the king's speech, which, if passed, would have been a virtual condemnation of the prevailing South African policy, resulted in a vote of 333 to 123 in favor of the government. The Irish members did not vote, but if they had the opposition would have mustered less than two hundred. No wonder Lord Rosebery has gone cruising in the Mediterranean, confident that nothing startling will happen in British politics—nothing, that is, in which he would be interested in the capacity of a Liberal Moses.

IN spite of all the epithets that have been exchanged recently by the English and German press, the Prince of Wales went to Berlin to be present at the celebration of Emperor William's birthday on Monday, and was, of course, well received by everyone with whom he came in contact. The kaiser is now forty-three years old and has reigned nearly fourteen years; all the dire prophecies that were made when he came to the throne and made his first speech to the army and navy have lacked fulfillment. Germany, as a matter of fact, is about the only great power in the world that has not been at war during William's reign. The world has changed its opinion of him in consequence, and now grudgingly admits that while he may be erratic he "knows what he is doing."

SOME real fighting took place in Colombia last week, one engagement resulting in the death of General Alban, governor of Panama, the most energetic of the government leaders, and another fight near Bogota involved losses aggregating over three hundred. This, as we say, is real fighting, and gives a far more serious aspect to the Colombian revolution than it has had before, proving that the revolutionists, upon whom most of the losses in the Bogota engagement fell, are very much in earnest in their determination to overthrow the existing government.

IN the absence of news from Venezuela, it is reasonable to suppose that the various revolutionary movements there are losing ground. A copy of the *Venezuelan Herald* about a month old, informs us that "the revolution makes no progress; or better said, nothing more is heard of it. With regard to the Matos movement, it is not even known where he is." This was printed at Caracas when our newspapers were filled with particulars of extensive uprisings against the Castro government, confirming the wisdom of our determination to believe nothing in connection with South American affairs until we see it.

AMERICAN

Concentration in the Philippines

GENERAL J. F. BELL'S ORDER

HAVING failed, after two years' strife, to subdue the insurrection in Batangas province, which lies just south of Manila, and having satisfied himself that lenient treatment of the insurgents is productive of no good results, General J. Franklin Bell, the military commander in that province, has determined on the enforcement of the war in the most vigorous and determined fashion. This appears from a long report to the war department, published last week. The reconcentration order provides for the establishment of a zone around the garrisons, into which the friendly inhabitants are to be required to come, under penalty of confiscation and destruction of their property. This is said to be necessary to prevent the collection of forced contributions from the inhabitants by the insurgents.

This order is followed by a long circular by General Bell to his station commanders, commenting on existing conditions, and giving them advice how to proceed. It begins with the statement that he shares in the general conviction that the insurrection continues because the greater part of the people, especially the wealthier ones, do not really want peace. He says it is regrettable that the innocent must suffer with the guilty, but the greatest good to the greatest number can be best brought about by putting a prompt end to the insurrection. Therefore, he directs the application of General Order 100, in force during the civil war in the United States, which practically regards an insurgent guerrilla as outside the pale of civilized warfare, and subject to the death penalty where he does not engage continuously in the war and observe the rules of war.

A special injunction is laid on the commanders to hunt down secret sympathizers with and contributors to the rebellion, many of whom, he says, will be found among the municipal officers. Neutrality should not be tolerated; every inhabitant should be either an active friend or be classed as an enemy, and acts, not words, must be made the test. Chief and most important among the class of disloyal persons, he says, are the native priests. General Bell declares it is practically certain that every such priest in Batangas and Laguna provinces is a secret enemy of the government and in active sympathy with the insurgents. He orders that they be given no exemption whatever.

"Under the circumstances," asks the *New York Evening Post* (Ind.), "would it not be well for this country to tender its humble apologies to the much-maligned General Weyler? We have heard many army officers declare that he 'knew his business.' Now that we have so completely adopted his methods, some suitable honor, such as a dinner at the Waldorf-Astoria, might at least rescue us from the hypocritical position in which we are placed." The policy outlined in General Bell's orders is, in the opinion of the *Boston Post* (Dem.), "a step further than Weyler went in Cuba, or than Kitchener has gone in South Africa. They were content with 'concentrating' the miserable women and children left after the devastation of farms and villages, but General Bell marks the husbands and fathers and brothers as criminals to be hanged when caught. Probably he will not hang them, but the threat itself is infamous. This is the

pass to which the 'benevolent assimilation' of President McKinley has come. The people of the United States are ranged with the rest of the subjugating powers."

While it is not conceivable, says the *Philadelphia Ledger* (Ind. Rep.), that the atrocious features of the Spanish concentration policy in Cuba will be re-enacted in the Philippines, "Americans abhor that form of relentless rule which passes under the generic name of Weylerism. It holds a distinct and inextinguishable disrepute in the American mind. We should shun this evil and the appearance of it. The United States can not assume censorship of other nations and other times while employing in name, if not in imitation, the courses we have placed under the ban of civilization." The *Indianapolis Sentinel* (Dem.) expresses its feelings in harsher terms: "The nation is responsible for this crime—the exact duplicate of the horror in Cuba of which we so justly complained. Such herding of people in improvised shelters, cut off from their ordinary means of support, deprived of all the comforts of their homes, necessarily results in immense suffering and loss of life. It is bad enough when applied to men. When applied to women and children it is indefensible in the sight of God or man. It is a blot on the civilization of the age. This nation can not afford to sustain such a policy. Its reputation for decency and Christianity is worth more than anything that could possibly be gained by it."

General Bell's order has given the *Diario de la Marina*, the leading Spanish newspaper in Cuba, an opportunity to say: "How scandalized were the Americans and the English over all that happened in Cuba, and particularly over the reconcentration system under Weyler! How humane, how charitable, how sensitive were those Anglo-Saxons! And what savages, what barbarians, what cruel beasts we Latins were! O, you hypocrites!" The preponderance of critical comment in the above summary is due simply to the fact that only the "anti-imperialist" press has as a rule paid any attention to the subject.

Besides the above discussion of General Bell's proceedings in Batangas, Governor Taft and President Schurman, formerly a Philippine commissioner, have lately commented upon Philippine affairs, which have also come up for debate in congress during consideration of the Philippine tariff bill. Governor Taft, returning from Manila January 21, told the San Francisco reporters that fighting was now confined to Batangas and Samar, and that General Wheaton had assured him that it would be over in the former province by March. "The chief difficulty at the present time is the lack of police protection in the provinces. There has never been a time since the United States became interested in the islands that the attitude of the Filipino people as a whole has been so friendly to the civil government established by the United States as now." Speaking at Boston last week, President Schurman said that "From the American point of view, Philippine independence is inevitable; and from the American point of view Philippine independence is a consummation devoutly to be wished. . . . Of the ultimate goal of independence there is no manner of doubt."

The Philippines and South Africa

A PARALLEL

MR. H. W. WILSON, writing in the January *Fortnightly Review*, (London) indicates several points of resemblance between the conflicts now going on in South Africa and the Philippines. "The theater of war in the far east differs in many respects from that in South Africa. The area of the Philippine group, which is made up of over two thousand islands of varying size, is about the same as that of the Transvaal, and so is much smaller than the South African field of war. In South Africa we have at least a temperate climate, and a country which can everywhere be traversed by wheeled vehicles. But in the Philippines the climate is tropical, intensely hot and damp, and not particularly healthy for white men."

The first parallel is to be found in the behavior of the two governments previous to the actual outbreak of hostilities. In each case attempts at conciliation and peaceful settlement were interpreted by the malcontents as a confession of weakness. "As the Americans showed themselves so averse to determined action, Aguinaldo's audacity grew, just as did Mr. Krüger's about the very same epoch." Otis's proclamation of sovereignty was received by Aguinaldo with a counter-proclamation, and "as a further act of defiance, a number of Tagal women sent in a document to the general in which, quite in the Boer fashion, they protested that when all the Filipino men were killed in the sacred cause of independence, they themselves would take the field. In Manila itself—as at Cape-town later in our own war—a huge conspiracy was hatched by the Filipino sympathizers under the very noses of the American army."

In the fighting in Luzon in the spring of 1899, General MacArthur was unable to deal a crushing blow at the enemy because of a lack of reinforcements, although at the same time General Otis was ordered from Washington to send home his volunteers. "This order it was impossible for him to carry out, but the incident reminds us of what has happened at every turn in South Africa, where seasoned troops

have been again and again withdrawn, sometimes to obtain political advantages, by ministers who did not fully understand the gravity of the situation. The mischief in each case probably comes from the management of a war by men who are quite ignorant of military matters and strategy."

The anti-war parties in both countries have made repeated demands for conciliation and the establishment to autonomy. The commission into the Philippines, of which President Schurman was the head, failed completely to bring about any understanding between the forces. This is precisely the step which the pro-Boer party has repeatedly urged upon the British government. Another difficulty with which the Americans have been forced to contend in the Philippines has been the impossibility of distinguishing combatants from non-combatants owing to the fact that the former wear no uniforms. "The parallel with South Africa is again exact, for there also one of the greatest troubles arises from the absence of uniform in the Boer forces, and the fact that the Boers find their way into the towns occupied by the British, and out again, almost as they choose—or did so till Lord Kitchener's advent to command." There are the same indications in both cases of a growing dissatisfaction among the officers and men in the field with the leniency that has hitherto been shown to the enemy and evidence of a common conclusion "that with guerrilla war in its last stages the extremest severity is really in the end the greatest humanity."

"The parallelism between the South African and the Philippine war is then close, and extends even to the management at home in either case. That the same faults should have been committed in either instance is almost startling, and points, perhaps, to the fact that ignorance of war in the administration at home, which is the essential feature of similarity in the American and British constitutions, may be the cause. It is most dangerous to entrust the conduct of a war to men who know little of military history, for foresight is simply the power of predicting the future which arises from a profound knowledge of the past. In both instances we see insufficient forces employed, and hampered by the order to be 'kind' to the enemy; troops withdrawn when they were most needed; generals asserting in perfect faith that the

WHAT'S THE MATTER WITH THIS?—*Minneapolis Journal*

IS THERE NO HELP FOR IT?—*Chicago Inter-Ocean*

conflict is over; conciliation essayed with grotesquely futile results; and insufficient arrangements made for the steady and continual flow of reinforcements to the field. In each case an Anglo-Saxon people fails clearly to grasp the problem before it, or to understand that in a war of conquest what is needed is to break down the opposed will by the infliction of suffering."

Who Was Our Friend in the Spanish Crisis?

LORD CRANBORNE'S STATEMENT

IN our issue of December 26 we reprinted certain statements made by "a personage in Paris who enjoys the best opportunities of knowing the truth" and by M. Hanotaux, ex-French minister of foreign affairs, to the effect that it was Russia who blocked the plan of a European combination against the United States when it became evident that war with Spain was inevitable. Moved, we understand, by this story, Mr. Henry Norman addressed a question in the house of commons which elicited from Lord Cranborne, under-secretary of state for foreign affairs, a reply to the effect that just before the outbreak of the Spanish-American war other European powers, in several notes, suggested that Great Britain should join in a united expression—to the United States—of hope that peace might be preserved; that Great Britain agreed to do so, but only after ascertaining from President McKinley that such action would not be displeasing to the United States, and that the British government declined to have anything to do with subsequent proposals which seemed to hint at trying to put pressure upon the United States in behalf of Spain.

The German foreign office "declares with all positiveness that Germany, neither before the outbreak of the Spanish-American war nor during its course, proposed intervention to other powers. Neither did Germany support such a proposition made by any other power. It is true that in several instances suggestions (Anregungen) were made to the German government from another source in the sense of intervention. But the German government, without exception, maintained a negative attitude toward such suggestions, and made known its negative standpoint whenever occasion offered. It must further be remarked that it was not from an Austrian source that such suggestions reached the German government."

It is the last sentence of this statement that confuses those who seek to place upon some one power the initiative of the movement to check the United States. Austria, because of its dynastic sympathy with Spain, was supposed to be this power, and, with France, is still believed by many to have been the prime movers in the enterprise.

The *Tribune*, whose Paris correspondent was the medium of expression for the statements first referred to above, now says editorially that it is satisfied by Lord Cranborne's statement that "No matter what any other power may or may not have done or desired to do, it was Great Britain that made her friendship for us effective in those trying times, and that stood as a lion in the path against any European coalition against the United States. That is a fact which has long been known to those acquainted with the circumstances of the case, and not too prejudiced to be willing to know the truth. It is agreeable to have it publicly and officially reaffirmed by one of the men most completely conversant with the facts, and one, more-

over, whose character and position are the strongest guarantees of sincerity." The *New York Press* confesses to some doubt as to the positions of the powers toward us in 1898, but from all the evidence, direct and circumstantial, concludes that these positions may be summed up as follows: "Actively friendly—Great Britain. Indifferently friendly—Russia, Italy. Actively hostile—Austria, France. Mischievously hostile—Germany. History will have to render the verdict on a much more complete state of facts than that now possessed. We can only infer that it will be something as above set forth, but can support the inference with the recollection that all our previous inferences on the subject have been borne out by Lord Cranborne's guarded revelation of the international situation of the time."

Both the *New York Evening Post* and *Commercial Advertiser* regard the statement of Lord Cranborne as absolutely conclusive as to the friendly service rendered to the United States by England on the eve of the Spanish war. The *Commercial Advertiser* would like to have further information, however: "Now that Great Britain has made public the rôle which she played, it is perhaps safe to assume that Russia will not be more reticent if she has anything equally agreeable to us to reveal, especially since the German kaiser has undertaken to demonstrate the friendly character of the present relations between his country and America. It would do us no harm to learn that in a time of need we had more than one friend across the Atlantic." The *Evening Post* suggests that "There may be a certain calculated timeliness in the revelation of the truth by the English foreign office. Lord Cranborne may have been squinting at a certain effusiveness of friendship for America visible just now across the channel. Never mind that; the fact is officially established that it was England who was our best friend in a national emergency."

The Cuban Tariff Hearings

FOR AND AGAINST THE GRANTING OF TARIFF FAVORS TO CUBA

THE hearings before the ways and means committee of the house on Cuban reciprocity were opened by a long statement on behalf of Cuba by L. V. de Abad, who stated that the Cuban was worse off than under Spanish rule, and prayed for relief for the planters who were now without markets.

Henry T. Oxnard, of the American beet-sugar association, was the principal opponent of Cuban reciprocity. "Stripped of sentimentality and all extraneous considerations, and reducing the Cuban demands for free or freer sugar to its simplest equation, it is this: Shall the United States, through its agriculturists, produce its raw sugar, and in its factories, scattered from the Atlantic to the Pacific, refine its products, or shall it permit foreign lands to export to it the raw material and content itself merely with the refining? That is what I fear would eventually come to pass if you interfere in any way at the present time with the existing production of home sugar." Mr. Oxnard characterized the Cuban proposition as most vicious, and asked why it was that the American sugar interests should be singled out for sacrifice. He severely criticized the American sugar trust and H. O. Havemeyer.

The opening statement in behalf of the Louisiana interests was made by J. D. Hill, of New Orleans, an extensive planter. He pointed out that there was no

need of making an appeal in behalf of Cuba, for the island was so gifted by nature as to produce sugar at exceedingly low rates, which could enter into fair competition with the rest of the world. He urged that this industry should not be subjected to foreign competition, which would seriously injure if not destroy it. Mr. Hill asserted that the sugar trust was behind the Cuban movement, and presented statistics to show that the result of concessions to Cuba would make the sugar trust the real beneficiary. Mr. Hill was followed by ex-Governor Warmoth of Louisiana and several others, all of whom spoke to the same effect as Mr. Hill.

One beet-sugar man, Thomas R. Cutler, of Utah, said he was willing to risk a reduction of 25 per cent on Cuban sugar, and intimated that he did not believe an even heavier cut than this would injure the beet-sugar industry of this country. John D. Spreckels, the great California sugar producer, said that, in his opinion, the beet-sugar industry could stand a small cut in duties on raw sugar, but not on refined. N. B. Bradley, of Michigan, argued that the beet-sugar industry was the first of the protected industries to directly benefit the farmers and for that reason he urged that it should not be disturbed to the detriment of the farmers.

John R. Young, president of the National leaf-tobacco association, made an earnest plea against any tobacco concessions to Cuba. He said there undoubtedly was a public sentiment in favor of granting relief to Cuba, but he contended that we should be as just to the people of our own country as to the people of foreign countries. As to cigars, Mr. Young declared that the proposed concessions would "wipe out the American-made ten-cent cigar." The Cuban cigar-maker would lay down a cigar here for less than the American manufacturer receives for his high-grade goods, and the Cuban would have the advantage of having his goods advertised as "imported cigars." This, Mr. Young said, would secure for Cuba the entire American market for all goods worth above five cents. George Storm, president of the American tobacco-growers' association, and an extensive cigar manufacturer, also argued against concessions to Cuba. He said the tobacco interests of Cuba were

not as much depressed as represented; that they were prosperous and enjoyed great advantage in the American market, and that in effect they now desired an absolute monopoly of the American market. If the calamity of annexation came, Mr. Storm said, the tobacco interests would bow to it; but for the present they protested against a movement calculated to enrich the tobacco and cigar industries of Cuba and destroy those of the United States. President Coleman, of the New York tobacco board of trade; Daniel Harris, of the International cigarmakers' union, and several other representatives of state tobacco interests, also were heard in opposition to any concessions to Cuba.

The Call for a Constitutional Convention

THE POPULAR ELECTION OF SENATORS, ETC.

THE Washington correspondent of the New York *Evening Post* notes the fact that six states have already notified congress, through their legislatures, that they desire an amendment to the constitution providing for the popular election of United States senators, and four of them specifically ask for the call of such a convention as is authorized by the constitution in article 5. One of the local newspapers asserts that thirty states have at some time in the past given their adhesion to the plan for the popular election of senators. It is therefore argued by cautious observers that a constitutional convention, which congress would be compelled to call upon the request of two-thirds of the states, may be impending. It is further suggested that since twenty-five amendments to the constitution have already been proposed since the meeting of congress, a union of the interests represented by them might give broader scope to the movement, and greater strength than even the taking issue of popular election of senators. Some of the other amendments which would doubtless come before such a convention are those relating to the income tax, the life tenure of the judiciary, the hours of labor, uniform divorce, prohibition of polygamy, the suppression of trusts, the control by the general government or irrigation, waterways, and woman suffrage.

FREE TO STARVE.—New York World

DANGER AHEAD.—Minneapolis Tribune

Senator Burrows, the chairman of the committee on privileges and elections, is the most persistent and outspoken advocate in either house of congress of the proposition to elect senators by popular vote. He is reported by the Washington correspondent of the *New York Sun* as saying that he was not aware that there was any concerted action to induce the states to memorialize congress in behalf of a national convention, although his own state (Michigan) is one of those from which joint resolutions have already been received. Mr. Burrows thinks there is no hope of inducing congress to submit to the people the amendment for the desired change in the method of electing senators, and says that even his own committee has been reorganized in opposition to the proposed plan. The only hope of success, therefore, Mr. Burrows thinks, lies in action by the states, and he for one is willing to take the risk of a national convention if this is necessary to accomplish an object so dear to the hearts of the American people. If congress will not listen to their appeals the senator thinks that the states will be entirely justified in demanding that a convention be held. While the sentiment in congress in opposition to the holding of a national convention is overwhelming, there is no denying the fact that under the constitution a convention must be called, if, for whatever purpose, two-thirds of the states demand it, and this they seem to be doing at a rapid rate.

Congressional Summary

CONGRESS DAY BY DAY

JANUARY 20.—The report of the Isthmian canal commission, recommending acceptance of the Panama company's offer, was received from the president; Senator Lodge reported the amended Philippine tariff bill, and Mr. Rawlins, of Utah, acting for the Democrats, offered a substitute; Mr. Frye introduced his ship-subsidy bill; debate on the department of commerce bill continued. In the house the day was spent in debate on the urgent deficiency bill.

JANUARY 21.—The senate began the consideration of the Philippine tariff bill; Mr. Lodge opened the debate in support of the measure, and Mr. Rawlins, of

Utah, made a speech in support of the minority substitute, in which independence was promised to the Filipino people so soon as a stable government could be established. The urgent deficiency bill was under consideration in the house, irrigation and the Philippine question being the principal subjects of discussion.

JANUARY 22.—The bill providing for the establishment of a department of commerce was under discussion for nearly two hours in the senate; in executive session the nomination of M. A. Otero as governor of New Mexico was confirmed. In the house, the item in the urgent deficiency bill appropriating \$500,000 for a military post at Manila, which the Democrats have been using as a text for speeches in opposition to the Philippine policy of the administration for three days, was the subject of further debate; the item was thrown out on points of order, but in lieu thereof an amendment to appropriate the same sum for the "shelter and protection" of the officers and enlisted men of the army on duty in the Philippines was adopted by a vote of 127 to 100.

JANUARY 23.—Senator Mason offered a resolution in favor of Admiral Schley, which was referred to the committee on naval affairs; consideration of the department of commerce bill was continued; consideration of the urgent deficiency bill was finished by the house, but a final vote was not reached.

JANUARY 24.—The senate was not in session. The urgent deficiency bill was passed by the house, the item of \$500,000 for shelter and protection of troops in the Philippines being adopted by the votes of all the Republicans and sixteen Democrats.

The senate committee on the judiciary on Saturday authorized a favorable report on Senator Hoar's joint resolution proposing an amendment to the constitution of the United States giving congress the power to designate some one to act as president in case of the disability of both the president and vice-president. The resolution provides that "the congress may by law provide for the case where there is no person entitled to hold the office of president or vice-president, declaring what officer shall then act as president, and such officer shall act accordingly until the disability shall be removed or a president shall be elected."

The Proposed Anglo-Russian Entente

A MANY-SIDED DISCUSSION

IN more than one quarter there is talk of an alliance, *entente*, or understanding between Great Britain and Russia. Advocating such an understanding, a writer in the London *National Review* says: "Russian statesmen have to make up their minds whether in the present condition of Russian industries, Russian agriculture, and Russian finance, a friendly understanding with England which would relieve her anxieties in the far east and which might result in her being able to continue her Trans-Caucasian and Siberian railways to the shores of the Persian gulf, and which, last but not least, might enable her to carry out her historic mission in the Balkans, is not worth a high price."

As the basis of the proposed *entente*, the writer just quoted offers the following suggestions:

With regard to the near east the basis would be that whilst Russia abstained from any attempts to interfere with the *status quo* in Egypt, we should frankly recognize that the fulfillment of what Russia regards as her historic mission in the Balkan peninsula conflicts with no vital British interest, and that in Asiatic Turkey we should abstain from favoring the development of schemes of expansion entertained in Germany.

With regard to Persia and Central Asia we might offer Russia our co-operation in the development of railway communication between the Caspian and the Persian gulf and in securing for her a commercial outlet onto the gulf in return for an undertaking on the part of Russia to respect the political *status quo* along the shores of the gulf.

With regard to the far east, Japan's claim to an extensive sphere of influence in Korea being recognized by Russia and England, she would presumably have no objection to a formal agreement under which Great Britain would recognize Russia's claim to regulate her political and commercial position in Manchuria and Mongolia by direct negotiation with China, and Russia would in like manner recognize Great Britain's claim to regulate in the same way her political and commercial position in the Yang-tse valley, each power binding itself to give no support in those regions to enterprises of any other power. With regard to all other questions in China, Great Britain, Russia, and Japan would agree to take no steps without mutual consultation.

Another writer on this subject, Professor Edwin Maxey, who expresses his views in the January *Anglo-American Magazine*, laughs these proposals to scorn. Under them, Professor Maxey says, England would concede everything, while Russia would simply "agree to behave herself"; and turning from this proposition as being impractical and impossible, the writer asks:

Is there any adequate basis for an *entente* between the two powers in question? I confess that I see none. There is lacking every element which is necessary for a firm and enduring agreement. Their interests clash at every point. Their ideas of civilization conflict. Their traditions, laws, language, and religions are dissimilar. Race hatred widens the breach. Neither has confidence in the good faith of the other—without which any agreement is but a rope of sand. There is, therefore, between the two not sufficient in common upon which to rest an understanding which we could reasonably hope would be abiding. Declarations of sovereigns and exchanges of visits by fleets can not take the place of community of race, language, religion, laws, traditions, ideas, or interests. Hence, any union of the two would be forced, unnatural, temporary. England must hold herself in readiness to protect her interests all along the line; and if assistance is necessary she must look for it in other directions than St. Petersburg.

The London *Times*, not long ago, printed an editorial

plainly aimed to draw out the Russian press on the subject of a *rapprochement* with England, and the comment of the St. Petersburg press thereon is just at hand. On the subject of a political *entente* the Russian press is silent, but a commercial understanding is thoroughly approved. The *Finance Messenger*, of St. Petersburg, organ of the Russian ministry of finance, says: "Russia's export trade must have for its inevitable object the extension of the commercial ties of the empire with other exporting countries, beginning first of all with Great Britain; it has already, with the aid of the government, taken quite a number of steps in this direction, such as the Russian agriculturists' mission to England, the reorganization of slaughter-houses, the development of butter manufacture, etc." Referring to this utterance, the *Novosti* says: "It is evident, from these words, that there exists a close relation between the new customs arrangements being made by Germany and the commercial *rapprochement* between Russia and Great Britain, which may largely compensate Russia for the loss of the German market, while at the same time the imports of British merchandise into Russia may be increased to the detriment of German imports. Any serious attempt to develop Russia's commercial relations with Great Britain is a matter of congratulation."

The Exodus of the Irish

THOMAS E. NAUGHTEN, in the January *Westminster Review*, (London (New York: L. Scott Pub. Co.). Condensed for PUBLIC OPINION

THE publication of the returns of the recent census, showing a decrease of a quarter million of people in Ireland during a period of ten years, has once more set people talking of the causes, and speculating on the possible preventives of this very considerable leakage of population. That the state of things indicated is unsatisfactory and regrettable must be conceded by all. But that the matter is so serious as some appear to think, is, in our opinion, a highly debatable proposition. Indeed, we would go so far as to assert that without the importation of sentiment, and very unhealthy sentiment, into the consideration of this question, it can not appear otherwise than unimportant. The Irish people have been struggling with their destiny for the past three-quarters of a century, and destiny has, of course, mastered the situation. The standard of living being raised without a corresponding increase in the national income, emigration became inevitable. There was only one alternative—starvation.

How far this national blood-letting might have been averted in the beginning by the judicious development of the country's resources, is a question that will meet with different answers from different men. It is, at all events, a rather unprofitable subject of discussion. What we have now to deal with are not the mistakes of the past, but the possibilities of the present. It is the tardy recognition of this obvious fact that is responsible for some movements which find a footing in Ireland to-day. One of these movements, and perhaps the most important, aims at the voluntary protection of Irish manufactured goods in the

Irish market. This is a sensible policy. But, however we may sympathize with its objects, we can not conceal from ourselves the fact that this movement does not and can not mean the economic salvation of Ireland. Even if the Irish people in a body could be prevailed upon to reduce this principle to practice upon every possible occasion—a task none too easy of accomplishment—it is evident that, although some additional thousands might find employment in manufacturing concerns, the remainder, and the major portion, of the surplus population in rural districts should still seek a livelihood across the seas. The other movements, mainly moral and intellectual as they are, have really no direct bearing on the problem, although many people hold the contrary. The revival of the Gaelic tongue, and the establishment of village libraries, are things very good in their way; but that they will have the effect of rooting the people in the soil we can not for a moment believe.

The truth of the matter would seem to be that there is no patent political or social medicine capable of curing the disease. It is too deep-seated, and surface remedies can not reach it. While the rate of pay for agricultural laborers remains £13 per year in Ireland, as against £52 per year in Australia, it is only to be expected that Irishmen will find their way across the ocean. Teach the Irishman habits of thrift, and what is the result? You simply enable him the sooner to put his "passage" together. Educate him, and you turn his thoughts in the same direction. And why should we advise any man to stay at home if he can better his condition elsewhere? Why should we regard Irish emigration as such a "crying evil"? Wherein does the disgrace of it lie? Is it not best for a family, containing too many members for comfortable living in the old land, to send some of their number abroad, thus relieving the congestion, and increasing the prosperity and happiness of all? Is not this process of domestic expansion going on all the world over? It involves some hardships, perhaps, and some heartbreaks, too, but such things are not confined to Ireland. They form part of the day's work in every clime under the sun, and they have to be borne as well as may be. This cry of "keep the people at home at all hazards" is a weak and cowardly, as well as an utterly futile one, springing, in every case, from a false view of life, and the habit of ignoring things as they are.

By Rail to the Victoria Nyanza

London Sphere. Condensed for PUBLIC OPINION

THE Uganda railway, of which the world has heard brief news at intervals to the effect that a certain mile point had been reached, has now been completed to what will be for the present its inland terminus on the shores of the Victoria Nyanza. Not only has the railway been completed to Port Florence, but the telegraph from Mombasa to the lake has also been completed, and the news that the first locomotive had arrived on the shore of the great African lake on December 19 came through to London in about an hour and a half. The preliminary work of the railway was begun in 1890, but the actual building of the line dates from August 8, 1896, so that the 582 miles of rail from Mombasa, on the Indian ocean, to the Victoria Nyanza has occupied four years and four and a half months. An immense territory of about 700,000 square miles is thus penetrated by this rail-

way, and one of the great chain of African lakes is in touch with the rest of the world.

The extent of this great "nyanza," which in English signifies lake, is fully equal to that of Ireland. It is a strange and wonderful country in which this huge sea lies. There are a number of terrace-like faults along the western shores, suggesting a series of immense landslips as a probable cause of the formation of the hollow which now contains the lake. The traces of volcanic action do not seem sufficient to account for so large a depression. The igneous area is, upon the whole, barren and desolate-looking, the remainder of the basin being clothed with luxurious tropical growths wonderfully varied in character.

The ocean end of the line is also interesting. Mombasa stands on a coral island three miles long by two and one-half broad, close to the coast, about 150 miles north of Zanzibar. The shores of the island are rocky and abrupt, and the greater part of its surface is covered with dense bush. The town has the usual Arab characteristics of ruin and neglect. Historic interest centers in an extensive fort, built in 1594 by the Portuguese and restored by them in 1635. Mombasa was visited by Vasco da Gama in 1497; it was then a large and prosperous town, with a colony of Christians and Bunyans from India. The native chief put it under British protection in 1823, but they soon abandoning it, it was seized by the sultan of Zanzibar, who, in 1888, ceded it provisionally to the British East Africa company. They were made definite masters of the place two years later, when they were also put in possession of a vast tract of country extending 400 miles along the coast. Gold, copper, plumbago, and iron ore, as well as india-rubber, are to be found in considerable abundance. The harbor, one of the largest, safest, and healthiest on the east coast of Africa, was, in 1890, made a British naval coaling station and the headquarters of the fleet in that part of the world. The fort possesses a pier, and other harbor works were begun in 1890. The population is about 20,000.

The great scheme of connecting Cape Town and Cairo by telegraph is also proceeding apace. During the last two years the work has been pushed forward rapidly, and the surveying party is now busily engaged mapping out the last section of the route so far as the African transcontinental telegraph, as it is called, is concerned—namely, from Ujiji, on the eastern shore of Lake Tanganyika, to the eastern shore of Albert Nyanza, the final inland terminus of the Uganda railway. The line extending northward from Lake Tanganyika on the map given here shows the course of the telegraph. When completed, the line will measure approximately 5,600 miles in length and will be the longest telegraph in the world.

The Spirit of the Mafia

ALEXANDER NELSON HOOD, in the January *Fortnightly Review*
London (New York: L. Scott Pub. Co.). Condensed for
PUBLIC OPINION

CAN Italy recover its lost greatness and become one of the great nations of the world? It is a difficult question to answer, for so large a subject offers many sides for consideration, necessitating a study and knowledge of the many peoples who form united Italy, and it is scarcely within the limits of an article that the matter can be properly discussed. But in the Italy of today there is a growing force arrayed against the progress of the country, which merits the attention of its well-wishers. That force comes from the south and is best described by the words which head this article. The Mafia is prevalent throughout the whole of Sicily, though the provinces of Messina, Catania, and Syracuse are less affected. In Palermo, Trapani, and Girgenti, it is found at its worst. Probably at no recent time of its history has lawlessness—none the less dangerous because silent in its working—been so paramount in Sicily as at the present moment. In the fifteen years preceding the union with the kingdom of Italy, the administration of justice was purer, safety of person and property more assured, and prosperity greater than is now the case. This is openly avowed, and deep-seated discontent is the result. The evil is seen and recognized; and there are those who go the length of wishing that things may get worse, so that the inevitable change may come the sooner.

"La Mafia" is no elaborate secret society with its written code of laws and solemn initiation into its mysteries: it has probably no list of members sworn to obey the orders of a chief, with periodical meetings in dark hiding-places to decree vengeance on its enemies. It is best defined as a sentiment of opposition to social and moral obligations, and to legal restraint—in short, an extended conspiracy against the community on the part of individuals arbitrarily and violently to impose their will on others.

The reason of the prevalence of the Mafia may be sought in a variety of causes. Its principal one is the corruption which pervades all classes from the highest to the lowest. The people are convinced that justice is for the powerful. They have no faith in the law, which they regard as their natural enemy. In the misery and ignorance of the masses, the Mafia finds a ready soil adapted to its growth. The peasant is a slave to whom liberty is a sham and prosperity a farce. Before the bureaucratic tyrants to be found in every town, and before the Mafia, unless he belong to it himself, he, as well as others, has to bow to the ground and put up with the injustice that may be meted out to him.

The real remedy for the curse of the Mafia lies in a complete revolution in the administration of justice, with the restoration of the death penalty for murder. If the judges and other law officials of all grades were held severely responsible for the performance of their duty and inexorably punished when failing to do it, the principal field of operation and illicit enterprise of the *Mafiosi* would exist no longer. Drastic measures are urgently called for. Much might be done if the well-to-do classes, who have a real stake in the prosperity of the country, would combine to impel public sentiment in the right direction. Economic improvement in the condition of the lower classes would be brought about by driving from their position those usurers who lend money at forty and even eighty per

cent interest, and by offering government loans at a fair rate. Greater concessions to the agricultural classes—such as the free distillation of wine—should be granted where the condition of the treasury permits it. There should be the severest punishment for speculation, so that the taxes should really reach the exchequer intact, and the government should look carefully to the choice of its representatives whom it sends to Sicily, as indeed should the Sicilians themselves to those whom they send to represent them at Rome.

Various Topics

BOERS TO FIGHT BOERS: Lord Kitchener has authorized General Vilonel, a burgher who surrendered, to raise an additional Boer corps of 1,500 men. General Vilonel has written a letter to ex-President Steyn warning the latter of his intention to form such a corps, and adding that the Boers in the concentration camps are tired of the useless struggle, and are determined to help the British end it.

LORD ROSEBERY'S NOVEL: Lord Rosebery has written a novel, on which he is now engaged in putting the finishing touches. The name and plot of his novel are not hinted at so far, but one of the weekly papers suggests it should be called "The Lonely Furrow," or if compiled on the lines of Dickens, it might be named "A Neutral Inn," which is a sarcastic reference to Lord Rosebery's recent suggestion that peace negotiations with the Boers might well be initiated at a wayside tavern.

ALLEGED RUSSIAN TRICK: The Peking correspondent of the *London Times* says a report circulated last Thursday that the Manchurian convention had been signed was premature, though undoubtedly the signature of the treaty is appreciably nearer. It is now virtually agreed that China will sign, simultaneously with the government convention, a separate agreement of a secret nature granting to the Russo-Chinese bank preferential railway, mining, industrial and commercial privileges in Manchuria, China, "saving her face" by the fiction that the bank, as its misleading name suggests, is partly Russian and partly Chinese.

AUSTRO-RUSSIAN RELATIONS: The relations between Austria and Russia, which certain events in eastern Europe made somewhat cool, are now much more friendly, largely as a consequence of the German customs tariff proposals. These proposals showed that there were powers ready to take advantage of differences between Russia and Austria. Both countries are prepared for any eventuality in Serbia, though the best information makes the reports of a dynastic change premature. A dangerous symptom is the dissatisfaction of the army, which in King Milan's time was always loyal. However, whatever happens, Russia and Austria are both agreed that it shall not imperil European peace.

THE IRRECONCILABLES

TWEEDLEDEE (Sir H. Campbell-Bannerman): "We must have a bit of a battle."

TWEEDLEDUM (Lord Rosebery): "Let's fight till half-past one, and then have lunch."—*Punch*

SOCIOLOGICAL

The Social Abyss in England

7,500,000 PEOPLE LIVING BELOW THE POVERTY LINE

WRITER in the current *Contemporary Review* calls attention to some "staggering" revelations in Mr. B. S. Rowntree's recently published "Poverty," chiefly to this, that out of England's population of 32,500,000, at least 7,500,000 are living below the poverty line. Mr. Rowntree says: "We have been accustomed to look upon the poverty in London as exceptional, but when the result of careful investigation shows that the proportion of poverty in London is practically equalled in what may be regarded as a typical provincial town, we are faced by the startling probability that from 25 to 30 per cent of the town populations of the United Kingdom are living in poverty." The all-important question in considering Mr. Rowntree's results is his definition of "poverty." He attempts, by elaborate calculations and comparisons, to reckon a minimum of physically healthful existence. This he terms the poverty line. He allows here for no item but the primitive wants of the human animal—food, shelter, light and warmth, clothing.

A family living upon the scale allowed for in this estimate must never spend a penny on railway fare or omnibus. They must never go into the country unless they walk. They must never purchase a halfpenny newspaper or spend a penny to buy a ticket for a popular concert. They must write no letters to absent children, for they cannot afford to pay the postage. They must never contribute anything to their church, or chapel, or give any help to a neighbor which costs them money. They cannot save, nor can they join sick club or trade union, because they cannot pay the necessary subscriptions. The children must have no pocket money for dolls, marbles, or sweets. The father must smoke no tobacco and drink no beer. The mother must never buy any pretty clothes for herself or for her children, the character of the family wardrobe as for the family diet being governed by the regulation: "Nothing must be bought but that which is absolutely necessary for the maintenance of physical health, and what is bought must be of the plainest and most economical description." Should a child fall ill, it must be attended by the parish doctor: should it die, it must be buried by the parish. Finally, the wage earner must never be absent from his work for a single day.

And poverty means, for Mr. Rowntree, the falling below this minimum standard.

Taking the city of York as representative of average conditions in England, Mr. Rowntree analyzes the causes of the poverty of 7,000 of its population. The results are as follows: One thousand one hundred and thirty he found due to the death of the chief wage-earner; 370 to his illness or old age; 167 only—38 families, surely representing a period of abnormal prosperity—due to the chief wage-earner being out of work; 205 due to irregularity of work; 1,600 due to largeness of family; and 3,756—640 families—in which the father is in regular work, the family is not abnormally large, but the low wages paid never lift them above the poverty line. Mr. Rowntree gives the occupations of all this dreary multitude. They cover practically the whole field of unskilled labor. General laborers, carters, railway employees, clerks, gardeners, a hairdresser, a lamplighter, and a teacher of music are examples of this varied assortment. Their average family earnings are 18s. 9d.; the average total number of the family 5.8, and their weekly balance shows a total average deficiency on the min-

imum scale (without, be it understood, one halfpenny for drink, tobacco, or the milder joys of life) of five shillings and a farthing per family.

"The wages paid for unskilled labor in York are insufficient to provide food, shelter, and clothing adequate to maintain a family of moderate size in a state of bare physical efficiency." If for York we can also read every similar provincial city in England, we can justify Mr. Rowntree's use of italics. This must mean one of two things, says the writer in the *Contemporary*, "either a continually degenerating physical stock to sell their labor, growing less effective each generation, for a continually lessening remuneration; or a supplement of the wages with the earnings of other more favored classes; all the demoralization of gusty philanthropy and the support of a parasitic population of seven millions. Frankly, this is abyss. It is life from which the elements of rational and illuminated experience have been withdrawn. The outline of the abyss is wavering and uncertain, and the particular denizens are continually changing. As in the locust horde, the individuals continually pass in or out, but the swarm itself remains." Mr. Rowntree traces by means of a suggestive curve, zigzagging above and below the poverty line, the desolate life-history of the average unskilled laborer. He notes five alternating periods of want and comparative plenty. "First, want in early childhood. This is the most dismal fact—that while the family is growing, before the children have begun to earn, poverty is at its greatest; hence the children underfed, the stunted physique reared to perpetuate the vicious circle. With the earning of the elder children the family climbs above the poverty line; and the laborer remains above, if a regular wage-earner, until he is married and has two or three children, when he falls below it again. Once more, when his own children are earning, he is raised into comparative affluence. Finally, when his children have gone out into the world, and he is no longer fit to work, never having received sufficient income to save any appreciable sum, he sinks into the cast-aside, dreary, intolerable old age of the great mass of the laborers of England—shivering towards the grave on uncertain charity, on inadequate outdoor relief, or massed in herds behind the barriers of some gigantic, state-provided institution."

The Germanizing of an American City

HENRY JAMES FORMAN, in the *Boston Transcript*
Condensed for PUBLIC OPINION

THE Germans in Milwaukee form about eighty-five per cent of the population, and to my thinking they are rapidly Germanizing the remaining fifteen per cent. The handful of Americans in Milwaukee is almost lost already. A few families on the east and south sides have a little society of their own. But for the greater part the Americans are being merged into the German population. They join the German clubs and try to marry the rich German girls. Americans in Milwaukee will soon be as extinct as the mastodon.

When the German emigrant arrives in Milwaukee

he has generally a relation, a friend, or at least a "landsmann" (countryman) already established there to whom he can turn for assistance. The assistance seldom consists in more than securing for him a place in a brewery, coal yard, factory, or tannery. The place once secured, he is launched. German seems to "go" everywhere. His grocer, his butcher, his milkman, his letter-carrier, the police officer in his district, all speak German. He enters on his career of American citizenship with a new zest. He feels at home and settles down to his proper place in the social body. His great passion from the first is to acquire property. He works hard, his children work hard, and all toward the one great object—to own a home. As a result, a great percentage of the German laborers in Milwaukee do own their homes. Often they are no more than mere wooden boxes with roofs over them, these homes, but a home's a home for a' that. Streets and streets of these little drab-colored one or two-story wooden structures stretch away on the north and west sides of Milwaukee. But they are all clean, these streets. Some of the houses have little *parterres* around them, and the meanest have grass plots. This it is that gives the effect of a German village—this and the drowsy hush that hangs over these miles of cottages. Every man is quietly intent upon improving his property, and thus it happens that the laboring classes in Milwaukee are better housed than those in perhaps any other city of its size.

A state of comfort like this demands occasional distraction to break the monotony. Milwaukee is in this respect well provided for. Not only are there dance halls and theaters in which English is spoken, for the young, but there is also the great German theater, built and supported by Mr. Pabst, of the Pabst brewing company. This is perhaps the best German theater in the country. The stock company is excellent, and the repertoires include the best pieces in the language. The prices are so regulated that anyone can go at least once a week. And right here I may add that Sunday is as good as any other day to the Germans. They hold that Sunday was made for man, not man for Sunday. And the more pleasure they can cram into that day of rest, the better for their health. But the most important means of the laborer's recreation is, of course, the saloon. The German is uncommonly gregarious. He can not belong to expensive clubs with luxurious furniture, which he would mar after a day's labor in the tannery or the brewery. The saloon is the one place for him.

If all this time we have been neglecting the children, we may at least have the comfort of knowing that they have been taken care of. Those who are over fourteen upon arrival are placed in factories, tanneries, or breweries, just as their fathers have been placed. Girls go to the knitting works, but for a great many of them there is room in the bottling departments of the breweries and in most of the factories. At first they all labor to the end of buying a house. But as they grow older they begin to look to themselves, marry and found homes of their own. The younger children are put to school. From the first grade on they have instruction in German an hour daily. As perhaps nine-tenths of the teachers are of German extraction, the young immigrants have no difficulties until they learn a little English. Besides, the German children are, of course, in overwhelming majority in most of the schools. So much so that many children, when asked where they or their fathers were born, are so accustomed to hear "Germany" that they feel ashamed to say anything else.

Co-operative Homes in Philadelphia

SUCCESSFUL EXPERIMENTS OF SELF-SUPPORTING WOMEN

THE girl away from home, living at \$8, \$10, or \$12 a week in Philadelphia, no longer has to domicile herself in the little hall bedroom. She has found a better plan. It is coöperative housekeeping. The *Philadelphia North American* tells of three clubs organized for this purpose. This writer says: "This new system, worked out by the girls themselves, is succeeding better than many of the plans which social reformers have dreamed of and tried to failure. The coöperative club members are getting more for their money and paying out less money to get it than they ever did since they took on their young shoulders the burden of self-support. They are actually living with all of the comforts and many of the luxuries of life, all for the sum of \$3 and \$4 a week. This, too, includes the cost of servants to do all of the housework."

"While all of the clubs are run on the same general plan, they are not exactly alike. The T. & B. club is named for the two women, Mrs. E. S. Turner and Mrs. J. P. Balderston, who helped the girls to found it. The president, Miss Viola Richmond, a public stenographer, is the girl who originated the idea. The girls began it with Miss Richmond as their leader. She has been the president ever since. She it is who does all of the buying, and it is because she does it economically and wisely at the large markets that the club has always run so smoothly. It has never failed to pay expenses. Once a month a business meeting is held, at which any suggestions from club members are received and acted upon. Whenever there is a vacancy an applicant for membership is taken in on one month's probation. If at the end of that time everybody likes her she stays. The club membership numbers twenty-two girls. They include stenographers, dressmakers, hair-dressers, and clerks. Each in turn makes out the menus for one week at a time, so that everyone in this way gets a chance to have her favorite dishes. Last summer the T. & B. club, in addition to its permanent headquarters, operated a vacation house at Chestnut hill."

"The Randolph club is named for Miss Sabilla Randolph Howell, the president and founder. It was started on a slightly different basis from the T. & B. club, for Miss Howell invested her own money to buy the furnishings and a percentage of the board money goes to her for the rent of these. The girls pay \$3 and \$4 a week, and here their laundry is included. Miss Howell herself acts as the housekeeper, and in compensation therefor her board is remitted. The Lunch club has ensconced itself in a stately old Philadelphia residence. It is really the outgrowth of a coöperative lunch-room. The latter has been in operation for six years, but the house with living quarters was only opened about a year and a half ago. Fifteen girls occupy it and pay \$3.50, \$4, and \$4.50 a week, according to the location of their rooms. Where a room is occupied by two girls, each has a single bed, separated from the other by a partition, and the space that is left is used for a common sitting-room. There is a prettily furnished general parlor, and, besides, a little 'rest-room' done all in soft green. Comfort, cleanliness, and congenial comrades go far towards making the club a real home."

The Decadence of Good Manners

ARE MEN GROWING LESS DEFERENTIAL TO WOMEN?

THE *Baltimore Sun* asserts that good manners are in a state of decadence, that men are less deferential to women than they were a generation ago, and that the habit of rudeness is growing. The writer continues: "In the north it has become simply brutal. In New York, if a man surrenders his seat in a street car to a woman every one in the car knows at once that he is from the south. Occasionally, however, one meets a southern man in, say, New York, who has imbibed the notion that it is the thing to exhibit indifference to women. On the streets and in all public places men take advantage of their superior brute strength to jostle and hustle women out of their way, to rush ahead of them, and to deprive them of their rights. It is a trite remark to say that the decrease in politeness to women means simply a decrease in civilization. It matters not how a people may advance in wealth and revel in luxuries, no matter what the veneer may be, a people who mistreat women are lacking in true civilization, and assimilate themselves with the savage tribes of mankind."

In reply, *Harper's Weekly* remarks editorially: "After reading the above, it would be pertinent to ask how long since the editor of the *Sun* visited New York city, and to question whether at that time he penetrated further into the precincts of New York than Coney island, for, as a matter of fact, considering the cosmopolitan character of its citizenship, considering its ceaseless activity and the hurry and rush of business life, there is no city in the world where a woman may come and go with less disrespect shown and more courtesy and consideration offered to her than in New York. To say that courtesy toward the fair sex in the city of New York is the stamp of southern birth, is an amusing conceit which may reasonably be expected from one who has never ventured out of the state of Maryland, but to indict a community upon a mere intellectual vagary, even when it is reinforced by a natural pride of birth, is not fair, and suggests not so much that our good manners are on the down track as that the sense of justice in at least one southern mind is sadly warped."

The Mixed Population of Hawaii

WHICH ELEMENT WILL PREDOMINATE?

WHAT can democracy do with a body of people, permanently divided by blood and habits, one in which the component parts have few or no interests in common, and in which no training of experience will bring one class to look on industry, business, or government with the eyes of the other? This is the problem which Hawaii presents to the United States, says Dr. David Starr Jordan, in the current issue of *Out West*. He emphasizes the situation by the following analysis of the population of Hawaii:

"The population of these islands in 1896 is estimated at 109,020. Of this number, 39,504 are classed as Hawaiian, 8,485 of them being of mixed blood; 21,616 are Chinese; 24,407 are Japanese; 15,100 Portuguese; while of the remainder, including Americans, English, and all other nationalities, the number is 8,493. The census of 1900 gives a total population of 154,000, but I have not at hand its division as to nationalities. It is probable that since 1896

the American element has largely increased, but does not exceed 5,000 or 6,000, while of the British there are about 2,500; of Germans, about 1,000; with a few French, Norwegians, and about 500 natives of the Gilbert islands. Quite recently a few hundred natives of Porto Rico have been added to the population of the islands.

"Practically, the 10,000 Americans, British, and Germans, with a few of the old native nobility, own all the property of the islands. The natives bear no relation to sugar culture, nor indeed to any part of the industrial or commercial activity of the islands. The Japanese, Chinese, Portuguese (from the Azores), and Porto Ricans were brought in to serve as laborers on the sugar plantations. They were chosen as the cheapest of cheap laborers available, and until 1900 worked under the contract labor system, which differed from ordinary slavery mainly in not being hereditary. The number of plantation laborers is given in 1899 as 35,987; Japanese, 25,644; Chinese, 5,979; Portuguese, 2,153; Hawaiians, 1,329; others, 882. The remainder of the Japanese, Chinese, and Portuguese population is chiefly gathered in the towns of Honolulu and Hilo, where all sorts of industries are represented. Among them, the fisheries, formerly carried on by the Hawaiians, are now almost entirely in the hands of the Japanese. The fish stalls are kept chiefly by the Chinese, while shops of all sorts and small manufactories are managed by men of either race.

"The fact that the Hawaiians are scarcely represented in industrial matters is not due altogether to indolence, but rather to the fact that when they feel like working at all they prefer to work for themselves. They are largely used in the wharf traffic, and it is said that they make good teamsters; but continuous labor is distasteful to them, as is work for any specified time. This is due, it is said, to their native instinct, which is adverse to subjection, unless to Hawaiians of high standing or to white people of authority. In general, the Hawaiian will not save money, unless he has inherited it. He is fond of pleasure and of giving pleasure, and habits of thrift interfere with this. In public estimation the Hawaiian who hoards his earnings 'is no better than a Haole' (foreigner), and such behavior is regarded as selfish and unworthy. For this reason most of them are generous, lavish, and impecunious. The Chinese and the Portuguese, originally imported as contract laborers, have largely drifted off into individual work, as is shown by the figures quoted above. The Japanese as laborers are on the whole probably best fitted for the needs of the sugar plantations."

Various Topics

A LONDON TUBERCULOSIS SANITARIUM: The *British Medical Journal* announces that £200,000 has been placed at the disposal of King Edward for charitable or utilitarian purposes by a philanthropist who has proved to be Sir Ernest Cassel. The money will be devoted to the erection of a sanitarium for tuberculosis patients in England.

IMMIGRATION STATISTICS: Immigration at the port of New York in the third quarter of 1901 continued at the same rate as in 1900, the number of arrivals in the three-month period of each year having been slightly more than 83,000. The southern Italians still constitute the largest contingent (about one-fifth of the entire number), followed by the Hebrews, Poles, and Germans. Of the immigrants 14 years old and over, 18,725, or 27 per cent, could neither read nor write. The largest degree of illiteracy was found among the Portuguese (82 per cent), while only 1 per cent of the adult immigrants from Scandinavian countries were illiterate.

LETTERS & ART

Calvé as Messaline

THE FIRST PERFORMANCE OF DE LARA'S OPERA IN
NEW YORK

SIDORE DE LARA'S "Messaline," one of the novelties of the Metropolitan opera season, has been presented to a New York audience, and has been mercilessly excoriated by the four leading musical critics, Mr. H. E. Krehbiel, of the *Tribune*; Mr. W. J. Henderson, of the *Times*; Mr. James Huneker, of the *Sun*; and Mr. H. T. Finck, of the *Post*. Mr. Finck thus outlines the history of the opera: "Isidore de Lara, whose real name is Cohen, is a native Dubliner who got some vogue in London and Paris salons as a singer and a composer of light and airy lyrics. Then he had the good luck to find a wealthy patroness in the former Princess of Monaco, who enabled him to produce two of his operas, 'Amy Robsart' and 'Moina,' and subsequently his 'Messaline,' under almost Bayreuthian conditions, at Monte Carlo. Not only was the house darkened, and the doors closed from the beginning of an act to the end, but the best singers were engaged, and fine scenic settings supplied. The first performance of 'Messaline' was given on February 21, 1899. The opera was subsequently produced, with varying fortunes, in several other cities, including London, where it was first heard on July 13, 1899. At Monte Carlo it was 'a gigantic success,' according to Mr. Runciman, who pronounced it the best of all English operas, and superior to the works of the young Italians. In London, the critics, almost to a man, pounced on the opera and tore it to pieces. The *Times* pronounced the libretto 'a triumph of pornographic art'; described the plot as made up of 'brutal sensuality unrelieved by any touch of honest love, or even of genuine human passion'; and the music as 'a pale reflection of the weaker side of Massenet's music,' and expressed satisfaction at the 'very moderate enthusiasm' with which the work was received in London. The *Daily News* was sued for libel for calling the opera indecent."

The libretto, which was outlined in PUBLIC OPINION after the first performance of the opera in 1899, concerns itself with a fictitious but plausible incident in the life of Messaline, wife of the Roman emperor, Claudius, and the incarnation of the profligacy of her time. Her amours with two Numidian brothers, which lead to the murder of one by the other and to the murderer's suicide, are the themes presented. Musically considered, Mr. Huneker says, "There is not one stout tune in the score of 'Messaline.' Even the vaunted love music is wishy-washy

MME. CALVÉ

(From her latest photograph)

passion, the feeble passion of decadent folk who symbolize their desire in slurring, cat-like chromatics and pant feebly in modish phrases. It is the froth on top of the cambric tea, not the genuine wine of fierce passion that de Lara pours out for us. He at no time keeps abreast of the book, which has some point and literary distinction, for it was written by those two experienced Frenchmen, Armand Sylvestre—since deceased—and Eugene Morand—the latter collaborator with Marcel Schwob in the best acting version of 'Hamlet' in French." Of Calvé's interpretation of the title rôle, this same critic says: "Calvé puts her whole brunette soul into the rôle. She is a glittering panther, a cruel, fascinating, remorseless woman, alternately cajoling her bewitched victims or biting and scratching them in true feline fashion. She is sufficiently shameless in her impersonation, and her entire person gives the true Scarlet Woman of the Seven Hills. It was viciously superb. She never sang better this season—indeed, it was the first night her voice has had the old ring in it, some of the old charm."

"Music can chasten and enoble even a loathsome libretto," writes Mr. Krehbiel, "but not music like M. de Lara's, which, when it strives for anything, strives to give an added atmosphere to the incontinence portrayed in the stage pictures and proclaimed in the text. It is not dangerous music, however, for it is an impotent striving with all its blatant pretence. The composer seeks to fill the opening scene with languor and lassitude; he fills it full of *ennui* instead. We should say that it was a hymning of sensuality in its lowest forms if it were a hymning of anything. But the composer is not musician enough to invent eloquent melodies or moving harmonies."

Mr. Henderson confesses that he "writes with grief, not altogether unmixed with indignation." "Nothing great," he says, "can come out of the attempt to set mere animalism to music. Nothing even vigorous comes out of it in 'Messaline.' We get only ascending melodic successions and *crescendi*. The best music in the opera is that heard at the opening of the scene in the tavern, where the composer has been successfully bacchanalian. Mme. Calvé acted and sang the rôle of Messaline with consummate dramatic art. The more's the pity. Her appearance was seductive and her costumes in accord with the character. As the historic voluptuary she was successful."

Art in Philadelphia

SEVENTY-FIRST EXHIBITION OF THE PENNSYLVANIA ACADEMY

"IF there be any fault to find with the annual exhibitions of the old Pennsylvania Academy of Fine Arts, it is on the score of an embarrassment of riches," writes Mr. Arthur Hoeber, in the *Commercial Advertiser*. "The seventy-first exhibition presents 1,060 works of art, with a variety and a freshness equalled by no other American display, for the management, not content to send out circulars and await the response of the artist, betakes itself to distant cities, to private studios, and to the homes of collectors, and with commendable push and energy, secures canvases that might otherwise forever remain hidden from the gaze of the general public."

Among the notable pictures that have been exhibited before are Mr. Winslow Homer's marine, "On the Coast of Maine"; Mr. Ryder's original and picturesque "Siegfried"; Mr. Abbey's "Penance of Eleanor"; paintings by Horatio Walker, John La Farge, Robert Reid, Gari Melchers, Kenyon Cox, and the beautiful portrait by Whistler, "The Andalusienne."

Of the new pictures, the critics bestow the greatest praise on Miss Cecilja Beaux's portrait of Mrs. Phelps Stokes. The *Tribune* correspondent calls it "brilliantly clever, with solid merit beneath the cleverness." Mr. Hoeber says that the "facility of her work is amazing, the modeling certain, and the color scheme most alluring." The work of Mr. George De Forest Brush, "Mrs. Goodwin and Her Sister," although it has been given the place of honor, has not been favorably received by the critics. The *Tribune* says that "the artist has wrecked himself on the suavely searching delineation of the features of his sitters. Carrying this to excess in the portrait just mentioned, he gives us modeling so painstaking that all the juice of life has been squeezed out of it; the flesh tints are cold; the draperies seem as though modeled in clay, they are so heavy, and over the whole painting there hangs the depressing atmosphere of a style which has become mannered and even commonplace."

Mr. Hoeber says that it is a pleasure to turn from the "repellent severity" of Mr. Brush's work to the "human warmth" of a portrait by Mr. Wilton Lockwood. "It was to have been expected with John La Farge as a sitter that he would have been seen at his best, and there is no disappointment, for here is an admirable likeness of the distinguished artist, limned skilfully and painted with refreshing freedom, in an attractive scheme of color. It is an intimate presentment of the man, full of character, and as a human document it is most valuable." Mr. Hoeber continues: "Nor has William M. Chase been recently seen to so much advantage as here, particularly in his likeness of Mr. Roos, which is speaking in its faithfulness and delightfully frank in style, as well as good in color. It is an honest, serious effort, worthy of the artist and his reputation. Gari Melchers, who sends many canvases, includes a portrait of Donald G. Mitchell, and the theme of a strong, vigorous personality has lent itself well to the mannerisms of this artist. The famous 'Ik Marvel,' with his splendid head of white hair, looks directly out at the spectator. About his shoulders is thrown a plaid shawl, and the expression is most lifelike."

Other examples of portraiture that have received the commendation of the critics are by John Lavery, Robert Henti, Irving R. Wiles, Carroll Beckwith, Robert Vonnoh, Clara McChesney, Frank Benson, Siddons Mowbray, W. H. Hyde, and Dora Wheeler Keith; a somewhat official-looking canvas of A. Newbold Morris, by John W. Alexander, and a large picture of the late Rosa Bonheur, by Anna E. Klumpke.

Aside from the portraits, the most discussed work of the exhibition has been M. Dagnan-Bouveret's "Consolatrix Afflictorum," first exhibited at the Paris exposition. Mr. Hoeber characterizes it as follows: "It is a large work, full of all the minute and loving care this artist bestows upon his compositions, but quite without the religious significance and the seriousness such a picture demands. Dagnan-Bouveret has fallen into a curious quality of greens that is far from satisfactory; the arrangement is labored and the figures suggest only Parisians dressed for the parts, the angels at the back playing on musical instruments being flippant, modern beauties of the boulevards. Only the figure of a man, prone upon the ground, in the immediate foreground, impresses the spectator. All this is most surprising and regrettable in view of the man's past performances, but the work seems hollow and there is a slipping away from the austerity and honesty of purpose evident in earlier works, while a sweetness about the color suggests rather the bonbon box than the work of a distinguished artist of M. Dagnan-Bouveret's endowments."

"Siegfried" in Paris

IS THE FRENCH WAGNER CRAZE AN AFFECTATION?

IT seems singular to relate that Parisians should have been obliged to wait a full generation longer than New Yorkers before hearing "Siegfried." It was, however, produced there for the first time on New Year's eve, with superb scenery and costumes and with Jean de Reszke in the title rôle. The correspondent of the London *Saturday Review* says that the French newspapers have been full for weeks of articles on "Siegfried," of analyses of the sort that used to appear in the Richter program books twenty years ago, of éloges of Messieurs Gailhard, de Reszke, Dalmas, Note, and of Mesdames Heglon and the rest. There never was such scenery, never such costumes, such consummate acting and singing, never such an orchestra and conductor. And Paris has fairly gone mad over the event. Still, this writer asserts, "Nowhere do I see any sign of any real, profound understanding of Wagner, any appreciation of the strength of his music. The wood music with the bird's song, the forge scene—these are the things that fill with joy the Parisian heart." And the leading French musical critics declare that the craze for Wagner in Paris is a mere affectation. One of them maintains that "Siegfried," to the French eye, contains the material for a pretty love-tale, a drama of intrigue; and when by plenty of cuts something approximating to a drama of intrigue is made of it, the Frenchman has to put up with this imperfect thing and console himself with the beautiful melodies scattered through the work.

The writer in the *Saturday Review* upholds the French view, and wishes that it might serve as a useful corrective to the Bayreuth view. "We all know it," he declares, "the 'Ring' is far too long; there are far too many repetitions; and it is in 'Siegfried' that

Wagner has sinned most. Even under Bayreuth conditions it is too long. The Frenchman, loving lucidity and clearness of form above all things, goes straight to the mark in his criticism; he sees that Wagner has sought to get balance of form not by cutting away passages that were too long, but actually by lengthening passages that must in the beginning have been already long enough. Wagner did everything too much: he talked too much, he wrote too much prose, he made all his dramas save 'Tristan' too long. He could never find a sufficient outlet for his enormous energy; he threw into his dramas everything that his riotous imagination suggested; he was never content to hint a thing, but must needs speak it out full, explain and explain and explain a hundredth time things he had made perfectly clear on their first statement. There never was a man with so wonderful a talent for explaining the obvious. Just as he presented his themes in a hundred different forms, so he presented his ideas from a hundred different points of view. When his ideas were his own he was always interesting; there is no one portion of the music-dramas that we would rather be without; but when we are compelled to hear all the portions on one evening the ordeal is often not a little fatiguing. He defeated his own object: on a first hearing the endless repetitions, instead of making for clearness, make for confusion. Balance of form on paper is not end: the end ought to be clearness when the music is sung; and clearness is not attained. And if the French critics are wrong on many points, on this one they are absolutely just."

The Value of Dialect in Literature

February Century, New York. Condensed for
PUBLIC OPINION

It is not unusual to hear the remark, "I never read stories with dialect," and every now and then this personal attitude finds expression in the press in the shape of a savage ban against this form of composition in prose or verse, as though it were a sort of literary heresy. The impression is sometimes given that dialect is an invention of the modern magazine. But a well-balanced mind does not allow itself to fall into superficial condemnation of classes, and a philosophic temper would be inclined to inquire why dialect has played so prominent and, on the whole, so acceptable a part in English and particularly in American literature.

Doubtless in Spenser's day his characterization of Chaucer as a "well of English undefyled" was accurate, but without a glossary his rich and rugged narratives are almost unintelligible to the reader of today; and yet how much they lose in the paraphrases of even a modern poet like Dryden! It is appalling to think what would become of Burns in such a process, and the measure of the loss is the measure of the value. And yet in readableness Chaucer and, in large part, Burns stand in much the same relation to us as though they were written in Creole or Negro patois. In Shakespeare, the speech of his low comedians, while more readable, is often like a homely steed set to the task of carrying the rich by-product of a mine. We can not spare Dogberry, or Launcelot Gobbo, or Bottom, or Touchstone, or Trinculo. Coming down to Scott and Dickens and Thackeray and Lover and Lever—to say nothing of Kipling—who would give up the humor, the raciness, the tang, so to speak, of their dialect characters—the Scotchmen, the Cock-

neys, the Yorkshiremen, the Irishmen, the East-enders? Who would be willing to give back to a state of non-existence such creations as Andrew Fair-service, Sam Weller, Peggotty, Sairey Gamp, Charley Bates, Costigan, Foker, Yellowplush, Pleeceman X., or Mrs. Poyser? If the canon were fixed against dialect, would not English fiction be robbed of many of its choicest personages? And what a havoc there would be among American writings! To be sure, we should still have the treasures of Hawthorne and Poe—products of a romantic era and of unhumorous minds; but every type and class of the country would be without its most salient exponent. What would become of Hosea Biglow, Petroleum V. Nasby, Hans Breitmann, M'liss, Tom Sawyer, Jules St. Ange, Uncle Remus, Marse Chan, Chimmie Fadden, Mr. Dooley, and many another of our "immortals"? In short, could one put into practice the anathema against dialect with *ex post facto* effect, the variety and flavor of democracy would largely disappear from fiction, and the color would almost fade out of it, while the gayety of nations would well-nigh be eclipsed. It would not be the abolition of dialect, but the extinction of a large measure of literature. To object to dialect is to object to the types it represents and to deny them the right to speak in their natural voices.

No; what the critics mean to inveigh against is not dialect as such, but the poor or tedious variety in which there is neither humor nor substance, but rather a finesse of philological exploitation, a labyrinth which it would take the skill of a Theseus to explore. One naturally tires of bad orthography or grammar when its associations are merely vulgar, when it exists as an only too perfect example of false realism. It is not the verbal or literal niceties of dialect that give it value, but the content it sets forth appropriately, the picturesque and engaging figures it adds to the ever-expanding realm of humor, its homely and humanizing touches of pathos. And not the least of its uses is the advantage it gives to the satirist of public affairs who is able to dramatize his criticism in a Naseby, a Biglow, or a Dooley.

Various Topics

LORD DOUGLAS'S FAREWELL SONNET: To pay off one's grudges with a poem instead of a pistol is a gentle innovation for which we are indebted to Lord Alfred Douglas. On bidding farewell to America, he dedicated to the Metropolitan club of Washington this sonnet, entitled "The New World":

Is this the new world? Nay, all this is old;
The love of self and kindness denied,
Malice and Envy and vain boasting Pride,
The hate of Beauty and the greed for gold.
Heads have been emptier still and hearts as cold
In older worlds than this, and men have lied
And worms have eaten them, and gods have died

When this Columbia was a tale untold.
O youngest daughter of Democracy,
The old sins nestle kindly in thy breast,
Take these old virtues, too (who runs may read),
Kindness and Courtesy, and let them be
Lamps that in all thy lights outshine the rest;
Then would thy country be New World, indeed.

INNOVATION BY THE LONDON TIMES: The first number of a literary supplement to the *Times*, on the plan of the New York *Times Saturday Review*, has appeared, the publication by the *Times* of the weekly paper called *Literature* being suspended. A supplement for book reviews and literary news is an entirely new feature in London journalism. The *Times's* supplement, according to the present plans, will be published twice weekly. It contains dramatic and musical criticism and notes on art and science in addition to the reviews of books. *Literature* has been bought by J. Morgan Richards, and is to be merged with the *Academy*.

SCIENTIFIC

Man in the Upper Atmosphere

A BALLOON TRIP 35,000 FEET SKYWARD

IN the February *Harper's Magazine*, Dr. R. Süring, of the Royal meteorological institute, Berlin, describes the trips taken last year by himself and a companion in a balloon of a gas capacity of 300,000 cubic feet, about six times larger than the ordinary balloon. "On the first voyage the physiological effects of height on the human body were carefully noted. It is generally known to mountaineers," the writer says, "that in climbing up to great heights their strength vanishes, and they begin to feel sick. Quite the same happens in the balloon, but in greater altitudes, therefore the effort of climbing is only a secondary cause for the mountain-sickness. Still there are various views about the origin of it. Especially the opinion so general with people that the thin air at great height produces an abnormal circulation of the blood, and that, consequently, the limbs swell and blood streams from ears and nose, is absolutely wrong. Not once has such effect been observed by scientific men in balloons. At great height the functions of lung and heart are not really modified; it is only the want of oxygen—so much more abundant in the atmosphere below—that causes the illness. Now, we are able to take oxygen with us in the form of compressed gas, and by inhaling it we can protect ourselves against height-sickness, provided that we take long and slow gasps."

The second voyage was taken in order to reach the utmost height. "Within one hour," Dr. Süring says, "a height of 16,000 feet, which is more than that of Mont Blanc, was attained; then we made about 3,500 feet an hour, until at 3:30 the maximum, six miles and a half, was reached. The wind was extremely slow and irregular up to 30,000 feet, but here, in the region of cirrus clouds, a strong western gale blew. The air was clear and transparent; only the lower clouds hindered a wide prospect; otherwise, we ought to have been able to see from our highest point an area greater in extent than the kingdom of Prussia."

Continuing the report of his experiences, the writer says: "By abstaining from exertion as much as possible, the use of the compressed oxygen did not become necessary below 18,000 feet, and as soon as we took it in greater altitudes, fresh strength and vigor returned at once. Thus we arrived in good condition at a height of 30,000 feet, feeling sometimes a weariness, which, however, had its reason in the short night rest before we started. This fatigue soon turned into a considerable apathy, an occasional falling asleep, from which state, however, we easily recovered by shouting and shaking one another. The observations could then be taken up again, though with some effort; and the inhaling of pure oxygen proved to be perfectly sufficient for reviving us. No sort of heavy unconsciousness took hold of either of the two voyagers until the last set of observations was made, at an altitude of 33,500 feet. It is to be noticed that, contrary to many former descriptions, the perception of the senses had not diminished; we could read the instruments quite accurately; even the viewing through a telescope did not tire; the notes we made are perfectly distinct, and scarcely different from one's handwriting below. The events which

took place at an altitude above 34,000 feet are a little confused to both of us. It seems that finally we became too weak to breathe regularly and deeply, and therefore we did not get enough oxygen. The falling asleep became more frequent, and therefore more dangerous. When Mr. Berson found me asleep at that point he resolved quickly to pull the valve. He succeeded; but the effort was too great; he collapsed altogether and lost consciousness. Before or after this act I, too, remember several clear moments, when I tried to impart more oxygen to my sleeping partner, but apparently in vain. Probably both of us had lost the breathing-pipes, and then sank into a heavy swoon, from which we recovered almost at the same time, finding ourselves at 20,000 feet."

Dr. Süring is not able to state exactly the altitude to which he ascended, partly because the ink of the barograph was frozen and registered imperfectly above 33,000 feet. Before pulling the valve, however, Mr. Berson read a height of 35,000 feet from the barometer, and the balloon was still climbing. The aeronauts found "the air was comparatively warm at the greatest height. It is true that we had 40° Fahr. below zero, but at a former voyage I observed already 55° below at a height of 25,000 feet. This voyage confirms the modern view, that even at the greatest heights of the atmosphere the variations of temperature are almost as great as on earth. The physiological observations seem to teach that at 35,000 feet is the boundary for a human being in open air. At any rate, it would be dangerous to try to get any farther."

The Reduction of Town Fogs

ROLLO RUSSELL, in the January *Nineteenth Century*, London.
(New York: L. Scott Pub. Co.). Condensed for
PUBLIC OPINION

FOGS, so far as London is concerned, may be divided into four classes, in the order of their density and danger, beginning with the least pernicious: (1) Damp fog or mist, caused by a thick stratum of exceedingly moist air, with much cloud from the ground upwards to several hundred or usually over one thousand feet. (2) Damp fog or mist, dense in country, without much precipitation on trees, shallow, with blue sky visible beyond an altitude of a few hundred feet or less. (3) Dense fog, dry—that is, without visible deposition of moisture on trees—extending usually some hundreds of feet (200 to 750) in height, with light air or calm, low temperature, following a very cold night in which radiation has greatly cooled the surface of the earth. (4) Occasionally, but seldom, after a very severe frost, when the ground has been chilled much below the freezing-point to several inches in depth, a southerly or other warm current spreads slowly over the country, displacing the cold air near the surface. The condensation of this warmer, moister air, by a ground temperature twenty degrees below its own, produces fogs of the greatest intensity, but they are commonly local and unstable.

Immunity from dark fogs, from specially obstinate fogs, and from the dark and sunless obfuscation familiar to dwellers in our large towns, may be ob-

tained by several distinct means, or by all of them together, applied respectively when and where convenient. Factories are enabled to consume their smoke, or, rather, to avoid producing appreciable smoke, by various ingenious appliances which need not be mentioned. Smoke from kitchen fires may be much diminished by the use of economical and properly constructed kitcheners or ranges, by careful stoking, and by the use of the least smoky coal broken to a convenient size. Public kitchens and restaurants, with arrangements for the supply of meals at private houses, will no doubt gradually increase in number and will economize coal and diminish the pollution of the air by many carelessly tended private ranges. Ordinary domestic fires admit of great improvement by the adoption of the proper economical principles for slow-burning, adequate but not excessive supply of air, forward-sloping fire-backs, and reduced size of chimney.

There would be some advantage in the preparation of forecasts of heavy fogs as of gales and storms. From a long series of investigations on the formation of thick haze and fog, I have come to the conclusion that in many cases it will be possible, from certain local as well as general symptoms, to predict, at least a few hours beforehand, the occurrence of dangerous fogs. To state the governing conditions broadly: we may expect to be free from fog so long as (1) the lower and upper currents of the atmosphere move from the same or nearly the same direction, and (2) the wind moves uniformly from about the same direction within a radius of about one hundred miles horizontally. On the other hand, we may expect dense fog in winter, or haze in summer, when, with copious radiation, clear or nearly clear sky, increasing cold and calm or a slight wind, the lower and upper currents or two lower currents, within a moderate distance of each other, move from opposite or greatly differing directions. The amount of haze or fog in these conditions, however, depends very largely on the difference of temperature of the two currents, and if they do not much differ there may be no fog. The worst fogs take place with the largest terrestrial radiation, the intimate mixture of two currents much differing in temperature, and prevailing calm or light airs.

Briquettes, the Future Fuel

Minneapolis Tribune. Excerpt

WE have an account of a process in operation at St. Etienne, in France, of making petroleum briquettes by mixing ninety-seven per cent of crude petroleum with three per cent of hydro-carbon. This is said to make a fuel four times as powerful as coal, weight for weight, and there is great anticipation of the boon it will be to ocean steamers in enabling them to save three-fourths of the space and tonnage now taken up with their fuel supply. The cost of the petroleum briquettes, however, as manufactured in France, out of American petroleum, is four times that of soft coal. Very probably they could be manufactured much more cheaply in the United States. There is another briquette process invented by an engineer at Omaha, which produces a fuel composed of clay and crude oil, at a cost of about \$2 per ton. The experiments with this are said to have been so satisfactory that two railroads and two large packing plants will begin giving it thorough tests on February 1. This suggests that an admixture of our northwestern lignite

with crude petroleum, pressed into the form of briquettes, might make a cheap and very desirable fuel. The lignite certainly possesses an abundant supply of carbon, and the Texas oil fields furnish an inexhaustible supply of fuel petroleum.

Another Cure for Consumption

DR. JOHN F. RUSSELL'S MIXED FATS TREATMENT

AN article in a recent issue of the New York *Tribune* describes the experiments with mixed fats in the treatment of pulmonary tuberculosis, the most common type of consumption, which are being made by Dr. John F. Russell, at the New York Post-Graduate medical school and hospital. The fats are reduced to a liquid, according to a formula of Dr. Russell, and this liquid is taken by the patients in the same way as most household remedies for internal disorders. These experiments were begun several years ago, and have been closely watched by many physicians of this and other cities, and by a committee of two physicians who were asked by the hospital officials to report on the success or failure of the test, as the case might be. They have just submitted to the executive committee of the Post-Graduate medical school and hospital their fourth report regarding the experiments, and this report is in part a *resume* of all the results obtained. Not one failure is announced by the committee, though it says that in certain complicated cases treatment by Dr. Russell's plan would not be feasible. Dr. Russell is not sanguine of affording much benefit to persons in advanced stages of consumption.

From all the reports and data at hand regarding the experiments, Dr. Russell has undoubtedly succeeded in discovering a method of treating successfully many cases of consumption, and the indications are that he and his judges have tried to avoid doing or saying anything that would give false hope to any sufferer from the disease. It appears to have been their highest aim to let the results of the experiments and the reports on the same be alone the means of making known the value of the treatment. Up to the present time Dr. Russell has not given to the public the formulæ of his preparation. Much is known, however, as to its composition. The ingredients used are beef fat, peanut oil, oil of cloves, and coconut oil. He began a series of experiments about three or four years ago to determine what fats were best assimilated by animals suffering with tuberculosis. His researches in this field attracted considerable attention. While engaged on them he discovered the preparation of mixed fats which he is now using.

The members of the committee appointed to report on the experiments are Drs. Thomas W. Bickerton and Donald M. Barstow. The report in part is as follows:

"Of the fifteen patients heretofore reported as apparently cured, all have been heard from within two months, excepting two, whose addresses are unknown. The remainder have either been seen or have replied to letters, and all are in good health and have gained or remained stationary in weight. Dr. Russell wishes your committee to state that he will accept for treatment any patient with uncomplicated pulmonary tuberculosis in any stage of the disease, who is able to come to the dispensary twice each day, and to obtain suitable food. About all the patients have more or less hemorrhages before they get well, but in ordinary

cases the attacks are not severe enough to send them to bed for any length of time, and hence do not interfere seriously with the routine."

The same issue of the *Tribune* refers to the experiments of Dr. George D. Barney, of Brooklyn, who has been attempting to prove that, contrary to the theory of Dr. Koch, tuberculosis is intercommunicable between cows and human beings, and who, to demonstrate his theory, inoculated a cow with germs from a consumptive human being and then said that he had inoculated a young woman, Miss Emma King, with germs from the cow. Some time ago he announced that the young woman had developed consumption after being inoculated. Now he declares that she has been cured by his patented process.

The Cure of Bright's Disease by Operation

The London Hospital. Condensed for PUBLIC OPINION

DR. GEORGE EDEBOHLS, of New York, proposes to cure chronic Bright's disease by stripping off and removing the capsule of the kidney—in fact, he says he has done it, and he speaks of the operation as one which is to be recommended in such cases. His first suggestion in this direction was made in 1899, and was the result of his observing how great an improvement in the general condition had followed the operation in four out of six cases in which he had performed nephropexy for the purpose of anchoring a movable kidney in the presence of well-marked chronic Bright's disease. For a while the suggestion that the cure of the Bright's disease which occurred in the cases operated on might be due to the correction of the displacement of the kidney by the nephropexy, stood in the way of further development of the idea; but when three secondary operations, upon kidneys which had been anchored some time previously, demonstrated the cure of chronic Bright's disease by operation, he began to see his way more clearly.

This brings us to another point which Dr. Edebohls has discovered, to his own surprise as it certainly is to ours, namely, that chronic Bright's disease is often unilateral. This unilaterality of the disease seems to Edebohls to explain the chronic course of many cases of chronic Bright's disease, and the comparatively little disturbance of the health sometimes occasioned. The healthy kidney does the work and toxic symptoms do not arise. Gradually, however, "the steady loss of albumin through the affected kidney tells upon and undermines the general health." Probably, also, towards the end, the other kidney generally becomes involved, "thus explaining the very great preponderance of bilateral over unilateral chronic Bright's disease as found in the deadhouse."

There is no doubt that surgeons have taught pathologists a good deal during recent years, but this that we are now told as to the unilaterality of chronic Bright's disease, and of the curability, even by operation upon one kidney alone, of a disease of such a widespread character as chronic interstitial nephritis has come to be regarded, goes a long step beyond anything that surgery has hitherto attempted. Probably the pathologists will make short work of Dr. Edebohls. If not, we shall all be taken back even beyond the days of our youth, back to the days when Gull and Sutton made war upon Dr. Johnson, to the days when arterio-capillary fibrosis was a new thing, and Bright's disease was regarded as a disease of

the kidney alone, all the rest being secondary to it. This would be a serious upsetting of all modern teaching, but if we can cure the malady by operation there would seem to be no other way out of the difficulty, unless, indeed, a little healthy skepticism as to the diagnosis might afford a means of escape from the dilemma. Even this resource, however, seems to be closed to us, for we are told that "the diagnosis of chronic Bright's disease in the above eighteen cases was based upon the previous history of the patient, upon the chemical and microscopical examination of the urine, and, lastly, upon the critical test of actual inspection and palpation of the kidney at the time of operation. This evidence was supplemented in two cases by microscopical examination of a small piece of kidney tissue removed at the operation." The delivery of the kidney upon the skin of the loin enabled Dr. Edebohls, we are told, to demonstrate to all witnesses of each operation the visible changes produced by chronic Bright's disease in the particular kidney under operation—the adherent capsule, nodulation, granular condition of the subcapsular surface, shrinking, unequal contraction, and occasional cyst formation of chronic interstitial nephritis, and the various changes due to chronic parenchymatous nephritis, including "cloudy swelling." So there is nothing left for us to do but to reform our pathology.

Various Topics

OZOKERITE IN FINLAND: The *Viedomosti*, of St. Petersburg, is responsible for the statement that Mr. Berislowski, a Russian mining engineer, recently discovered extensive deposits of ozokerite (mineral wax) in the extreme north of Finland. The deposits are situated along the bed of the Kemioki river, and the ozokerite is said to be extremely rich in paraffin.

SALT AND PEPPER, have a real and distinct value, outside their use in bringing out the flavor of the food, to which they have been added. The *Chicago Tribune* points out that in eastern countries the condiments such as pepper, are used to profusion in all foods. Gastric troubles common enough in other countries are conspicuously absent, and the free use of pepper has much to do with the fact. Salt and pepper work against fermentation.—*Medical Record*.

PIGMETOPHAGUS: M. Metchnikoff, a bacteriologist, says he has discovered the cause of hair turning gray. He ascribes it to a bacillus, which devours the coloring pigment. He has christened this pigmetophagus. He says it is a voracious feeder and proliferates with an activity approximating perpetual motion. The strong vital resistance of youth keeps it down, but low vitality arising from care, grief, moral shock or sedentariness favors its growth and multiplication.

STEERING BY ELECTRICITY: The Earl of Crawford has devised a means of manipulating a vessel's rudder by means of electricity from any part of the ship. A practical demonstration of the invention was recently given upon the inventor's steam yacht, *Valhalla*, in the Solent before several representatives of the British and Japanese navies, who were considerably impressed with the device. The most prominent feature of the device is that it is not so liable to accident as the steam gear, and it is much easier to manipulate.—*Scientific American*.

AN ILLUMINATING SUGGESTION: In a recent lecture before the students of the college of commerce and administration at the University of Chicago, Franklin H. Head suggested a novel method of illuminating the city. He presented as a possibility of the future, the use of a belt of windmills, running dynamos which would charge storage batteries with electricity. A series of windmills, he believed, say for forty miles, could supply storage batteries with enough electricity to light the whole city continually, and possibly to heat it. Mr. Head's remarks were made to illustrate the great value of the new storage battery invented by Thomas Edison.

RELIGIOUS

The Admission of Non-Conformists to Anglican Communion

A DISCUSSION BY WELL-KNOWN CHURCHMEN

IN the December number of the *Fortnightly Review* the Rev. H. H. Henson, canon of Westminster abbey, made a strong plea for the admission of Nonconformist bodies to the Anglican communion, from which they are excluded by the Anglican rubric. The heart of his contention is "that the theory of the national church, which is now in the ascendant, prohibits intercommunion with non-Episcopal bodies, to which, indeed, it denies the name and attributes of churches. Nonconformists are held to be schismatics; non-Episcopal orders are held to be no orders; and the holy communion administered in the non-Episcopal churches is held to be irregular, and perhaps invalid. The prevailing Anglican doctrine on these matters has retrograded to the intolerance which was paramount at the end of Queen Anne's reign, and, none the less, the fashion of the hour is to refer to Nonconformists in terms of respect, and even affection. This is an unwholesome and demoralizing situation. Fraternal language can not remain without some practical expression. It is not consistent with self-respect to exchange compliments and congratulations with fellow-Christians whom, none the less, you repel from communion and officially regard as schismatics. Now the inevitable expression of Christian fraternity is the common reception of the Lord's Supper. It was so in the Apostolic age; it has remained so ever since. At present courteous language and obliging manners are concealing a situation which tends to become painfully hypocritical. I conceive that religion can dispense with compliment, and the less fine sentiment the better in the absence of charity."

In the January number of the same magazine, several distinguished churchmen commented, most of them favorably, on Canon Henson's suggestion. The Bishop of Durham agrees with him and says: "The rule of the rubric is a domestic rule of the Church of England, and a very wholesome one. But both Anglican history and the equity of the case are for me conclusive that it is not a rule to be pressed against Christian guests from other communions."

"I can not but extend my hopes further," says the Very Rev. W. H. Freemantle, Dean of Ripon, after recapitulating the advances already made toward unity. "The object is not to make peace merely, but to stimulate Christian effort. And this must not be confined to the clerical functions, but extend to the whole life. We must not merely get rid of Episcopalian exclusiveness, but of ministerial exclusiveness generally. The universal priesthood of believers must become a reality."

Pessimistic approval is the prevailing tone of the comment by the Very Rev. G. W. Kitchin, Dean of Durham: "Brave attempts on behalf of peace and unity, such as this by Canon Henson, fill me with profound gratitude; also, with a still more profound despondency. It seems so simple, so beautiful, so true; and yet one knows that it will fail. Yet many see that the points of union are important, and indeed overwhelming, when they compare them with the points of difference; and they make an effort to draw Christians together—not so much because of loving-kindness and the joy of unity, as through fear of the ad-

vances of free thought. For whatever reason, good or bad, we may welcome the feeling that in grappling with the moral and social evils of our day there is room enough for every worker."

The strongest note of dissent is sounded by the Very Rev. W. R. W. Stephens, Dean of Winchester. His objection to the proposed concession is that it would eventually mean the admission, without reordination, into the Episcopal ministry of men who had not been Episcopally ordained. "Now, would these concessions, especially the latter, be too heavy a price to pay for the supposed possible advantages to be derived from the absorption of many rival denominations into one comprehensive organization? I reply emphatically, 'Yes'; and this for several reasons, although the primary one really includes and carries with it all the others. The radical objection to the proposal is that it would violate one of the most fundamental and immemorial traditions of church life. The principle of the Christian ministry, as it has been delivered to us by continuous tradition, is that the authority to exercise a sacred office, and dispense spiritual gifts, must be derived from above and not from below. Thus the transmission of ministerial authority from the higher power to the lower has been the standard law of the church from the beginning. For anyone to take this honor upon himself, or to have it conferred upon him by those who have not themselves received it from a higher power, is a violation of the church's order, a breach in the continuity of the church's life."

The Sphere of the Institutional Church

REV. WILLIAM P. MERRILL, in the *Interior*, Chicago
Condensed for PUBLIC OPINION

THE institutional church, "the church of the broader ministry," is an attempt to meet certain new conditions which seriously affect the progress of the church and the race. Foremost among these is the tendency of social life in cities to stratify. Isolation of rich and poor; absence of means of communication between the parts; the gathering of the Christianized, refined elements of society in one place, and of the unreached heathen elements in another; the creation of suburbs and slums—all this is a condition which demands new methods, an occasion which teaches new duties. Close upon this follows, as effect follows cause, another and a most serious condition—the plain fact that ordinary church methods fail in cities. The institutional church is an attempt to meet this serious condition by devising a church which can live among the poor; live there, not simply exist; not live there by sending its roots miles away into another soil, but live there by striking root into the soil where it is planted, and drawing nourishment and life from its environment.

The institutional church may be viewed as an effort to satisfy certain new instincts. The business instinct is one of them. No one can mistake the line of evolution in modern business. More strong is the social instinct. A significant element of present life is a sudden tide of social enthusiasm. The social settlement is

the most apparent product. No one can fail to see that these social settlements succeed where the ordinary church fails. Yet many of us feel that the settlement can not meet the problem, because so often it lacks the vital element of definite, recognized religion. One more impulse must be given as at the root of the institutional church movement—the new religious instinct, which is to do away with the rigid division between things secular and things sacred, and to discern the sacredness of all normal, helpful common life. One of the best things about the broader ministry in a church is the fact that it gives a chance to young men and women to work for and in the church who, under the old methods, were compelled to use their talents outside.

We may view the institutional church as the using of novel methods. This aspect is the one by which it is best known, though by no means the most important. The institutional church adopts freely new methods of conducting religious services. It provides for physical welfare and enjoyment by gymnastic privileges, baths, and lunch-rooms. It meets and appeals to the social instincts, by reading-rooms, club privileges, lectures, entertainments. It lays hold of the children and their mothers through the kindergarten, bringing to the little lives, and often to the weary older ones, some of the sweetness and light that culture alone can give.

But the most important and truest aspect of the institutional church is as the embodiment of a new or newly emphasized spirit. Here is the supreme meaning of this movement. Methods are valuable; the spirit is invaluable. What is that spirit? For one thing, it is a new conception of the aim and end of the church. This means a new conception of the proper sacredness of the church building. It will be holy through being used, spent, disfigured, in the service of simple humanity. The chapel will be, not too sacred to be used as a gymnasium or club-room, but sacred because so used. This institutional spirit means most of all the application of the ideal of consecration to the church as a whole. We need to learn that every church must not seek its own pleasure, or the carrying out of its own ideas, but must be willing to be, not what the people in it want it to be, but what the people out of it need it to be.

The Case of Professor Pearson

METHODIST PROFESSOR ATTACKS NEW TESTAMENT MIRACLES

THE latest aspirant for the crown of the academic martyr is Professor Chas. W. Pearson, head of the department of English literature in Northwestern university, Evanston, Illinois. Professor Pearson's offense appears to have been in his stating as his belief that "the miracles believed to be performed by Jesus and recorded by the writers of the New Testament are obviously as legendary as those of the Old Testament." Northwestern being a Methodist institution, ministers and members of that denomination have naturally expressed their opinion of Professor Pearson with great force and freedom. According to dispatches, the Rev. F. A. Hardin, former presiding elder of the Rock River conference, Illinois, said: "If I had the power and ability I would skin that man, salt his hide and tack it up on the barn-door before the ordinary preacher could sharpen his jack-knife." An attempt was made at the ministers' meeting at which the Rev. Mr. Hardin delivered his tirade to take some action against the professor, but the final

decision was to allow the trustees of the university to take the initiative.

The general opinion of the Chicago press of Professor Pearson's position seems to be that, while he has a perfect right to believe as he pleases, as a professor in a denominational university he should not have promulgated views so completely at variance with the tenets of the denomination. As the *Evening Post* says: "With the views of Professor Charles W. Pearson, of Northwestern university, we are not particularly concerned. It is admitted even within the circles of his own church that in this century a man may believe anything he wishes. The point is, Is it proper for him to express his beliefs wherever he wishes, even if they are contrary to the doctrines of the church wherein he retains membership? It is impossible to reach any other conclusion than this: Where a member of a church has ceased to believe in what that church teaches, the only proper course is to withdraw his membership. And only after he has done this may he with propriety give open expression to his changed convictions."

The *Inter-Ocean* and the *Chronicle* agree with the *Evening Post* in counseling Professor Pearson to resign, the former comparing him to a "congressman who disbelieves the constitution that he has sworn to support and who believes he should not be a representative of the people, but the courtier of a monarch ruling by divine right."

Co-operation Among Missionaries

JAMES L. BARTON, in the *Outlook*, New York
Condensed for PUBLIC OPINION

LET us glance briefly at a few of the recent movements among foreign missionaries toward community and coöperation. The present evangelistic movement in Japan has seldom been surpassed in any foreign country in its depth, breadth, or earnestness. While remarkable in this respect, it is absolutely unparalleled in the history of the Christian church in that it had its origin with and is participated in by all of the evangelical Christian denominations, with one exception, in that empire. In that same country there is a constant tendency to union organizations as "The Church of Christ in Japan," which includes the churches of seven denominations. In the theological department of the Doshisha there are three denominations, representing three mission boards, upon its faculty.

In the cities of Colombo and Jaffna, Ceylon, the missionaries of all denominations, together with the representatives of the Young Men's Christian association and other Christian workers, meet monthly to discuss the work and plan for its best interests. This is true also of other cities in Ceylon, and of almost every city where missionaries of different denominations reside. These assemblies are systematically organized, and discuss questions of general Christian coöperation in practical details. Many of them have their committees upon different departments of mission work, so that the waste in duplication is avoided and the strength of the Christian forces is conserved. In these associations or conferences from three to ten different Christian organizations and denominations make up the active membership, which often numbers from twenty to one hundred men and women. Besides this association of foreign missionaries, in which Indian Christian workers have also a place, there exist interdenominational Indian Christian associations, with their monthly meetings, organizations, commit-

tees, and constitutions from which the missionaries are not excluded, and all for the purpose of promoting harmony and conserving strength.

The recent deputation of the American board found in the Madras presidency three foreign-mission boards, the Church of Scotland, the United Free church of Scotland, and the Dutch Reformed board of New York, uniting together the different churches organized by them under one name, "The South Indian United Church." The plan includes ultimately a common theological seminary and normal training-school, with full coöperation in all publication and educational work and a common annual conference for all the Christian workers. The Christian college at Madras, although originally founded by one mission board, is now receiving an annual subsidy from three different boards, with men of different evangelical denominations upon its faculty, and students from all denominations and no denominations upon its rolls. In the Deccan, for male teachers, a most excellent school of this kind is well sustained by a missionary of another board with whose work the American mission is in fullest coöperation, and by whom its teachers are trained.

It may not be out of place in this connection to note the fact that for the past eight years there has been held in New York an annual conference of representatives and officers of all of the evangelical for-

eign mission boards and societies in the United States and Canada. This conference represents the foreign boards of all North America, and every denomination that is conducting a foreign work. The object of the organization is to promote coöperation and comity on the field as well as at home. I venture the statement that there is no other regular annual gathering of Christian workers in the world representing so wide and varied interests, and including so many leading denominations—this all in the interests of foreign missions.

Various Topics

DR. ALEXANDER VINTON, rector of All Saints' church, Worcester, Mass., has been elected bishop of the new Protestant Episcopal diocese of western Massachusetts.

"A MODERN APOLLOS," by the Rev. Robert MacIntyre, of Chicago, has been objected to by the executive committee of the Epworth League as containing sensational features that unfit it for the reading of young Methodists.

THE PRESBYTERIAN CREED REVISION COMMITTEE has prepared a "declared statement of the things which are most surely believed," and will present it to the next general assembly. The statement to be issued recognizes the fundamental doctrines of Calvinism and expresses them in popular form. It teaches the existence of God, the doctrines of the divine sovereignty, the Trinity, the divinity of Christ, the inspiration of the Scriptures, life everlasting, the atonement, predestination and other fundamental truths, but avoids the old phraseology around which controversy raged.

MISCELLANY

The Boer Prisoners in Ceylon

HARRY STEELE MORRISON, in New York *Collier's Weekly*
Condensed for PUBLIC OPINION

THERE are at present more than five thousand Boer prisoners interned on the island of Ceylon, and the British war office could hardly have found a better place for the location of prison camps. The island is generally healthful in climate, and nature has bestowed every natural comfort upon its people. For the largest of the camps the authorities chose a site at Diyatalawa, a place many miles up-country from Colombo, but easily reached by the railway. Here are kept more than four-fifths of the entire number of prisoners, and Sir West Ridgeway, the governor of Ceylon, is courteous and liberal in granting permission to visitors. Comparatively few soldiers are required to guard four thousand Boers, and in view of the elaborate arrangement of fences, one is not surprised to learn that no prisoners have escaped. The entire area of the camp is surrounded by a wire fence ten feet in height, and several feet distant from this first barrier is erected another exactly similar. Between the two is a perfect network of barbed wire, stretched back and forth until it would be quite impossible for any person to get through.

No man is obliged by the British authorities to work, but if any of the prisoners wish to help about the camp they are paid for the labor they perform. Those who don't work occupy themselves in various ways. There is an extensive library of Dutch books, and they are kept well supplied with the English illustrated papers. There are numerous sports in which they engage with much interest. They have a cricket team which is first class, and, as a special favor, they were allowed to play against the crack English team of the island in Colombo. The English won, but the Boers gave them the closest run they had seen for

many months. Some of the prisoners rigged up a bowling-alley, and the sound of the balls and pins is to be heard at all hours of the day. Quoits is another favorite game, and on occasions no less than thirty games may be in progress at one time. Boxing is also in great favor, and every night there are informal bouts in the Recreation Hut, a large building which is used for a variety of purposes. On rainy days the religious services are held there, and at other times it is used as a general reading-room and indoor gymnasium. There are punching bags and horizontal bars and other paraphernalia to assist the athletic prisoners in their training. At one end of the hut is a stage, where the prisoners frequently give amateur theatrical performances and concerts. On the curtain is painted a scene of the battle of Magersfontein, and the British are evidently in full retreat and getting the worst of the fight, in the picture.

The Diyatalawa camp resembles a busy town. Some of the streets have been named by the prisoners after famous places in the Transvaal. There is Lady-smith street, Majuba hill, and Spion Kop, and every thoroughfare between the huts bears some historic name. These unwilling guests of the Singhalese government vary in age from fifteen to seventy-five years, but the majority of them are over fifty. It is a pathetic sight to observe the old men of sixty and seventy seated silently in the shade, thinking, doubtless, of their wives and families so many thousand miles away. Few seem to have any complaint to make of the treatment they receive, or express a desire that the war may end quickly in favor of the British, so that they may return to their homes. All admit that peace is still far off, but they would rather remain prisoners in Ceylon for the rest of their lives

than see General De Wet surrender. There are many famous men among the prisoners. There is General Joubert, General Olivier, and a number of other high officers. They are accommodated in special huts, and are frequently allowed out on parole. There are also a son and a nephew of President Krüger and a brother of President Steyn, who have thrown in their lot with the rank and file of the prisoners. Naturally, they are treated with great respect, and when the two generals walk down Ladysmith street every hat is raised in salute. The comfortable state of the prisoners at Diyatalawa is due to the interest of Sir West Ridgeway in their welfare. As governor of Ceylon he has been able to bring about every necessary reform, and he is more popular among the Boers than any other official.

The Founding of Royal Houses

London Standard. Condensed for PUBLIC OPINION

THERE is not a royal house in Europe that has held its throne for more than seven centuries, or that can be compared with the imperial house of Japan, founded by a female Goddess of the Sun. The mikado is the one hundred and twenty-second in unbroken descent of his line, his family having sat on the throne of Japan since the time of Nebuchadnezzar, 666 B. C. King Edward VII can claim descent through fifteen of the thirty-five monarchs who have preceded him on the English throne, from Alfred the Great and Egbert, first king of England, and further back still from the emperors of Rome, and even from the Hebrew house of David. Nevertheless, it is a fact that King Edward owes his crown to a horse's shoe. The act of settlement, by which, in 1701, parliament elected the house of Hanover to the British throne, was passed by only one vote. And this winning vote was cast by Sir Arthur Owen, M. P., for Pembrokehire, who rode post-haste from Wales for the purpose. He had relays of fresh horses all along the route, but arrived, dusty and travel-worn, at Westminster only just in time to enter the aye lobby. If one of his horses had gone lame or cast a shoe, he would have been too late.

The declamations of the German emperor on the divine right of kings in general and himself in particular are very picturesque in this age of prose. But, as a matter of history, the right of William II to the Prussian crown and the German overlordship is merely the right of a pawnbroker to an unredeemed

pledge. Five centuries ago Frederick Hohenzollern was the burgrave of a small city of Nuremberg. The Emperor Sigismund was in a state of impecuniosity. He applied to the burgrave for the loan of 100,000 gulden. Frederick lent this sum (about £10,000), and as security for it took the state of Brandenburg. After five years, as Sigismund did not repay the money, Frederick Hohenzollern foreclosed the mortgage and established himself as Frederick I of Brandenburg and an elector of the empire. This was the first advance of the Hohenzollerns. Gradually increasing their domains, they became dukes of Prussia, and in 1701 promoted themselves to the rank of king. And now William Hohenzollern, descendant of the money-lending burgrave of Nuremberg, is the third German emperor.

Alexander of Servia is merely three generations removed from the swineherd. The Servian Cromwell, or William Tell, who rose to deliver his country from Turkish misrule, was Michael Obrenovitch. Leaving his pigs to feed and tend themselves, he headed his countrymen, who rewarded his success by electing him Prince of Servia. On his death, in 1868, he was succeeded by the late ex-King Milan, who handed over the crown to his son in 1889. Of English sovereigns, Queen Mary II and Queen Anne were the granddaughters of a domestic servant. While he was Duke of York, James II married Anne Hyde, the daughter of Lord Clarendon, and the two queens were the children of the union. As a briefless barrister, Lord Chancellor Clarendon had married a housemaid, and her grandchildren sat on the British throne.

The Day and the Deed

THE DEATH OF GEORGE III., OF ENGLAND

Died January 30, 1820

He died! his death made no great stir on earth;
His burial made some pomp; there was profusion
Of velvet—gilding—brass—and no great dearth
Of aught but tears—save those shed by collusion;
For these things may be bought at their true worth;
Of elegy there was the due infusion—
Bought also; and the torches, cloaks, and banners,
Heralds, and relics of old Gothic manners,
Formed a sepulchral melodrama. Of all
The fools who flocked to swell or see the show,
Who cared about the corpse? The funeral
Made the attraction, and the black the woe,
There throbbed not there a thought which pierced the pall;
And when the gorgeous coffin was laid low,
It seemed the mockery of hell to fold
The rottenness of eighty years in gold.

From Lord Byron's "Vision of Judgment."

MR. RUDYARD KIPLING TILTS AT THE CRICKET WINDMILL.—Westminster Gazette

SHACON AND BAKESPEARE
HOMER. "Look here, what does it matter which of you chaps wrote the other fellow's books? Goodness only knows how many wrote mine!"
[Nods, as usual and exits.]—Punch

THE NEWS OF THE WORLD

MONDAY, JANUARY 20

DOMESTIC.—Andrew Carnegie offered to give \$50,000 for a free library building to Lexington, Ky....Six men were killed and ten injured by a mine explosion in Pictou, Cal....A hundred capitalists and labor leaders presented Senator Mark Hanna, at Cleveland, Ohio, with a statue of "Peace" in recognition of his efforts to bring labor and capital together.

FOREIGN.—A naval battle between government and rebel fleets took place in the harbor of Panama, resulting in the death of General Alban, the governor of Panama, and the sinking of the *Lautaro*, a government vessel, and the *Darien*, a rebel vessel....The Pan-American conference agreed to adjourn *sine die* on January 31....Lord Cranborne, in parliament, replying to a question by Mr. Norman, said that Great Britain had declined to join with other European powers in a joint note to President McKinley before the outbreak of the Hispano-American war, because its object was to bring pressure to bear on the American government....The sugar conference reassembled at Brussels, and the intention of Great Britain to impose a countervailing duty was made known to the delegates.

TUESDAY, JANUARY 21

DOMESTIC.—The money for the ransom of Miss Stone and her companion has been forwarded to Americans treating for the missionaries' release....The president nominated Dr. P. M. Rixey for surgeon-general of the navy....United States Senators Allison and Dolliver were re-elected by the legislature of Iowa....Franklin Murphy was inaugurated as governor of New Jersey....Professor Edmund J. James, of the University of Chicago, was elected president of Northwestern university.

FOREIGN.—The French minister to China refused to present his credentials until reparation for the murder of a priest was made....Aubrey Thomas De Vere, the poet, died in England....Thirteen persons were killed and fifty injured in a mill disaster at Belfast....Dr. Hugh von Ziemssen, former privy councillor of Bavaria, and the author of celebrated medical works, is dead.

WEDNESDAY, JANUARY 22

DOMESTIC.—The president approved the bill appropriating \$90,000 to meet the expenses of the government exhibit at the Charleston exposition....Resolutions protesting against drawing the color line in the general federation were adopted by the Maine federation of women's clubs....The Kentucky senate, by a vote of 23 to 9, passed a bill submitting to the vote of the people a constitutional amendment to return to the old *viva voce* system of voting.

FOREIGN.—Impressive memorial ser-

vices were held at Frogmore, Windsor, at the tomb of Queen Victoria; there were memorial services elsewhere in Great Britain and in Berlin, the accession of King Edward likewise being commemorated....The anti-Ritualist, John Kensit, created a scene of disorder at the confirmation of the Right Rev. Charles A. Gore, at Westminster, as the bishop of Worcester....Two armed Armenian bands have appeared in the Mush district of Asiatic Turkey, and in an encounter between Armenians and Turkish troops the latter lost an officer and two men killed.

THURSDAY, JANUARY 23

DOMESTIC.—The president and Mrs. Roosevelt gave a reception in honor of the members of congress....The New Jersey Republicans in caucus nominated John F. Dryden to succeed General Sewell as United States senator....The president signed the bill providing for the free transportation of all mail matter sent by the widow of the late President McKinley....The largest gas well in West Virginia has been struck in Pleasants county; it is flowing about 15,000,000 feet of gas a day, and is also producing over 250 barrels of oil.

FOREIGN.—There is a rush to import sugar into Great Britain, the importers fearing an increase in the duty in the next budget; tea importers likewise expect an increase from fourpence to sixpence a pound in the duty on tea....King Victor Emmanuel conferred the Order of St. Maurice and St. Lazarus upon William Marconi....There have been over 100 deaths from the plague at Shuiting, about twenty miles south of Canton, China....The Archduchess Elizabeth of Austria was married in Vienna to Prince Otho von Windisch-Graetz, thereby forfeiting her claim to royal succession.

FRIDAY, JANUARY 24

DOMESTIC.—A treaty ceding the Danish West Indies to the United States was signed at the state department by Secretary Hay and Mr. Brun, the Danish minister in Washington....A mine explosion in the Lost Creek company's coal mines, at Lost Creek, Iowa, killed and entombed many miners....President James J. Hill of the Great Northern railway company testified before the Interstate Commerce commission in Chicago regarding the Northwestern railroad merger; he gave a new reason for the Burlington purchase, said competition meant high rates, and declared that no railway trust was intended by the merger....The coroner's jury which had been investigating the Park avenue tunnel disaster, in New York city, brought in a verdict exonerating Wisner, the engineer of the Harlem train, and holding the New York Central officers responsible for the accident.

FOREIGN.—Mr. Balfour stated in the house of commons that no peace proposals of any nature had been received from the Boer leaders recently....It was reported in Panama that the Liberal General Herrera had been defeated near that city by the government forces under General Castro.

SATURDAY, JANUARY 25

DOMESTIC.—E. H. Harriman was a witness before the Interstate Commerce commission in the inquiry into the railroad merger, and told how he and his associates secured a large amount of Northern Pacific stock and their disposal of it....A hearty welcome was given in Chicago to Rear Admiral Schley, who was the guest at several receptions and at a banquet; he declared he had no political ambition....Colonel Tasker H. Bliss, collector of customs at Havana, made an argument before the ways and means committee for liberal tariff concessions to Cuba....Rear Admiral W. K. Van Reypen, surgeon general of the navy, was placed on the retired list after forty years' service....It was announced that the Cooper and Hewitt families had given \$600,000 for an endowment fund for Cooper Union, and Andrew Carnegie had made a second gift of \$300,000 for the same purpose.

FOREIGN.—Another force of Boers to fight their countrymen is being organized....Six hundred government troops on the *General Pinzon* reached Colon....It was announced that a chance to accept a contract for the construction of *Shamrock III* would be offered to the Thorneycrofts.

SUNDAY, JANUARY 26

DOMESTIC.—The National Liberal party was formed in Cincinnati and a remarkable platform was adopted....An exceptionally heavy blizzard swept over Nebraska; the temperature was extremely low and heavy losses of stock were reported....The American chamber of commerce at Manila has sent a petition to congress asking permission to allow Chinese laborers to enter the islands....The *Umbria* and the *Etruria* broke the ocean record for sending Marconi messages at sea, exchanging messages over 110 miles.

FOREIGN.—A report from Lord Kitchener, from Johannesburg, announced the important capture of General B. Viljoen in the neighborhood of Lydenburg, Transvaal colony, as well as the captures of small parties of Boers elsewhere....The Prince of Wales received a cold welcome in Berlin, where he has gone to represent King Edward at the celebration of the kaiser's birthday....Miss Stone, the captive American missionary, and her companion, Mme. Tsilka, were located near Yapyak, in the vicinity of the Turkish frontier.

The Book of The Week

CHRONICLES OF THE HOUSE OF BORGIA.
By Frederick Baron Corvo. Cloth,
pp. 375, \$6. New York: E. P. Dut-
ton & Co.

THE author of this book approaches his subject in an unusual, not to say strange frame of mind. "Why," he asks, "Why should good hours of sunlight be wasted on the judgment seat by those who, presently, will have to take their turn in the dock? Why not leave the affairs of Borgia to the Recording Angel?" Why not, indeed? But since Baron Corvo elected to delve into and write about the affairs of Borgia, it seems to us that it was incumbent upon him to do so dispassionately and in a judicial manner. Further along he says that "The writer does not write with the simple object of 'white-washing' the House of Borgia; his present opinion being that all men are too vile for words to tell. Further, he does not write in the Roman Catholic interest; nor in the Jesuit interest; nor in the interest of any creed or corporation, or even human being; but solely as one who has scratched together some shreds of knowledge which he perforce must sell to live." This is frank if nothing else, and it is to be regretted that this sort of frankness does not pervade the book throughout. Instead there is from first to last a manifest determination to decide every controverted point in favor of anyone who bears the name of Borgia. Others who come up for judgment are most severely dealt with; Savonarola, Charles VIII, he who became Pope Julius II, and others are examined and unsparingly condemned, but the Borgias are without sin and without reproach.

This is the author's text: "A fire, that is kindled, begins with smoke and hissing, while it lays hold on the fag-gots; bursts into a roaring blaze, with raging tongues of flame, devouring all in reach, spangled with sparks that die; settles into the steady genial glare, the brilliant light that men call fire; burns away to slowly expiring ashes; save where smouldering embers flicker, and nurse the glow, until propitious breezes blow it into life again." The first part of the book is "the kindling of the fire"—the rise of the Spaniard Alonso de Borja, Pope Calixtus III, and his appointment to the cardinalate of Don Rodrigo de Lancol y Borja; the second part is "the roaring blaze," the reign of Rodrigo as Pope Alexander VI; the third part—the brilliant light—is a history of Saint Francisco de Borja, great-grandson of Rodrigo (through his bastard son Don Juan Francisco de Borja) and the famous general of the Jesuits; part four tells the story of the last churchman of the Borgia family—whose name, by the way, was now thoroughly Romanized—Don Stefano

Borgia, who died in 1804. Coincident with the history of Pope Alexander is told the story of his famous daughter, Lucrezia, and of his reputed son, Cesare, who, resigning from the cardinalate, conquered for himself a kingdom while Alexander was restoring order and prosperity in and increasing the greatness of the papal states.

We have no doubt that this great family have been outrageously defamed by their enemies and by such careless persons as Dumas, who, without malice insist upon making a sensational story out of the alleged crimes of the Borgia pope and his family. But our present author goes to the other extreme, and paints them as saints, unselfish soldiers, or perfect women. The three great crimes charged against Rodrigo Borgia (Pope Alexander VI), were bribery in connection with his election, immorality, and the murder of numerous enemies, generally by means of poison. The author refutes all these charges by a clever handling of the very facts used by other chroniclers to prove the guilt of the Borgia. It is true, he will admit, that on the eve of his election Rodrigo sent four mule loads of silver to the house of one of the cardinals, but there was nothing improper in that; doubtless he sent the silver to the house of his brother cardinal to save it from the mob, and if he forgot it after his election and it remained in the hands of the cardinal to whom it was sent for safety, no reasonable person will say that there was any intent on the part of Borgia to influence one of the electors. Of course not! On the charge of immorality Pope Alexander is acquitted on two grounds. 1, because he was not immoral, and 2, because he was not more immoral and had no more illegitimate children than was customary in those days. The spectacle of the vicar of Christ on earth with one of his bastards in his college of cardinals, giving a wedding feast to another in the vatican, and amusing his old age by watching his bastard son and grandson play about the vatican gardens—this seems not only pardonable, but natural to Baron Corvo. And the mother of this precious breed, Giovanna de'Catanei, was so inconstant in her affections that the author admits that it is impossible to say whether Rodrigo Borgia or another cardinal, Giuliano della Rovere, was the father of the famous soldier-priest, Cesare Borgia, who seems to have taken that name simply because Rodrigo at the time of the former's birth was the lover of Giovanna. On the whole, however, the author's analysis of this moot point is keen and satisfying, and leads irresistibly to the conclusion that Cesare was not the son of Rodrigo, but of Giuliano della Rovere, who, as Pope Julius II, shamefully betrayed and destroyed him after securing his support by disclosing the facts relating to his parentage. As for the habit of murdering their enemies by venom or otherwise, Baron Corvo has found no evidence that they ever killed anyone illegally, least of all by means of poison, to which they were absolute

strangers, so far as any one has proven. This may or may not be true; the author's opinion is as good as another's, but it will strike the reader as rather absurd to offer in proof of their innocence the fact that he can not find a poison ring in any of the British collections of antiques. Very properly, the legend that Pope Alexander was killed by a poisoned draught prepared for Cesare is scornfully rejected simply because the pope could have had no object in desiring the death of Cesare, and it may be granted at the same time that it is reasonable to acquit Rodrigo and Cesare of most of the historic murders of which they are accused for the same reason—they were crimes for which there are no visible motive. As for Lucrezia, whatever may have been her life during her first marriage, it was most exemplary after she wedded Don Alfonso d'Este; she was noted for her charities and good works and for "genuine piety" and the observance of religious duties.

Not only are father and (alleged) son proven to the author's satisfaction to have been innocent of the crimes attributed to them, but they were, he tells us, the greatest men of their time. "As a secular sovereign, no contemporary of his even deserves to be named in comparison with Alexander VI. . . . Notwithstanding all that weakly has been said to the contrary, the Holy Roman church and Christendom owe a vast debt of gratitude to him." Furthermore, "As pontifex maximus, earthly vicar of Jesus Christ our Saviour, he merits reverent admiration. . . . The Lord Alexander P.P. VI was a very great prince, a very faithful pastor, a very human man. By members of that church, at least, which he so ably ruled, he should be regarded as above and beyond criticism (so-called), amenable to no judge, ecclesiastical or secular. For the rest—the dwellers in glass houses—."

Baron Corvo presents an impressive array of the authorities consulted in the preparation of this history, and even without these one could not fail to note that the author has labored assiduously in collecting his data, and from such of it as is presented, the reader is at liberty to draw such conclusions as recommend themselves to his judgment without regard to these of the author. For this reason the book is a valuable one, and the chronicles of the House of Borgia could not fail to be interesting in whatever shape they were presented. A form of pedantry is exhibited in the use of archaic forms of expression, in fantastic capitalization, and in the author's insistence that every proper name shall be given in full, however long it is or however often it may be mentioned. Nor does it seem indispensable that a pope should be invariably referred to as The Lord—P.P.—. This criticism is seen not to be trivial when it is remembered that the names of an Italian noble may occupy four or five lines of type. The book is enriched by eight engraved portraits of the more prominent Borgias and their contemporaries.

Ex-Speaker Thomas B. Reed's Splendid Library of the Best After-Dinner Speeches, Classic and Popular Lectures, Famous Addresses, Stories, etc., in ten elegant volumes, superbly illustrated with fine photogravures and color plates.

THOMAS B. REED

The Library of "Modern Eloquence"

stands without a peer. Nothing like it was ever attempted before. Edited by one of the greatest of Modern Leaders of Men, ex-Speaker Thomas B. Reed, assisted by a corps of editors famous wherever the language is heard. "Modern Eloquence" is the masterpiece of one who has lived close to those who made the history of our times.

In these volumes the reader runs the whole gamut of eloquence, from laughter to tears, from pathos to ridicule; keen satire is mingled with unctuous humor; the strong, trenchant utterance of action with the droll fancies of the funny.

We hear the applause and the laughter, we surrender to the spell of the words; we can feel the tense silence as the speaker mounts to his sublimest flights, then hear the outburst of applause, as the audience catches the speaker at his climax.

One sits at the board where the greatest after-dinner orators, wits, and humorists are at their best. One listens to those master minds who from the platform have swayed multitudes, and held men's minds captive by the magic of their words.

These are the books for the home—for an idle hour—for the days and nights of preparation—for an evening's entertainment—for the future. They are filled with living thoughts for living men.

Here DEPEW puts you off your guard with a laugh, before his keen blade, with a quick thrust, drives home the truth. Here may be seen something of that marvelous power and poise by which BEECHER, single-handed and single-voiced, conquered and calmed the howling mobs in English halls, and won from hostile crowds a hearing for the Union cause. Here the reader, as he feels the thrill of GRADY'S immortal words on "The New South," realizes something of the wondrous change of national feeling wrought by "the velvet splendor of that mellow tongue," and how it was that by that banquet speech in a single night the speaker "leaped into national fame." Here such men as GLADSTONE and CHOATE, EVARTS and CURTIS, HILLIS and GOUGH, reveal in their words something of the secret which every aspiring man longs to penetrate—the secret of power over the minds of men.

To live with and absorb such power from this inexhaustible storehouse of intellectual food and stimulus, affords not only an equipment for success in life, but is an opportunity which, if used, will develop the reader into a higher type of man.

Special Offer A large, handsome portfolio, containing 11 sample photogravures and chromatic plates, and 80 specimen pages of brilliant After-dinner Speeches, Lectures, Addresses, Anecdotes, etc., will be sent free of charge, on request. With this we will also submit a special proposition which easily will place this great work in your possession.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION
Dun's Review, New York, Jan. 25

Little of a novel nature has developed in the business or financial situation during the past week. Conditions of the preceding week were accentuated as a rule, active manufacturing plants becoming still more busily engaged while the downward tendency of prices was not checked. Retail trade is of immense volume, and jobbers have large spring orders to fill. Western cities send the most satisfactory returns, but nearly all sections are enjoying wholesome activity, even the south showing evidence of improvement. Wages were voluntarily advanced at a number of manufacturing plants, hours reduced at others, and aside from the teamsters' strike at Boston there were few labor controversies, while skilled workmen are in greater demand than supply. With gratifying persistence railway earnings continue to grow, for January thus far showing an advance of 10.6 per cent over last year, and 20.5 per cent over 1900. Notwithstanding the striking loss in volume of speculation, bank exchanges at this city for the week were but 6.6 per cent smaller than a year ago, and 5.4 per cent below those of 1899. At other leading cities there was a gain of 18.1 per cent over the clearings in 1901 and 22.1 per cent over 1899.

IRON AND STEEL

Conditions in the iron and steel industry are shown by record-breaking production at many plants and rapid in-

crease of facilities at others. When orders for rails cannot be taken because delivery is desired before the last quarter of the year, it would seem that new figures of output were assured for 1902. Structural mills are equally well occupied, having contracts for office buildings, factories, bridges, track elevation, and other constructive work. Large steel structures are going up very fast in far western cities. Plates and sheets are available more promptly, owing to enlarged capacity of mills. Railways handle coke with less delay, which accelerates blast furnace operations and tends to restore normal prices for fuel. Despite the pressure for nearly all steel products and pig iron there is no tendency to force quotations, but rather a stubborn resistance to every upward movement. This feature of the market is watched most intently, as the abnormal activity would lose its chief value as an indication of prosperity if business were stimulated by excessive prices. Incidentally, foreign competition would also be invited, and mills abroad are in position to take full advantage of any such opportunity.

COTTON AND WOOL

Textile markets are quiet, both buyers and sellers showing a disposition to wait, although reports of the jobbing trade are most favorable, except at some southern points. Cotton mills are busy as a rule, but uncertainty as to the future of the raw material tends to unsettled prices. Specialties have been put on the market, with a fair degree of success. Heavy goods for China are in better inquiry, although the views of sellers are still above prices offered. Home buying of fine yarn goods increases. Print cloths are nominally three cents and scarce for near delivery. Woolen mills are working overtime and have much business in sight. More linens opened at slightly lower figures than a year ago, which was natural in view of the difference in cost of raw material. Last year, however, the opening figures were not productive of much business, and subsequent reductions occurred. A repetition of this action is not expected in 1902. Raw wool is strengthened by

A STRAIGHT SHOT

Brought About By Accident

A lady who accidentally began eating Grape-Nuts and quickly discovered the strength that she gained, felt disposed to write regarding the food.

She says, "Grape-Nuts has done so much for me. When I came out of school I was broken down in health from overwork and nervousness. Every summer during the hot weather I have been practically exhausted and generally have lost five pounds or over.

Quite by accident I began using Grape-Nuts and thought I liked it very much at first, but the taste grew on me so much that I am extravagantly fond of it. I ate it all last summer and was surprised to find that I kept up with plenty of strength, my nerve force increased, and I lost no flesh.

I know exactly what has sustained me for I have made no change in my way of living except to take on Grape-Nuts. I never tire of it. I always use it with cold cream in summer and warm cream in winter. This is a straightforward, honest letter and I trust it will be of service to you." Lucy J. Rowen, Cedar Falls, Ia.

sale. Cotton is not receiving the support anticipated, reports of exhausted stocks on plantations being refuted by undiminished receipts.

WHEAT, CORN, ETC.

Hesitation is general in the markets for staple products. There is no longer the reckless buoyancy so conspicuous a short time ago. Disaster to one prominent operator had a calming influence, and in the case of corn the insignificant export can not well be entirely ignored. From Atlantic ports for the week the movement was but 352,450 bushels, against 3,472,614 a year ago. Foreign buying of wheat, flour included, is much more liberal, all ports of the United States sending out 4,320,005 bushels during the past week, compared with 4,038,381 bushels a year ago. It is surprising that the outgo is so well maintained in view of the higher level of prices and the record-breaking exports that have already gone out this crop year. Meats have weakened, especially lard, and dairy products are also less inflated. Eggs declined sharply, but partially recovered. Coffee sold down

A GOOD CHANGE

A Change Of Food Works Wonders

The wrong food and drink cause a lot of trouble in this world. To change the food is the first duty of every person that is ill, particularly from stomach and nervous troubles. As an illustration: A lady in Hickmon Mills, Mo., has, with her husband, been brought around to health again by leaving off coffee and some articles of food that did not agree with them. They began using Postum Food Coffee and Grape-Nuts Breakfast Food.

She says, "For a number of years I suffered with stomach and bowel trouble which kept getting worse until I was very ill most of the time. About four years ago I left off coffee and began taking Postum. My stomach and bowels improved right along, but I was so reduced in flesh and so nervous that the least thing would overcome me.

Then I changed my food and began using Grape-Nuts Breakfast Food in addition to my Postum Coffee. I lived on these two principally for about four months. Day by day I gained in flesh and strength until now the nervous trouble has entirely disappeared and I feel that I owe my life and health to Postum and Grape-Nuts.

Husband is 73 years old and he was troubled, for a long time, with occasional cramps; and slept badly. Finally I prevailed upon him to leave off coffee and take Postum. He stood out for a long time, but after he tried Postum for a few days he found that he could sleep and that his cramps disappeared. He was satisfied and has never had coffee since.

I have a brother in California who has been using Postum for several years; his whole family use it also because they have had such good results from it."

to six cents for No. 7 Rio on account of overwhelming Brazil receipts. Raw sugar stiffened owing to restricted arrivals, which are natural since Cuban holders await favorable tariff arrangements, and bounty discussion affects conditions in Europe.

Failures for the week numbered 301 in the United States against 306 last year, and 28 in Canada against 46 last year.

Financial

THE MONEY MARKET

Bradstreet's, New York, Jan. 25

It would seem that a further increase in the supplies available for the use of the New York loan market has taken place this week, and the estimates made were that the banks have gained about \$8,300,000 from the total movement of funds. There are reports that leading New York banking interests have been large borrowers of funds in nearby cities. Call money was more plentiful and showed increasing ease, the extremes being 3@4 per cent, and at the close of the week the current rate for bankers' balances was 3 per cent. Time money was more abundant, but was in decreased demand. Rates were slightly easier at 4@4½ per cent for all periods in mixed collateral. Mercantile paper is in better demand with a fair amount of buying for city institutions, while the offerings are not particularly large, and rates are based on 4@4½ per cent for prime double names.

THE STOCK MARKET

The New York stock market, though dull, has shown a better tone, due partly to easier money and an expected good bank statement today and partly to the investment demand for and activity in bonds. Heavy trading, with advances in both prime securities and speculative issues, characterizes the bond market. Standard railroad stocks are dull and rather heavy on uncertainty about the Northern Securities deal. Some high-priced dividend stocks, notably Northwestern and Lackawanna, advanced on manipulation. The coal stocks are heavy. Tractions, led by Metropolitan, advanced on reports of new stock and "rights" by that company. Sugar is strong on the expected reduction of Cuban raw sugar duties. Foreign exchange is steady at 4.86½@4.87 for demand sterling. A shipment of \$300,000 gold was made to Germany early in the week.

BANK CLEARINGS

Clearings for the week ending Thursday, January 23, aggregate \$2,225,599,076, a decrease of 8.5 per cent from last week, but an increase of 1.2 per cent over a year ago. Outside of New York the loss from last week is 5.2 per cent, while compared with last year there is a gain of 18 per cent.

Various Topics

The French imports for the year 1901 were of the value of 4,714,548,000 francs, against 4,697,802,000 francs during the year 1900. The exports in 1901 were

valued at 4,166,165,000 francs, against 4,108,699,000 francs in the previous year.

The United States is one of the leading vegetable-oil producers of the world. In addition to supplying the domestic demands of 76,000,000 people for most varieties of these products, it produces an annual surplus for export aggregating in value from \$16,000,000 to \$19,000,000.

The *Baltimore Manufacturers' Record* calls attention to the remarkable record in the exports from the south during the last year in breadstuffs. Baltimore exports increased during that period \$7,501,446; New Orleans, \$9,034,141; Newport News, \$2,599,176; Galveston, \$2,238,995. Including other ports there is a total increase in exports from \$83,114,434 in 1900 to \$104,830,309 in 1901, or \$21,715,875. This represented 6 per cent of the total increase in the value of breadstuff exports at all ports.

The *Philadelphia Press* estimates probable railroad expenditures the current year at \$339,500,000, divided as follows: Pennsylvania, \$125,000,000; Vanderbilt lines, \$75,000,000; Baltimore & Ohio, \$30,000,000; Southern Pacific and Union Pacific, \$28,000,000; Gould lines, \$25,000,000; Atchison, \$20,000,000; anthracite roads, \$12,000,000; New England roads, \$8,000,000; southern roads, \$4,500,000; St. Paul, \$3,500,000; Louisville & Nashville, \$3,000,000; St. Louis, \$3,000,000; Illinois Central, \$2,500,000.

A short while ago the *London Daily News* had an article admitting the enormous influence of the United States over the British colonies and asking "what would happen if the United States should offer Jamaica, Canada, and even Australia the enormous bribe of reciprocity?" Apropos of which the *Demerara Argosy* notes that "unless strong inducements are offered by the United Kingdom to send our trade (colonial) to the homeland, the inevitable trend of Caribbean commerce must be toward the United States. If Canada can arrange matters so as to obtain a share of this patronage, the West Indies will be very glad to give it, but there is not the consumption in British North America to warrant hoping that that market will take the place of the United States, even if the tendency of Canada herself had not been toward cultivating Yankee trade relations in preference to British ones."

California Illustrated

Copy of the illustrated monthly, *The Chicago 400*, a journal of travel and topics, reaches us by the courtesy of the Chicago & North-Western R'y. It is one of the finest illustrated publications that we have ever seen. The tinted half-tones rival those of the finest magazines, and the letter-press of the whole edition is as perfect as that of any publication ever issued, pictorially and descriptively mirroring California's wonderful scenery. Copy delivered free on application, or mailed to any address upon receipt of two cents postage, by H. A. Gross, 461 Broadway, New York City.

Advertising Instruction Without Cost by a Famous Expert and

How Young Men and Women May Earn Big Salaries and Business Men Save Thousands of Dollars.

(From Success.)

Mr. Powell who furnishes the matter for the entire series, is a man of untiring energy and enthusiasm, having devoted his entire life to the practical, theoretical and artistic study of the subject. He is conversant with the most successful methods employed in the production of effective advertisements, booklets and auxiliaries which are of value in securing that most desirable element known as publicity.

Mr. Powell is to-day considered by those best competent to judge as one of the most skillful planners and writers of advertising in America. Some of his achievements are notable.

Entering the field in 1891 he quickly revolutionized bicycle advertising, and set a pace that was never equaled. Later he astonished patent medicine men by demonstrating his ability to float a new article and making it highly profitable the first month.

Next came Mr. Powell's work in building up the advertising department of one of the largest women's publications in America, and in a year his methods

added nearly \$50,000 worth of extra business besides materially improving the quality of the advertising.

About three years ago Mr. Powell established himself in New York, and besides making thousands of dollars from another proprietary article of his own, he has helped scores of others to win through up-to-date publicity.

As a counselor and planner of advertising campaigns Mr. Powell stands first among experts, and he is paid the highest fees by scores of our largest advertisers, with whom he is in constant touch. There is not a week that he is not sought for in pushing to the front stock deals or new manufacturing enterprises.

To benefit hundreds who are anxious to earn from \$25 to \$50 a week in advertising writing, and to supply advertisers with competent help, Mr. Powell will give instruction to all who take advantage of the opportunity and enable students to earn tuition.

WIT AND HUMOR

"It's Morgan's"

I came to a mill by the river side,
A half mile long and nearly as wide,
With a forest of stacks and an army of men,
Toiling at furnace and shovel and pen.
"What a most magnificent plant!" I cried,
And a man with a smudge on his face replied,

"It's Morgan's."

I entered a train and rode all day
On a regal coach and a right of way
Which reached its arms all over the land
In a system too large to understand.
"A splendid property this!" I cried.
And a man with a plate on his hat replied,

"It's Morgan's."

I sailed on a great ship, trim and true,
From pennant to keel and cabin to crew,
And the ship was one of a monster fleet;
A first-class navy could scarce compete.
"What a beautiful craft she is!" I cried,
And a man with akimbo legs replied,
"It's Morgan's."

I dwelt in a nation filled with pride,
Her people were many, her lands were wide;
Her record in war and science and art
Proved greatness of muscle and mind and heart.

"What a grand old country it is!" I cried,
And a man with his chest in the air replied,

"It's Morgan's."

I went to heaven. The jasper walls
Towered high and wide, and the golden halls
Shone bright beyond. But a strange new mark

Was over the gate, viz., "Private Park."
"Why, what is the meaning of this?" I cried,

And a saint with a livery on replied.

"It's Morgan's."

I went to the only place left. "I'll take
A chance on the boat on the brimstone lake,
Or perhaps I may be allowed to sit
On the griddled floor of the bottomless pit."

But a leering lout with horns on his face

Cried out, as he forked me off the place,

"It's Morgan's."

—Pittsburg Dispatch.

"Gingham," added the missionary, "is as cheap as dirt!"

"But is it as cool?" objected the savage young person, for she still hesitated.
—Detroit Free Press.

"If I had my way," said the practical man, "there would be no poetry written."

"Well," answered the cynical reader of magazines, "I guess you've got your way, all right."—Washington Star.

Good Advice

A writer in the *Chaperone Magazine* on Flannels, Blankets and Laces insists on little wringing for woollens and no rubbing for laces. Every intelligent woman has a method of her own but all agree on those two points—hard points using ordinary bar soap—harder still with penny—cheap Washing powders.

Have used Pearline a number of years, and like it very much for all kinds of flannel garments. They are soft and nice after washing. Mrs. Rev. C.T.

Am never without Pearline. Use it with the most delicate fabrics and with coarse things. Find it satisfactory in all things. Mrs. Rev. G.E.L.

PUBLIC OPINION

Number 6
Volume XXXII

The Week

Thursday
February 6, 1902

LAST week all eyes were, or should have been, turned on congress. In no other place in the world could one see so much that was interesting and instructive. Three senators highly distinguished themselves; Senator Dubois, of Idaho, by referring to General Wheaton as "probably some charity boy appointed to West Point by a senator or representative and since supported by the government," and Senator Money, by his formula for the solution of the Philippine problem—"Let them go to the devil and take care of themselves." When it can fairly be said that such expressions are characteristic of the Democratic side of the senate, it is no wonder that people in general are quite reconciled to the fact that "the hypocritical, commercialized, and damnable Republicans,"—Tillman's words in the senate last week—are in control of the government.

ON the other side of the Capitol time might have been profitably spent in watching the writhings of the ways and means committee as its members sought to escape from the disagreeable necessity of "doing something for Cuba." First it was announced that Cuban reciprocity would be shelved until the committee attended to the reduction of the war taxes by some seventy millions of dollars. The public refused the bait; they declined to be lured away from the Cuban tariff; the committee observed this very quickly and the very members who had airily disposed of Cuba on Tuesday declared on Wednesday that nothing was further from their intention than the ignoring of the island's plaintive prayers for relief. All of which is very instructive as to the ways of statesmen, both Democratic and Republican.

THE senate's threat to hitch a Cuban reciprocity measure to some other bill has excited the curiosity of the house. The house wants to know how this can be done under the constitution, and has therefore adopted a resolution directing the ways and means committee to "investigate whether the treaty-making power could negotiate reciprocity treaties affecting the customs revenues without action by congress." This is a proper subject for investigation, and covers much more than the Cuban tariff. For if the senate can affect adjustments of the tariff without reference to the house, the constitutional provision that all bills for raising revenue shall originate in that body becomes of no effect.

GOVERNOR TAFT'S statement of conditions in the Philippines before the senate committee last week should satisfy every man and woman in the United States; should satisfy them that they now have the facts. Whether or not these facts are altogether palatable is another matter altogether. Nothing of a startling character was brought out in the course of Judge Taft's examination, but he confirmed the already existing belief that the islands were slowly but surely being pacified, and dispelled the disagreeable impression that the civil and military authorities there were at loggerheads. No one can say that the governor gives a roseate hue to the situation; he merely demonstrates to the satisfaction of reasonable people that our position is far from being a hopeless one and that it is steadily improving.

ALL that has materialized so far in the way of a steamship combine is an agreement on the part of the British lines to increase their rates on grain to $1\frac{1}{2}$ d. per bushel, to add 11-3s. to the rate per ton on flour, and $2\frac{1}{2}$ s. per ton to the rate on provisions. New York shippers all agree that there are no freights of this description going abroad at any price, so the new rates can have no immediate effect on business, and it is puzzling to see why they were made at all. One

steamship agent asked the question: "If we can't get grain to carry at a penny, how can any agreement provide the grain at a penny and a half?" We give it up.

A CANADIAN subscriber writes to us to ask how many British soldiers are now engaged against the Boers in South Africa. At last accounts there were 250,000 men employed in garrisoning the country and hunting down between five and eight thousand guerillas. These figures were given in the house of commons by Mr. Brodrick a few days ago. At the same time he offered proofs of the permanent pacification of a large part of the Transvaal and Orange River Colony, and referred to the resumption of business on the Rand. Further proof of the waning of the war is shown in the reduction of the estimates of its cost from \$1,000,000 a day to \$5,000,000 a week.

IN view of this state of affairs it is easy to understand why Englishmen take less interest than anyone else in the irresponsible peace proposals which have recently come from Holland. The exact terms of these proposals and the reply of the British government thereto are likely to be made known before this is read. There seems to be no good reason to think that anything will come of Holland's intervention, simply because there is no way of binding the Boers in the field to any agreement that might be made at London or Amsterdam, and such representatives as the Boers have in Europe are still crying to high heaven that they will accept nothing less than independence.

THE German tariff bill is going through the same sort of experience that tariff bills have in the United States congress. The German bill in its present form would hardly be recognized by its best friends, the press dispatches say, the changes having gone so far that the imperial secretary of state for the interior has given notice that if the bill is further amended the government will withdraw its support. Something besides amendments may have cooled the government's ardor—the bye-election in Saxony, for instance, in which the Socialist vote increased 2,000 on the issue of free trade in food stuffs, showing very plainly how the industrial classes view the new tariff proposals.

EMPRESS-DOWAGER TSI-AN handing out jeweled bracelets to the wives of the Peking diplomats and weeping over the horrors of the siege while the emperor sat neglected in a corner twiddling his thumbs—it is a rare privilege to have witnessed this scene, descriptions of which are found in last Saturday's press dispatches. At the first reception of the ministers they also tacitly recognized the empress as the real ruler of China, a strange proceeding, in view of the fact that however contrite she may be now, she was undoubtedly a sharer in, if not the prime instigator of, the anti-foreign outbreak. Had foreign recognition been given only to the emperor, he would at least have had a chance to belie or prove possession of the progressive ideas attributed to him. As it is, he remains a contemptible figurehead.

AFTER reading certain items in last week's newspapers we are inclined to doubt the truth of Burke's statement that the age of chivalry is past. William Tubbs, a laborer in the New York tunnel in an endeavor to save others is blown to pieces. Two nurses caring for a smallpox patient in a fireless tent on Staten island lie down by the sufferer to keep her warm. Two escaping felons submit to capture and death rather than desert the woman who aided them to break jail. Chivalry may be dead, but its spirit appears to be as much alive as ever.

AMERICAN

The Growth of Our National Feeling

IN the February *World's Work*, Captain Mahan writes of "the growth of our national feeling" as exhibited in the events of the last ten years. Up to 1890 the United States "was perhaps looking outward, but she evidently was not, as a nation, taking notice." The first really rousing event was the proposal to annex Hawaii, of which Captain Mahan said eight years ago: "What is here involved is not so much a particular action as a principle pregnant of great consequences," and in the writings of the author after that time he finds evidence of "the awakening consciousness of the people, reflected in the attentive minds of editors." These articles were *The Possibilities of an Anglo-American Reunion*, *The Future in Relation to American Naval Power*, *Preparedness for Naval War*, and *A Twentieth Century Outlook*. "Of course," says Captain Mahan, "naval officers, moving round the world, talking with its inhabitants in various localities and afterward bringing the various ideas to the common exchange of the mess-table and of other professional intercourse, imbibe a good deal of information particularly pertinent to the question of expansion, needing only digestion and arrangement to have a usefulness quite peculiar to itself. I was therefore pretty full of matter, and to this day remember the delightful ease of production due to that fact as contrasted with some heart-breaking work done since. Nevertheless, for the reasons noted, the record of articles traces not my development, but the progress of national awakening from 1890 to 1897; to the eve, that is, of the great year when old things passed away, and all things became new in the birth of a new national resolve, quickened into life by the crash of a falling empire and the devolution of its responsibilities upon our conscience." Up to 1885, Captain Mahan was "traditionally an anti-imperialist," but by 1890 the study of the influence of sea power and its kindred expansive activities upon the destinies of nations had converted him.

Continuing his argument, Captain Mahan notes how "the last decade of the century carried the outward look on from the isthmus and Hawaii, and from the naval preparations essential to maintaining the nation's requirements, as formulated in the Monroe doctrine and evident in the conditions of the Pacific, to consider the general outward movement of the European world, evinced in the new era of colonization and the search for naval stations that had recently begun. This impulse, I believe, will hereafter be recognized as the chief among those transmitted by the nineteenth century to its successor. Viewed with the new and significant restlessness among the Oriental peoples, aroused at length, by intimate contact with Europeans, from the torpor and changelessness of ages—an awakening of which the occidentalizing of Japan is merely the most conspicuous incident—this is the significant feature of the opening century, that should direct the attention of our people in external policy. This European movement has three principal fields: the Levant—in which Egypt may for convenience be included—Africa, and Asia. Though locally Asiatic, the Levant is a European interest, pure and simple; and Africa, in relation to world politics, is but an an-

nex of Europe, geographically as well as, now, by pre-emption. Eastern Asia, however, and China especially, with all its immense possibilities, stands over against us, demanding our most careful and constant thought; all the more because there would appear to be a disposition in some quarters to question our right of interest.

"As a matter of national decision, Hawaii is already past history, and the Monroe Doctrine seems even now to be approaching a condition of general silent acquiescence which, if realized, will give to it also the quality of permanence that distinguishes the present. The living external issue of the present and the future, the field for us alive with multifold possibilities and uncertainties, is eastern Asia; so far in 1901 have we traveled, in the eight years that began by seeing even Hawaii rejected and have ended with the Philippines possessed.

"The canal, Hawaii, and the Philippines are valuable to us as positions even more than as possessions. In the problem of eastern Asia, still in an early stage of its solution and of doubtful issue, they are important as facilitating our access to the seas of China and to the valley of the Yangtse, and as furnishing territorial support to our action there. Intrinsically, their future now presents but few elements of anxiety."

Cleveland

WILLIAM ALLEN WHITE, in the February *McClure's Magazine*, New York. Excerpt

CLEVELAND, as a statesman, will be remembered as the man who stopped things. He checked abuses; he prevented bad men from accomplishing their schemes; he warded off impending calamity. He reduced revenues and saved taxes; he stayed the ebbing tide of public credit; he throttled anarchy; he stopped foreign aggrandizement on the American continent. Always he was the safety-valve. He brought no new doctrine to the people; he had no theory of government—merely an ideal of duty for the hour. He founded no institution; in the political life of his time he constructed nothing. As a statesman he will be remembered as one who every hour of the working day did what he thought was exactly right, and who never attempted to guide the current of the public business, but always to see that the business was wisely and honestly done. He was a modest, industrious public servant, who lived so closely the motto, "A public office is a public trust," that people came to believe that he invented it—which he did not. He never injected himself nor his ambition into any public affairs. His name was never linked with any policy, and no law on the statute books of his country is known as Cleveland's law. He tried to efface his personality, but it was so strong, and distinctive, and pungent with masculinity that it dominated everything he did in spite of his aversion to personal politics. Yet he will never be a hero, because he did not live a dramatic life. There was nothing in his biography to amuse or interest a Plutarch or a Boswell. When he passes from the earth, no biographer will materialize him in a flesh-colored sketch. He must

remain to posterity a disembodied spirit, an ideal of honesty bearing a man's name—the symbol of a national inspiration toward public virtue.

Time has mellowed Cleveland, and experience has taught him a kind of philosophy. There is a tincture of humor on his outer face now, and a strong, placid light of happiness glowing from his heart. Of late years he has lived at Princeton, N. J., in a big white house with a hall through the middle of it, and on the wide blue-grass lawn his children play, while inside he and his wife and his books and his pleasant memories are happy together. The college boys from Princeton congregate in his yard on occasion, and frequently he returns their calls and goes down to the chapel and talks to them in a good-natured, felicitous way. He fills in his days with writing, reading, and recreation. When duty prompts him to say a thing, he says it in few words and in good taste. Youth still tempts him out fishing and hunting, and he loves the fields and woods and waters as he loved them when he was a ruddy-cheeked boy. He has lived to see his enemies put to rout, and much that he advocated vindicated by events and justified by the ballots of his countrymen. Nature has checked in his face the lines that followed the days and nights of hard living and hard working in the years of his youth. But behind those lines there is another face—a serene, exalted face which shines out of a strong, unconquerable soul—a righteous, rock-anchored Presbyterian soul.

It was from that soul that these words came in a letter to his brother, just before the election that made Cleveland governor in 1882:

I have just voted, and I sit here in the office alone. If mother were alive I should be writing to her, and I feel as if it were a time for me to write to some one who will believe what I write. I have for some time been in the atmosphere of certain success, so that I have been sure that I should assume the duties of the high office for which I have been named. I have tried hard, in the light of this fact, to properly appreciate the responsibilities that will rest upon me, and they are much—too much—underestimated. But the thought that has troubled me is: Can I perform my duties, and in such manner as to do some good to the people of the state? I know there is room for it, and I know that I am sincere and honest in my desire to do well; but the question is whether

I know enough to accomplish what I desire. In point of fact I will tell you first of all others the policy I intend to adopt, and that is to make the matter a business engagement between the people and myself, in which the obligation on my side is to perform the duties assigned me with an eye single to the interests of my employers. I shall have no idea of reelection or of any high political preferment in my head, but be very thankful and happy if I serve one term as the people's governor. Do you know that if mother were alive I should feel so much safer. I have always thought her prayers had much to do with my successes. I shall expect you to help me in that way.

Nearly seventeen years ago, this man, Grover Cleveland, left his state for his nation's service. During those years he has seen many strange changes and has been a part of them. Pageant after pageant has filed through the *blase* crowd down Pennsylvania avenue to the Capitol. Sometimes the band has played quicksteps. Sometimes it has played dirges. He has seen men rise to the high office which he occupied, has seen them serve valiantly and pass away from the places of their triumph; soldiers and statesmen have come and gone in those years, and war, with its victories, and peace with its problems, all have passed before his inquiring eyes; and he has survived them all—presidents, soldiers, victories, defeats, statesmen, little knaves and big ones, disaster, prosperity, sorrow, and national rejoicing; and the changes time has wrought have been so great that this man—still a man in his strength—seems a link with the distant past.

How to Assimilate the Foreign Element in Our Population

“NO other subject in the larger politics of modern times deserves more earnest attention than the problem of assimilating the foreign element in our population,” says John T. Buchanan, in an article in the February *Forum*. “Unless an intelligent effort is made for the protection of our national ideals, the United States will be in a fair way to become un-Americanized; and sooner or later the question will become not how we may assimilate the foreign ele-

JOHNNY BULL AND GERMANY: "You know ME, Sammy; you know ME!"—*Minneapolis Journal*

UNCLE SAM: "I didn't have so many friends a few years ago."

—*Chicago Record Herald*

ment, but how we may discern traces of our original government and institutional spirit. The native population in some parts of our country today is practically saturated by the foreign element, and no more of that element can be absorbed under existing conditions without a dangerous precipitation."

Mr. Buchanan's remedy for this state of affairs is compulsory education for all, and the requirement of educational qualification of all who claim naturalization and the franchise. Summing up the arguments in favor of this remedy, Mr. Buchanan says: "Compulsory education will give to the foreigner a chance of obtaining a thorough understanding of the English language; a fair knowledge of our government, and of the means of governing himself; and last, but not least, it will make him feel that he is the peer of all if he conducts himself as a true American citizen. The city of New York provides educational facilities not only for pupils who come within the age required by the compulsory educational law, but also for people of any age. It has its primary schools, its grammar schools, its high schools, its City college for boys, and its normal college for girls; and, besides, it has its training school for teachers, its junior and senior evening schools, its evening high school, etc. And within this system it exerts a necessary paternalism; furnishing textbooks and material without which education would be inaccessible to the masses. It lays special stress upon the teaching of the English language and of the nature of our institutions. So the schools become the real safeguards of national life. Without its free public schools, New York would be helpless in dealing with its hundreds of thousands of foreign population. This process of regeneration is slow; as slow, really, as the education of the young and the ignorant. It is possibly still imperfect, but I am convinced that it is the way. The results attained by the public schools in bringing the various elements of our population into such pleasant relations as to make them easily assimilable are so apparent in New York and in other cities and places where compulsory education is demanded by law, that I am forced to the conclusion that the most efficient, persistent, and constant power of assimilation in America is the free

public school under a well-devised compulsory education law.

"America for Americans' is not an unjust demand. But is our inheritance so limited, is our hospitality so lacking, is our love of freedom so destitute of vigor that it is necessary to place an insurmountable barrier between the immigrant and our shores? Should we not be more in accord with the spirit of our forefathers, if industry and intelligence are to receive open-armed welcome? St. Ambrose said: 'When I am at Rome, I do as they do at Rome.' And we should be entirely justified if we were to say to the incoming alien when he arrives: 'Thou shalt do as we do; in our land our language shall be thy language; our customs shall be thy customs.'"

Military Attaches

New York Times

IT is no wonder that a zealous British naval *attache* should have got himself into trouble at Washington through excess of zeal. The frequency of such accidents as that which has happened to the zealous Briton suggests a doubt whether the position of an *attache* is not, in fact, "untenable." Sir Henry Wotton's definition, away back in the time of James I, of an ambassador as "an honest man sent to lie abroad for the commonwealth," may be supplemented in our own time by the definition of a naval or military *attache* as an honest man sent to spy abroad for the commonwealth. An *attache* who got only such military or naval information as the government to which he is accredited, and by which he is frequently discredited, chose to give him would not be thought much of at his own headquarters. His business is to get what he is not expected to get, to get the military and naval secrets which the government whose guest he is carefully guards for its own use. Not, of course, that there are not useful lessons to be learned from maneuvers and other military and naval functions to which he is welcome, but that these by no means account for his time and his pay. He must get more

CUBA: "Tahs o'hers wantin' de same thing."

—Cleveland Plain Dealer

CONGRESS: "Philippine Tariff Bill, you're first."

—Minneapolis Tribune

than this. And he must get it so as not to be caught at it. Truly, his lot is not a happy one. It is questionable whether governments would not consult their own dignity by discontinuing the office and purveying what military or naval information they find at once indispensable, and only by indirection accessible, through the medium of persons who do not pretend to be "officers and gentlemen."

Washington (D. C.) *Post*

The rumor set afloat to the effect that Captain Lewis Bayly, naval *attache* of the British embassy, has been so very much too energetic in his quest of our naval secrets as to make himself *persona non grata* with this government is, we learn, a mere idle canard. But this rumor, unjust to Captain Bayly as we know it to be, merely furnishes fresh testimony to the folly of the arrangement under which we send naval and military *attaches* to our embassies and legations abroad, and receive at this capital similar officials from foreign nations. We have always insisted that the system is both mischievous and unprofitable; for these *attaches* are not needed to procure such information as the various governments are willing to impart, while if they attempt to invade a territory closed to them, they at once become transgressors of a most odious and offensive character. Our own government took a very proper and honorable stand in this matter when, some years ago, it recalled from his post the United States military *attache* at Paris. We have always thought, however, that the entire system should have been abolished, then and there. Do we really propose to steal the secrets of friendly governments, to demoralize their employees, and betray their gracious hospitality? Or are we providing luxurious nests for army and navy pets who are expected to do nothing but enjoy themselves.

YOU MAY SNEER AT THE SOCIALIST and condemn Socialism, without knowing anything about it, but the class which controls machinery and land, controls your present and your children's future. The measure of happiness which your children will enjoy is determined beforehand by private property in the means of production and distribution. If you don't help to abolish that, you will help to consign your offspring to slavery.—*Social Democratic Herald*.

The Canal Routes

A COMPARISON

WILLIAM H. BURR, a member of the isthmian canal commission, contributes an exhaustive article on the proposed isthmian ship canal to the February *Scribner's Magazine*, concluding with the following comparison of the two routes under consideration:

Concisely stating the situation, its main features may be expressed somewhat as follows:

Both routes are entirely "practicable and feasible."

Neither route has any material commercial advantage over the other as to time, although the distance between our Atlantic (including Gulf) and Pacific ports is less by the Nicaragua route.

The Panama route is about one-fourth the length of that in Nicaragua; it has less locks, less elevation of summit-level, and far less curvature, all contributing to correspondingly decreased risks peculiar to the passage through a canal. The estimated annual cost of operation and maintenance of the Panama route is but six-tenths that for the Nicaragua route.

The harbor features may be made adequate for all the needs of a canal by either route, with such little preponderance of advantage as may exist in favor of the Panama crossing.

The commission estimated ten years for the completion of the Panama canal and eight years for the Nicaragua waterway, but the writer believes that these relations should be exchanged, or at least that the time of completion for the Panama route should not be estimated greater than for the Nicaragua.

The water supply is practically unlimited on both routes, but the controlling or regulating works, being automatic, are much simpler and more easily operated and maintained on the Panama route.

The Nicaragua route is practically uninhabited and consequently practically no sickness exists there. On the Panama route, on the contrary, there is a considerable population extending along the entire line, among which yellow fever and other tropical diseases

STILL THEY COME

—*New York Tribune*

U. S.: "I don't see how anything can get by me here without my knowing it."—*Minneapolis Journal*

Digitized by Google

are probably always found. Initial sanitary works of much larger magnitude would be required on the Panama route than on the Nicaragua, although probably as rigorous sanitary measures would be required during the construction of the canal on one route as on the other.

The railroad on the Panama route and other facilities offered by a considerable existing population render the beginning of work and the housing and organization of the requisite labor force less difficult and more prompt than on the Nicaragua route.

The greater amount of work on the Nicaragua route, and its distribution over a far greater length of line, involve the employment of a correspondingly greater force of laborers for an equally prompt completion of the work.

The relative seismic conditions of the two routes can not be quantitatively stated with accuracy, but in neither case are they of sufficient gravity to cause anxiety as to the effects upon completed canal structures.

Concessions and treaties require to be secured and negotiated for the construction of the canal on either route, but the Nicaragua route only is free from the complications of prior rights and concessions.

Great Canals of the World

THE NINE GREAT SHIP CANALS

A PUBLICATION of the treasury bureau of statistics gives some timely information regarding the great canals of the world, from which we take the following descriptions of the nine artificial waterways which may be properly termed ship canals:

In America, the canals connecting the Great Lakes are the principal ship canals, and are three in number: the Welland canal, originally constructed in 1833 and enlarged in 1871 and 1900; the Sault Ste. Marie, or St. Mary's river canal, opened in 1855 and enlarged in 1897; and the Canadian canal at St. Mary's river, opened in 1895. The American canal was originally constructed by the state of Michigan, but subsequently taken charge of by the United States and enlarged at a cost of \$2,150,000. The cost of the canal was about \$30,000,000, largely due to the fact that 25 locks are required in surmounting the rise of 327 feet in the distance of 27 miles.

The length of the Suez canal is about 90 miles, the cost \$100,000,000, the present depth 31 feet, width at bottom 108 feet, and at the surface 420 feet. The number of vessels passing through it has grown from 486 in 1870 to 3,441 in 1901.

The Cronstadt and St. Petersburg canal, which gives a passageway for great vessels to St. Petersburg, is 16 miles long, including the deepening of the bay channel, 20½ feet in depth, and the total cost estimated at \$10,000,000.

The Corinth canal, which connects the Gulf of Corinth with the Gulf of Aegina, is 4 miles in length, 26¼ feet in depth, 72 feet wide at the bottom, and cost about \$5,000,000.

The Manchester ship canal, which connects Manchester, England, with the Mersey river and Liverpool, was opened in 1894. Its length is 35½ miles, depth 26 feet, width at bottom 120 feet and at the surface 175 feet, and cost \$75,000,000.

The Kaiser Wilhelm canal, which connects the Baltic and North sea through Germany, is 61 miles in length, 29½ feet in depth, 72 feet wide at the bot-

tom, 190 feet wide at the surface, and cost about \$40,000,000. An additional canal connecting the same bodies of water by way of the Elbe and Trave rivers was opened in 1900. Its length is 41 miles, depth about 10 feet, width 72 feet, and cost \$6,000,000.

Congressional Summary

CONGRESS DAY BY DAY

JANUARY 27.—The senate engaged in a prolonged and animated discussion of the Philippine question and of the right of army officers to criticize utterances made in the senate or elsewhere on the conduct of affairs in the islands; the senate, in executive session, received the treaty with Denmark transferring the West Indian possessions of that country to the United States; the consideration specified in the treaty to be paid by this country is \$5,000,000; the extradition treaty with Servia and the trade-mark treaty with Guatemala were ratified. The house adopted a resolution calling for documents relating to the old training ship *Vermont*, which was placed out of commission last summer, and also passed a bill to provide for the compulsory attendance of witnesses before registers and receivers of the general land office.

JANUARY 28.—There was another exciting debate on the Philippine tariff bill, in which Senators Spooner, Lodge, Beveridge, Teller, and Tillman took the leading parts; the bill to create a department of commerce and labor was passed; Mr. Spooner introduced a substitute for the Nicaragua canal bill, giving the president authority to choose between the Panama and Nicaragua routes; the resolution introduced Monday by Mr. Lodge authorizing the committee on the Philippines to make an investigation of the entire Philippine question.

JANUARY 29.—The Republican members of the ways and means committee of congress decided to frame a bill for the reduction of war taxes before proceeding further with the subject of Cuban reciprocity; the senate continued the discussion of the Philippine question, with special reference to the point as to whether a censorship of the press exists in Manila. The house adjourned after being in session twenty-five minutes.

JANUARY 30.—Mr. Hoar's resolution providing for a constitutional amendment respecting the presidential succession was adopted. The permanent census bureau bill was passed by the house.

No other important business was transacted during the week by either house.

Various Topics

THE CARTOON, "About Ready to Drop," credited in our issue of January 16 to the Philadelphia *Inquirer* should have been credited to the Brooklyn *Eagle*.

ADMIRAL SCHLEY'S APPEAL: Rear Admiral Schley's appeal from the findings of the court of inquiry and prayer for the president to approve the minority opinion of Admiral Dewey is based on three contentions, as follows: First—That "he was in absolute command at the battle of Santiago," and is entitled to the credit due to such commanding officer for the glorious victory. Second—That "the blockade of Santiago was effective," and the two concurring members of the court erred in expressing no opinion on this, one of the most important specifications of the precept. Third—That Admiral Dewey's approval of Schley's conduct from Key West to Cienfuegos and on the passage to Santiago "is the only opinion justified by the evidence." Each point is fortified by argument and a review of testimony.

FOREIGN

Persian Gulf Problems

By "One Born in Turkey," in the *February Review of Reviews*,
New York. Excerpt

THE unexpected return of peace and cultivation over a large area south of Bagdad, the growing prosperity of this Moslem and distant region, and the increase of the commerce of the Persian gulf have awakened rivalry in a region but rudely delimited. Muscat, its sultan, and the territory about Oman, at the entrance of the Persian gulf, is as completely an English dependency as any protected state in India. This has not prevented the growth of a French claim to a coaling station on an island off the coast, not fully settled, being the aid France offers as ally to the approach of Russia from the north. After suppressing their piracy early in the century, England, in 1835, negotiated a truce and protectorate with a group of Arab tribes who extend from Oman to Odeid, where Turkish authority begins. These tribes, known in English dispatches as "Trucial Arabs," are as good as governed by the English consul-general and resident at Bushire. England maintains, also, the protected condition and independence of the peninsula of el Katr and Bahrein, an island whose pearl fisheries, worth \$2,000,000 a year, make it the prize of the gulf. For a space along the littoral—from Hodeid, across the base of el Katr, to el Katif—Turkey holds a loose authority where caravan routes from the Nejd cross the Nefud, or desert, and enter Hasa—a less barren strip—on their way to the gulf. Here were the various conflicts of Mubarrak with the ruler of the interior, Nejd, a semi-independent realm, which confused the newspaper reader four months ago.

Between this strip of Turkish authority, acquired in the past thirty years, and still challenged by England and Bassora—where undoubted Ottoman territory begins—is Koweit, the best harbor on the gulf, in the ninth century *entrepot* of the east, settled again two centuries ago by an independent Arab tribe, and protected from Turkish authority by England since the British resident at Bassora took his flag here in 1821. Whoever holds it commands the northern end of the gulf and the navigation of the Euphrates and Karun rivers. Only this autumn, an English gun-boat prevented the landing of Turkish troops, and last month was loaning field guns to its chief. Koweit is the natural terminus of any railroad seeking the Persian gulf, and there tends the great German concession which begins opposite Constantinople and is to end at Koweit, but which stops just at present at Konia. Railroads in Asiatic Turkey open with the Smyrna-Aidin railroad (Ottoman railway company), begun in 1858, completed in 1866, a very tidy, dividend-paying property until about ten years ago. This road depended on its business for its receipts. In 1888-90, an imperial firman, the early sign of German railroad supremacy in Turkey, transferred to the Deutsche bank a little line from Scutari, the Asiatic quarter of Constantinople, to Ismid, fifty-eight miles long; extended the concession to Angora, three hundred miles distant, and assigned the revenues of four sandjaks, including Angora, to pay a guaranty of \$4,950 per mile per annum. In 1899, gross receipts from traffic were but 7,161 francs per kilometer—say \$2,500 per mile. The Smyrna-Cassaba railroad, opened in 1866, was also English until the Deutsche

bank purchased it, in 1899, and began its extension under a guaranty. Between them, these two lines paralleled the earlier English line, and in due time, 1899, this line was offered a German purchase refused by its English security-holders. This was unwise, as there is small use of running a road against a government-subsidized line of which both sultan and kaiser are patrons.

The precise size of the Turkish subvention is in the maze which envelops all Ottoman finance. An English foreign-office report places its full charge in the future at \$3,000,000 annually. By 1899, the concession, in response to the kaiser's kindly aid, had expanded to a railroad to the Persian gulf. The natural route follows the great caravan route from Angora, by which Cyrus marched. This, however, carried the line too near the Russian sphere, and it was dropped for an extension from Konia. Easier than the other after crossing the Taurus, though with less population, it presents some ninety miles of the most costly engineering in the range. In the spring of 1900, early construction was anticipated, because England formally withdrew its counter-projects; but there has fallen on the road the sinister blight which checks all progress in Turkey—international jealousy. If one or both roads are built, Asia Minor becomes German. Lesser coast roads there are in Turkey, but the only project which promises aught is this. It would bring the Ægean two days from the Persian gulf; but by no possibility can adjacent population render it profitable on the Euphrates route, and on the Tigris it blocks the Russian advance, and will therefore not be built there.

If it ever reaches the Persian gulf, it will find Russia coming down across Persia, and England extending its line from Quetta to Seistan, already a caravan route over which Russian papers protest. When all is said, Macedonia, with its line bringing Austrian railroads to the Ægean at Salonika, the railroads of Asia Minor, the disorder of Armenia, made possible by Russian support of Turkey at a critical moment and the struggle over the Persian gulf—these are all part of a world race for a new-old route to India and the east. Its opening would be easy, certain, and early if it were not along a line upon which lie the Moslem millions of Turkey, neither able to advance nor to maintain the past system of the Ottoman empire and Mohammedan supremacy with which they are satisfied.

Analyzed, therefore, the sudden recrudescence of the near eastern question in Turkey is really the issue as to who shall hold the last connecting link between the railroad system of Europe and the trade and transport of the Indian ocean and eastern Asia. Shall Russia secure this by railroads coming down through Persia and eastern Turkey? Shall Germany gain the prize by extending the German-owned lines of Asia Minor? Shall England block both by keeping the grip it early won on the gate to both projects in the Persian gulf, Austria, England's "hereditary ally," holding its present railroad dominance over the other end of this long line in Macedonia?

England has settled its present position and policy in the matter by asserting and enforcing its claim on Koweit. At Koweit, any Euphrates railroad must

end, if it is to be served by deep-draught steamers, and there any maritime power can command the navigation of the rivers that enter the gulf and dominate every Turkish and Persian fort. The Russian line just established from Odessa to the Persian gulf is of small consequence in the face of this step, and no extension by Russia in Persia can match this command of the sea power of the gulf and its two best harbors at Koweit and Muscat.

The State of Affairs in Servia

KING ALEXANDER DEFENDS HIS QUEEN AND HIS THRONE

THE Paris edition of the *Herald* publishes interviews with King Alexander and Queen Draga of Servia and two of their ministers, which, if the statements are taken at their face value, refute the scandalous charges made against king and queen for more than a year and the reports of Servian disruption which have emanated from Vienna for some time.

"Miloch Obrenovitch," the king said, "was fond of using Servian proverbs. There are three things a man should never abandon—his wife, power, and a good horse. I heartily endorse the proverb. You

KING ALEXANDER

may declare on my behalf that all rumors concerning my abdication or that there exists any agitation in my country in reference to a successor to the throne, are absolutely false, and can only come from systematic enemies of my dynasty or from people whose brains are deranged. Such rumors are totally fantastic, just as probable as would be a report that I ate human flesh."

His majesty indignantly protested against the mal-
evolent and indecent campaign conducted against him, in which the queen's name and personality had been used in a revolting manner. He remarked that there was nothing extravagant in the belief that a man of his age, twenty-five years, might still be the father of an heir to the throne. He referred to the queen with devoted tenderness, and said: "All reports concern-
ing the succession—and I say it openly to all the world

—are worked up by the late minister and president of the council, M. Vladen Georgevitch, who is now banished from Servia and lives in Vienna. He has written and distributed many articles on the subject, and he is all the while hand in glove with the Karageorgievitch pretender's family."

"King Alexander wound up the interview by declaring: "Should my throne be menaced, I will defend it, sword in hand, at the head of my faithful army, acting in a manner befitting the grandson of the creator of new Servia. How stupid were the reports of internal discord was shown in a recent journey I and the queen made through the country. Everywhere I found expressions and demonstrations of the most profound loyalty to the dynasty from the people of Servia. The financial condition of my country is serious, but by no means hopeless."

The queen also granted an interview in which she said: "All reports which speak ill of our relations are abominable calumnies. I could not wish anything better to my dearest friends than that they should enjoy as thorough happiness in their married lives as we do. The king is an affectionate king. There is no cloud between us. When the king married me," she said, "I expected opposition. My success—my entire happiness—was bound to make me enemies. I know the world. I knew that there would be thorns about that crown, and I was prepared. But what I do not comprehend is the endless continuation of this campaign of lies—that this persecution should be kept up so long. It is too bad!"

The New Premier of Holland

A SKETCH OF DR. KUYPER

AN attempt has been made recently to prepare the ground for peace between England and the Transvaal. The proposition came from Dr. Abram Kuyper, premier of Holland, who went to London in person to confer with the leaders there. Miss Caroline Atwater Mason, in the February number of the *Outlook*, tells something of Dr. Kuyper's work and personality.

For a generation Dr. Kuyper has been a force to be reckoned with in the politics of Holland. Today, by virtue of the reactionary movement led by him to an almost dramatic victory last June, the aforesaid Calvinist dominion has become a conspicuous figure in the politics of Europe. A unique personality, this—the preacher, editor, controversialist, parliamentarian! No pietist parson is more evangelical in his piety, more unrelenting in his orthodoxy, than this man, who is capable of reversing the government of his nation and fusing elements the most diverse into an astounding political unity.

He was born at Maassluis, October 29, 1837. His father was a Calvinist pastor, and the son followed in the same calling. He received his degree of doctor from the University of Leyden with a thesis on Calvin. He was pastor of several provincial churches, but public life attracted him, and in 1869 he established himself in Amsterdam and entered parliament as member from Gouda. In 1872 he became editor-in-chief of *De Standaard*, a conservative secular journal, through which he set forth his ideal of Christian influence in the state. Five years later he resigned from the second chamber of parliament and occupied

THE PIPE OF PEACE—WILL THEY ACCEPT IT?
New York Tribune

himself wholly with the defense of the Calvinist position in *De Standaard* and in *De Heraut*, a second local journal, and in the formation of an anti-revolutionary party.

So much for the personality of the man. What of the tendency, the movement which he represents? What of the incredible fusion of those historic arch-enemies, Calvinism and Catholicism, known as the "monster alliance"? The Liberalism against which the "monster alliance" flung itself last June with sudden and startling force, although strongly seated, was rapidly growing old. Its earlier enthusiasm had declined; its new ideas were new no longer; its watchwords had lost their power to stir the people. It had no force within itself sufficient to its own renewal save that unmanageable and dreaded force whose expression is Socialism—a force dreaded by the majority of Liberals not less than by Conservatives. Education, next to religion, is to the Hollander the uppermost consideration, absorbing the interest of all classes. The neutral or unreligious school furnished the point of attack where Catholic and Calvinist could move on parallel lines. Dr. Kuyper, High Calvinist though he be, was broad enough, or was politician enough, to avail himself of his opportunity. Unhesitatingly he held out his hand to the Catholics, and called them to fight by his side.

The very latest returns, November 24, show that the Clericals, in the last parliamentary by-elections, have succeeded in holding all their places and thus have fifty-eight seats in parliament out of one hundred. Of the remaining forty-two, seven are held by Socialists, and the remainder by the defeated Liberals and by small, scattering groups of various factions.

Is An Invasion of England Possible?

THIS discussion may appear puerile to the American reader, but, as we have explained before, it appears to have endless attraction for English and continental writers. Last November the *Pall Mall Magazine* published an article by a French officer showing the possibility of the invasion of England from the French point of view. The same magazine now prints an article by Major Hoenig, of the German army, on the same subject, from which we take the following:

The English coasts offer many points where troops could be landed, and, as the late Admiral Tryon pointed out, many important manufacturing ports could be

shelled, with serious consequences, by the invaders. Now, it may be taken as certain that the first step in the invasion of England would be a landing on her southern coasts, because this is the most direct route and the shortest crossing. Only one of the conditions of an undertaking of this kind would, necessarily, be a destructive engagement with the English fleet. Were this accomplished, the enemy would have gained much greater scope for their further operations. Hence it follows that if, at the critical moment, England desires to face with a bold front a possible future coalition of great powers, she must, in addition to keeping up her navy, pay much more attention to her home defences. This involves a change in the laws governing enlistment, the organization of the troops of the mother country, and, lastly, a systematically carried out scheme of coast defence, with a view to the protection of the most important points. No other course of action would enable England to repel from her shores an enemy which had already gained a foothold thereon.

It does not at present appear probable that France will overtake England from a maritime standpoint. France, however, is, as formerly, the only power which, in view of existing conditions, could attempt the landing of the necessary number of troops on English shores. So long as England has not this to fear, only the coalition of France with some other power puts her in any danger; and England has sufficient diplomatic methods of averting this. Still the moment may come when these may fail her. After that an invasion would present few difficulties from a military point of view: the difficulties would lie in the defects inseparable from all coalitions. Still, easy as it would be to carry out an invasion under such conditions, at the same time it would be quite unnecessary. The first preliminary to any invasion would be the destruction of the English fleet, and this would doubtless take place close to her coasts. The fleet once defeated, England stands like a gigantic fortress which needs no further be attacked from without, because she carries death within herself, in the form of grim starvation, which sooner or later must beat down all her powers of resistance. Nevertheless, England

"THE WOMAN IN THE CASE"
The Empress Dowager Receives the Powers "Sight Unseen."
—Minneapolis Journal

must prepare herself to oppose invasion of her shores to the utmost, and, in case she is unable to prevent this, must be prepared to quickly expel the invaders.

SOCIOLOGICAL

Social Aspects of the Chicago Stock Yards

CHARLES J. BUSHNELL, in the February *American Journal of Sociology*, Chicago. Condensed for PUBLIC OPINION

SOICIABILITY or conviviality is as necessary to us as exercise. One of the most striking ways in which this elemental want manifests itself is in the need which every man feels of the honor and respect of his fellows—the need of personal recognition—what the Germans call *Anerkennung*. A person who does not have, not only a certain amount, but a certain quality of courteous attention and experience of social comradeship, is seriously crippled in every one of his social functions, even, it may be, to the impairment of his health, as in the extreme case of the rejected lover or the unsuccessful statesman. This is the fact which makes solitary confinement, or “sending to Coventry,” such fearful punishment. And in respect to no human interests, perhaps, have the principles of modern business erred more than in their relation to normal and democratic conviviality. This traditional attitude of modern business management toward the workman was bluntly expressed to the writer not long since by a manager in one of the largest packing-houses at Chicago in the words: “When one cog wears out we put in another.” The futility, waste-fulness, and

inherent absurdity of this principle applied to flesh and blood and spirit are coming to be felt by the most advanced of business managers, however; and, as a result, in many parts of the world we see progressing the erection of workmen's clubs, game-rooms, settlements, and assembly halls, and a corresponding development of democratic feeling and hearty coöperation between employers and workmen.

The immediate question is: What is the relation of this typical community, the Chicago stock yards, to this movement? Let us look at the conditions. Regarding the element of personal recognition, it should, of course, be conceded at the outset that in any large business, employing thousands of men and women, it is out of the question for the few chief managers to be personally acquainted with, or even often to meet, all of the employees. On the other hand, there is such a thing as a spirit of opposition, jealousy, and harshness between employers and workmen which may be developed to such an extent as seriously to interfere with and overburden the management. In some parts of the Chicago stock yards, it must be said, this spirit of hostile and aggressive opposition is developed to a serious degree. Another element which seriously injures the sociability interests of the workmen and the people of the community at

the yards is the element of strain and irregularity of work—a decided drawback. This strain and irregularity so disorganize the habits of the men that they are frequently too tired or too indifferent to be sociable and cheerful. Again, the intense spirit of suspicion, in the face of an unskilled labor market so largely overstocked, accompanied by fierce and almost barbarous competition for work and for higher positions, very seriously injures the development of those finer sentiments of human comradeship so essential to any true and joyous democratic life. It is not too much to say that the packing-houses at the yards are in many, if not all, departments, hotbeds of petty political intrigue. The actual loss to the business, not only in good feeling and earnest work, but in dollars and cents occasioned by this condition of affairs, ought to be evident to every good manager.

Swift & Co. deserve great credit for their recent

erection of dining-room, smoking-room, and barber shop for their general office employees. These same accommodations ought to be, and probably in time will be, extended to include in some measure all of the employees of the plant. In

From *Journal of Sociology*

BARBER SHOP AND DINING-ROOM OF SWIFT & CO.

these matters of industrial betterment, indeed, Swift & Co. seem to have seen the advantage of certain kinds of improvement sooner than any of the other companies. But it must be said that, in spite of promising improvement in certain directions, the conditions of sociability at the Chicago stock yards are far from being ideal; and that once more the most serious public aspect of these conditions is the fact of their hindrance to the efforts of the community outside the yards to raise the social life of the people. Such institutions as the settlements, the schools, the churches, and many others that might be named, find their efforts materially thwarted by the conditions of discord, personal contention, and worry engaging so much of the time and energy of the majority of the community at the yards. The socialization of industry even in one of its aspects must mean thus the organic, democratic unification of the whole community.

The relation of the Chicago stock yards to the movements of artistic betterment in industry is as yet, it must be confessed, not very close. The whole air of the place usually gives one a very disagreeable shock, both physically and æsthetically. Many of the buildings are, from an æsthetic point of view, piles of most miserable and grimy ugliness.

Woman Suffrage in Colorado

GOOD AND EVIL RESULTS OF AN EIGHT YEARS' TRIAL

A CENSUS taken at the last Colorado election shows that in Arapahoe county (practically Denver) forty-two per cent of the women voted, and in other counties, with the exception of the rural mountain districts, from forty to forty-five per cent. "To the surprise of most people," writes Mr. William Macleod Raine, in the February *Chautauquan*, "this extension of the suffrage has proved an incident, not an epoch, and the ship of state appears to sail on in much the same way as before." This writer points out isolated results both good and bad of eight years of woman's suffrage. The chief evils are that it has made the vote more cumbersome, the purchasable element larger, and the cost of an election greater. "It is the testimony of political bosses that the woman vote is more of an uncertain quantity than that of the men, that it is more largely controlled by the emotions, and that it can not be depended upon so surely along party lines. They are agreed, too, that the vote of women in conventions is more easily manipulated than the vote of men, and that this is due not so much to inexperience as to feminine vanity; that, generally speaking, the women are more anxious to determine the right, and less able to do so, not so much by reason of inexperience as on account of an inherent fundamental difficulty of sex. The actual party workers are not generally the best classes of women in the community. Like the men, they are in politics for what they can get out of it. This was, of course, to be expected, and simply parallels the experience of our political conditions everywhere. Women of a certain type are in politics, just as men of the same type, for their own personal advancement."

On the other hand, Mr. Raine says that "Colorado has been among the foremost states of the union in reform legislation during the past eight years. Laws have been enacted in regard to the property and maternal rights of women that were much needed. A few years ago a woman could not prevent her husband from mortgaging the roof over her head. Through the efforts of women legislators, all community property now requires in transfer the signatures of both husband and wife. Organizations of women have had bills introduced for new primary and election laws, as well as one in the interests of civil service reform. A bill for raising the legal age of consent for girls to eighteen years was championed by women and successfully carried through. The newly aroused interest of women in civic affairs has manifested itself in other ways, in the greater cleanliness of streets, in the city park improvements, and especially in the care, ventilation, and artistic decoration of school buildings. The women members of the various state boards have done good work in furthering the interests of their charges. This has been notably true in those boards relating to the care of the criminal and pauper classes, manifesting itself in the more efficient management of the female wards of the state and in the improved conditions of the state institutions generally. The industrial home for girls is a shining example of this. The fear that women would flood the public offices, or would take in any way an undue part in public life, has not been realized in Colorado. Since the political enfranchisement of women there have usually been three members of that sex in the Colorado legislature, but at the present time there is but one. The only

office on the state ticket conceded to women is that of superintendent of public instruction."

Mr. Raine sums up by saying that "it is probably true that the ballot and its attendant circumstances have increased the unhealthy restlessness of some women, and have left profoundly unmoved many others; but between these two extremes there are indubitably a large class who have been awakened to a great practical interest in problems confronting the social body, and who are beginning to understand more of the patriotism which does not talk but acts. Hitherto, at least, the predictions of extremists have been confuted, for the ballot in the hands of woman has neither unsexed her, nor regenerated the world."

Belgium's Municipal Art Crusade

THE SUCCESS OF "L'OEUVRE NATIONALE BELGE"

FROM time to time we have recorded in this department the municipal art endeavors of Paris, London, New York, and Chicago. The greatest progress in this direction, however, has been made in Belgium by the society "L'Oeuvre Nationale Belge." In the current issue of *Harper's Magazine* is given the following account of the work of this remarkable organization:

L'Oeuvre's first act, after the early publication of its principles, was a formal announcement in 1894 that it intended to show its faith by its works, "in at once conducting open contests for the most beautiful constructions on a new street of Brussels, the Rue Joseph Stevens, and for various objects of public utility." These latter were to include street fountains, electric light poles, flag staffs, newspaper kiosks, etc. So in the first year there was promised an immediate starting of that work now so widely known, and of the example which Paris has lately followed, of prizes for the most artistic house fronts on new streets. In its second year, 1895, L'Oeuvre arranged an exposition of artistic signs, ancient and modern—held at the museum of Brussels; organized (1) a competition for plans of signs, and (2) a competition for signs that had been executed. In the next year, 1896, the society adopted as the particular subject for its crusade the decorative quality of apparatus for public lighting. It organized a competition for the most artistic practical means of lighting public places. A jury of eminent artists was appointed jointly by the competitors and the public authorities who participated, and the result of the trial was that several of the submitted designs were recommended later for definite execution. A single candelabrum that was designed for the Place de la Monnaie, in Brussels, has been reproduced in a great number of places in different cities, and two other designs were accepted by the communes of Molenbeek and Anderlecht.

The fourth year of L'Oeuvre's existence, 1897, was notable in Brussels for the holding of a world's fair, and the society decided to bend its energies that year to the fitting up at the exposition of a department of public art, in which it might give a careful and, it hoped, an inspiring, demonstration of its work and aims, and of the ancient glory of civic art in Belgium. So striving earnestly in many lines wherever opportunity was offered for advance in civic art, L'Oeuvre came at last to its call for the first international congress on the subject. The sessions were held from September 24 to September 29, 1898, in Brussels, and

there were present official representatives to the number of more than two hundred from England, France, the United States, Sweden, Norway, Holland, Hungary, the Grand-Duchy of Luxemburg, and from many important cities and societies, the membership making a very distinguished body, judged from either an administrative or artistic standard. Since then the work of L'Oeuvre has found expression in countless channels, it enlists the sympathy of all classes and all tastes, it is altering the aspect of Belgian cities, restoring to their modern type something of the glory of ancient Flemish art, and it is attracting the attention of the world. Paris has founded a public society in likeness to L'Oeuvre; cities of Italy, led to dream of their lovely past, have followed the Belgian example in an organized effort to reclaim it. "Art dans la rue" has of late years become a rallying-cry that reaches farther than Belgium's little cities; but the movement has found in them its strongest organization, gains confidence in the thought of their proud history, finds inspiration in the loyalty to tradition of the earnestness of their present effort to reclaim it.

Probation for First Offenders

J. FRANKLIN FORT, in the February Forum, New York
Condensed for PUBLIC OPINION

WITHIN the last few years—less than ten—there has grown up in some states a system known as probation for first offenders. It takes the offender at the very threshold of a criminal life, and, instead of imposing a sentence of imprisonment upon him, commits him to the custody of a probation officer in whose care it permits him to remain at large. The system had its origin in the state of Massachusetts, where its admirable results have received the commendation of courts, legislatures, philanthropists, and all humane citizens. A study of the statistics of its operation has gained for the system the universal approbation of all investigators, and has produced earnest advocates for its adoption in many other states. Three states, at least, have adopted it in part within the last two years. It is pending in the legislatures of several.

In 1900 the legislature of New Jersey adopted the system in a short and simple statute. The results which have been attained under the operation of this act in a single county of New Jersey—the county of Essex, in which is the large city of Newark—are most remarkable. The probation officer was appointed on April 1, 1900. Up to December 1, 1901, a period of twenty months, he had had committed to his custody 193 persons—184 males and 9 females—and of these only 15 have broken their probation, have failed to report to the officer, or have been rearrested for additional criminal acts. Of the 193, there were 88 male and 7 female adults, 77 males and 2 females between 16 and 21 years of age, and 19 boys under 16 years of age. The New Jersey law applies only to cases in which the offender is under accusation or indictment for crime. Hence, these 193 persons were all committed to the probation officer by the quarter-sessions court; and but for this officer all would probably have served at least a short term in the penitentiary. They have been saved from that. The difference in the effect upon the future life and character of these persons is beyond estimation. It is the difference between loss of self-respect and increase of self-respect. In the one case, the state is pushing the man farther down the road of crime; in the other, it is helping him up and away from that highway.

Co-Operative Telephone Service in Wisconsin

February Review of Reviews, New York

THE Wisconsin valley people received the telephone, just as most Americans received it, at the hands of a great monopoly. Ten years ago, the customary rates for telephone service in this country, for the smaller cities and villages, were \$48 a year for stores and offices and \$36 for private houses. These are still the prevailing rates in many places. These were the rates maintained for the Grand Rapids exchange, which included only about seventy instruments. In 1894, some of the Grand Rapids subscribers, believing that the charges were exorbitant in view of the service rendered, petitioned for a reduction. Their request was denied. The next step was the forming of a coöperative company to set up an independent telephone exchange for Grand Rapids and vicinity. The company was organized on this basis: a capitalization of \$5,000, divided into 100 shares, each representing the cost of installation of a single telephone (\$50); each stockholder to be permitted to hold one share of stock for each telephone rented by him, and no more; ownership of the stock to be absolutely confined to renters of telephones; dividends of at least one per cent per month to be paid on the stock.

The estimates of expenses made by the promoters of the new exchange were verified by experience; for at the monthly rates established—\$2.25 for stores and offices and \$1 for residences—the company was not only able to give good service, but increased its dividends from the one per cent a month required by its charter to one and one-half per cent, so that in time the members had to pay only \$1.50 a month for business service (after deducting the dividend), while for residence service the extremely low rate of 25 cents a month was paid. The new company found that its operating expenses would be, approximately, \$9 a year for each instrument. Adding \$3.50 to cover interest and depreciation of plant, it is clear that an income of twenty-five per cent on the investment was required. The rates were adjusted to secure this income and at the same time to maintain a small sinking fund to provide for improvements in the service. Starting with an exchange of eighty-three 'phones, the business steadily increased from year to year, until at the present time there are about 300 instruments in use, or one to every 17 persons in the community.

The lesson of the Grand Rapids experience was not unheeded by neighboring cities. Similar coöperative telephone systems have been organized in the other Wisconsin valley cities of Wausau, Merrill, and Marshfield, all of which were formerly profitable territory for the operations of the same monopoly that dictated terms to Grand Rapids. In this little group of Wisconsin valley towns, an aggregate population of from 30,000 to 40,000 is now served by coöperative telephone exchanges. The next step will be independent long-distance connections.

SOCIAL REGENERATION IN INDIA: The active interest taken by a few Indian ladies in the Bombay Social conference, that was held at Bombay recently is a noteworthy point, denoting the advance that the cause of social regeneration in India is making among the women. Regarding the advocacy of female education in India, a daughter of Mr. Justice Chandavarkar, Mrs. Shiror, addressed the meeting in English, appealing to her countrywomen to restore their womankind to that place in society which it enjoyed in the days of yore.—Mysore (India) *Standard*.

LETTERS & ART

The Memorial to Queen Victoria

SATISFACTORY RESULT OF THE ARCHITECTURAL COMPETITION

ACCORDING to the *Pall Mall Magazine*, England has secured a work of art in the national memorial to Queen Victoria. Mr. Frederick Wedmore, who contributes the article, says that the commission appointed for this service has drawn from the right sources. Mindful of the fact that the government had often expended vast sums of money for art and secured only mediocrity (as was the case of the Albert memorial), the commission decided to invite five representative architects to compete: three Englishmen, Mr. Aston Webb, who has done important work in London; Mr. T. G. Jackson, architect of the new buildings at Oxford; Mr. Ernest George, whose work was so extravagantly praised by Ruskin; one Irishman, Sir Thomas Drew, president of the Royal Hibernian academy; one Scotchman, Dr. Anderson, who has done notable work in Edinburgh. The successful competitor was Mr. Aston Webb, whose general design was selected for the architectural treatment of the immense space in front of Buckingham palace allotted for the memorial. The central monument, with the statue of the queen for its principal feature, had already been entrusted to Mr. Thomas Brock.

The accompanying illustration gives the general plan of Mr. Webb's design. Of its artistic features,

Mr. Wedmore says: "Proportion, breadth, unity; these are high virtues in any work of art; rare always, and rare especially where the work is, of necessity, complicated and intricate, as this is. The admirable bend, the studied curve, just at the central point of the long line of arcade, gives an air of classic beauty. The whole is wisely planned, and, solidly wrought, it will be a scheme of harmony, and not an assemblage of compromises, a chance muddle. Mr. Webb's scheme and Mr. Brock's statue are happily wedded. Passing to a matter of detail, in which the latter is essentially right, his statue of the queen herself, upon the monumental fabric, is put in the true place. It is not at the top, as in one at least of the big schemes in the architectural competition, it was suggested it should be. It is not high up. In Mr. Brock's group, a symbolical figure—not the queen at all, but the emblem of her glory trumpeted to all the winds—crowns the edifice; and, at no great height above the people who will pass, the queen, amongst her people, as of old, sits—as she sat and moved of old—with her face of homely wisdom and profound feeling. It is what the nation most wanted—a record of the virtues and triumphs, of the gathered years and weighted meditations and crowning wisdom of the great queen."

From the *Pall Mall Magazine*

A BIRD'S-EYE VIEW OF THE MEMORIAL TO QUEEN VICTORIA

The Victor Hugo Centenary

KENYON WEST, in the February *Outlook*, New York
Condensed for PUBLIC OPINION

ON February 26 will come the centenary of the birth of Victor Hugo. The French people intend to celebrate this interesting event by appropriate and enthusiastic ceremonies. The house, No. 6 Place Royale (now known as the Place des Vosges), in which the poet lived for nearly eighteen years, will be set apart as a museum to hold portraits, autographs, first editions, and their original illustrations, many valuable personal relics, and probably some of the luxurious furnishings in which the poet took such pleasure. Eugène de Mirecourt has left us a glowing description of this house in the Place Royale, for in his opinion Victor Hugo was the first to restore a taste for beautiful historic furniture. There were rich tapestries, one representing in crimson the Romance of the Rose; ancient drawings; the dining-room stove, concealed by a "splendid panoply to which twenty centuries seemed to have paid tribute." In the salon was a crimson-and-gold banner which had been captured at the siege of Algiers. The poet's study was a dream of beauty, peopled by his fancy with rare, curious, and artistic objects. Through stained-glass windows fell the light upon gems, lacquer-work, statuary, old Sèvres. Such a description as Mirecourt's helps us to understand the complex personality of the poet and to feel that the gorgeous, opulent, occasionally extravagant imaginings which found expression in some of his books were but another phase of his taste for the quaint, the curious, the barbaric, the antique, sometimes the grotesque. At the time of the revolution of 1848, the iron-barred gate of Louis XIII, which was in harmony with the seventeenth-century architecture of the Place Royale, was taken down. This annoyed the poet greatly, and he decided to change his residence. A sale followed, and many of his treasures were dispersed; but he straightway commenced to gather a new collection, and in the arrangement of his new abode he showed originality and taste. The house in Guernsey in which he lived during a part of his long exile from France was also noted for its treasures. Not the least interesting of these were drawings executed by the poet himself.

M. Paul Meurice has evidently preserved relics of Victor Hugo, for it is said that many of the most valuable which are to be in the museum in the Place des Vosges have been contributed by him, and he has also given to the city of Paris the sum of twenty thousand francs to aid in the establishment and maintenance of the museum. An imposing monument in honor of Victor Hugo will also adorn Paris, and will prove to the world that France, so often ungrateful to her noblest sons and unmindful of their services, does indeed cherish the life and the work of this her greatest poet and is loyal to his memory.

When the centenary of Dante was celebrated, Victor Hugo wrote to the Gonfalonier of Florence: "Let us not say that nations are ungrateful at a given moment. A man has been the conscience of a people. By glorifying that man, the people attests the existence of its own conscience." There have been suggestions that there should be an international celebration of the centenary of Victor Hugo (Rudyard Kipling is proposed to represent England). But even if there should be no formal recognition of the event, the world will wait with interest the comments in France from French thinkers and critics.

It is not yet seventeen years since Victor Hugo passed out into the infinite sea of the immortal life. It is not yet possible to estimate with exactitude how much of his work is to endure. Many of the literary and political questions which influenced him so profoundly are still subjects for inquiry, for discussion, and for controversy. Principles for which he fought so bravely and won such masterly victories have still to be fought for. Only when these problems are solved will his winged words lose their power. Some of his books will indeed be forgotten with the local occasions which gave them birth, but all of his work will be of value to the student who studies French literature in a time of peculiar and absorbing interest, and who is concerned with the political agitations of a most vivid and intense period in French history. And this is certain: as long as the heart has passions, as long as life has woes, Victor Hugo's best work will last.

Two Tendencies in Modern Music

DANIEL GREGORY MASON, in the February *Atlantic Monthly*, Boston. Condensed for PUBLIC OPINION

THERE is noticeable in modern music, first, an effort to express emotions more directly, more poignantly, and with less of the restraint imposed by non-emotional considerations than ever before. Music becomes, above all, the language of mood, an utterance passionate and wayward. But, secondly, this tendency is opposed by another, which seeks, not a more intense expression of feeling, but a more highly organized type of beauty. Music, it says, in order to progress, must seek no outer bond, no power dependent on association; it must aim, rather, at a greater perfection, increasing differentiation of inner means and effects, a unity built upon wider variety, a symmetry more many-sided and complex. In brief, one ideal of music is emotional expression; another is plastic beauty. Let us add at once that these are the ideals of the two greatest composers of our time, Tschaikowsky and Brahms, in whose works the two phases of art can be best exemplified and interpreted.

In all arts there is more or less conflict between beauty, the aim of the art as an art, and expression, its necessary condition as a human instrument. Thus, for example, the poet, in order to express his thought, must often use words either harsh and discordant in themselves, or cheapened by vulgar associations; beauty becomes a victim on the altar of expression. Or again, the landscape painter has to choose whether he will represent a given tree in its actual position, thereby injuring the balance of his picture, or place it where beauty would have it, thereby abating the truth of his expression. Such dilemmas illustrate the conflict that always exists in the real world between inner need and outer fact. Stubborn maladjustments of material are ever hindering the representative artist in his pursuit of beauty. Such maladjustments, however, are at their minimum in the art of music. The material it deals with is not objective, given as brute fact, alien to the mind, and therefore in defective harmony with it; if the reader will reflect that all the relations of harmony, melody, and rhythm—that is to say, all the relations of music—have been founded by the laws of the human mind, expressing themselves historically in the selection and disposal of the twelve tones of our scale, with such relations to each other as consonance, dissonance, and the like, he will get a general notion how musical material is ductile to the creative mind as no wholly external material can be.

The full and unrestrained expression of each emotion throws out inevitably the harmony of the piece as a whole; we can not have in one work the maximum of emotional expressiveness and the maximum of organic perfection. Tschai-kowsky is liable to incoherence, Brahms to dryness. In other words, Brahms has stamped the romantic ideas of Schumann and his fellows with the organic beauty of classicism. Our conclusion is inevitable. We must look upon Tschai-kowsky as a new romanticist, opening up unexplored fields of emotional expression; "losing in art," to be sure, "what he gains in poetry," but enriching the resources of music just as Schumann enriched them before him. Once looked at in this light, Tschai-kowsky falls into his true place, and we see that his fresh and sincere expression is a real contribution to the development of art, awaiting only some future Brahms to assimilate and reconstitute it in those forms of inner harmony that can alone give music its highest eloquence.

The Poetry of the South

HAVE THE SOUTHERN POETS BEEN NEGLECTED?

IT is the opinion of Mr. Hamilton Wright Mabie that with the exception of Poe, the southern poets have not yet received adequate attention at the hands of students and critics of American literature. Writing for the February *International Monthly* on this subject, he says: "The student of vital conditions in this country might have anticipated that the deepest and richest poetic movement would take place in the south rather than in the north. History has failed to confirm such a prediction; but it remains true that in lyrical quality, in sensitiveness, in simplicity, and directness of emotional response to the appeals of beauty in nature, in that capacity for pure song which more than anything else reveals the poetic temperament, the southern poets are at one, from the time of Poe to that of Lanier. The product is not great in mass; it is by no means so comprehensively interpretative of the spiritual history of a great community as is the work of the northern poets; but so far as it goes, it is pure poetry: it is poetry for the love of beauty rather than poetry for the sake of ideas. It is transparently sincere; its spontaneity gives it fidelity to experience and emotion; it is the poetry of feeling rather than of the intellect."

Mr. Mabie cites Henry Timrod, Paul Hamilton Hayne, William Gilmore Simms, and Sidney Lanier as poets whose works have never received the attention they merit. These southern poets, he asserts, "share a richness of temperament, a freedom and courage of emotion, denied to the majority of the New England poets. They are natural singers, with a quick ear for melody of the kind which instantly discloses its charm. They are mellifluous; they are, one and all, lovers of nature; but, with the exception of Lanier, they approach her through the feelings and sentiments, and are content to describe her rich and tropical aspects. These inspirations are not deep, nor is their art broad and well sustained. Their verse lacks fullness and variety of thought, and is often over-sensuous in expression. The verse forms used are few and simple, and there are abundant evidences of lack of artistic training. That which is real in them is their simplicity of feeling, their naturalness of manner, their command of the singing note. There is often a note of provincialism in their praises of their section and their people, a note of exaggeration, a

note, in other words, of that inexperience which had its root in lack of that close contact with other communities which gives a sound and true perspective. The old south was fatally hampered in its later intellectual development by the fact that there was in its social and industrial system one feature which could not be discussed. That fact created a barrier between a generous people and the rest of the world, developed an abnormal, local sensitiveness, and fostered a tone of exaggeration which is reflected in the minor poets, from which Lanier's largeness entirely preserved him. There is, however, the charm of the southern temperament even in the most conventional of those singers—warmth, grace, power of abandon, generosity of spirit; qualities which are winning under any conditions, and which, reinforced by adequate, artistic training and adequate ideas, promise rich fruitage in the poetry of the future."

The Triumph of Forgotten Things

EDITH M. THOMAS, in *Harper's Magazine*

There is a pity in forgotten things,
Banished the heart they can no longer fill,
Since restless Fancy, spreading swallow wings,
Must seek new pleasures still!

There is a patience, too, in things forgot;
They wait—they find the portal long unused;
And knocking there, it shall refuse them not—
Nor aught shall be refused!

Ah, yes! though we, unheeding years on years,
In alien pledges spend the heart's estate,
They bide some blessed moment of quick tears—
Some moment without date—

Some gleam on flower, or leaf, or beaded dew,
Some tremble at the ear of memoried sound
Of mother-song—they seize the slender clew—
The old loves gather round!

When that which lured us once now lureth not,
But the tired hands their gathered dross let fall,
This is the triumph of the things forgot—
To hear the tired heart call!

And they are with us at Life's farthest reach,
A light when into shadow all else dips,
As, in the stranger's land, their native speech
Returns to dying lips!

Various Topics

FOR A NATIONAL OPERA HOUSE: The Earl of Dysart has offered £10,000 toward the erection of a national opera house in London, provided the balance of the £500,000, which he believes is needed, is raised in six months. The earl has long been interested in this scheme, and has associated himself with Prof. Stanford and Sir Alexander Mackenzie in an endeavor to get the county council to assist and subsidize a British home for opera.

TRIBUTE TO RISTORI: The eightieth birthday of Adelaide Ristori, the famous Italian tragic actress, was celebrated in Rome by a performance at the *Teatro della Valle*, at which Signor Tommaso Salvini declaimed verses in honor of the occasion. The actress received gifts and congratulations from all parts of the world. King Victor Emmanuel, accompanied by a numerous suite, visited her and presented a diamond bracelet, the gift of Queen Helena. Mme. Ristori, the daughter of strolling players, when fourteen years of age was playing "Francesca da Rimini" to the delight of Italian provincials. At the age of twenty-four she married the Marquis Capranica del Grillo. She essayed the rôles of Medea, Myrrha, Judith, Phedra, and Lady Macbeth, and in all reached the climax of triumph. She met with an enthusiastic reception in Paris and all the European capitals, and during her four tours in America, the last of which was undertaken in 1884.

SCIENTIFIC

The Congo Pygmies

SIR HARRY H. JOHNSTON, in the February *McClure's Magazine*, New York
Condensed for PUBLIC OPINION

THE Congo pygmies appear to be divisible into two types, according to my own observations and to those of preceding travelers—one with a reddish or yellowish-brown skin and a tendency to red in the head-hair, and the other a black-skinned type with entirely black head-hair. It is possible that the original type of dwarf had a dirty brown skin, and a tendency to red both in the body and head-hair, and that this type mingled anciently with the first true Negro invaders of the forest—a people with decidedly black skins—and produced a black type of dwarf, which now seems to exist conjointly with the red or yellow pygmy; that is to say, in the same family of pygmies there may be both types. In stature, perhaps, the black type tends to be slightly taller than the other. The tallest specimen of pygmy measured by me or by my assistants was about five feet in height; but the average altitude for men was four feet seven inches, and for women four feet two inches. Several of the men measured by me were only four feet two inches in height. One adult woman was just under four feet. There are two features which markedly distinguish these dwarfs from other Negroes—the shape of the nose, and the long upper lip. The nose has a very low bridge, and is exceedingly broad. The upper lip, besides being long and prognathous, is not so much everted as in the ordinary Negro. The chin is very weak and receding. The neck is short, and the head is sunk rather between the shoulders, though not so markedly as in the ape-like types referred to in the first part of this article. The legs are short in proportion to the body, though they are usually sturdy little limbs.

The Congo pygmies keep no domestic animals, and do not practice agriculture. They live entirely by hunting, and eat the flesh of monkeys, of almost all other beasts and birds which they capture in their snares or shoot with their arrows; and they also feed on certain grubs, on honey, and on the bee-grubs found in the honey-comb. They range the forests far and wide, indifferent whether they lose their way or not,

since they sleep and feed in the forests, and are in a sense always at home. Seemingly they have only known the use of metal (iron) by their contact with Negroes of superior race. Before this contact they seem to have used weapons and implements of wood, possibly also of stone. Even at the present day they not infrequently use wooden arrows. Their huts are about four feet high and about four feet in diameter, and are usually built of withes or branches stuck into the ground at both ends, in a semi-circle. Over this framework of bent boughs a thatch of large leaves is laid on, and a small hole is left at the side, through which the little pygmy crawls in to lie on his bed of leaves.

The dwarfs appear to have no language of their own, but simply to talk more or less imperfectly the tongue of the big Negroes who are their nearest neighbors. Thus the dwarfs whom Stanley encountered on his various journeys across Congoland were always found to be speaking corrupt Bantu dialects, or in one instance a language scarcely differing from Manyema. Their pronunciation of these languages is imperfect, and they are much given to replacing certain consonants by little gasps, and sometimes by a sound which faintly recalls the South African click. They speak with a singularly musical intonation, their speech being almost intoned. Their pronunciation of words is rather *staccato*, each syllable being pronounced separately and distinctly. They are very fond of singing and dancing, and the songs that they croon are distinctly melodious.

The Congo dwarfs, though they may exhibit ape-like features in their bodies, and though in their natural life they are absolutely savage, display nevertheless a certain alertness which gives one the impression that they possess quicker intelligence and a greater adaptability of mind than the ordinary big Negro. They are admirable mimics. They learn languages easily, though they may speak them with a defective pronunciation. The little dwarf women readily attach themselves to Negroes of the big races, and make affectionate and dutiful wives. When Captain (now General Sir Frederic) Lugard journeyed through the Semliki forests, the Sudanese soldiers by whom he was accompanied brought away with them several dwarf women whom they married. It used to be an amusing sight to see husband and wife together, the husband perhaps six feet in stature and broad in proportion, and the little wife four feet only, and disproportionately broad, walking along by the side of him.

The Englishman is 5 feet 11 inches—
the pygmy, 4 feet 6 inches

Rivers of the Ocean

THEODORE WATERS, in the February *Ainslee's Magazine*, New York. Condensed for PUBLIC OPINION

THE United States government is making concerted effort to obtain information concerning ocean currents by observing the conduct of sealed bottles thrown overboard to drift. The bottles are distributed by shipmasters who coöperate with the hydrographic office. This system has been in operation for years, and the result is a series of charts, covered not with numberless criss-cross streaks, but with long lines running almost parallel with one another, showing how, after each bottle floated into the path of an ocean river, it followed the stream as accurately as though the latter were enclosed in precipitous banks, instead of being bounded merely by a medium of its own kind.

Take a map of the world and look upon the Atlantic ocean where the equator crosses from Africa to South America. This is the region of what sailors call the "trades," which push along a great body of water in a westerly direction. It flows from the coast of Africa to the coast of South America, and is known to seafarers as the equatorial current. When this current reaches Cape San Roque, it divides, part of it flowing in a northerly and part in a southerly direction. The north branch, under the name of the Gulf stream, warm with tropical heat and swift as a land-bordered river, flows northward off the coast of the United States toward the Grand banks of Newfoundland, after which, with a widening radius and a lessening force, it moves across the Atlantic toward northern Europe. That part of the equatorial current which splits off on Cape San Roque flows southward along the shore of South America to the neighborhood of the La Plata river, where it is met by a cold current flowing up from Cape Horn, and is deflected in a circle eastwardly to the coast of Africa.

Now, precisely the same condition exists in the Pacific ocean, only on a more widely extended scale. As in the Atlantic, the trade winds push a great equatorial current across the tropical regions. On reaching Asia this current divides, part flowing north and part south. The northern branch is the well-known Kuro Siwo (Blue Water), or Japan current, which flows in a great circle across the Pacific to the neighborhood of Vancouver, where it turns south along the California coast and joins the parent equatorial stream on its way westward. The southern branch flows down toward the east coast of Australia, meets an Antarctic current and, combining therewith, moves by a devious course to the South American coast, where, as the cold Humboldt current, it brings fog to the shores of Chile and Peru, follows the coast upward until it rejoins the current from the north and flows westward again under the influence of the equatorial trades.

In the Indian ocean there is a great wheel or swirl of water moving around and around. Like the others, it follows the equator west, then it goes down the coast of Madagascar, east again to Australia, and then north to complete its cycle.

It has been calculated that the five currents moving from the equator carry away more than half the solar heat received in the tropics and redistribute it in the temperate zones. This, then, is the mission of the great machine. If there were no currents in the ocean there would still be what is known as oceanic drift, which is the slow but constant interchange of the

CHART OF NORTH ATLANTIC, SHOWING THE PATHS OF FLOATING BOTTLES DISTRIBUTED BY THE HYDROGRAPHIC OFFICE

warm water of the tropics and the cold water of the poles. It is due to difference in specific gravity between warm and cold water, the flattening of the earth at the poles, the rotation of the earth on its axis, and other causes. But the equalization ultimately brought about by ocean drift would not be nearly as effective as that now maintained by the currents.

Intelligence in Animals

EDWARD L. THORNDIKE, in the February *International Monthly*, Burlington, Vt. Condensed for PUBLIC OPINION

THE systematic observations of animals has convinced me that in the common meaning of the word animals do not think at all, do not have any stock of ideas worthy of note, or form any considerable number of associations between them. Their consciousness seems to consist in the main simply of vague sensations of their surroundings, sensory emotions, and obscure impulses; their learning seems rarely to involve more than the association of these impulses with their sensations and emotions.

If man's psychological position in nature is apart from that of the lower animals, in general, in consequence of his ability to have ideas of all sorts and to learn by them, it becomes important to examine his mental kinship to his nearest physical relatives, the monkeys, and to ask, in particular, how far the latter represent an advance from the condition found in dogs, cats, and other mammals toward that found in man. With this aim I undertook experiments with monkeys, which might represent an advance along either or both of the following lines: (1) the presence, at least to some extent, of a stock of ideas influential in modifying conduct, or (2) the development of the animal method of learning by an increase in the number, delicacy, complexity, and permanence of the associations formed between situations and impulses to action. There are in the behavior of the monkeys some signs of the first sort of advance, and one can not feel the certainty in denying them an ideational life which he feels in the case of the dogs and cats. Yet they do not learn by seeing their fellows or human beings do things, nor from being put through the acts, thus failing to manifest two of the chief symptoms of a stock of ideas. The second sort of advance, how-

ever, is shown by the monkeys' behavior in all sorts of ways. No. 1, for instance, learned readily to open doors held by bars, single and double, hooks, single and double, bolts, loops of wire hung over nails, plugs, levers, etc. It was hard to put together by rough-and-ready carpentering a mechanism which his varied acts would not sooner or later hit upon.

If, then, we think of the human mind as a storehouse of ideas, the monkeys must be set apart with the other mammals, but if we think of it as the most complex associative mechanism in the animal kingdom, the mind of the monkeys should be included with it in a common group. Now the human mind is both. Consequently the extent to which one admits our mental kinship with the lower animals depends upon the degree of emphasis one lays on each of these two aspects. But to the question, "Which aspect is the more fundamental, the more important one in mental evolution?" I should certainly reply, "The increase in the human mind in the number, delicacy, and complexity of associations of the animal sort."

So, though for practical purposes and for common sense, man and the lower animals are mentally far apart, the deeper student may find the human mind to be as close a relative to their minds as is his body to their bodies. And it will seem nearest of all to the mind of the primates—his nearest physical relatives.

Music and Crime

AN INVESTIGATION INTO THE EFFECT OF MUSIC ON THE MORAL FACULTIES

MR. HENRY W. STRATTON has conducted an inquiry into the effect of music on the moral faculties, and gives the results in the February *Arena*. Warden Bridges, of the Massachusetts state prison, is quoted as saying that as a reformatory agent "music helps; that is, I consider it beneficial, but can not recall any instances of men being morally improved by it. I have noticed, however, that a good singer often produces a better effect upon our audiences than a sermon." A different view was expressed by the Rev. S. Stanley Searing, chaplain of the house of correction at South Boston, Massachusetts. He is of the opinion that "music can and should be applied more practically to develop the moral sense."

Mr. Stratton is an enthusiastic believer in the efficacy of music as a moral agent, and he claims that where it appears to fail, the explanation is to be sought in the fact that the wrong sort of music was used. It is the simple folk-song, and not the oratorio or symphony, that uplifts, and on this point Professor Dolbear is quoted as saying that the music "must be of a kind that sings itself, and modern composers have little respect for that kind. Whoever reaches for character will take the old road, make his music to fit the people, and not expect to make the people fit his music. Proper music is as definitely related to character as is action to thought."

From the foregoing it is clear, the author claims, that the nature of music—that is, the simple essence of it—tends to promote moral improvement of the race. Just what music can do for criminals in general and for anarchists in particular depends upon its quality and the method of using it. Cabanis observes: "There are peculiar combinations of sounds, and even of single tones, that affect all the faculties of sense; these, by their immediate action upon the soul, arouse certain sentiments over which they seem to have special power, in accordance with the primitive laws of organization."

The Migration of Man Over the Face of the Earth

PROF. LINDLEY M. KEASBEY, in the February *Popular Science Monthly*, New York. Excerpt

TAKING the geological location of the remains of *Pithecanthropus* into consideration, we conclude that the differentiation of the human species took place during tertiary times. Reasoning in like manner from the geographical situation of the discovery, we may suppose Indo-Malaysia to have been the cradle-land of mankind. The assumption is further substantiated by the fact that this tropical region is still the home of many of the higher apes, and was probably the point of departure for the dispersion of the other anthropoids. If we turn, now, to the evidences of quaternary culture we shall find a multitude of human relics buried in the pleistocene or post-pleistocene deposits of every continent of the globe. The widespread diffusion of these remains proves beyond peradventure the existence of man in every quarter of the earth at the beginning of the prehistoric epoch. Obviously, then, the descendants of the pliocene precursor must have wandered far and wide from the original abode during the long geological era that elapsed between the pliocene and post-pleistocene periods.

Subjectively speaking, there were evidently no difficulties in the way. The human prototype was structurally fitted to walk, and his omnivorous manner of life must in itself have led him further and further forth in search of subsistence. It is only when objective conditions are taken into account that obstacles appear to arise. Granting primeval man's ability and desire to wander, how are we to imagine he endured the vicissitudes of climate that met him on the march? and how are we to suppose he crossed the seas that separate the several continents?

The possibilities of dispersion during the glacial, interglacial, and post-glacial periods may be generalized as follows: Each time the northern hemisphere was glaciated, the migrations of men must have been confined for the most part within the Indo-Mediterranean-Malaysian belt and the southern peninsulas of the old world. During the genial epochs that intervened between the three great glacial movements from the north, the continental area was open to incursion on either side, the climate of the northern hemisphere was everywhere equable, and the topographic conditions were such as to encourage migration along the Atlantic and Pacific shores of the Eurasian continent into the arctic peninsulas of the new world. As the arctic glaciers became more and more restricted to the northern regions, primeval men were probably able to hold their own in the continental area and migrate east and west across Eurasia. But after the third glacial epoch, if not before, the Atlantic land-bridge was broken; so that henceforth access to America was only possible along the Pacific, by means of the Aleutian island chain.

Cave deposits and fossil remains mark the course of the dispersion of mankind in these different directions. The aboriginal inhabitants of the now separated continents and isolated islands of the globe also preserve certain distinguishing characteristics by which the lines of their respective ancestries can be traced back along these several routes to more or less definite points of departure about the Indo-Malaysian abode. There is archeological and ethnological evidence, therefore, to show that primeval men migrated originally along the lines laid down by the climate and topography of the glacial periods.

RELIGIOUS

Theology and Thriftlessness

CHARLES BARTLETT DYKE, in the February *Popular Science Monthly*,
Garrison, N. Y. Condensed for PUBLIC OPINION

THE Negro's real menace to the south lies in the paucity of his earthly wants. Poverty, even though it may entail dishonesty, is too often accepted as a dispensation of Providence, to be compensated for later by the glories of heaven. A recent study of twelve hundred Negro children brings out strongly their limited ideas of what constitutes wealth, their lack of thrift, and the sanction placed upon poverty by their religious teachers. While fewer than one-fifth of the older children living in cities repudiate wealth, one-half of the country children from fourteen to twenty years of age distinctly declare their preference for poverty. The children of the city poor usually see the ordinary comforts of life in evidence among their more fortunate neighbors, and often their ambition is aroused to acquire equally desirable property. On the other hand, in the rural districts the standard of living varies less widely, and there is less evidence of prosperity to stimulate the desire for wealth. However, the disproportionate number of country children who exalt poverty does not depend upon the merely passive effect of neighborhood conditions. Their papers bear proof of positive teaching that the accumulation of property is opposed to religion. Almost all who repudiate wealth do so on religious grounds. Between the *civitas diaboli* of the wealthy and the *civitas Dei* of the poor a sharp distinction is drawn. The wealthy are declared to be sickly, discontented, and unhappy, spending their nights sleeplessly guarding their treasure. They are wicked and cruel, and 'get their wealth by stealing from the poor.' A girl of sixteen sums up the general impression in her statement that "A rich person never feels happy, they is always sad and unhappy." "Them that is not rich is happy Always." The attitude of the great majority is that "God don't leck rich folks."

The following replies are typical of this sentiment:

Girl, 15. No, I would not like to be rich because a rich person will not enter the Kingdom of Heaven. I would rather be poor and be kind and gentle in my manner.

Boy 17. No, I would forget the Lord and put my whole heart and mind in my riches.

Boy, 20. I don't care to ever be rich. If I were rich it might come to me to turn to the things of the world, and not on heavenly affairs.

Bearing in mind that wealth in the black belt means merely a decent standard of living, we must regard the religious ban placed upon its accumulation as a positive encouragement of unthrift. This theology is undoubtedly an outgrowth of slavery. It was most desirable to suppress in slaves any ambition to own property. But the great obstacle to useful citizenship today is this very lack of ambition. For sloth and extravagance are justified by the belief that God has placed a ban upon the fruits of industry and foresight.

It is a significant fact that only three children find any religious sanction for accumulating property. A girl of thirteen declares that: "The Lord put something on this earth for everyone," and another justifies herself by the statement: "My Father in heaven is rich." An Alabama boy of seventeen writes: "I would like to be rich, because I could serve God bet-

ter. I wouldn't have to plow and get angry with the mules." A girl of eighteen sends a beautiful specimen of casuistry. "I would like to be rich, then I would be able to live above wants. Though the Bible says it is impossible for a rich man to enter the kingdom of heaven. But I would trust God. Because there is nothing impossible with God." The different religious teaching of city children certainly accounts largely for their different attitude towards wealth. Among the Negro clergymen of the cities represented are men distinguished for broad training, for careful investigation of social conditions, and for rare personal devotion. Realizing that the progress of their race depends largely upon its industrial development, they constantly exalt thrift and a good standard of living in their teachings. There is no present danger that the growth of avarice will destroy the Negro's religious sentiment.

The Uses of a Cathedral

RT. REV. HENRY C. POTTER, in the February *Century*, New York. Condensed for PUBLIC OPINION

WHAT do we want, in modern times, with a cathedral? To that question, in its merely ecclesiastical aspect, I will not now stop to reply. There is a much larger aspect of it with which everyone is concerned who believes that "the best deserves the best"; and what the best is, in our American civilization, I do not believe any considerable number of people are seriously in doubt. They may not have any keen personal sense of their own need of a religion; but they know that the religion which is inwrought with all the history of the American people stands for certain definite ideals of truth, and purity, and honesty, and loyalty, and self-sacrifice, which, from our first beginnings here, men have always held high aloft. And they know also that a great idea demands, from the very nature of it, expression, incarnation—visible and material utterance, in a word, worthy of its majesty and grandeur.

This is a democratic age, but reserved rights in God's house for kings, governors, peers, plutocrats, privileged people of many kinds, but of one unbrotherly temper, have encroached upon the temple of Him who declared in the beginning, "All ye are brethren," until, as to the consummate blossom of the whole business, we have the modern pew system. Well, in one cathedral, at any rate, there will be no pews, no locked doors, no prepayment for sittings, no reserved rights of caste or rank, but one and the same welcome for all.

And this brings me to another note of the true cathedral. There is one characteristic of the days through which we are living of which all thoughtful men and women, and many who are accounted the least thoughtful, are aware: it is a period, in the realm of fundamental beliefs, of suspense. I am not one of those who believe that religion is losing its hold upon the individual faith and conscience. Dogmatic statements, reactionary exaggerations of particular periods of religious revolt or reform—hardened, under the stress of intense feeling, into cruel and inexorable

forms—may have done that, and, as a consequence, may have left many honest minds, for the moment, adrift. Such persons are not ripe to be either “corralled or classified. The deepest in them is passing through a transition stage, out of which one may hope they will find their way to clearer light and a firmer standing-ground. But in the meantime, and until they can, something larger, higher, wider, roomier, more impersonal for the time being than the parish church is wanted for them; and that is the place and office of the cathedral: God’s house, but with no parish list, no inquisitive interrogation, no parochial enrollment, but just space and silence, the majesty of worship—and absolute freedom to come and go.

And all this leads up to one other office which a cathedral alone can fill, and which, by many minds, will be esteemed the highest. It is not a “one-voice” or a “one-man” church. The ordinary parish church is served by one person, who fills its pulpit all the year round; and even in the churches to which two or more clergy are attached, the rector is expected to do the preaching, and if he does not, the people who pay

From the Century

THE CATHEDRAL OF ST. JOHN THE DIVINE

their pew-rent look black. And so it is well that, in every great center, at any rate, there shall be one pulpit which shall command and constrain to its service the best, of whatever bias or tradition; the ablest, the most fearless, the most persuasive; one pulpit which shall be dominated by no trustees or vestry or plethoric pewholder—by nobody who can threaten to “give up his pew,” for the simple reason that there will be no pew to give up, and who can stifle or strangle no clarion voice that dares to tell men the truth by “cutting off the supplies.”

“THE EVANGELIST”: In transferring to our columns from the *Critic* a sonnet by W. C. Wilkinson, entitled “Who?” we changed the title to “The Evangelist.” Mr. Wilkinson informs us that he has been taken severely to task by a correspondent who was offended by the application of the lines the “the evangelist.” We therefore assume all responsibility for the title used, remaining firm in the belief that it was the better of the two.

Decrease of Theological Students

IS THE MINISTRY BECOMING LESS ATTRACTIVE?

BAPTISTS should be interested in an investigation recently carried through by a prominent Baptist paper, the *Standard* (Chicago), with a view to discovering the ratio of increase or decrease in number of theological students now in the Baptist seminaries, the cause of the decrease, if there is one, and the remedy. The replies were in the main expressions of individual opinion and therefore inconclusive and unsatisfactory. One correspondent makes a comparison of the registration at Newton, Colgate, Rochester, Crozer, Southern, and Chicago, the six leading seminaries of the denomination, showing that in 1900 the number of students was two and six-tenths times greater than it was in 1875, although the number of churches had hardly more than doubled. A different sort of comparison is set up by Jesse B. Thomas, of Newton theological seminary. “Within the last quarter of a century the number of recorded theological students has fallen from 120 to 114 per million people, while the proportion of law students has risen from 61 to 163, and of medicine from 196 to 327. During the last year of the century theology lost 252 students, while law gained 642 and medicine 1,435.”

When it comes to declaring the causes which have led to this relative falling behind, there is a manifest groping on the part of the correspondents. The attractiveness of other occupations is alleged by several. The low religious condition of the churches is also charged with being responsible. Higher requirements, an impression among young men that the profession is already overcrowded, the spirit of commercialism, the progress of scientific thought and method, small salaries, and national expansion calling men to political or military activity are presented as possible causes.

In the matter of a remedy for the present condition, there is but one voice. Let the churches lay greater emphasis upon the importance of the work of the ministry and the need for trained and educated men to carry it on.

In the *Examiner*, another Baptist paper, Rev. Robert Bell Fisher discusses the same subject with reference to several denominations. He finds in the Congregationalist seminaries a decrease of 42 per cent in the last ten years and of 33 1-3 per cent in the last five. Presbyterians show a loss of 28 1-3 per cent in the decade and of 36 per cent in five years. The graduates from the seminaries of the Reformed church increased from thirteen in 1892 to eighteen in 1901. Methodists gained 11½ per cent during the decade, but suffered a loss of 30 per cent during the last five years. According to this investigator, the number of students in all the Baptist seminaries increased 27 per cent in the ten years, but fell off 5 per cent during the last five.

Willis G. Craig speaks for the Presbyterians in the *Interior* and makes a special effort to rebut the charge that the ministry is overcrowded. “The proportion of unemployed ministers is very small relative to the whole number of ministers. Of these, many are not available for the churches which most need the care of a settled pastor for their upbuilding and strengthening. Some of our ministers have failed to show fitness for the ministerial calling, and have practically turned to other occupations. That there should be such failures is inevitable. The same thing occurs in every profession. If every one of our available, un-

employed ministers was settled over a vacant church today, our vacancies would not be filled, and there would be no provision made for advance work, either at home or abroad. So we maintain that the facts set out in true proportion will sustain the contention that there is no surplus of usable ministers in the Presbyterian church, and the same facts will force the conclusion that we are now short of ministers required to man our work properly, and that this shortage will soon be an acknowledged disaster, if our young men are not speedily drawn, in increasing numbers, to the sacred calling."

Gambling Not Immoral

A DEFENSE OF MR. SCHWAB

THAT President Charles M. Schwab, of the United States Steel corporation, committed any moral wrong when he staked his money at Monte Carlo is denied vigorously by the *Pittsburg Catholic Observer*. The *Observer* says: "Lest Catholics themselves should get a false conscience from the Protestant clamor, the *Observer* thinks proper to state that there is nothing essentially evil in taking part in any game of chance, that Mr. Schwab did not exceed in his ventures the amount of money he could afford to spend for his

amusement, and that it is not against the civil law in Monte Carlo to play those gambling games. When there is no cheating at a game of chance, when the players can afford to risk the stakes, when they do not lose their temper and grow angry, when they do not waste time that belongs to some duty, and when in no other way do they offend against justice or charity, under what commandment do they commit a moral wrong? There is nothing sinful in chance, since the eleven apostles chose a successor to Judas by lot. There is nothing wrong in making an agreement to let chance decide who shall have a stake.

"Of course, in gambling as ordinarily conducted, there is cheating, and that is fraud and robbery, and is forbidden by the seventh commandment. Again, gambling is like liquor in this that indulgence in it is apt to grow into a habit and to go into excess. In that way it is dangerous. When it takes more time or money or thought than can be safely expended for one's entertainment, or when it leads to quarrels, it is a proximate occasion of sins that may easily be mortal and so must be avoided. But there was no harm in Mr. Schwab's play in itself or for him. He played only a few times and risked only an amount that is to him a trifle. The to-do that has been made of his play is only an outcropping of the latent Puritanism that wants to make the straight and narrow way a good deal straighter and narrower than it is."

MISCELLANY

A Newspaper with Many Functions

THE WONDERFUL BUENOS AYRES *La Prensa*

IN Buenos Ayres there is a newspaper establishment unmatched in all the world. *La Prensa* (*The Press*), the greatest newspaper in South America, owned by Dr. J. C. P. Paz, formerly Argentine minister to France, and edited by his son, Esequiel P. Paz, is not only a newspaper, but a free doctor, a free lawyer, a free library, a free forum, a free museum, and a free hotel for distinguished visitors. Mr. Bernard Meiklejohn contributes the following account of this wonderful institution to the February *World's Work*:

The establishment is at first glance an imposing gray marble structure, standing on the finest boulevard in the city. Towering nearly 200 feet above the pavement is a colossal figure of golden bronze, by Thiébauld, of Paris, representing *La Prensa* (*The Press*), holding in her hand a lantern. During the Boer war, a yellow light flashed from the lantern meant a British victory; a green light meant a Boer victory. The statue stands on a tower just in front of a glass roof which covers the courtyard around which the structure is built. This courtyard fills one of the important functions of the paper. In political crises or other times of public excitement the gates are swung wide open, and into the court pour the people—as many as wish, up to 2,500—for a public demonstration.

On the ground floor are the business offices, a luxuriously furnished consulting-room, where the poor may get free legal advice; a free medical consulting-room, and a free museum. The chief physician, with five assistants, attends an average of 110 patients a day from noon to midnight. The museum, much like our Philadelphia commercial museum, is devoted to

the exhibition of Argentine products and manufactures, from a sheaf of wheat to a pair of boots; and connected therewith is a chemical laboratory where such work is carried on as the analyzing of soils for farmers. Any citizen may have this service free. On the second floor are the luxurious offices of the proprietor, the editor, and the editorial writers. Instead of a corner, a worn desk, a pot of paste, an inkwell, and a nail for his hat, an editor has the use of gorgeous drawing-rooms, smoking-rooms, a billiard-room—such equipments, indeed, as make life a sort of editorial paradise. On the same floor is a hall that serves as St. Paul's in London once served, or the Roman forum: here political meetings may be held, business may be transacted; in short, the people of Buenos Ayres use the room freely. On this floor, too, is a school where Spanish is taught.

Distinguished foreigners visiting Buenos Ayres will find on the third floor the most wonderful feature of the establishment—a palatial suite of apartments for their reception. Racovitza, the explorer, was entertained here in the gorgeous dining-hall, on his voyage in search of the South Pole with Captain Gerlache. Woolf, the naturalist, lived a fortnight here. And in the future when any great foreigner stays for a time at Buenos Ayres, he will find ready for him this copy of European palaces; his wife will have at her service a parlor canopied in blue silk, hung with tapestries of blue silk, made bright with candles stuck in candlesticks of Dresden china, and glittering with furniture ornamented in imitation of Dresden. Other details of the apartments almost match this, even the *salon des fetes*, a great hall where literary, charitable or scientific meetings or entertainments may be held at the hospitable invitation of *La Prensa*.

From the World's Work

THE PALATIAL DINING-ROOM

RECEPTION ROOM FOR DISTINGUISHED GUESTS

On the top floor are the composing-room, the reporters' room, a restaurant, and a fencing salon. Fencing is popular in Buenos Ayres, to such an extent, indeed, that it seems good to Dr. Paz to maintain a master for the benefit of his reporters, who indulge in guarding and lunging three times a week under tutelage. Opening from the reporters' room is a restaurant, where meals are served at cost to the twenty-five reporters and the six men on the editorial staff. At one o'clock in the morning, moreover, tea or coffee is served free to everybody in the establishment.

La Prensa has a circulation among the 800,000 people in Buenos Ayres and throughout South America of 100,000. Its price is about three cents in our money. Its highest advertising rates are four dollars and a half an inch. Its treasurer's report for the first six months of this year showed gross receipts of \$1,033,905.47 in our money, and expenses of about \$650,000. Among the expense items appeared \$280,000 Argentine (or about \$140,000 gold) for paper, bought from a New York firm, and \$86,390 Argentine (or about \$43,000 gold) for cable service.

The Salon of the Princess Mathilde

VICTOR DU BLEU, in the *February Century*, New York
Condensed for PUBLIC OPINION

MANY people maintain that there is no more society in France, that there is no more conversation, that the sense of grace and civility, of delicacy and perception, has been lost. Nothing could be falsier. Conspicuous among the hundreds of Parisian salons or pseudo-salons where dinners and parties are given, there are perhaps thirty or forty *elite* gatherings which still represent French society, and where the atmosphere of moral beauty and intellectual power is still felt. In the foremost rank of these is the house of the Princess Mathilde, who for fifty years has held the scepter of clever and artistic refinement. Her high position facilitates this supremacy. She is the own niece of Napoleon I, daughter of King Jerome, cousin of the King of Rome (l'Aiglon) and of Napoleon III, sister of Prince Napoleon, and aunt of Prince Victor and Prince Louis. In the early part of the second empire her salon was really the court club. From 1852 to 1870 she exercised a decided influence over the emperor, who had at one time wished to marry her, and who appreciated her merits, and was indebted to her for having mollified many artists and writers and prevented their reverting to the violent opposition party. Even after the downfall in 1870

she maintained the prestige of rank, sustained by recollections of the past and by the group of eminent men whose friendship she commanded, and who created around her a halo of admiring gratitude.

She is now over eighty years old, though one can scarcely believe this when he hears it. She has a spontaneous nature, impulsive, passionate, frank to rudeness, with traits of an impetuous violence worthy of her uncle. She says all she thinks, and has learned only with great difficulty the art of control. She is a true *grande dame*, very much of a princess when she wishes to be; capable of making those who forget it an instant feel that she has the blood of Cæsar in her veins, and that, to her mind, Napoleon I is the most extraordinary man who ever lived. Usually like all thoroughly intelligent people, she is very simple. Humorous, original, always alert and penetrating, sometimes rather broad, she does not hesitate at bold remarks, or thrusts which cut deep, made now and then with a haughty air that seems to toss at you: "I am a Napoleon, and I go straight to the point where my passion or reason leads, without bothering about convention or etiquette." Her Wednesdays and Sundays at home are known to all Paris, and one could fill a library with the wit they have called forth. Under the empire they dubbed the hostess "Notre Dame des Arts." Now they speak of her as the "good princess." These are charming passports to posterity.

Various Topics

HUMAN SACRIFICE BY INDIANS: "Padre," a "big medicine man" of the Yuma Indians, who live on a reservation near Yuma, Ariz., has been offered as a sacrifice, in accordance with their customs, and has expiated the sins of the tribe, which are held responsible for an epidemic of smallpox. The "medicine man" divined the Indians' intention several days ago, and fled to the mountains, but in a half-starved condition wandered back to the Indian village and pleaded for mercy. He was promptly bound and conveyed by a delegation of Indians to Mexico, where he was tied to a tree and tortured to death.

A GREEK MONTE CARLO: Samos in the Greek archipelago hopes to become a Monte Carlo for the Levant. The legislature of the island has voted to grant a ninety-nine years' concession to Pythagoras Lepos Uetios, representing a Belgian syndicate that promises for the concession to build railroads and quays, to lay out gardens and promenades, to build a hospital, a theater and a circus, to found an agricultural bank and a commercial school, to pay subventions to steamship lines for a service between Samos, Constantinople, Salonica, the Piræus, and Alexandria, and to pay a sum of 200,000 francs down and all the money the island may wish at 3 per cent interest, besides a yearly payment of 8,000 pounds Turkish, rising to 40,000 pounds. No inhabitant of the island will be permitted to enter the gambling rooms.

THE NEWS OF THE WORLD

MONDAY, JANUARY 27

DOMESTIC.—Six persons were killed and about one hundred injured by an explosion of dynamite in the Rapid Transit subway at Park avenue and Forty-first street, New York city.... Postmaster General Payne reissued an order, promulgated by previous administrations, prohibiting all employees in the service from visiting Washington for the purpose of influencing congressional legislation.... A company with \$5,000,000 capital has been chartered at Dover, Del., to build a railroad in Mexico.

FOREIGN.—The Hamburg-American steamer *Australia* went ashore at the mouth of the Scheldt and broke in two.... The kaiser's forty-third birthday was celebrated with enthusiasm at Berlin.... The death of Colonel P. H. Atwood was reported from Winnipeg.... Representations have been made regarding the ill treatment of British subjects at Bay islands, Honduras, by soldiers, with the connivance of the government.

TUESDAY, JANUARY 28

DOMESTIC.—The New Jersey legislature elected Mr. John F. Dryden, of Newark, United States senator to succeed the late General Sewell, all Democrats voting for Mr. Allen McDermott.... The program for the reception and entertainment of Prince Henry from his arrival at New York, on February 22, until his departure for a southern and western trip, on March 1, was made public in Washington.... Rear Admiral Lewis A. Kimberley, United States navy, retired, died at West Newton, Massachusetts.... Mr. Eugene Dupont, the noted Delaware powder manufacturer, is dead.

FOREIGN.—It was admitted by Mr. Balfour in the house of commons that Holland had made proposals to act as mediator in settling the war in South Africa.... The French chamber of deputies passed the bill providing \$12,100,000 for new waterways.... Santos-Dumont made two successful trials of his airship at Monte Carlo.... It is believed from wreckage found that a number of vessels, including H. M. S. *Condor* have been lost in the Pacific.... Lieutenant Colonel Du Moulins and eight men of a British force were killed in a fight at Abraham's Kraal, Orange River Colony.

WEDNESDAY, JANUARY 29

DOMESTIC.—The Republican members of the ways and means committee decided to frame a bill repealing practically all the war taxes before taking further action on reciprocity with Cuba.... The trustees of the Carnegie institution held a meeting in Washington, at which Mr. Carnegie presented the deed of gift of \$10,000,000, and officers were elected.... The birthday of President McKinley was observed in many places.... An im-

portant new gold find was reported from the Klondike, the conglomerate of the Indian river valley being said to be as rich as that of the Rand in South Africa.

FOREIGN.—The Newfoundland government, in deference to a request from Colonial Secretary Chamberlain, has undertaken to renew for the present year the French shore *modus vivendi*, which expired on December 31.... The Colombian government war vessels returned to Panama after an indecisive engagement with the Liberal fleet thirty miles southwest of that city.... The eightieth birthday of the Marquise del Grillo (Adelaide Ristori) was observed in Rome, many monarchs and other distinguished persons sending her congratulations.... The Socialists won a seat in the reichstag from a district in Saxony, the tariff, which their candidate opposed, being made an issue.... Vice Admiral Sir Harry H. Rawson, who was commander of the channel squadron from 1898 to 1901, has been appointed governor of New South Wales.

THURSDAY, JANUARY 30

DOMESTIC.—The navy department replied to Admiral Schley's appeal, holding that he did not exercise command at Santiago, and is not entitled to credit for the victory.... Admiral Rogers reports ten marines missing in Samar and seven suffered severely as a result of the hardships they endured.... The bill for the creation of a permanent census bureau passed the house of representatives.... Ex-Congressman Chas. F. Sprague, of Massachusetts, died at a sanitarium in Providence.

FOREIGN.—The premier of Wellington, New Zealand, announced that the government is prepared to give preferential treatment, in the shape of rebate duty, to British goods carried on British ships.... The tariff committee of the reichstag adopted an amendment requiring certificates of origin on all dutiable goods imported into Germany.... A free fight between Catholic and Socialist deputies occurred on the floor of the Belgian chamber of deputies.... Wreaths and floral emblems of Legitimist clubs were placed around the statue of King Charles I at the Guildhall to celebrate the anniversary of his execution.

FRIDAY, JANUARY 31

DOMESTIC.—Governor Taft appeared before the senate committee on the Philippines and gave an encouraging statement of the situation in the islands.... President Roosevelt issued an order forbidding officeholders to attempt to influence legislation in their own interests.... The Biddle brothers and Mrs. Soffel, by whose aid they escaped from the Allegheny county jail, in Pittsburg, were wounded and captured.... Judge Tuley, in Chicago, ordered a receivership

for the Zion Lacey industries to protect the interests of Samuel Stevenson, over whom he ruled that John A. Dowie had exerted undue influence.... It was announced that an agreement to maintain a minimum ocean freight rate on grain, flour and provisions had been reached by the steamship companies whose ships ply between American and English ports.

FOREIGN.—Mr. Brodrick introduced a supplementary army estimate of £5,000,000 in parliament, bringing the cost of the Boer war for the year up to £61,070,000.... Two hundred and ten Japanese soldiers lost their way in a storm on the island of Hondo and froze to death.... The looted Chinese imperial seals were sold at auction in London, bringing £386.... The Brussels sugar conference adjourned to February 11.

SATURDAY, FEBRUARY 1

DOMESTIC.—Leslie M. Shaw succeeded Lyman J. Gage as secretary of the treasury, the oath of office being administered by Justice Shiras, of the supreme court.... It was announced by President Eliot that John D. Rockefeller had given a million dollars to the Harvard medical school.... In an interview with Speaker Henderson and Representative Dalzell, President Roosevelt impressed upon them the necessity of immediate relief for Cuba.

FOREIGN.—President Castro of Venezuela formally refused to permit the son of M. Secrestat, of Bordeaux, France, to land at La Guayra.... By a mine explosion at Honda, Mexico, 106 men were killed.... Mr. Stephen Phillips's drama, "Ulysses," was produced at Her Majesty's theater in London.

SUNDAY, FEBRUARY 2

DOMESTIC.—Great economic gains were shown in most of this country's farming industries in 1901.... A fireman was blown from his engine by a burst of steam while running forty miles an hour, near Binghamton, and killed.... Walker D. Hines, first vice-president of the Louisville and Nashville railroad, accused the Interstate Commerce commission with encouraging rate cutting.... Six thousand employees of the American Woolen company are affected by the strike against the two loom system.

FOREIGN.—J. Santos Zelaya was inaugurated president of Nicaragua for his third term at Managua.... Count Leo Tolstoy is again seriously ill.... Prince Henry left Berlin for Kiel, whence he will take his departure for the United States.... The Italian ship *Nicolo Accame* was wrecked while on a voyage from London to Pensacola; the crew were saved.... The Donaldson line steamer *Alcides* went aground in a snowstorm at the entrance of St. John's harbor, but was floated.

The Books of The Week

HENRY V. The Typical Mediaeval Hero. By Charles Lethbridge Kingsford, M. A. Cloth, pp. 418, \$1.35. New York: G. P. Putnam's Sons.

MR. KINGSFORD's preface consists of a very intelligent examination of the merits and value of the various original sources of information regarding Henry V, and he then proceeds to give a life-like characterization of the man and a clear outline of his aims and manner of their accomplishment. Shakespeare's play and the many contributions to romantic literature, not to mention the predilections of historians, have made Henry almost an international hero. Mr. Kingsford destroys some of the legends connected with his name, but leaves a great deal to interest us.

"It is likely enough," he says, "that the legends of Henry's riotous youth had some foundation of fact; but at the most they point only to youthful indiscretion. Certainly they leave no serious blemish on the prince's character, which indeed they help to illustrate. They give life and warmth to what would be otherwise a somewhat colorless and dim personality. They enable us to see Henry as he really was: frank, generous, and warm-hearted; steadfast and self-reliant; not taking life sadly, but not unmindful of its serious side; not old before his time, but ready for responsibility when it came upon him—in short, by disposition as he was by birth, the most English of our Plantagenet kings, heart and soul in sympathy with his subjects, marked out by nature to be the leader of a united nation."

The story of Henry's domestic policies, his rather uncommon conception of justice, his treatment of the religious problems of his time, his foreign policy, and his valor as a soldier, justify the author's concluding estimate: "He stands in history as the true type of the mediæval hero-king, stately in bearing and prudent in speech, valiant in arms and provident in counsel, a lover of religion and a great justicer." Granting that Henry had a fine conception of his duty as a king, the author "can not regret that his dream of a united Christendom and a new Crusade should have failed. The modern order was not to spring from any restoration of ancient ideals. The time was at hand for fresh faiths and fresh principles of government, for society to be remodeled on a new basis. Europe, however unconscious, stood at the parting of the ways and must enter upon her inheritance of progress by a rough and novel road. Henry, for all his genius, was not fitted by temperament to be her leader. He was the perfect pattern of the mediæval hero, born, as it were, out of due time, and instinct with all the traditions of the past. His ideals were those of authority in church and state, of a king who ruled a willing people as a trust from God, of a society

based, not on equality, but on the mutual interchange of rights and obligations. It is a noble theory, the mediæval vision of a Golden Future that is yet far distant. Still, if Henry was the champion of a lost cause, nothing can rob him of the fame due to those who have spent their lives in the quest of a great ideal. A special charm and pathos must always attach to the memory of that princely hero, who, through the splendor of his achievements, illuminated with the rays of his glory the decline of the mediæval world."

CHRISTUS VICTOR. A Student's Reverie. By Henry Nehemiah Dodge. Third edition. Leather, pp. 186. New York: G. P. Putnam's Sons.

THE poet's theme is the mystery surrounding the ultimate destiny of the individual. A young student studying a human skeleton lets his thoughts wander into a contemplation of the nature and the end of the soul. Baffled by the teachings of philosophy and the results of science, he is at his wit's end when Christ appears to him in a vision and shows him that His own passion is a pledge of the final victory of good over evil in the world. The meter of the poem changes constantly to express the varying shades of the dreamer's moods and fancies. At times the verse seems hardly to rise to the dignity of the thought, although there can be little quarrel with the technical accuracy of the versification. Some critics may consider that the poet wanders aside at times from the main path of his theme, but with a subject so broad it is a matter of difficulty to draw strict lines of relativity. The conclusion is that God is merciful and just.

I did not ask for life. By God's decree
Helpless I came athwart the light of day.
My lot already cast, my wish ignored,
I had no voice to say if I would be.
Would He who forced my being on me
leave

My unknown future, my eternal fate
In these weak hands?

MEMORIALS OF WILLIAM CHARLES LAKE, DEAN OF DURHAM. Edited by Katharine Lake. Cloth, pp. 342, \$5.50. New York: Longmans, Green & Co.

THE name of Dean Lake is probably not a familiar one to American readers, but his memoirs contain much of interest, none the less. Educated at Rugby, he came early under the potent influence of Dr. Arnold, an influence which he acknowledges in many places. Both at Rugby and at Oxford he was a friend and associate of Arthur Penrhyn Stanley. At Oxford both of the young men came to feel for the first time the tremendous power of the teachings of Newman then dominating the High Church party. How much of his own leaning toward ritualism Lake owed to his acquaintance with Newman it is impossible to say. The debt was probably considerable, although he was never prepared to go as far as did his great teacher. During his incumbency at Durham he accomplished a great work in the way of restoring the cathedral which had been allowed to fall into neglect. Under

his care, also, the university connected with the cathedral experienced a substantial revival and came to rank with the best of the minor universities of England.

IN THE FOOTPRINTS OF THE PADRES. By Charles Warren Stoddard. Boards, pp. 335, \$1.50. San Francisco: A. M. Robertson.

A VOLUME of reminiscences of old California in the early days of statehood. The author made the journey across the isthmus in the late fifties to join his father in California, and recounts the trials of the way and the experiences after his arrival on the coast in very entertaining fashion. The later pages are occupied with the incidents of his more mature years, particularly his acquaintance with "Mrs. Theresa Yelverton," the heroine of a sensational suit before the house of lords, in which the lady appeared on the floor of the chamber and pleaded her own case with vigor and effect.

A SECOND CENTURY SATIRIST; or, Dialogues and Stories from Lucian of Samosata. Translated with Introduction and Notes by Winthrop Dudley Sheldon. Cloth, pp. 462, \$1.50 net. Philadelphia: Drexel Biddle.

RELIGION, philosophy, and human life and society were the targets at which Lucian aimed his bolts of satire. Living in a particularly sterile literary period it is no sure recommendation of his artistic merit to say that he was easily the first man of his age. The present translation is rather freely rendered, the translator dropping into modern colloquial English often in his effort to produce the effect intended by the author.

THE CARE OF DESTITUTE, NEGLECTED, AND DELINQUENT CHILDREN. By Homer Folks. Cloth, pp. 251, \$1. New York: Macmillan Co.

MR. FOLKS passes in review all the efforts for the aid of children that have been made in the different states of the union, from the beginning of our national history. In the rough, there are two methods of treating this class of delinquents: in purely state institutions, where the children are under the direct charge of the state, and the contract or subsidy system by which the management is private and the support partly or wholly public. The tendency at the present time appears to be toward the state control as being more in accord with American ideas of government. The book is to be unreservedly recommended to students and workers as a guide in the study of the practical aspects of the problem.

THE ATONEMENT. By S. M. Merrill. Cloth, pp. 160, 25 cents net. Cincinnati: Jennings & Pye.

IN this one of a series of books on doctrine Mr. Merrill has presented very clearly the Methodist doctrine of the atonement. The differences between the Methodist and the Calvinistic beliefs are clearly shown, and the theories of Universalism and Unitarianism, as held today, are combated. The book is

written for use in Sunday-Schools and Epworth leagues, and is a popular work, presenting the truths of this great doctrine in language easily understood by lay-readers, by whom it will be much appreciated.

THE CHRISTIANITY OF JESUS CHRIST. By Mark Guy Pierce. Cloth, pp. 192, 25 cents. Cincinnati: Jennings & Pye.

A FORCIBLE denunciation of the idea that training, methods, and money are absolutely essential to the making of Christianity a power in the world. Phariseism and the cold, formal church are severely condemned. Then in a series of vivid pictures the author presents the true Christianity as the religion of the spirit in which personal considerations are set aside and all the sacrifices of individual inclination made that a sincere faith demands.

HOW TO ATTRACT AND HOLD AN AUDIENCE. A Popular Treatise on the Nature, Preparation, and Delivery of Public Discourse. By J. Berg Esenwein. Cloth, pp. 272, \$1. New York: Hinds & Noble.

THE author divides his discussion into four parts: The Theory of Spoken Discourse, Preparation of the Discourse, Preparation of the Speaker, and Delivery. It is essentially a working manual with outlines and diagrams and many useful hints for the budding orator.

ELEMENTS AND NOTATION OF MUSIC. By James M. McLaughlin. Cloth, pp. 123, 55 cents. Boston: Ginn & Co.

A STUDY of the theory of music intended to supplement courses in practical instruction. "Its compilation was prompted by the apparent need of uniformity among teachers and pupils in defining, describing, and explaining the common elementary effects, terms, and characters occurring in school music."

THE PERSONAL LIFE OF THE CLERGY. By Arthur W. Robinson. Cloth, pp. 163, 90 cents net. New York: Longmans, Green & Co.

THE author indicates some of the most important dangers and difficulties as well as the responsibilities and opportunities of the most significant part of a clergyman's work, his daily life among his people.

LACHMI BAI. The Jeanne d'Arc of India. By Michael White. Cloth, pp. 297, \$1.50. New York: J. F. Taylor & Co.

A NARRATIVE of the career of a Hindu princess during the Sepoy rebellion. Dressed and armed as a man, she leads her troops in person and beats the English in open fight.

THE ENDEAVORER'S DAILY COMPANION, FOR 1902. By Amos R. Wells. Paper, pp. 110. Boston: United Society of Christian Endeavor.

The preface to this little volume states that "it is primarily designed for intimate, daily association with the Endeavorers." The ideas suggested are related to the weekly prayer-meeting topics.

The Best Shakespeare

at Half-Price for a Limited Time

If you are a lover of Shakespeare, this edition will interest you. Not only does it excel in *accuracy, clearness and convenience of arrangement*, but in regard to price, it costs less than half what any other first-class edition costs. The Coupon will bring you a set for examination, and one dollar a month will keep it.

Sets in 13 Handsome Volumes, 7000 pages. Size of Volumes, 8 x 5½ inches.

A Complete Shakespearian Library

The New International Edition of Shakespeare stands based on three centuries of searching criticism. It indicates the high-water mark of Shakespearian scholarship. It is so far superior to other editions in every essential respect that we believe we are justified in calling it the best Shakespeare ever published. Every obsolete word and every obscure passage is fully explained by the Notes, Glossaries, and Comments. All recognized Shakespearian scholars are represented in the notes and explanatory matter, among them being Dyce, Coleridge, Furness, Johnson, Malone, Weiss, Goethe, Brandes, White and Hudson. Shakespeare's Works—everything he wrote—are given complete, including the Sonnets and Poems. The 13 volumes include over 200 illustrations and full-page plates in colors. A set of this edition is a complete Shakespearian Library.

Entire Sets Sent on Approval

The first edition—which was sold at half-price for introductory purposes—was closed out last month, but orders continued to come in by every mail. We felt that we could not disappoint those who sent their orders in good faith expecting to secure a set at the introductory prices, so we have ordered a new edition, which will be sold at half-price, and on the easy payment plan—\$1.00 a month. The new edition is printed on superior white paper, contains new illustrations, and is in every way a splendid specimen of modern bookmaking. The special prices are \$22.00 for a set in half-leather, and \$18.00 for a set in cloth—about one-half the regular subscription prices. You may pay in little payments of \$1.00 a month. The Coupon will bring you a set for examination (*express prepaid by us*), and if not satisfactory it may be returned at our expense without costing you a cent.

FREE We will send free with each set of this edition a complete Topical Index to Shakespeare's plays (forming one volume) and a Plan of Study for each play, containing study questions. The Index Volume is in every way equal to a Concordance, and no Concordance can be purchased for less than \$6.00. The Method of Study for each play is invaluable to students.

*Beautiful Specimen Pages
sent on request.*

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, Feb. 1

Despite some drawbacks, the business situation continues satisfactory, with especially good news from manufacturing centers. Labor disputes are somewhat more numerous, and low water stopped mills in parts of the northwest. Special lines were stimulated by seasonable weather, but the same influence affected others adversely. Transportation interests were just resuming normal conditions after the worst congestion ever experienced, when the heavy snowfall at many points caused further blockades. Nevertheless, railway earnings thus far reported for January show gains of 10.1 per cent over last

year's and 20.5 per cent over 1900. Commercial operations continue of large volume, as shown by payments through the principal clearing houses outside this city for the week, exceeding last year's by 12.5 per cent, and 1899, the largest previous year, by 14.0 per cent. Notwithstanding the decrease of 50 per cent in sales of stocks, there was a gain of 2.3 per cent in bank exchanges at New York over last year's figures, and 1.4 per cent as compared with 1899.

IRON AND STEEL

Although manufacturers of steel have stubbornly resisted inflation of prices, the urgency of consumers has attracted more importations. Distant deliveries are undertaken by domestic producers, but, where immediate shipment is required, it is often impossible to prevent foreign makers securing the business. Last year's official statement showed a considerable loss in exports of some finished products of iron and steel, and this was doubtless due to the same pressure by home consumers that is now bringing a movement into the country, not in competition with producers here, but because early deliveries can not be made. As anticipated, the ore companies fixed Bessemer at the old rate of \$4.25. The remarkable report of the steel corporation gives some idea of the volume of business transacted last year, while contracts already placed practically assure still greater activity for 1902.

COTTON AND WOOL

Textile mills are well occupied, and the lack of accumulations in first hands gives a strong tone to the market, though there is much evidence of conservatism among buyers. While the size of the cotton crop remains uncertain it must exert a quieting influence on goods. Fewer lines of new wools have been opened than were expected. The raw material is sustained by brisk competition and firm prices at the London wool sale.

WHEAT AND CORN

After carrying the decline to an extreme point, especially for coarse grain, there was sharp recovery. As usual during a period of gradually falling quotations, the market became heavily oversold, so that once the turning point appeared there was the added impetus of anxious covering by the short contingent. Even at the lowest point of the week wheat was five cents and corn eighteen cents higher than at the corresponding date last year. Foreign buying of wheat was not perceptibly stimulated by the lower prices, but there continued a steady outgo, aggregating 3,764,873 bushels for the week, flour included, compared with 3,324,758 a year ago. Consumption of wheat as fodder or holding back for higher prices prevents the big yield from swelling receipts, which for the week were 2,840,081 bushels, against 2,775,975 last year. The reduced yield of corn is reflected in in-

EATING IN HAVANA

Yankees Club Together

In Havana it is the custom to serve only bread and coffee for breakfast. A little colony of Americans that felt they could not do their work until noon on this kind of a diet clubbed together and began importing Grape-Nuts Breakfast Food.

One of them writing about the matter, says, "The modern cooking range had never been known in Cuba until the American occupation, and even now they are scarce, so that a ready cooked food like Grape-Nuts recommends itself to start with; then the Yankees were accustomed to the food and felt they could hardly get along without it. They began buying in five case lots and one by one the larger grocery stores began keeping Grape-Nuts in stock so the business spread until now great quantities of Grape-Nuts are used in Cuba, and it is not only used by the Americans but the other inhabitants as well."

This is an illustration of the way the famous food has pushed itself into all parts of the world. Wherever English speaking people go they demand Grape-Nuts. They can be found in South Africa, Egypt, India, China, Japan, Australia and South America.

Many Americans speak of the home-like feeling it gives them to see the numberless busses in the streets of London decorated with great blue signs with the word, "Grape-Nuts," done in yellow letters, and all over England the great purveying shops distribute Grape-Nuts.

English roast beef has largely given way to American roast beef, and the old-fashioned English breakfast of bacon and potatoes is now supplemented with Grape-Nuts and cream. The change was made for a reason. It has been discovered that almost magical power rests within the little granules, and this power is set free in the body that makes use of the famous food.

\$10 SECURES \$480 LOT IN GREATER NEW YORK

The Astors' Way of Making Money
Made Possible to Every One.

Everyone knows that the Astors made their money in buying and holding New York City real estate,—that, as the city grew, their property increased in value, so that to-day the Astors have one of the largest fortunes in the world.

New York City is now growing faster than ever, and the present represents one of the best times in which to buy property. It is not necessary to have a great deal of money to buy real estate under our plan. \$10 down and \$1.50 a week will buy a \$480 lot within thirty-five minutes of New York City Hall, which lot is guaranteed to increase in value 20 per cent. within one year after purchase. If this is not proven to be a positive fact, your money will be refunded and six per cent. interest added.

Upon investigation, you will find this to be stronger and safer than a savings bank.

We offer a free trip to New York City and return to intending purchasers. Send to us for particulars.

Send to us for maps, details of information and full particulars. It will only cost you a postal card to post yourself thoroughly.

Write to Wood, Harmon & Co., Dept. 193, 257 Broadway, New York. If you will write immediately, we will give you the choicest selection of lot.

TURNED OUT TRUE

Coffee Drinking Responsible

"At a dinner party a number of years ago a physician made this statement, 'Coffee drinking is responsible for more ills than any other one thing, but it is impossible for me to make my patients believe it.'

Neither would I believe him but continued to drink my coffee with sweet content. After a time I became aware of the fact that I was frequently lying awake nearly all night without any apparent reason, and the morning found me tired out and nervous.

The insomnia increased, then came a dull pain at the base of the brain and severe pressure at my heart. My outside work was given up for I could hardly bear the little fatigue of the day. 'Nervous prostration brought on by overwork,' the Doctor said. I thought of the words of old Dr. Bagley, 'Coffee is the poison that is responsible,' etc., etc.

I had heard of Postum Food Coffee and determined to try it. The first cup was so weak and flat that it was not fit to drink. The next time it was prepared I looked after it myself to see that the directions were followed properly. The result was a revelation; I found it a delicious beverage.

The cure was not wrought in a day but little by little my nerves became strong, the pain ceased, and again I could sleep like a tired child.

I am now completely restored to health by Postum Food Coffee used in place of ordinary coffee, have regained the fresh complexion of girlhood, and I can realize the truth of the old Doctor's statement. I wish people could understand that truth before they permit coffee to break them down.

I have known of several others who have been restored to health by leaving off coffee and taking up Postum Food Coffee. Please do not publish my name, but I am willing to answer letters of inquiry if stamp is enclosed." Name given by Postum Co., Battle Creek, Mich.

FAILURES

Liabilities of commercial failures during four weeks of January aggregated \$12,902,007, of which \$5,683,392 were in manufacturing, \$6,435,984 in trading, and \$782,631 in other strictly commercial lines. Failures in the United States for the week numbered 301, against 263 last year, and in Canada 40, compared with 37 a year ago.

Financial

THE MONEY MARKET

Bradstreet's, New York, Feb. 1

There has been a further flow of money from the interior to New York this week, and the bank statement due today is expected to show another large gain in cash and in surplus reserve. It is estimated that the increase in the cash held by the metropolitan banks will not be far from \$6,000,000, and a bank statement fully as favorable as that of last Saturday is, therefore, considered likely. It is understood that out-of-town institutions have been offering money on time direct to New York borrowers, and, though foreign exchange remains at a comparatively high level, there is no anticipation of further gold exports at present. Time money is offered with increased freedom, and the current rates on mixed collateral are 4@4½ per cent for all periods. Call money has tended to ease off, 3 per cent being the highest figure this week, and 2½ per cent became the established quotation for business of this kind early in the week. The abundance and lower rates in regard to call loans seems to have a tendency to limit borrowers on time, and there is only a moderate inquiry for accommodation of that description. Mercantile paper has been dull, though there is a good out-of-town demand and a moderate supply of fair offerings.

THE STOCK MARKET

A decidedly strong undertone exists in the New York stock market, and, though public speculation is quiet, the bond market is active and higher on investment buying, which extends to dividend stocks as well. Liquidation has ceased and bear operators are cautious, so that manipulation has been successful in advancing prices. There is an improved feeling about the Northern securities litigation and the reports of peace negotiations abroad, the recovery in copper and rise in copper stocks, as well as the easing of money, with other favorable circumstances, cause appreciable, though irregular, advances in the railroad and industrial lists. The United States Steel corporation's report was favorably received, but did not result in activity or advances in its stocks. Foreign exchange is dull and steady at 4.86½@4.87 for demand sterling.

BANK CLEARINGS

Clearings for the week ending Thursday, January 30, aggregate \$2,157,119,883, a decrease of 3 per cent from last week, but an increase of 6 per cent over a year ago. Outside of New York the loss from last week is 10 per cent, while compared with last year there is a gain of 14 per cent.

Various Topics

The exports of gold from Australia during the eleven months ended November 30, 1901, amounted to £11,118,711, £212,642 over the total for the same period in 1900.

The comptroller of the currency has declared dividends in favor of the creditors of insolvent national banks as follows: 30 per cent, American National bank, of Baltimore, Md.; 2½ per cent, First National bank, of North Manchester, Ind.; 67-10 per cent, First National bank, of Kearney, Neb.

Two hundred and fifty-five textile mills of all kinds were built in the United States last year, compared with 400 during 1900, according to statistics compiled by the *Textile World*. The decrease of 145 mills is distributed among all branches except the woolen industry, which shows an increase over the preceding year of five mills.

The Steel Trust's first detailed report shows net earnings, 9 months, \$84,779,208; cost of properties, \$1,437,494,862; cost of Carnegie Co., \$493,206,000; profits of syndicate (par value), \$129,997,500; total assets, \$1,647,443,021; surplus, \$174,344,229; dividends paid (9 months), \$41,980,706; total bonded debt, \$362,841,683; common stock issued, \$508,212,543; preferred stock issued, \$510,173,778.

Live-stock traffic in 1901 exceeded all precedents, largely on account of increases in hogs and sheep. The latter broke all records, and hogs made the best showing in years. Aggregate receipts at Chicago were 15,978,677 head, an increase of 1,004,023 over 1900, of 1,059,803 over 1899, and of 506,423 head over 1898. The Northwestern, St. Paul & Burlington brought in the largest percentage.

The treasury department has fixed the amount of countervailing duty to be assessed on sugar imported into the United States from Austria-Hungary during the present year. This action is taken in compliance with the terms of the act of July 24, 1897. The rates are as follows: On sugar under 99.3 per cent and not less than 90 per cent polarization, 2.47 crowns a hundred kilograms; sugar of at least 99.3 per cent polarization, 3.55 crowns a hundred kilograms.

The extent of the horticultural industry of the United States is shown by the final census statistics of the establishments making the cultivation of flowers and ornamental plants their business. These figures show for the United States a total of 6,159 such establishments, cultivating and using in their business 42,647 acres, of which 34,692 is improved land. The value of the land and buildings used by these establishments is \$50,619,866, of which \$22,654,756 represents the buildings alone. The value of the implements and machinery for these establishments is \$1,367,087. The value of all the products, including flowers grown in their greenhouses and fields and the various farm crops on the lands controlled by them, is \$18,387,420.

Shawknit

TRADE MARK.

half hose never fade, stain, or crock, neither do they lose their shape; they are knit to fit. As to wear, there's no stocking in the world their equal. This is no hearsay, but a fact; ask any dealer, ask any one who really knows, what a SHAW-KNIT sock is for wear.

SUPER SILK LISLE

looks like silk, wears ten times longer, and colors are absolutely unchangeable. More you wash them the more silky they become. Are extra light weight, forty threads throughout, finest combed and gassed lisle sea-island cotton yarns. Customers when unable to buy from local dealers should select colors by following stock numbers, and order from us. Made in the following colorings:

SNOWBLACK, XX^o B.
HAVANA BROWN, XX^o T.
ROYAL PURPLE, XX^o R. P.
50c. per pair; one-half dozen, \$3.00. Sent prepaid upon receipt of price to any address in the U. S. Size, 9 to 11½ inclusive. When ordering specify size and colors. Sold by dealers. Be sure you get Shawknit. Our catalogue, with over eighty different styles and colorings, in Cotton, Lisle, Merino, Wool, Linens, and Cashmeres, sent free for the asking.

WIT AND HUMOR

And the Revolution Continued

Colon was surrounded by the Panama revolutionists and the siege was on. The rebels couldn't get in and the government forces couldn't get out. The situation, after some days, became a desperate one. The commander of the government troops finally came out under a flag of truce and was met half way by the leader of the revolutionists.

"Señor," said the general of the government army, politely, after they had exchanged cigarettes, "you can not get in and we can not get out. We will compromise with you; each of us shall occupy half of the city."

"Ah," returned the rebel leader lightly, blowing a cloud of smoke into the air, "then we would each have a semi-Colon."

The fighting was then fiercely renewed.—*N. Y. Times.*

Nothing New

There's nothing new in politics,
There's nothing new in art;
The Chinese say they knew it all
Before we got a start.

And men who view the pyramids
And travel at their ease
Declare that the Egyptians were
Ahead of the Chinese.

Each little jest that one essays,
Each passing verbal trick,
Is very likely to be found
On some Assyrian brick.

But why pursue the doleful theme,
Since no relief we view;
There's nothing new in telling men
That there is nothing new.

Sure to Pay

"I have a great scheme."
"What is it?"

"Why, let J. P. Morgan buy up all those South American wars and charge admission to see each battle."—*Chicago News.*

Her Hand

I held her hand—'twas late last night,
We sat before the gas-lights bright,
(The proper place for one to woo);
She smiled but did not blush—'tis true,
Nor did she whisper her delight;
In fact, to tell the story right
She did not stammer in affright,
While I, ah, lucky, guileless wight,
I held her hand.

I clasped her hand and pressed it tight;
And though her husband was in sight
He only laughed and said I'd do
To fill in for a hand or two;
While she dropped out to serve a "bite"
I held her hand.

GOOD HOUSEKEEPING

For the Higher Life of the Household

Monthly—**FOR ALL THE FAMILY**—Magazine

GOOD HOUSEKEEPING is bright and newsy—bristling with new ideas. It tells not only how the every-day affairs of life may be conducted, but also appeals to the craving for the new and helpful in household duties. Practice and inspiration is its motto. Its departments, regular and special, are as numerous as the varied phases of the life of the household. It appeals to either sex, whether of young or of advancing years, and not only helps but gratifies the physical, mental and aesthetic natures of all its readers. Its unparalleled Cooking Service, its Unique Health Department, its bright Stories, Sketches, Paragraphs and Verses, are supplemented by special articles from the most noted writers of the day. It is beautifully illustrated.

The CHARIOT RACE From BEN HUR

The publishers of Good Housekeeping have recently secured exclusive control of a beautiful reproduction of Checa's masterpiece, **THE CHARIOT RACE**, in all the colors of the original painting, which is valued at \$50,000. The subject, which General Lew Wallace has made so well known through his immortal work, "Ben Hur," is the thrilling race scene at the exciting climax of the story. Every detail of the artist's brush is faithfully brought out by the twelve distinct color printings. The picture is on heavy plate paper, with suitable margin, and measures 22x30 inches.

A WONDERFUL OFFER

To introduce Good Housekeeping into every home where it is not now taken, we will send the magazine for three months upon receipt of only 25 cents, in silver or stamps. We will further send without cost to all ordering immediately a copy of **THE CHARIOT RACE** (as above described), the same as is given to all yearly subscribers at \$1.00 per year. Address, mentioning this paper, all orders to

WEBER PIANOS

1852--1902

The history of the Weber Piano vividly illustrates the value of persistence and fidelity to an idea. As a musician, Albert Weber, senior, recognized early in his career that the development of the piano had hitherto been almost wholly in the direction of mechanism. To improve the tone and give to it the sympathetic quality found in the violin became the central motive of his life. The result more than justified his conception, and the Weber Pianoforte today stands as the embodiment of the musicians' idea of tone. ❖ ❖ ❖

PUBLIC OPINION

Number 7
Volume XXXII

The Week

Thursday
February 13, 1902

THE past week has brought forth few if any important developments in matters of great public interest—Cuba's fate is still in doubt in spite of the harrowing statements of distress which come from the island and the plainly expressed desire on the part of the administration and the general public that something shall be done to relieve the depression of Cuban industry; the prospect of definite canal legislation grows fainter as the days go by without action looking toward the agreement of advocates of the opposing routes. The senate committee on interoceanic canals must make the next move, but it has been made plain that congress does not consider itself bound in this matter either by the action of committees or commissions. So far, however, as official sentiment has found expression, this has been a Panama week, and if the newspapers are a true index to public sentiment, the Panama route is every day gaining advocates who a few weeks ago would listen to no arguments except those in favor of Nicaragua.

A BROAD Prince Henry's visit claims a larger share of interest than any other event of international import. It may surprise Americans to be told that immense political significance is attached to the visit although it can not be said English or continental commentators are at all specific in pointing out the political results likely to follow upon Prince Henry's reception here. In a vague way it is said that the visit will result in a rearrangement of international friendships, England, France, and Russia drawing closer together as the more or less general ill-feeling between the United States and Germany is dissipated. We venture the belief that Americans are quite insensible to any change of feeling toward Germany, and that they recognize in the cordial reception now preparing for Emperor William's brother merely a courtesy that would be as readily accorded to a Russian, a Frenchman, or, for that matter, a Siamese, of equal importance.

OUT of the maze of contradictions regarding the efforts to release Miss Stone it is possible to evolve but one thing, and that is that she is still a prisoner in the hands of her Bulgarian captors. The difficulty seems to be that neither Turkey nor Bulgaria is willing that the ransom should be paid and the captive released in their respective territory for fear that the responsibility would be placed upon the country in which the release was effected. And when we read that the party bearing the ransom started out with 150 soldiers as an escort it does not seem surprising that no hopes should be entertained of coming up with the outlaws. They would be very ingenuous brigands who allowed themselves to be approached by armed troops in the guise of ransom bearers. New efforts to deliver the ransom and release the missionary have been instituted and there is still a prospect that this will soon be accomplished.

THE action of the Presbyterian committee on revision, sitting at Philadelphia, on the question of predestination and "elect infants" will be the subject of comment in the Religious department in our next issue. In the meantime it is sufficient to say that the committee in declaring that the doctrine of predestination "is held in harmony with God's love for all mankind, and that no man is condemned except on the ground of his sin," and that the phrase elect infants "does not mean that any dying in infancy are lost, and that all dying in infancy are included in the election of grace"—it is sufficient to say that the committee in arriving at this late day at these conclusions is simply adopting the position long ago arrived at by sane secular opinion. Belief in infant damnation and literal predestination passed away some time ago.

WE are not disposed to claim any credit for our forecast of the complete failure of Holland's effort—it was scarcely that—to bring about peace in South Africa. Obviously, the movement lacked any basis of authority or even of common sense, the Dutch government offering merely to arrange with Great Britain that Boer commissioners should proceed under

British protection to the scene of war, confer with the men still in the field, and return with a statement of the terms which the Boers would accept. No one can blame the British government for its refusal to entertain such a childish proposal nor for pointing out somewhat bluntly that it would take three months to carry out the plan with no prospect of its success, that the so-called commissioners had no standing, and that General Kitchener could readily be found by anyone who had peace proposals to make.

NO, the war will be prosecuted to the bitter end, and newspaper readers who still read news from South Africa must have observed that a new era has set in there. In place of the monotonous "regrets to report" and the regular "surprises" of British commands, there are steady accounts of surprises of another kind. The British soldier has evidently learned the game and now it is the Boers who are surprised and captured, bringing their extermination within sight, if, as is not probable, they insist upon being exterminated. There never was any reasonable hope of intervention in their behalf and such hope as there was has expired; the few men who remain in the field are tired out and poorly equipped; De Wet and one or two other leaders remain, but beyond forays they can do nothing. England has been made to pay a price that has "staggered humanity," but no one can now doubt that the struggle of the last three years was absolutely useless.

THE campaign in France is in full swing, and if we did not have considerable experience of our own in such matters we should be surprised at the composure of the present government, assailed as it is by the Nationalists, by the ultra-Clericals, the Socialists, the Jew baiters, even by the Royalists, from some real or imagined vantage point. This concerted attack has had the good effect of putting the government on its guard, and the Republicans are said to be more active and better organized than ever before. The one serious weakness of the present government is its financial policy. If this had been strongly attacked the government must have been defeated, but with half a dozen parties each trying to make its own particular notions the issues of the campaign the result will probably be a substantial victory for the element already in control.

IT would be natural, if one recalled all the inconsiderate remarks that were made in England anent our embalmed beef scandal, to get even now by commenting sorrowfully upon the depravity disclosed by the army frauds which have been brought to the attention of parliament during the past week. But the fact must be admitted that a war without contract scandals would be a very queer sort of war. Rascality on the part of those who sell supplies in war times is not confined to any one nationality; it is quite universal, and Englishmen can claim no exemption from the rule. That is all there is to it. But that that pure patriot, Mr. Cecil Rhodes, is found to be willing to pay \$1,000,000 for a meat contract can not be explained except on the ground that he was unwilling that his government should be swindled by a mere army contractor.

IT was only a few weeks ago that Emperor William gave an hour or two of his valuable time to the settlement of some church history problems that had confused scholars for several hundred years. He has now turned his attention to "spiritualists, faith-healers, Christian Scientists, or kindred cults," and has ordered that they be rigidly excluded from the court. Prayer healing is severely reprobated by the emperor, who, merely by making it and "kindred cults"—how each of these cults will rave at being mentioned along with the others!—unfashionable, has probably put a stop to their growth among the better classes in Germany, but we warn the emperor that he does ill to stir up animosity in the ranks of Eddyism on the eve of his brother's approach to these shores.

AMERICAN

The Senatorial Oligarchy

IS THE SENATE OVERSHADOWING THE HOUSE AND THE PRESIDENT?

MATTER that is attracting the attention of publicists and students of the constitution generally is the growing supremacy of the senate over the lower house and even over the president. Mr. A. Maurice Low devotes a long article in the February *North American Review* to a consideration of this tendency.

"The legislative surrender of the house to the senate," Mr. Low says, "began with the election of Mr. Reed to the speakership of the Fifty-first congress. Mr. Reed had the courage and the ability to frame a code of rules that made it possible for the house to conduct business in an orderly and expeditious manner, but, unfortunately, he was a revolutionist; he accomplished with one bold stroke and in a few days what under other circumstances would only have been brought about very gradually and after long years of discussion. Not only did he feel it his duty to put an end to interminable and frivolous debate, but he also regarded it as incumbent upon him to check the rapidly rising tide of extravagant expenditure.

"Two important things followed from the new dispensation. One was that even vital measures were disposed of without proper consideration. When the time arrived for taking a vote the gavel fell, often in the midst of a sentence, and all debate ceased. The other was that members of the house who were unable, because of the speaker's rigid ideas of economy, to secure appropriations in house bills, accomplished their purpose by inducing senators to offer for them bills in the senate in the form of amendments. Senators were not averse to doing this, as it placed representatives under obligations to them, it increased their prestige in their states, and it added still more to the growing power of the senate. To such an extent has the practice grown that it is now recognized, as a matter of course, that the senate will 'take care' of routine legislation to which the house is opposed or on which it is not safe to risk the chance of possible defeat in the house. To say that the house has been reduced to a negligible quantity in legislation would be an overstatement of the case; it is no exaggeration to say that it has become an insignificant factor. In further support of this assertion let it be said—and no greater practical proof of its correctness could be offered—that the correspondents who represent in Washington the leading newspapers of the country no longer think it necessary to consult members of the house regarding legislation; they confine their attention almost exclusively to the senate.

"There is no more striking example of the encroachment of the senate than the way in which the senate deals with appointments and its interference in the conduct of foreign relations. Presidential nominations have been frequently rejected; no president now dares to make a nomination unless the senators from the state in which the nominee resides have given their approval. Fitness, merit, talents are not the conclusive considerations.

"This is mischievous and, at times, humiliating to the president; but it is seldom dangerous. The interference of the senate in the conduct of foreign relations and its meddling with diplomatic negotiations are

fraught with serious consequences. The constitution gives the president the power 'to make treaties, provided two-thirds of the senators present concur,' which has been interpreted by some expounders of the constitution to mean that the senate may ratify or reject a treaty as it sees fit, but it has not power to amend. This, however, is not the judicial interpretation, and the supreme court has decided that the senate is not required to adopt or reject a treaty as a whole, but may modify or amend it. But the senate has assumed an even more advanced position. It now chooses to regard a treaty as simply 'a project.' Having advanced the doctrine that treaties negotiated by the president are merely 'projects for treaties; they are still in-choate,' the senate has now still further encroached on the executive by claiming to know the details of a treaty while in process of negotiation and before the treaty is submitted to it for ratification. That, virtually, is what the senate compelled President McKinley and Secretary Hay to do when it so amended the Hay-Pauncefote canal treaty as to make its acceptance by the British government impossible.

"What enables the oligarchs of the senate to exercise their dominant power, to reduce the house to a legislative nonentity and to keep the president in subjection, is the peculiar code of the senate, the unwritten code which is more powerful than the printed rules. In the senate authority comes with length of service. A new senator is placed at the foot of unimportant committees, no matter how long his experience in public life or his standing in the house of representatives or elsewhere, and he can only reach a chairmanship of a leading committee by the retirement of senators who outrank him. By this method power always centers in the hands of a few men, the half dozen or so senators who are at the head of the few really important committees. No legislation can be enacted, no policy can be put into execution, unless these men are first consulted and give their consent. They are, in effect, the senate of the United States."

"The steady degradation of the American house of representatives proceeds from session to session almost from day to day," complains the *Detroit News-Tribune*. "A sub-committee of the senate committee on foreign relations is now considering the question of the relations and jurisdiction of the house in the matter of reciprocity treaties in which the revenue and expenditure of the government are affected. It is said that the sub-committee of the senate now considering the question, will in its report take the broad ground that, inasmuch as the treaty-making power of the president and senate is entirely unrestricted, there will be no occasion to consult the house in the matter of the reciprocity treaties, even though they seriously modify the tariffs with various countries. Should the house yield to this interpretation of the law, and it probably will if the others are insistent, there is no reason why the president and senate should not in time take over to themselves the full control of the subject of revenue. Jointly with the house they can enact tariffs on imports, and then, by means of commercial treaties with all important commercial countries, fix the rates at what may prove more satisfactory to themselves."

The Protectionist Side of Cuban Reciprocity

February Gunton's Magazine, New York. Condensed for
PUBLIC OPINION

THERE are two groups of interested persons whose statements, of course, should be accepted with careful scrutiny, on the assumption not that they are dishonest, but that they are anxious to get as much as possible out of the government and as near a monopoly as possible for their own industry—one is the Cuban planters, the other the American refiners and owners of Cuban plantations. With the first group there is proper ground for the American people having a sympathetic interest. They are the people who have struggled for freedom against Spain in Cuba. Their future prosperity depends to a large extent on the success of the sugar industry in the island. If left alone, untutored by politicians and uncoerced by the American sugar refiners, these people would ask only feasible and legitimate aid from the United States. When the Cuban delegates first came to this country all they asked was that Cuban sugar should have a preference over German and European sugar in the American market. How much concession is really needed to put Cuba in this position and not injure our domestic industry can easily be determined by the comparative costs of putting sugar in the American market from Cuba and Germany. The average price for the whole year of 1901 at which German sugar could be put on board at Hamburg was 1.8 cents a pound. Cuban sugar can be put in bond in New York for 2.07 cents a pound. Adding $\frac{1}{4}$ of a cent for freight to the free-on-board price of 1.8 cents at Hamburg, and $\frac{1}{4}$ of a cent for the extra offsetting bounty duty which it has to pay on entering this country, makes the German sugar cost 2.3 cents, or .23 of a cent more than the Cuban. On the basis of the average price of 1901, to put German sugar down in New York costs about .23 of a cent a pound more than Cuban. Clearly, therefore, a bounty of half a cent a pound on Cuban sugar would give Cuba nearly $\frac{3}{4}$ of a cent a pound advantage over Germany in the American market.

What are the claims of the other group, the American investors in the Cuban sugar industry? On what grounds of public policy should the United States protect American investors in foreign countries? Nothing could be more against a sound American policy. If the protective tariff is of any value whatever to the nation, it is to encourage capital to invest in the development of industry in the United States, not to encourage capital to invest in foreign countries and bring the products to this country in competition with our domestic products. Such a policy would convert the tariff into a deadly weapon for the destruction of American industry and the depression of American labor. If these capitalists want protection or special privileges in the sugar market from the United States, they must invest their capital and conduct the industry in this country, employ American labor and pay American wages. When American capital goes to a foreign country in pursuit of cheap labor, it loses all claim to protection or privilege in the American market. Protection is not for capital *per se*, but for American industry.

This is nearly the first opportunity that congress has had distinctively to stand by protection for the development and diversification of agricultural industries. If it fails the farmers of the country will be justified in believing that the Republican talk about

protection to agriculture is mere politics, and they may be trusted to act accordingly when the day of reckoning comes.

New York Press (Rep.)

The reason that there is no tariff fight in congress, and that there will be none, is that the members of the senate and the house—the Republican members of the majority party—are practically unanimous for the maintenance of the present tariff. Save for one or two mercenaries—a wine tout and a brewery agent—the representation in congress of the Republican party is solid for the present tariff. In Washington there has been one other official element in conflict with the Republican party and the American people. It is the administration element, which attempted to push the free trade interests, so far as they were concerned with Cuba, at the cost of all the industries and all the interests of the United States. But this was done more in ignorance than in sin, political or economic. The president's sentimental regard for the Cubans seemed to blind him to the fact that he was advocating in his reciprocity business the very thing which he repudiated in his message; that he was inviting the dangers against which that message warned us; that he had allied himself with the forces and influences which always have been hostile to the principles and policies of the Republican party, which is responsible for this tariff law, this congress and this administration.

The Arraignment of the Interstate Commerce Commission

Chicago (Ill.) Record-Herald

FOR ten years or more the interstate commerce commission has pleaded strenuously in annual reports, magazine articles and newspaper interviews for more power to remedy the traffic evils which the commerce law was designed to correct. The public has taken it for granted that the law was inadequate to meet the traffic situation, and the railway officials, as a rule, have gladly assented to this view. The commission having acknowledged itself powerless to enforce the penalties of the law against railroad companies which violated it, it was hardly to be expected that the railroads would take issue with them on that point. President Stuyvesant Fish of the Illinois Central was the first railway official to file a public dissent from what appeared to be the view of a majority of railway managers. Now comes Walker D. Hines, first vice-president of the Louisville and Nashville railroad company, who arraigns the commission for its failure to enforce the law, declaring that it has the widest possible powers, including the right to call for all books, documents, and papers, and the power to require the district attorney of the United States to prosecute all violators. These powers have been upheld by the courts. He says: "The indisputable fact must be kept before the public that the prevalence of rate cutting is an unanswerable argument against giving the commission more power, because it is due principally to the commission's utter failure to perform its manifest duty."

Mr. Hines makes no attempt to excuse the railroads for violating the law. He simply avers that the commission is seeking to use the rate cutting—which it should have prevented—as a basis for demanding radical powers which would in no way tend to correct it. The views of such men as President Fish and Vice-President Hines can hardly fail to raise a reasonable doubt as to the wisdom of enlarging the powers of the commerce commission.

Indianapolis (Ind.) *News*

We doubt whether the attack of Mr. Walker D. Hines on the interstate commerce commission, will carry any great weight. For though Mr. Hines is no doubt an honorable man, yet he belongs to a class that is interested—or that seems to be interested—in opposing any legislation conferring additional powers on the commission. Mr. Hines thinks that the present statute, if rightly administered, is wholly adequate. Other men do not hold this view. It is notorious that there is great dissatisfaction with existing conditions. There is a strong feeling in congress in favor of a more complete control over the railroads, and two bills are now pending having that object in view. If they do not go beyond the actual need, there is no reason why they should be objected to, even if it be believed that the present law might be made to serve. We should have a much better case against the commission if it should refuse or fail to enforce the law which it itself admitted to be adequate. Nor is it proposed to do anything more than to give the commission undoubted power to abolish practices which everyone—including Mr. Hines—admits to be wrong.

The Pay of United States Judges and Legislators

New York Times

SENATOR HOAR'S bill increasing the salaries of all the judges of the federal courts by 25 per cent has been passed by the senate. In the case of a certain number of the district and circuit courts, this increase is modified by the fact that the bill requires that the judges shall pay their own expenses when serving on the bench away from home, allowance having been made heretofore for these expenses within a maximum of \$10 per day. Still, it remains true that the bill if now passed by the house would increase the compensation of the great body of the judges of the federal courts by one-fourth. Following are the salaries provided in the bill, compared with the actual salaries:

	Proposed	Present
Chief Justice.....	\$13,000	\$10,500
Associate Justices.....	12,500	10,000
Circuit Judges.....	7,500	6,000
District Judges.....	6,250	5,000

A like provision for advance is made for the judges of the court of claims and for the courts of the District of Columbia.

We regret—indeed, we are almost ashamed—to say that this very moderate advance did not receive the unanimous support of the judiciary committee, and that it was strongly, and even violently, opposed on the floor of the senate, especially by Mr. Berry, of Arkansas. His trouble and that of others who joined in the debate later, is that their standard of comparison is not only narrow and inaccurate, but selfish. It seems absurd to the senator from Arkansas that a district judge of the United States court should be paid as much for his services as a senator, and that a justice of the supreme court should be paid twice as much as a senator. Yet, putting aside all question of the average usefulness or the average character of senators and judges, there are obvious differences in the conditions of their employment. A judge must be trained, and severely trained, in the profession of the law. He must be possessed of ability sufficient to attain a high position at the bar before he will be considered for the bench. By virtue of this training and ability he can rely on an income from twice to ten times the pay he

can get as a judge. After he takes a judicial office he can not make a dollar by practice, and he is shut off from many opportunities for profitable investment which are open to others—especially senators.

We pay the judges of our supreme court in this city \$17,500 a year, with a term of fourteen years, and there has never been the slightest discontent therewith. It is not only fair, it is also highly expedient, that the federal judiciary should be paid salaries that would give them ease of mind as to their families and themselves and enable them to live measurably as their associates live. With reckless extravagance in so many directions, mere decency in the treatment of a co-ordinate branch of the national government should prevail.

Albany (N. Y.) *Argus*

Fifteen United States senators voted for the Stewart amendment to the bill increasing the salaries of federal judges. The intent of this amendment was to increase the salaries of senators and representatives in congress to \$7,500 a year. There can be no doubt that many senators who would have liked to vote aye, voted no, under pressure of fear of being accused in taking part in a "salary grab." Mr. Clay, of Georgia, declared that there is no justice in an arrangement by which a judge received \$10,000 a year, and a senator \$5,000; "we do equally as much work as the judges," said he—yet he voted in the negative. From that point of view, the vote is gratifying, because it shows what a whip-lash the fear of popular censure still is in congressional affairs. But in another way the vote is not so satisfactory. It is noted that nearly all the men who voted aye are poor men, or men of moderate means; while many of the senators who voted no can afford to ignore the size of the salary, or get along without receiving anything from the government. Public sentiment is strongly against any improper increase of salaries; but, on the other hand, it can not be desirable to make it harder for a poor man to get into congress than it is said to be for a rich man to get into heaven.

The Cowboy in Office

New York Evening Post (Ind.)

THAT big-hearted, one-eared Rough Rider, Ben Daniel, whom President Roosevelt had appointed United States marshal of Arizona, forgot to tell the colonel of his old regiment that he had a jail record in Wyoming. This little incident in a picturesque career was, however, brought to the attention of the senate, and Daniel's confirmation was unanimously reconsidered, and the nomination referred back to the judiciary committee. We can not expect to have nothing but "plaster saints" in office in Arizona, but we shall have to draw the line at convicts. It is one thing for a cowboy in the hot blood of youth to have had an unpleasant collision with the law twenty-three years ago, and to have undertaken a reform, with the good will of all; but it is quite another to reward him with office. Mr. Roosevelt knows his southwest better than most, and he is doubtless quite right in believing that an Arizona marshal must be a man who is ready to chase cattle thieves for three days and nights running, and to shoot, if necessary, when he catches them—a very differently qualified official, in short, from the one required in the sedate and slothful east. But the Daniel incident shows that there is a certain danger in tying up too closely to a man simply because he can ride and shoot, and knows no fear, yet to whom larceny, and

a term in prison for it, may appear an unconsidered trifle not worth mentioning; and also that the temptation to regard rough riding as a mantle to cover a multitude of sins is one against which the president should be on his guard.

Boston (Mass.) *Advertiser* (Rep.)

Some of the president's friends are saying—but not to Mr. Roosevelt—that he has made a bad blunder. We doubt it. President Roosevelt knows his men. It may be true that "Ben" Daniels has a prison record. But such men are popular idols in their own little communities and they must have some sterling good in them to gain that popularity. The chances are that they will make good records in office. They must be brave and fairly honest, according to their lights. They would not be so popular otherwise. There have been plenty of Americans in office who could not make a grammatical speech and who still have made themselves respected. Such cases have not been entirely unknown, even in New England. Give the cowboy in office a chance, anyway. It may be that President Roosevelt's whim will yet justify itself before his term of office is out.

Brooklyn (N. Y.) *Citizen* (Dem.)

From what we have heard of Arizona there are "bad" men there as well as "bad" lands, and a tender-foot marshal would be decidedly *de trop*. The more we think about it, the more we are inclined to agree with the president, that Daniels, with his broken nose,

broken ear, scars, his private cemetery, is the ideal candidate for the high office of United States marshal—in Arizona. Even his prison record does not make us wince. We remember that Vidocq, the best thief catcher in France, once served a term in the galleys at Toulon.

A New Solution of the Philippine Problem

"LET 'EM GO TO THE DEVIL"

"SENATOR MONEY has put the issue which the anti-imperialists are dangling under the noses of the Democratic party in a far more effective form than Erving Winslow, with all his dazzling gifts, has been able to devise," says the New York *Commercial Advertiser*. "What would you do with the Philippines?" asked Senator Hale. 'Let 'em go to the devil and take care of themselves, as far as the American people are concerned,' replied Senator Money. That is a great deal more stirring than Mr. Winslow's version—'independence for the Filipinos'—and it is also more truthful. Nobody can deny that if we gave them the kind of independence that the 'antis' are demanding they would 'go to the devil' with a speed and completeness that would concentrate upon us the attention of the civilized world."

"Such a retort is absolutely unanswerable," in the opinion of the *Providence Journal*. "It disposes at

once of all questions of national good faith and national honor; it cuts the Gordian knot at once and leaves a people put into our care by treaty and interests voluntarily assumed by us wholly in the lurch. Few great statesmen would have had the courage to take so bold a course. Indeed, it is doubtful if any great statesman ever played before so completely the part of *deus ex machina*. In the *Congressional Record* Mr. Money's language is softened. 'Let them go where they please,' he is represented as saying. But this is a distinctly inferior version. It is a pity to preserve the amenities of discussion by amending the original proposition, which undeniably reveals the honorable gentleman's true mind. Indeed, is not the whole 'anti-imperialist' position based upon the assumption that the Filipinos should be permitted to 'go to the devil' in their own way? Civilization under Aguinaldo would presumably have something of an infernal cast."

"The mockery of the pretended humanitarianism, the affected altruism and the specious magnanimity of the Democrats is exposed in the blunt sentiment extracted from Mr. Money in a thoughtless moment," says the *Kansas City Star*. "The 'opposition' is working for nothing in particular in the Philippines, but is awkwardly and mistakenly endeavoring to make political capital out of its antagonism. When pulled up short and confronted with the task of offering an alternative for the administration's plans, the answer is, 'Let them go to the devil!' Everyone who has tried to present anything like a substitute policy has floundered hopelessly. If the islands are to cut adrift, they will certainly reach the destination to which the Mississippi senator would consign them. It would have been much better to have left them under the sovereignty of Spain than to make them the prey of other powers which would probably fight out their claims on Philippine soil." The *Charleston News and Courier*, on the other hand, thinks Mr. Money's reply "answers the general demand of the administration party for the formulation of an opposition policy, and answers it fully as well as concisely. It does not mean, of course, that the islands need or would 'go to the devil,' in fact."

Congressional Summary

CONGRESS DAY BY DAY

FEBRUARY 3.—The senate gave further consideration to the bill to increase the salaries of federal judges; an amendment to increase the salaries of senators and representatives was rejected; the debate on the Philippine tariff bill was resumed. The house devoted the day to general debate upon the oleomargarine bill; the opponents of the measure attempted to filibuster against it at the opening of the session, but were beaten by more than a two-thirds vote.

FEBRUARY 4.—Mr. Hoar's bill increasing the salaries of United States judges by 25 per cent was passed by the senate; consideration of the urgent deficiency bill was begun, Mr. Tillman becoming involved in a sharp controversy over the case of Judge Noyes, of Alaska; John F. Dryden, the newly elected senator from New Jersey took his seat. In the house the day was spent in debate on the oleomargarine bill.

FEBRUARY 5.—The senate passed the urgent deficiency appropriation bill substantially as it came from the committee; during the debate the Noyes case was again referred to at length. The house reached

an agreement whereby the oleomargarine bill will be brought to a vote after two more days of consideration, one to be devoted to general debate under the five minute rule; the bill was then laid aside to permit action on the legislative, executive, and judicial appropriation bill.

FEBRUARY 6.—The Philippine tariff bill was again before the senate; several amendments were adopted; a bill appropriating \$2,500,000 for a new post office at New York was passed.

FEBRUARY 7.—In the senate Mr. Turner, of Washington, spoke against the government's colonial policy; the pension appropriation bill was passed. The legislative, executive, and judicial appropriation bill was passed by the house.

FEBRUARY 8.—The senate was not in session; Governor Taft continued his testimony before the Philippines committee. The only bill of general interest passed by the house was one to authorize the transfer to an adjoining district of causes in district or circuit courts in which the judge of the district wherein such causes are pending is disqualified.

UNITED STATES SENATORS are supplied with bottled mineral waters at government expense. Nearly every committee room has something very like a bar attachment. It is usually in one corner, behind a screen, and next to the washbowl. The bottles of fizzwater are supplied by colored messengers, who bring them in buckets of ice like champagne. —*Chicago Journal*.

FOREIGN

A Pan-American Union Impossible

PRINCE A. DE YTURBIDE, in the February *North American Review*,
New York. Condensed for PUBLIC OPINION

CONSIDERING the nature of the official language of the day and the influence of the erroneous conceptions which are rife, it is not astonishing that it should become a habit, in discussing the international relations of America, to assume that the Latin countries of the new world are bound by their paramount interests to their northern neighbor, nor that it should be taken as a sign of intelligence to regard those interests as being so obvious as not to require clear definition, and their development as being the assurance of Spanish-American prosperity. The special conditions characteristic of Latin-American countries are these: They possess every element of prosperity, from the intelligence of their people to the favorable geographical position and varied wealth of their territory. They are, however, the newest factors in the scheme of modern civilization, and they may not hope to fill their proper place unless they remain in close contact with all the exponents of the world's progress. They have, on the other hand, an object which no consideration of progress or of prosperity may affect; that is, the unconditional preservation of national independence and the maintenance of the body social on a high moral level.

The paramount interests of Spanish-America, therefore, demand that her external relations be essentially commercial, and that the political phases of these relations conform to that condition. It follows from this that we are bound preferably to our best customer; by which is not necessarily meant the power in whose account with us there appears the greatest cash balance to our credit, but the one with which we may exchange products to our greatest moral and material advantage. For it is through these relations, chiefly, that we may develop the working capital on which the world will eventually pay the interest. From all of this it follows that, if our relations with any foreign power be opposed to any one of those national purposes, it is no longer with interests but with complications that we have to deal.

Now, to what extent are these advantages to be improved or those interests to be subserved by our establishing artificial relations with and in favor of a great exporting power that has several successful competitors in our markets? Manifestly not at all, seeing that the advantages to be derived from special intercourse with that power have abundantly asserted themselves already, have been measured by comparison with the benefits derived from intercourse with other powers, and rated according to their value; and there can be no error in this valuation, for it has been set forth in the results of commercial operations—and commercial operations, as long as they remain untrammelled, give true conclusions with automatic precision. If, therefore, special support is to be given by us to the mercantile interests of any single power, the power that competes most successfully in our markets is evidently the one that should be preferred, for it is the one that has succeeded on its own merits, and in doing so has proved its capacity to serve us. It would be difficult to show that any nation, among those that have absorbed our foreign trade, fills so important a place in the scheme of our development that it

should be favored by uncalled-for discrimination; but if such a customer we had, it assuredly could not be the power that requests such discrimination in its favor, for if her commerce had been proven deserving of it she would not need it. In the matter of cheap construction, specific facts would seem to justify the United States in its claim of superiority over all competitors. The commercial world, however, does not appear to concede that claim; because in its most successful fiscal year the United States was some distance from the head of the list as an exporter of manufactured articles, a fact which seems to indicate the world's verdict in the premises. Now, in the face of all these circumstances, we, of Latin-America, are asked to do all of our trading with the United States, and practically to close our markets to the rest of the world.

This project of a union of American states is so unreasonable from the commercial Spanish-American point of view, that it has not received serious consideration from the conservative people of Spanish-American countries, a fact that is frequently ascribed to bias by publicists of the United States, but which impartial criticism attributes to more legitimate causes. The countries of Spanish-America are not afraid of being conquered; but they are averse to entangling alliances with a great power whose people wish continually to hear that they have missions of conquest, seeing that arrangements of that kind are calculated to brew trouble under almost any circumstances.

Botha, De Wet, and Viljoen

BRIEF SKETCHES BY ARTHUR LYNCH

ARTHUR LYNCH, the ex-colonel of a regiment of Boer cavalry and recently elected to the house of commons from Galway, contributes to the *Revue Bleue* (Paris), some "silhouettes" of Boer leaders, from which we translate the part descriptive of the men best known to American readers.

If the brilliant acts of Botha and De Wet and their followers are known over the entire world, their personal appearance is less known; therefore, I shall try to sketch rapidly the traits of the personality of these heroes. General Botha is still young, too young say some Boers who are only accustomed to giving their confidence to gray beards; but experience has done much to dispel such prejudice. He is great even in his height, towering over the medium height of the Boers, with broad shoulders, and a deep chest, and very muscular. Everything about him denotes vigor and health. Nevertheless, his appearance is not forbidding. If the word sympathy had not been abused to the point of making it ridiculous, I would say that he is certainly one of the most sympathetic men I have ever met. When I saw Louis Botha for the first time, he was surrounded by officers who were congratulating him on his magnificent exploits at Spion Kop. At that time he seemed several years younger than he really is. Today he appears older, not that the privations of war have caused this change in his appearance,

but because of the continual care of a superhuman task that has given his face an expression of gravity, which matures and improves it. I have never seen Botha depressed, even in the worst circumstances. He never shows the least ill-humor before his subordinates, but always appears confident and resolute. A skillful tactician, he is also a great strategist. I believe that his value would be as great in time of peace as in war. A diplomat on occasions, he is always admirably drawn out by difficult circumstances, displaying the strength of his intelligence, his high probity, and the firmness of his character.

De Wet is a born tactician. A peaceful merchant before the war, he would have passed a perfectly unknown existence if circumstances had not brought to light the marvelous qualities of the warrior. De Wet is older than Botha, being near his fiftieth year. Of medium height or shorter, he is vigorous, solid, hard and dry as wood. His attitude, his gestures, even his profile, seem to express resistance. He has become more and more taciturn. Formerly he consulted his officers before making a decision, now he keeps his own counsel. Silently, carefully he studies his plans, nourishing his projects until the moment of their execution. Then he becomes inflexible. It generally happens that after a long period of reflection, De Wet suddenly gives an order to his men to put themselves in saddle without any one having the least idea of his intentions. Nevertheless, each one obeys without hesitation. Perhaps he is about to change the camp. Perhaps he is going to attempt some hazardous feat like Sannah's Post or Tweefontein. De Wet fights as he hunts; almost all his great exploits are surprises. He watches for the prey, he glides, he crawls, until it is within reach, and strikes. De Wet has that great quality which also distinguishes Botha, he is never discouraged.

Among the less known chiefs I will cite General Ben Viljoen. Viljoen, born in the Cape, began his career as a policeman. Very intelligent, also very ambitious,

he was elected Liberal delegate, and when the war broke out Viljoen was given the command of the troops of the Johannesburg commando. These troops have shown themselves thoroughly efficient as much by their aggressiveness as by their qualities of resistance, and the reputation their young chief has made only increases from day to day. Viljoen is very large and straight as a line. He is nearly the same age as Botha, and no one would be better qualified to take the place of the general-in-chief if the need arose. Viljoen has the air of a good fellow, open and frank, in battle evincing all the dynamic strength of a soldier of the race.

The New French Navy

H. W. WILSON, in *Collier's Weekly*, New York. Condensed for PUBLIC OPINION

TEN, even five, years ago the French navy was, in the matter of material, in a state of chaos. It owned a "collection of specimens"—to use the phrase of an eminent French authority—not a fleet. Construction was miserably slow. Battleships were ten years or even more in the dockyards. Today France is building as fast as England or Germany or America. In fact she has succeeded in launching a first-class battleship in six months from its commencement. Though the French navy is conservative enough—like all navies—in many matters it has been quick to introduce startling changes in the design of ships. The screw war-vessel and the employment of armor for the protection of water-line and hull had their origin in France and were copied from her by the world. In the present generation she has been the first to realize the danger of fire in the modern warship; as far back as 1890 she had practically eliminated wood from her new cruisers and battleships. She was the first power to utilize electricity to any extent on shipboard, for purposes other than lighting. She was the first to adopt high explosive shells, and now she claims that she has a fuse of such admirable action that it will allow these terrible projectiles to penetrate thin armor and explode in the interior of the ship. She was the first to realize the importance of protecting the cruiser with armor. Her ships of the *Dupuy de Lome* class, were, as usual, first scoffed at and then copied by the world. She was the first, also, to see the possibilities of submarine craft, and today owns more of these dangerous little vessels than all the other powers of the world combined. The United States may be said to have begun to experiment with the submarine in 1899; ten years before, the French constructor Zédé had designed and completed the *Gymnote*, the predecessor of the *Gustave Zede*, *Morse*, *Narval*, and eighteen other submarines now built or building for the French navy.

But, it will be said, might not the French navy on trial fail as dismally as did the Spanish? On paper the Spanish ships were good enough and at Kiel the Spanish seamen made an especially favorable impression. The answer to this is that Spain made shipwreck on two things—want of maneuvers and sufficient gunnery. It had never struck the Spanish authorities that a ship which can steam and hit the target is worth ten vessels which can do neither. But French shooting is excellent, judging from figures published in 1899, relating to the practice of the French Mediterranean fleet. The best figure was seventy-two per cent of hits, which verges upon the wonderful, and many others were nearly as good. Great attention is

—*Simplissimus, Munich*

now paid to gunnery; and good shots and captains of guns receive extra pay and various distinctions dear to the seaman's heart. In the future it will not be as at Trafalgar, where the British ships fired three shots—shots, too, which hit—to the French one. Again, the war training of the French navy is thorough and complete. The Mediterranean fleet, containing the best and newest ships, is constantly at work all the year round, working at steam tactics, night firing, the bombardment of coast defenses, torpedo attacks, and the great problem of hunting down an enemy and keeping touch with him. It is the deliberate opinion of British admirals well able to judge that its efficiency is of the highest; possibly, indeed, it is the most formidable fleet of its size in the world. The northern squadron cruises in the channel and the Atlantic for only six months in the year, and because of this, and also because it includes older and less effective ships, is not so powerful a weapon. Still it is probably equal to the British reserve fleet, which in war it would have to meet, as this fleet is only fully manned for four months in the year.

British Army Contract Scandals

LONDON dispatches say that the apparent incompetence and, it is claimed, possible dishonesty, which permeate the purchasing departments of the British army, as revealed this week in parliament, have caused a public agitation that augurs badly for the war office. Judging from recent and promised disclosures, scarcely any of the supplies for the army in South Africa were secured on business principles. Speculating contractors are now known to have made hundreds of thousands of pounds by reselling contracts. The opposition vainly endeavored to get de-

tails regarding the new contract for the supply of meat, announced by the government in the house of commons, with the view of ascertaining if a saving over the former methods really will be effected. The government successfully avoided answering, but it is understood that the contract in question was first resold at £10,000 premium, and then at £40,000, while Cecil Rhodes and the De Beers group handed over £200,000, and thus finally secured the privilege of supplying the troops in South Africa with fresh meat. A dozen or more committees of investigation are now sitting, or are in process of formation.

So far the so-called scandals have been brought out only in connection with the supply of meats and horses. Last week the amounts of money lost by the government through the dishonesty or incompetence of its agents were placed in the millions, and now the *Herald's* London correspondent describes one farcical investigation into the charges made: "The jobbing in connection with Hungarian horses was first exposed by Sir Blundell Maple, member for Dulwich, who claims to be a judge of horseflesh and is certainly a man of business. The result of his plain speaking was the appointment of a committee, chiefly composed of ministers, their relatives, intimates, and friends. Sir Charles Welby, M.P., the chairman, had been private secretary to Lord Lansdowne when Lord Lansdowne was at the war office. The report of this committee was designed to whitewash everybody all around except Sir Blundell Maple, upon whom it cast a slur. The witnesses were allowed to alter their evidence after it had been given. The conclusions of the committee were bluntly described as 'rubbish' by that staunch tory, Mr. Lowther, and now, at the instance of Sir Henry Campbell-Bannerman, Mr. Balfour promises a further and fuller inquiry 'after the war is over.' That will not do for the English people. They want to be assured at once that the taxpayer will no more be robbed and the army no more be supplied with inferior horses. If the war were not still going on, the government would have been beaten as the liberal government was beaten over cordite seven years ago."

J. C.—"Does he expect to live forever?"—*Philadelphia Record*

SOCIOLOGICAL

Profit-Sharing sans Philanthropy

SOME SCHEMES THAT HAVE PAID

IN addition to the instances of profit-sharing already cited in this department, we wish to call attention to the methods of a number of other concerns, as described by H. E. Armstrong, in *Ainslee's Magazine*:—the Pillsbury flour mills, of Minneapolis; Ballard and Ballard, millers, of Louisville; Haines, Jones, and Cadbury company, plumbers' and steamfitters' supplies, of Philadelphia; the Columbus (Ohio) street railway company and gas company; the Riverside press, Cambridge, Mass.; and the Proctor and Gamble company, soaps, Cincinnati.

Mr. Armstrong says that the Pillsbury flour mills pay a cash dividend to salary-earners, skilled laborers, and those who have worked five years, when the profits exceed eight per cent interest on the investment. All the excess apparently doesn't go to the employees, and in 1886 and 1887—the system was introduced in 1882—there was no dividend to labor, because of a steady decline in breadstuffs. In 1883 and 1888, \$40,000 was divided, and there has been a distribution every year since, when the eight per cent and more were earned. The Ballard & Ballard company has had a profit-sharing plan for more than ten years. Fourteen years ago it employed a head miller at a stipulated salary and agreed to give him five per cent of the profits in addition. From this beginning a complete scheme of sharing profits has been developed. Mr. Charles T. Ballard, president of the company, says: "We might say that a common day laborer, who comes to us at \$1.25 a day, is advanced to \$1.50 at the expiration of six months, \$1.75 at the expiration of a year, and to \$2 at the expiration of eighteen months, beginning to participate in our profits as above after being with us twenty-four months." The company has never had a strike, nor have the employees had a grievance.

The Haines, Jones, and Cadbury company made its first trial of profit-sharing in 1887-88, all employees participating. In three years the sum of \$30,000 was distributed. The Columbus (Ohio) railway company pays all its employees the same dividend on wages that stockholders receive on their stock. President Robert E. Sheldon says: "During the three years, since the inauguration of the plan, we have twice made voluntary advances in the wage schedule, and, besides, have increased our dividend from four to five per cent per annum on our preferred stock, which, of course, inures to the benefit of employees and stockholders alike. We do not pretend to advise others, because conditions may be different in other localities, but we are certainly well satisfied with a plan that has passed the experimental period." The Columbus gas company also pays employees a semi-annual dividend equal in rate to the dividend to stockholders. This dividend may be in stock at the election of the company until the employee has three shares to his credit, when he may sell them.

The Riverside press allows a share in profits by paying an extra interest on savings, which may not loom large as a benefit, but is an encouragement of thrift. The Proctor & Gamble company adopted profit-sharing in 1887 as a protection against strikes—there had been fourteen the year be-

fore. According to the proportion of wages to the whole cost of production, the net profits were divided between employees (boys and girls not included) and the firm. At first the employees were skeptical, but the dividend for the initial six months was 13.47 per cent on wages, for the second 11.80, and for the third 9.33 per cent. To discourage waste and indifference, it was decided to pay twice the regular dividend to those employees who took a lively interest in their work—who hustled, in other words; the regular dividend to less zealous workers, and no dividend at all to sluggards and wasters. The dividend in April, 1890, was 15.57 per cent, and in three years the employees, without a single exception, were working hard and intelligently and wasting nothing. In July, 1890, the plan of giving employees a dividend on wages equal to that on the common stock was adopted, and at the time it promised to be twelve per cent. Many of the employees now own stock. There have been no strikes since 1887. The cost of labor has decreased nearly forty per cent, and wages are twelve per cent higher.

French Women in Real Life

A MUCH MISREPRESENTED CLASS

A WRITER in the *London Chronicle* says that the French woman of today is grossly misrepresented in modern French fiction, which depicts her as "amazingly cold, egotistical, frivolous, heartless, and immoral." This writer says that, "we must put aside modern French fiction (with a few consolatory exceptions), with its presentments of female character in its least worthy aspect, if we want to rid ourselves of the absurd idea that French women are, speaking generally, and excluding a specific class of working girls who have no counterpart in other countries—frivolous, empty-headed, light-minded, and immoral, or unimportant factors in the estimation of their great and enlightened race. The exact contrary is the fact.

"Miss Hannah Lynch, speaking with a long, close, and intimate knowledge of the women, says: 'An England without her women would be conceived as still standing, so effaced is their rôle; but France almost may be said to exist by hers.' Those who admit the truth of the first proposition so far as the present is concerned, will at least dispute its applicability to the past, in which English women, as wives, mothers, and sisters, have been as instrumental in building up the greatness of this country as men. But, so far as the second proposition is concerned, it remains as true to-day as in the seventeenth century, and the French woman still plays that double rôle which no other woman of any other nation has known how to combine successfully. Without being, any more than any of her sisters in any age or in any nation, a *creator*, she is at once playing the part of active doer and inspirer. Wherever you go in France, you find the woman active, business-like, level-headed, and practical. It may be urged not more so than a section of English women and a considerable proportion of American women, who are now conducting business enterprises, are

showing themselves to be. But the essential difference is, that, whereas the English-speaking business woman accomplishes her success with some of the finest and most distinctively feminine qualities *annihilated*, the French woman, however shrewd, however worldly, however intent upon the main chance, always preserves some quality of sentiment, something subtle, indefinable, yet unmistakable, that makes you ever mindful of the *woman* beneath the business woman.

"The desire to please, which Madame de Girardin, one of the most brilliant and witty of French women, calls 'the whole duty of woman,' has a vastly wider meaning in the eyes of a French woman, and is not limited to the conquest of eligible young men. It is an instinct that has been sedulously cultivated, in place of being repressed, as is so often the practice with worthy and even noble English women, as a moral duty—and the desire to please becoming a second nature, is extended not only to husband, children, and friends, but also to the daughter-in-law, the mother-in-law, the governess who teaches the children, the dressmaker, the servant. The humblest shop girl shows the same instinctive desire to please instead of vexing and repelling, and does not rest content with one sex. And with all the defects of her convent training, which is not as uniformly bad, however, as depicted, and the chief defect of which is the too great domination exercised over her conscience by the religious directors, the French woman has more intelligence, more mastery over her special *metier* in the science of life, a greater variety of *knowledge* than the average well-educated English woman."

District Attorney Jerome as a Slum Resident

WHAT THE EAST SIDERS THINK OF THE MOVE

THERE has been a good deal of comment on the fact that District Attorney William Travers Jerome has moved his New York residence from Washington Heights down to Rutgers street on the edge of the Ghetto. A writer in the New York *Sun* says: "Mr. Jerome laid down his opinion of the East Siders' mental and moral condition several times during the campaign in words that fairly express the thought of most of the advanced settlement workers. He said he believed that the average man below Fourteenth street was rather more moral and more thoughtful than the average man above the dividing line. He said that because these people were very poor, wicked and avaricious men took advantage of them, and because sometimes they were not familiar with the English language they seemed to be ignorant of a great many things on which they were thoroughly well informed. It is rather hard for some folks not acquainted with settlement work to understand why people such as those described by Mr. Jerome do not resent the coming among them of comparatively rich people who advertise the fact that they are making sacrifices in order to live among the lowly. The workers in the settlements however find very little such resentment. They say that the resentment is not lacking because the people lack pride. Men and women who know the resident of the East Side well say that he is the proudest man in New York and the most suspicious of any attempt to patronize him or make him dependent. But in the neighborhood of the settlements the people have taken the workers at the workers' own estimate of themselves as friends and helpers."

Two of Mr. Jerome's prospective neighbors have expressed themselves to a *Times* reporter on this subject. "I know almost everybody about here," says one, "and they all say they are glad Jerome is to come and live here. It is hard to tell how much good his coming will do. It will certainly do a great deal. Of course, there are some, but they are not many, who sneer and say it is a political move and an insult to the intelligence of voters." Another remarks, "he's wiped out the red-light district. The girls can go out in the evening without being insulted by 'cadets.' That breed isn't about here, as it was. There are still wrongs to be corrected here. Every hour in the day someone comes into the shop to ask when the district attorney, or 'de chief,' as they call him, will be in his home."

Mr. Jerome outlines his own motives as follows: "I make this move at some personal sacrifice, but I promised in the campaign that I would do it, and I mean to keep the promise. The office will be open until 10 o'clock in the evening, and as much later as necessary. I mean to be the criminal counsel of the people, in addition to district attorney. I am going among these people to be of help to them. They often suffer wrongs that should be righted, and they will know where to come with their grievances. The opening of an office in my home will greatly facilitate the work of this office. People making complaints will have them immediately investigated, and I will be in touch with them, as I would not be if I had continued to live uptown. Speedy action can be taken. Where the police are wanted at once for investigation, they will be notified. Then, too, I can be of help to the Legal Aid society, and they to me. We shall work in cooperation with them. They have an office in the University settlement, and handle many cases that ultimately come to the district attorney. Working together, we can expedite justice and be of greater help than if we should not be in close communication. When my plans are complete the cases will be sent directly to me by the Legal Aid society, and we believe that this will be a boon to the poor. I am thoroughly satisfied that this experiment of mine will meet with success."

The Co-Operative Banks of Massachusetts

Boston (Mass.) Transcript. Condensed for PUBLIC OPINION

THE Massachusetts league of coöperative banks, which held its annual meeting recently, represents one of the most salutary movements for social betterment in the commonwealth. The movement dates from the year 1877, when an act permitting the formation of such associations was passed by the legislature. The chief mover in the agitation for this legislation was the late Josiah Quincy. During the first year after the passage of the act ten institutions were incorporated; at the present time there are about 125 of these banks, with a membership of over 70,000 and assets of nearly \$28,000,000.

Through the agency of the coöperative banks thousands of workingmen in this state have been enabled to purchase homes. The importance of this movement to the working class and to the state can hardly be over-emphasized. In the first place it brings a clear financial gain to the home owners, relieving them from the heavy drain upon their incomes represented by rent payments. City rents are excessively high; and the only way in which the working people can escape this

tax is by becoming home owners, thus uniting landlord and tenant in the same person. In the second place home ownership brings a stimulating sense of dignity and independence and thus helps to raise the standard of character and citizenship. Former Governor Brackett says in this connection: "The homes of the people should as far as possible be owned by the people who occupy them. Not only is their condition thereby improved, but the good order, progress, and general well being of society are promoted as well. The man who becomes the owner of his dwelling place not only acquires a higher social position and a better opportunity for sharing in the good things of life, but he has an additional incentive for being a good citizen. He realizes that he has a greater interest in the country, that he is a more important part of the body politic. His position as a taxpayer, while it imposes a burden, also adds to his sense of dignity and self-respect. He feels more deeply the necessity of good government, of economy in public expenditure, of the maintenance of law and order."

But although home-owning is universally favored by social economists, statistics show that the overwhelming majority of city workers rent their homes. According to Hon. Carroll D. Wright, of the families occupying homes in the 420 cities and towns in the United States having 8,000 to 100,000 inhabitants, over 64 per cent are tenants and less than 36 per cent owners; and of the families occupying houses in the 28 cities having 100,000 or more inhabitants, 77 plus are tenants and 22 plus are owners. Either money or credit is required to purchase a home; often the workingman has neither. It is here that the coöperative banks, or building and loan associations come to the assistance of the working-class. These institutions successfully meet the financial difficulty, which was formerly a barrier to home-ownership in the case of all but the highest-paid workers. Through this agency any man who is earning fair wages can secure a home by long monthly payments covering a comparatively short term of years.

To Protect Negro Girls

THE WORK OF THE WHITE ROSE MISSION IN NEW YORK

A WRITER in the *New York Commercial Advertiser* gives an account of a mission founded in New York city five years ago to shelter, influence, and teach colored girls and women as the immigrant homes do for the girls who come from Europe. It combines the benefits of an industrial school with the protection of a home. Mrs. Victoria Earle Matthews is the founder, chief worker, and superintendent of the institution, which is known as the White Rose mission. It has now grown to such dimensions that it has been necessary to move into new quarters at 217 East Eighty-sixth street. Fifty cents a week is charged for lodging. To any one who knows the atrocious prices asked for rooms in the crowded tenement districts where the great mass of New York's negro population lives, this cheap, clean, safe and respectable lodging seems the greatest godsend in the White Rose work. To the friendless, almost penniless, ignorant colored girl it means just the difference between safety and shelter and—in nine cases out of ten—falling into the hands of the human sharks, and a future of immorality and misery.

According to this writer the career of the average negro girl who comes to New York from the south is a

pitiable one. The girl arrives, and with no one to meet her and no knowledge of a big city or its ways, falls a prey to those very active agents who are employed to secure negro girls for evil purposes. Every large city in the south has agencies who traffic thus in souls. The same evil threatens white girls from the country (and from other countries), but hundreds of people are looking out for the white girls. There are the girl's friendly societies, the immigrant homes, the Y. W. C. A., and organizations connected with churches of all denominations. But there is nothing of the kind for the negro girl. She is left to fend for herself. In a week she is working in the Tenderloin, where she is paid in finery and demoralized by her associates and surroundings. In a year or two she is known at the station houses and can not get work with respectable families. In five years she usually dies in the hospital on Blackwell's island, ashamed to let her friends know of her ways or her whereabouts.

Mrs. Matthews meets the steamships on their arrival from the south, and, through her appeals to the police, extra guards have been put on the piers to see who takes the girls away. But the sharks are skilled in their craft. They come in the guise of employment agents or of employers. The girls are ignorant and unsuspicious to begin with, and bewildered in their strange surroundings. They are accustomed to obey white men's commands. That they ever escape is a matter of wonder to all who have worked, often fruitlessly, to save them from degradation. The life of the girl who has friends or bona fide employers to meet her, or who is taken into the White Rose garden, all depends on what she herself wants to make it. She is started aright and the rest depends on herself. She at least has a chance, good advice, and kindly influences to guide her.

Various Topics

BOSTON'S PUBLIC BATHS: For the first ten months in 1901 the total number of bathers at the six public baths in Boston, Mass., amounted to 494,624 of both sexes, the greatest number being in March (57,478) and the least in February (40,592). Of this total there was an average of three males to every female.

THE PHILANTHROPY OF A YEAR: According to the *Chicago Tribune* the record of donations for 1901 amounted to \$123,888,732. This amount is classified as follows: \$68,850,961 has been given to colleges, universities, academies, seminaries, and institutes; \$22,217,470 to charities of various kinds; \$15,388,700 to libraries; \$11,133,112 to museums and art galleries, and \$6,298,489 to churches. More than half of this great sum has been given by three persons, as follows: Andrew Carnegie, \$42,888,500; Jane L. Stanford, \$30,000,000, and John D. Rockefeller, \$2,889,750. In the detailed list there are twenty-eight gifts ranging from \$500,000 to \$30,000,000, for various purposes, and fifty-one gifts to colleges, ranging from \$100,000 to \$30,000,000.

INTEMPERANCE AMONG WOMEN: The Right Rev. Leighton Coleman, bishop of the Episcopal diocese of Delaware, in a sermon on "Intemperance," declared that while there is a grateful decline in intemperance among men, there is an alarming increase of intoxication among brilliant and cultured women, those belonging to the so-called better classes. "A short time ago," he continued, "I addressed a meeting of leading society women in New York city, when I made that statement. A leading newspaper made a careful investigation and sent me a copy of the publication which contained the result. It proved that my statement was literally correct as far as New York city is concerned. I am sorry to say that it appertains to women and to mothers, particularly those who have the care and instruction of our future men and women. It is a sad outlook when mothers are not living in soberness and chastity."

LETTERS & ART

Stephen Phillips's New Play

THE PRODUCTION OF "ULYSSES" BY BEERBOHM TREE

THE great event of the London dramatic season is the production of Stephen Phillips's "Ulysses," by Beerbohm Tree. All critics have pronounced it a triumph of stage management, though they differ radically on other points. The *Tribune* correspondent thus describes the scenes: "The curtain rose upon a conclave of Greek gods on Olympus, with Athene pleading with Zeus for the deliverance of Ulysses from Calypso's spells and Poseidon angrily opposing her, until her prayer was granted, subject to the condition that Hades should first be visited. This beautiful stage picture was followed by a festival of suitors at the court of Ulysses's palace in Ithaca, with hints of costume and primitive architecture drawn from Schliemann's researches in Troy, and beautiful effects of color. A drunken riot was interrupted by the descent of Athene to arouse Telemachus to action, and Penelope appeared in answer to the minstrel's song, and begged for delay when Antinous importuned her to make a decision.

"The first act closed with a magnificent spectacle of Calypso's seagirt home, with Ulysses caressing the goddess and listening to the song of the sea nymphs, until Athene and Hermes revived his memories of home and Penelope, and he found strength to break away from the sirens. The second act reproduced with weird scenic effect the Homeric Hades, dimly tenanted with the fitting phantoms, and rehearsed Ulysses's meeting with Agamemnon and other spirits in the manner of the Sixth *Æneid* rather than the *Odyssey*. The third act began with the return of the ship-wrecked Ulysses to the swineherd's hut on the coast of Ithaca, and ended with a splendid scene in the banquet hall of the palace, in which the suitors were outwitted and ejected."

The correspondent of the *Sun* says that "Ulysses" is not equal to "Herod," either as literature or as drama. "It contains some powerful lines, provides several strong situations, and as presented by Mr. Tree it forms one of the most magnificent productions ever seen on this or any other stage. The eye is charmed, dazzled, and before the end satiated with beauty and splendor, yet despite the succession of wondrous spectacles the auditor finds himself vaguely bored at the

MR. BEERBOHM TREE

end of the fifth scene and wishing that Ulysses would remain in Hades instead of resuming his laborious adventures in the upper world. "There is a secret yearning also for the human style of love-making which Mrs. James Brown Potter desired to introduce in the character of Calypso, but which the author sternly repressed. Mrs. Potter resigned and Miss Nany Price, who took the part, scarcely realized one's conception of the evil siren's passion, but the acting as a whole was excellent. Mr. Tree had no such opportunity as in "Herod," but it goes without saying that he made the most possible of the difficult hero."

Mr. E. A. Dithmar, writing from London for the *Times*, says: "The scenery was painted by Hawes Craven, who derived much inspiration from some of Turner's paintings of classical subjects. The incidental music, which includes three songs for the minstrel at Ithaca, the chorus of the nymphs of Calypso, and the descriptive melodrama for the mystic doings in Hades, as well as the usual prelude and entr'actes, was composed by Coleridge Taylor. The scene in Hades was wonderfully well done, and aroused great enthusiasm."

Two passages of the drama that have been warmly praised are Penelope's appeal for the return of her absent husband and

Ulysses's farewell to Calypso. The first is in part as follows:

Where art thou, husband? Dost thou lie even now
Helpless with coral, and swaying as the sea sways?
Or dost thou live, and art with magic held
By some strange woman on a lone sea-isle?
Yet we are bound more close than by a charm;
By fire-side plans, and counsel in the dawn—
Like gardeners have we watched a growing child.
Thy son is tall, thou wilt be glad of him;
All is in order; by the fire thy chair,
Thy bed is smoothed, but now these hands have left it.
Thou knowest the long years I have not quailed,
True to a vision, steadfast to a dream,
Indissolubly married to remembrance.
But now I am so driven I faint at last!
Why must my beauty madden all these wolves?
Why have the gods thus guarded my first bloom?
Why am I fresh, why young, if not for thee?
Come, come, Ulysses! Burn back through the world!
Come, take the broad seas in one mighty leap!
And rush upon this bosom with a cry,
Ere 'tis too late at the last, last instant—come!

From a dramatic point of view the parting scene be-

tween, Ulysses and Calypso has been pronounced the climax of the play. Calypso offers the gift of immortality to Ulysses if he will forego his departure, but the hero refuses to "take life but on terms of death." He continues:

Then have the truth, I speak as a man speaks;
Pour out my heart like treasure at your feet.
This odorous, amorous isle of violets,
That leans all leaves into the glassy deep,
With brooding music over noontide moss,
And low dirge of the lily-swinging bee,
Then stars like opening eyes in closing flowers—
Palls on my heart. Ah, God, that I might see
Gaunt Ithaca stand up out of the surge,
Yon lashed and streaming rocks, and sobbing crags,
The screaming gull and the wild-flying cloud—
To see the far off smoke of my own hearth,
To smell far out the glebe of my own farms,
To spring alive upon her precipices,
And hurl the singing spear into the air;
To scoop the mountain torrent in my hand,
And plunge into the midnight of her pines;
To look into the eyes of her who bore me,
And clasp his knees who 'gat me in his joy,
Prove if my son be like my dream of him.
We two have played and tossed each other words;
Goddess and mortal we have met and kissed.
Now am I mad for silence and for tears,
For the earthly voice that breaks at earthly ills,
The mortal hands that make and smooth the bed.
I am an-hungered for that human breast,
That bosom, a sweet hive of memories—
There, there to lay my head before I die,
There, there to be, there only, there at last!

Mr. William Archer says that Mr. Phillips's play is classic in atmosphere, but modern in spirit. "Ulysses, Calypso, and Penelope in their Hellenic setting, are actuated by the same passions that fire the hero, the heroine, and the 'other woman' in the up-to-date society drama, and the *denouement* of their tragic idyll has a familiar ring."

Tributes to Aubrey de Vere

London Academy. Condensed for PUBLIC OPINION

THE death of Mr. Aubrey de Vere removes from us not only a poet of distinction, but the last link with the poetic past of the early nineteenth century—a poet who held memories of conversations with Wordsworth, and had received commendation from the lips of the men who revolutionized English poetry. Wordsworth was one of those who seldom commend any poetry which is not akin to their own, and it can readily be surmised, therefore, in what school the young poet graduated. Shelley influenced him, as is visible in his first poem, "The Search After Proserpine"; and he profoundly admired Coleridge, but the supreme planet was Wordsworth. To that tradition he remained unswervingly faithful through his long life and all changes of poetic fashion: when other gods were enthroned in the market-place his worship was unchanged. He lived to see the Wordsworthian tradition revived by Mr. William Watson, and to receive the homage of that poet. But if Mr. Watson was the last, he was not the first poet to render such homage. Landor hailed the rise of a new poet in some characteristic verses when "The Search After Proserpine" appeared; Sir Henry Taylor was not less emphatic in his admiration; and at a later day so totally antagonistic a poet as Mr. Swinburne wrote in generous praise of him. The praise was the more generous because De Vere, never having been a fashion, then and throughout the close of his career had become *vieux jeu* to the modern critic. Yet Mr. Swinburne does not praise ignorantly, and it may be surmised that Aubrey

de Vere does not deserve the tranquil neglect into which he had passed. A great poet Aubrey de Vere was not. One who follows a master with such unswerving fidelity as he followed the Rydal singer must be content with the lower praise of a derivative poet. The Wordsworth whom he followed was not the Wordsworth of the simple lyrics, with their close touch upon the human heart, but the later Wordsworth, who had openly broken in practice with his own theory of poetic diction—he of the austere grand odes, with their leaven of classic English phrase, and he also of the sonnets. It is, indeed, by the best of his lyrical pieces that Aubrey de Vere should be judged, rather than by the long narrative or dramatic poems on which he expended so much labor.

Tennyson and Wagner

JOHN MARKS HANDLY, in the February *Catholic World*, New York. Condensed for PUBLIC OPINION

IN the dual mysticism of our race's infancy Wagner saw the Christian superseding the pagan, illuminating it, triumphing over it, as sunlight triumphs over moonlight, while Tennyson has lost his heart in mourning for the lordly shadows that the day dispelled. Both have revived the past, and both have made it better than it really was; for both are poets. But Wagner made it more supernatural, while Tennyson made it more genteel. Tennyson has taken us up one by one and with a poet's mastery has shown us the worth of the Arthurs around us, whom we fail to value as we should; shown us the charity we owe to our Lancelots; shown us the worshipful beauty of our Enids—the abhorrent ugliness of this or that Etarre. He has given our lives the perspective of the misty landscape of fable, and has taught us how we may make our lives—not sublime but noble, with that nobility which our ancestors had before we became a race of shop-keepers. And this is good. This is the high and holy office of poetry, which Tennyson has exercised so admirably that we can not easily overestimate our debt of gratitude to him. But in the end our laureate is pagan, and the echoes of his idylls mingle with the wails of the water nymphs when Thrannos told them that the great Pan was dead.

Wagner was a greater genius than Tennyson. He was not circumscribed by his age. He had more than the spirit of his times—he was inspired with the spirit of eternity, and made for himself an age. Tennyson is Victorian—the crowning glory of the Victorian age, the standard by which the future will measure that age, the strongest claim of that age upon immortality. And he has given us the Victorian version of the Arthurian age. I do not believe that this is the true version. A great deal of history—all the history between St. Augustine and Sir Thomas More—has to be unlearned and forgotten in order to give verisimilitude to the Passing of Arthur; and the Last Tournament is the groan of an old, sick, sin-weary race, at which the real actors would have listened with dismay. But the Victorian version of King Arthur is vastly important to us because it holds the mirror up to nature—not of the past, but of the present. And Tennyson, being a faultless artist, has been unflinchingly true to the spirit of the age he mirrored.

Irresistibly, my heart pays first homage to Richard Wagner. From Rheingold to Parsifal this master prophet, who has given to the world a new medium of spiritual teaching, blazes and thunders the great truths of Christian ethics and Christian revelation.

The names and men and deeds of the old half-pagan times are there, but the substance and the mighty conclusions of his themes are one with the eloquence of St. Peter at Pentecost and with the pathos of St. Mary Magdalen at Simon's banquet. He has appreciated to the fullest the beauty of his material. Nothing more mystic, more sense-satisfying, more truly pagan, more characteristically racial, than, for example, the fire charm that concludes the Walkyrie; but its delightful cadence, its exquisite preternaturalism, is none the less the final summing up of the great opera's lesson—that the gods themselves can not make right wrong, and justice must triumph though the heavens fall. On the other hand, his instinct of the true Christian spirit is unerring. The cycle of his works is a progressive development of happiness.

Two Views of Hugues Le Roux

IMPRESSIONS OF THE FIFTH HYDE LECTURER AT HARVARD

HUGUES LE ROUX, the fifth annual lecturer of the Cercle Francais of Harvard university, has arrived in this country and will deliver over one hun-

M. HUGUES LE ROUX

dred talks on dramatic, social, and literary subjects, in more than forty American cities from New York to San Francisco. He will be heard at all the leading universities, beginning with Harvard. In "O Mon Passé," which is the chronicle of his youth, M. Le Roux relates that he was born at Håvre, November 23, 1860, of an old Norman family of ship-owners. By his mother's side he was related to General Gourgaud, who accompanied Napoleon to St. Helena, and Gourgaud-Dugazon, the actor, who flourished towards the end of the XVIIIth century and was so conspicuous in the literary history of his time. In his childhood M. Hugues Le Roux had known Flaubert who was an intimate acquaintance of his family. At eighteen, while finishing his studies for the licentiate degree of philosophy, ruin having befallen his family, he was plunged into the struggle for existence and became secretary to Alphonse Daudet. He married at twenty-three, full of confidence in his own energy,

and then began his curious career. He was sent by Menelik, Negus of Abyssinia, to trace the course of the Blue Nile. He crossed the Sahara to study the sects and tribes of the Arabs. He has visited Russia in order to study the Nihilists, and has been to Norway to know Ibsen. In less than twenty years he has written thirty-three volumes.

In the current issue of the *Critic*, we find some impressions of M. Le Roux, contributed by Mrs. John van Vorst, who has known him for some time in Paris. Mrs. van Vorst writes: "This novelist, playwright, explorer, journalist, diplomat, lecturer, and patriot, has the same indifference to leisure as the busy American man, and his working hours are spent in the midst of life, in the service of his talent, his family, and the state. A Norman by descent, the native of a seaport town, he has the inborn taste for conquest and exploration. He has visited the North Cape, Abyssinia, and all the intervening countries; he has traversed the African desert and been to the center of Russia; but this other men have done, while Hugues Le Roux, in a way altogether personal, has explored humanity. He has lived with princes and paupers, with Nihilists, vagabonds, scientists, and cutthroats; he has been comrade to men of every condition. The wide field of his observations, the brusque contrasts in his experiences, have given him singular opportunities to study mankind, and his vital interest, his sympathy, his universal kinship, have enabled him to understand his fellow-creature—man."

Another view of the lecturer is given by the Paris correspondent of the Boston *Transcript*, who says that M. Le Roux is by no means regarded in France as a critic of any particular distinction, and in de Julleville's recent survey of French literature he is set down as being at the most a rather clever journalist and interviewer. He conducted for a time a column of heart-to-heart talks in *Le Journal*, somewhat after the fashion of Ruth Ashmore in the *Ladies' Home Journal*, and he has written a good many short stories which are amusing, but altogether ephemeral. For the rest he is a very alert and entertaining type of the modern Frenchman who is aware that France is not the whole of Europe. He might be called "the Richard Harding Davis of France."

Various Topics

STATUE OF SHAKESPEARE FOR ROME: A committee has been appointed, says the Rome correspondent of the *Times*, for the purpose of securing the erection of a statue of Shakespeare in the Italian capital. It will form one of a trio, the others being the intended statue of Dante, and the statue of Goethe, which Emperor William is to present to the city. The statue is also designed to show gratitude for the respect paid to the Italian language by Great Britain in Malta.

MR. NORRIS REPLIES TO MR. LIGHTON: "The Literature of the West," quoted in a recent issue, has called out a reply from Mr. Frank Norris. He applauds Mr. Lighton's protest against the "red shirt" literature of the west, but declares that the typical westerner is still the adventurer. "New York produced the financier, Maine the trader, the south the planter, Boston the littérateur, Chicago the business man, but the product of the west from the very first and up to this very hour of writing has always been, through every varying condition, occupation or calling, the adventurer. You cannot get away from him. Long since he has put off the red shirt, he has even abandoned his revolver. But scratch the surface ever so little and behold—there is the forty-niner. There just beneath the veneer is the tough fiber of the breed, whose work since the beginning of the nineteenth century has been the subjugating of the west."

SCIENTIFIC

A Study of the Motion of Fluids

Paris Correspondent of the New York *Scientific American*
Condensed for PUBLIC OPINION

MATHEMATICIANS have developed certain interesting theories to explain the movement of a fluid in encountering obstacles. Unfortunately the results of such theoretical calculations have been of little value, because they were not based upon sufficient data obtained by actual observation, or because they applied only to non-existent perfect fluids, the molecules of which glide over each other without friction. If these mathematical theories could be verified experimentally much would be done both for hydrodynamics and aerial dynamics. Furthermore, it would be possible to devise a body which would encounter the least possible resistance in moving through water or air; for the laws underlying the movement of bodies around a stationary obstacle would apply conversely to a body moving through a fluid.

The first attempts to observe the movements of fluids directly by the eye, or indirectly by means of photography, were made some years ago by L. Mach and the English physicist, Hele-Shaw. More accurate results have been obtained by Marey, an eminent French scientist, who has made the study of the movements of air his life work. His method is to form a series of parallel air-streams within a large chamber, then to charge them with smoke and thus make them visible. When an obstacle is placed in their path the movement of the air is clearly distinguished. To carry this out he uses a large chamber five feet high and two feet in section. In the lower part is an orifice, joined to the aspirating ventilator on the right, driven by a small electric motor. The air descends through an opening at the top of the chamber, which has stretched across it a frame covered with silk gauze whose meshes are very fine and regular. This serves to direct the

air in a series of vertical streams and prevent the formation of vortices, and it thus descends parallel to the walls of the chamber. The smoke is fed into the air by a series of sixty tubes, one-quarter inch in diameter and about the same distance apart. When the ventilator is set in motion the air is aspirated and draws with it the smoke, and the latter descends in a series of vertical cords which may reach as long as three feet if the air of the room is perfectly still.

The accompanying figures show some of the most interesting results obtained by this method. In Fig. 1 the air encounters a plane surface inclined at about 70 degrees. It will be observed how the air-streams pass around the obstacle. Part of them mount on the left side, but the greater number follow the slope. In the rear is a region of agitated air which extends far back. The waves are closer together at the contact of the plane, showing a diminution of speed in Fig. 2, which represents a concave surface at an angle of about 45 degrees. In Figs. 3 and 4 are shown the different manner in which the air acts in contact with concave and plane surfaces; the figures indicate that concave surfaces are more advantageous than plane surfaces as regards flying, a result which has been already proven by the aviators. In fact, in the rear of the concave surface the air is aspirated with energy and without much agitation, which is a very favorable condition, as this agitation represents a great expenditure of work. Fig. 5 is the same as Fig. 3, but with a different lighting; the former, taken by an instantaneous flash, shows the agitated zone at a given moment; in the latter the light was continuous for several seconds, and gives the mean direction of the air. Here the agitated portion is represented by a white band. Fig. 6 is of especial interest as showing

PHOTOGRAPHS OF AIR STREAMS UNDER VARYING CONDITIONS

the resistance to the air which is offered by a body having the form of a boat or again of a dirigible balloon. In Figs. 7 and 8, two bodies, a plane and a cylinder having the same section, are compared in order to show how the streams curve in the rear of the obstacle and also the relative diminution of speed. Fig. 9 shows the same cylinder with a prolonged lighting, and here the zone of air in the rear of the cylinder is strikingly brought out.

As will be seen, the method of M. Marey is of great practical value in the study of the resistance which various bodies present to the air. It can be applied to great advantage in studying the best forms to be given to dirigible balloons. In the study of curved or plane surfaces it shows that the former are much more advantageous than the latter. The apparatus will also be useful to mathematicians in giving them figures which will facilitate the study of the laws of air-resistance.

The Anatomy of Sound

London Daily Graphic

WHAT is the meaning of resonance, and why do some sounds strike us as agreeable and some as disagreeable? These two questions from Professor Fleming's *viva voce* examination of the youthful audience at the Royal institution lectures would probably find only a small percentage of answers among a much maturer assembly; and it says a great deal for Professor Fleming's extraordinary adaptability that probably nearly all who listened to his fourth lecture on "waves" came away able to answer them. He first showed, by means of swinging pendulums, by elastic springs, and by a strip of thin planking, that everything which vibrates has its proper period of vibration, just as a pendulum must always swing in the same time, however hard it is propelled or however high it swings. Then he showed by practical experiment that if the pendulum was impelled at proper intervals—at intervals, that is to say, corresponding to its proper period of vibration—it was easy to add to the amplitude of its motion; but that if anyone tried to urge the pendulum forward at uncertain intervals the effort was wasted. In the same way a thin plank stuck out from the wall might be rapidly hammered with a wooden mallet, and would survive these shocks; but if the plank was set vibrating and a touch was administered to it every time it came up to its upper limit of vibration, then presently the plank broke under the strain. "Everything had its proper period of vibration," said Professor Fleming, and added a very happy illustration. "If a boy with a pea-shooter were to aim at Charing Cross bridge he could, if he were persevering enough and had sufficient peas, break it down—by always timing his pea to hit the bridge when it swung forward under the impulse given to it by previous peas. For the same reason soldiers, when walking across a suspension bridge are told not to march in step, lest the tramp, tramp of their regular marching should by chance be keeping time with the proper period of vibration of the bridge."

Upon this basis Professor Fleming built a super-structure of the theory of organ pipes, showing how a column of air had always its proper period of vibration. First he showed that a tuning fork held over a column of air in a big test tube could so set that column of air in motion that the note of the tuning fork, hitherto inaudible, became magnified into audibility by the

resonant vibrations of the air column—a result not to be attained unless the column of air were of the proper height, and immediately lost if, for instance, the column was made shorter by pouring water into the test tube. Passing from this point, he explained why organ pipes gave out different notes; and in a very pretty experiment, arranged by letting a tiny tambourine down an organ tube, showed the points in the tube, its top and its bottom, where the air was vibrating. This part of the lecture may be said to have ended with the explanation of the resonance produced by the column of air in the "sounding box" of a violin, and with a demonstration furnished by the new Stroh violin that it was possible to find a substitute for the wooden "sounding box." The second part of the lecture was a remarkably clear exposition of Helmholtz's theory of the assonance of sound waves—an explanation which it is quite impossible to make briefer than Professor Fleming's own statement. But, putting his explanation merely as a statement, the reason for the pleasant or unpleasant nature of sounds lies in the speed of "intervals" in combined sound waves. A simple sound wave consists of a regular wavy line of so many vibrations a second. If another sound wave is joined to this, the humps of the combined wave and the depression must become altered in shape and in periodicity. If these humps only occur as many as eight or nine times a second the sound is agreeable. If the humps become very frequent the combined note or compound wave produces a disagreeable sensation on the ear.

The Nature of Explosions

February Engineering Magazine, New York. Excerpt

ALTHOUGH explosives have been used for hundreds of years in the form of gun-powder, and for more than half a century in the form of the so-called "high explosives, the theory of their action is not even yet fully understood. A recent lecture by Professor Dixon, of Owens college, Manchester, upon the nature of explosives, published in the *Colliery Guardian*, gives the latest theories upon the subject, and contains much interesting matter.

The investigations of Bunsen, many years ago, led to his statements of the velocity of propagation of explosions in gases, namely that the propagation in oxygen and hydrogen was about 36 to 40 yards a second, and the propagation was slower in a denser medium. The later work of Berthelot and of Le Chatelier, however, has caused the figures of Bunsen to be greatly modified. According to their experiments an explosion in a mixture of hydrogen and oxygen travelled at an increased rate from the point of inflammation until in a very short time the rate became constant. The rate of explosion is equal to the mean rate of movement of the burning gases at the temperature of the explosion, calculated according to the "molecular theory." Le Chatelier had shown that the flame began by traveling slowly at a uniform rate, that it then commenced to oscillate violently, and, finally, either the explosion wave was set up or the flame died down.

There are thus three *regimes* of explosions—first, the uniform and slow combustion; second, the vibratory period; and third, the explosion wave. Mixtures of coal gas with air and firedamp with air show phenomena of the first and second kind. Ignited at the open end of the tube these mixtures burn at a uniform rate for a certain distance, and then the flame begins

to vibrate. The vibrations acquire greater or less velocity according to the nature of the mixture and the conditions of the experiment, but the third *regime* of uniform maximum velocity is not set up. In narrow tubes the explosion soon dies out. The phenomena studied by Le Chatelier have been observed in a large scale in explosions in coal mines. It had been noticed that little damage was caused at the source of the explosion, and at a distance varying from 50 to 80 yards from the origin of the flame, while beyond that distance falls of roof, broken tubs, and blown-out stoppings testified to the violence exerted by the explosion. Great as the destruction is which an explosion of firedamp and air causes in a mine, it is fortunate that these mixtures do not detonate. The physical nature of detonation has thus been explained by experiments on gases, but other problems still remain. The mode in which chemical atoms unite, the dissociation of compounds, the variations in specific heat, are all subjects of extreme interest on which we may hope for more light from a study of explosions.

Artificial Aging of Whisky

London Correspondent New York Tribune

A NNOUNCEMENT has just been made of a discovery that is likely to revolutionize the spirits trade, both in England and America. The discovery is of a process that will in a few months lend "age" to whisky. The discoverer of the process is Professor J. T. Hewitt of the East London technical college. He is a man of scholarly attainments, and is prominent in scientific circles. Professor Hewitt made his announcement at a meeting of the society of chemical industry, held at the Burlington house, and in support of his claims had the backing of Dr. Schildrowitz, a spirit expert of international fame.

Dr. Schildrowitz told the assembled scientists that he had examined and tested several samples of whisky prepared under Professor Hewitt's formula, and found that he had succeeded in eliminating the poisonous qualities from the new whisky, and in giving it the flavor of the product that is kept for years in barrels. Of course the professor did not publicly disclose what his formula is composed of. He simply declared he had achieved success by adding certain chemical substances to the "pot-still." The result was that a certain chemical combination was formed in the still with the noxious components in the new whisky, and that thus the liquor was practically distilled over, becoming quite pure. The poisons were, in fact, removed entirely from the whisky.

The London *Lancet* combats the idea that any chemical process can lend "age" to whisky. Countless attempts have been made, the *Lancet* says, to remove rapidly the raw characteristics of new whisky, but no real success has ever been attained comparable with the mellowing influences of age. The common and erroneous belief is that new whisky would at once be made as old if such things as fusel oil, furfurol, and probably other aldehydes could be extracted or destroyed. That is not the case. The product would then be simply alcohol and not whisky at all and spirits of wine might as well be consumed. It is constantly forgotten that genuine old whisky is palatable and wholesome because those very products which give it a raw, harsh, and disagreeable taste when it is young are the very constituents which time, and time alone, fashions into pleasing flavor. In fact, the harsher the taste when

young the more full-flavored is the whisky when matured. This salutary change is due to a gradual resolution of certain of the products of distillation, but not the alcohol, into new bodies which communicate to the whisky its characteristic flavor. These products, therefore, the aldehydes and higher alcohols, are essential to the production of a wholesome and good-flavored spirit. This result can not possibly be gained by chemically abstracting these bodies as it is proposed to do. In fine old brandy the flavor is due essentially to these bodies assimilating each other, so to speak, over a long period of time and producing wholesome flavors. The ethers in particular, upon which much of the excellent medicinal effect of old brandy depends, increase largely with age and the ethers themselves are most probably a product of the union of the raw bodies. To eliminate these raw bodies, therefore, by a chemical process is to eliminate the materials which afterwards contribute the finest characteristics, and such a spirit can not be regarded as being in any sense equivalent to a spirit mellowed by age. The process may take out deleterious things in a new spirit but it does not leave old whisky or old brandy behind, and such extracted spirit would probably never be the better or more wholesome for maturing in the absence of those ingredients which make old spirit acceptable to the palate and the economy.

Various Topics

PLANT VACCINATION: French botanists are endeavoring to vaccinate plants against parasitic diseases. As the elementary functions are the same in animals and plants there seems to be no reason why their diseases, whether arising from microbes or fungus, should not be treated in the same way.

A THEORY OF VISION: In place of the chemical theory, A. Pizon has shown that in the visual organs of both the vertebrates and invertebrates, the pigmentary granules that accompany the visual cells are in rapid motion like that of micrococci. The presence of these granules in immediate contact with the visual cells and the constancy of their motions lead naturally to the conclusion that they serve as intermediaries in the excitation of the cells.—*Popular Science Notes*.

THE MECHANICAL EQUIVALENT OF HEAT has been investigated by Mr. H. T. Barnes, who recently described his experiments in a paper before the royal society. According to a note of it in *Science Abstracts*, the determination was made by imparting electrical energy to a constant stream of water, so as to give a steady difference of temperature at its ends. In terms of the thermal unit at 16 degrees C., the specific heat of water was found to be 1.00530 at 5 degrees C., 0.99735 at 40 degrees C., and 1.00370 at 95 degrees C., with a minimum at 37.5 degrees, and the resulting mechanical equivalent of heat is equal to 4.18876 joules—a result which is about 0.132 per cent higher than those of Reynolds and Moirby by direct mechanical means.—*Engineering Record*.

A NEW PIGMENT: A patent issued January 14 to Dr. Alexander S. Ramage, of Cleveland, Ohio, discloses a method of producing a remarkable iron pigment, with an old formula and new properties—the hydrated basic ferric oxide. In outline the process is as follows: The waste ferrous liquor derived from iron-pickling—generally ferrous sulphate or chloride with some free acid—is neutralized, and then oxidized by the joint action of air and steam. By the oxidation of the ferrous sulphate, basic ferric sulphate is formed, and this salt in the presence of the large volume of water is hydrolyzed, yielding sulphuric acid and basic ferric hydrate—the pigment in question. The pigment is light yellow in color, but is readily converted by heat into the several iron oxide reds, and affords also a suitable base for mixed pigments. Its absorptive capacity for oil greatly exceeds that of the standard pigments, being $2\frac{1}{2}$ times that of standard French ochre, and $7\frac{1}{2}$ times that of white lead. Its covering power as compared with these pigments is almost proportionately high.

RELIGIOUS

Religion in a Typical Factory Town

A STUDY OF BROCKTON, MASS.

UST how far is modern Christianity, as focused at a given point, influencing the personal and community life of the world? This is a question which can not be answered out of one's inner consciousness, but which calls for a patient, thorough study of the actual facts. A representative of *The Congregationalist and Christian World* has undertaken to do this for the interesting and to a degree representative city of Brockton, Mass., the center of New England shoe manufacturing. In studying Brockton three avenues of information were followed: (1) talks with a number of prominent men; (2) authorized records supplemented by individual inquiries; and (3) a personally conducted census of all places of worship in the city which were open, so far as could be learned, on a certain Sunday.

Mr. Preston B. Keith, a man well known in Brockton, is a manufacturer of shoes and sees both sides of Brockton life. "The proportion of Sabbath keepers and churchgoers in Brockton," he said, "is larger than in some manufacturing cities. The majority of the leading business men are church supporters and attendants. No license is much better than license, but it is not always well enforced. Liquor is used, and some of it is sold in Brockton." Rev. Albert F. Pierce of the South Congregational church saw a "spirit of unity and fraternity between the ministers," "but no organized coöperation." Mr. Benjamin F. Pierce, general secretary of the Y. M. C. A., said: "I never

saw a cleaner city, and I attribute it to no license and the sentiment which supports it. There are wild girls in Brockton, to be sure, but I do not think you will find open houses of prostitution. The church membership and attendance of men is not so large as it ought to be. The men are good fellows; their morals are generally pretty good, but they are not religious."

Thirty-six churches worship in thirty-one edifices and five halls; there are six missions and the Y. M. C. A., making forty-three places of worship open on Sunday, or one hundred and forty-three services in all, counting Sunday-schools and all young people's meetings. The Protestant Sunday-school enrollment and the public school membership are about the same; and the public school average attendance is one-fifth larger than the Protestant church membership. The Congregational churches show the greatest increase since 1890 in membership and valuation. In five years the Methodists have just held their own, the Baptists have gained a little except in Sunday-schools, and the Congregationalists have gained one-fourth, three new churches having been established. There are about 28,700 Protestants in Brockton, of whom one-fifth are church members and one-fourth attend Sabbath-school. A peculiar item in regard to sex is that, reckon as you will, by nativity, birth, race, or school children, any way but by churches, Brockton's population is almost exactly one-half male. Reckon by churches, however, and the males are a scant one-third.

Going back ten years and taking United States

THEOLOGICAL ATHLETICS — JUMPING THE HURDLES.—Ram's Horn

census figures of 1890, we find substantial gains. Church valuation has more than doubled, and there are thirteen new churches. The greatest gain in valuation has been in the Congregational and Methodist churches. The Unitarians have lost members, Methodists and Baptists have gained not quite one-third, and Congregationalists a little less than one-half in membership. Altogether the Protestant church membership reported shows a gain in ten years of 2,180, while the Protestant gain in population has been approximately 10,500.

The influential factors in Brockton's moral and religious life are: The character and nativity of the population, which includes many Americans, a large proportion of Swedes and a comparatively small proportion of the objectionable elements; the attitude of leading citizens in municipal and other affairs; no license, a high municipal ideal and pride in the home city; an admirable school system; business progressiveness; a local press, which, although it does foment sensational church exploits or bickerings, prints other church items as news and not as an occasional filler; and the women of Brockton, who outnumber the men in the churches and who, through a strong W. C. T. U. and a Woman's club, composed of representatives of the best families, are a power to be reckoned with in any great movement, political, moral or religious.

The Y. M. C. A. in Russia

New York Times. Excerpt

THE bestowal of the Order of St. Anne, third class, upon Franklin Gaylord, an American, secretary of the Russian society for the Moral and Physical Development of Young Men, organized by himself and James Stokes of New York, is a source of gratification to the whole American colony in Russia, of which Mr. Gaylord is one of the most popular members, as it is the czar's way of recognizing the work of Mr. Gaylord in connection with the Young Men's society. Messrs. Stokes and Gaylord had anything but easy sailing when they began their efforts to institute the Young Men's society. Indeed, their attempts to transplant the Young Men's Christian association to Russia never advanced an inch until they succeeded in enlisting the interest of the czarina and of Prince Alexander of Oldenbourg. The prince extended his patronage to the society, and has always participated actively in its work. It found favor with the young men from its inception, and has grown rapidly. Owing to its high patronage, the society has enjoyed complete immunity from interference by any branch of the government. The religious features are directed by priests of the Orthodox Russian church. The organization attracted favorable attention last year from the fact that the young men under its influence refrained from participation in political disturbances.

At the annual meeting, just held, Prince Alexander presiding, the secretary of the executive council, Peter Sidoroff, reported 1,016 new members received for the year, and an average attendance at the evening classes of 400. The society has a good library and reading room, supplied free by the St. Petersburg publishers, and the concert room, lecture rooms, game room, class rooms, etc., are well furnished and are lighted by electricity. The gymnasium is the best equipped place of its kind in Russia. The institution is gradually becoming self-sustaining, although the membership fee is only \$1.50 a year, and tuition costs only \$3 for each subject. About half of the needed funds are now found in St. Petersburg. The members of the society

recently testified their gratitude by presenting to the organization excellent portraits of Mr. Stokes and Prince Alexander. The council is composed of Ivan Tourchaninoff, formerly sub-prefect of police; Prince P. S. Obolensky, Senator N. S. Tagantseff, Mr. Sidoroff, Emanuel Nobel, William E. Smith, Father Nicholas Vassilieff, the Rev. Alexander Francis, pastor of the British-American church, and Mr. Gaylord.

Each in His Own Name

PROFESSOR CARRUTH, Reprinted in the *London Academy*

A fire mist and a planet,
A crystal and a cell;
A jellyfish and a saurian,
And caves where the cavemen dwell;
Then a sense of law and beauty,
And a face turned from the clod—
Some call it Evolution
And others call it God.

A haze on the far horizon,
The infinite tender sky;
The ripe, rich tints of the cornfields,
And the wild geese sailing high;
And all over upland and lowland
The charm of the golden-rod—
Some of us call it Autumn,
And others call it God.

Like the tide on a crescent sea beach,
When the moon is new and thin,
Into our hearts high yearnings
Come welling and surging in—
Come from the mystic ocean
Whose rim no foot has trod—
Some of us call it Longing,
And others call it God.

A picket frozen on duty,
A mother starved for her brood,
Socrates drinking the hemlock,
And Jesus on the rood;
The million who, humble and nameless,
The straight, hard pathway trod—
Some call it Consecration,
And others call it God.

Can a Business Man Preach?

REV. CHRISTOPHER G. HAZARD, in the *Evangelist*, New York
Condensed for PUBLIC OPINION

IN preaching there must be a practical element or abstract theorizing will still curse theology; there must be a parochial element, or the shepherd and the sheep will not be in touch; but into preaching there must go a time element, or it will be crude. There must be time for thought. No man can improvise truth, and no man can improvise art. It sometimes seems as though our age may be making an ancient mistake. It is putting a time limit on the sermon in more senses than one. The time element, so essential to true and powerful preaching, is the one element denied to the modern preacher. No longer a prophet and a seer, he has become a busy, fussy man of affairs, and manager of countless ecclesiastical, social, and philanthropic institutions and enterprises.

Probably it is at the demand of the people that the church has so largely abandoned her teaching function and set out upon the path of active and material progress. And probably the minister is but hearing the church in becoming so largely a business man. But after the minister has forgotten his apostleship, and after he has become so busy a man, one is moved to ask the question, Can a business man preach? The impression that one gets from extended observation

is that he can not. This is not an era of great preaching. There is an abundant ministration of questions, and they are ably discussed. Terse, epigrammatic treatments of ethical truth, and business like presentations of practical subjects, are everywhere heard. But one misses the high notes, and marks the narrowness and bareness of the speaker's art. It is borne in upon those who listen to modern preachments that very often the preacher is "not prepared." Greatness of subject and thought, depth of treatment, easy command are sufficiently rare to disappoint, and to provoke questioning. The business man can talk, but he can not preach. The church is spoiling good preachers and making poor business men. It is not possible for one man to comprise and combine in himself the functions of the whole church, she is a body with many members. It would not be good to have a one-man church if it were possible. It is not needful; at last the burden can be rested more squarely upon the shoulders of church officers.

Various Topics

THE WESLEYAN METHODIST FUND of a million guineas, which was started three years ago, has been completed.

POLYGLOT METHODISM: The Methodist Episcopal church is preaching in this country in sixteen languages, nearly all of which are represented by delegates in its general conference.

PARIS ABANDONS RED MASS: Paris gave up this New Year's after many centuries, the Red Mass in the Sainte Chapelle for the judges of the higher courts. This was done by order of the minister of justice on account of the intermeddling with political affairs of the religious orders. The ardent Catholic judges and lawyers attended instead a mass celebrated by Cardinal Richard in the Church of St. Germain L'Auxerrois, opposite the Louvre, whose bells gave the signal for the massacre of St. Bartholomew.

THE PSALM OF THE PROFESSORS

Let us, then, be up and doing
Things unorthodox each day—
Ripping gospels up and strewing
Old beliefs along the way.
Be not like dumb, driven cattle—
That would be a foolish crime—
Flout the holy Bible, that'll
Make you famous every time.

—*Chicago Record-Herald.*

CHURCHES IN DANISH WEST INDIES: With the accession of the three West India islands from Denmark will come accession to the religious forces of the United States. About 16,000 of the 30,000 population of St. Thomas, St. Croix, and St. John islands are actively identified with the churches. There are Moravian, Dutch Reformed, Methodist, Catholic, and Church of England bodies, the Moravian and Dutch Reformed being the strongest in membership and influence. The Church of England, which has parishes in each of three principal towns of St. Croix, has affairs in charge of the resident bishop of Jamaica.—*Hartford Times.*

MISCELLANY

The Gallery of Beauties at Munich

KING LUDWIG'S REMARKABLE COLLECTION OF PORTRAITS

A WRITER in the February *Strand Magazine* describes the manner in which King Ludwig I of Bavaria collected the portraits for the celebrated Gallery of Beauties in the royal castle at Munich. He says that the collection of portraits of beautiful women was not suggested with a view to pay compliments to the bearers of great names, though it is to a great extent a highly aristocratic bevy of beauties which has been immortalized by the subtle brush of Joseph von Stieler, the court painter. "The king desired to collect these portraits independent of rank and position. During his lonely walks he succeeded in discovering many a subject for his collection. Wherever he saw a lovely woman's face he sent his faithful Stieler with a request for the necessary sittings to secure a portrait. No woman resisted such a compliment paid to her beauty, and thus it came about that in the same room with the portrait of Queen Marie of Bavaria we find one of a girl who served the foaming Bavarian beer to the guests at her father's inn. These two pictures are, perhaps, among the most beautiful of the collection, though the best portrait is that of Lola Montez." The writer gives the following sketch of that remarkable adventuress: "Lola was born at Limerick, Ireland, in 1818, her mother being a Creole of notable beauty. After having passed the early years of her life in an English boarding-school at Bath, her beauty and vivacity of spirit attracted a young Anglo-Indian officer, Captain James, who married her and took her with him to the far east. But Lola found eastern life rather dull and, secretly leaving her husband, she embarked for Europe. Struggling poverty assailed the adventuress in London, and after a most checkered career as a street singer Lola went to Madrid. She

obtained an engagement in the ballet at the Porte St. Martin théâtre, in Paris, in 1839, but the director found himself bound to dismiss the irrepressible ballerina. We hear of her again in Berlin, where Ludwig I of Bavaria, meeting her apparently by chance at the house of a courtier, expressed a wish to see her dance a fandango. Completely fascinated by her feline grace and witty repartees, the royal enthusiast presented her to his court as "my best friend." She was made Baroness von Rosenthal and Countess Landsfeld. A pension of 20,000 florins and a magnificent villa gave suitable atmosphere to the newly-created titles. She was finally expelled from court, married first an Englishman, then an American, and died in New York in 1861."

Some of the other beauties in the collection are sketched as follows: "Cornelia Vetterlein was a young girl of good family, and well brought up. Her parents lived in a neighboring town, and one day when she went to Munich with her elderly maiden aunt the king saw her in the Ludwig-Strasse, where he often took his walks alone, and commissioned Herr von Stieler to paint her. There is nothing known about Ianthe, Lady Ellenborough, née Lady Digby. The peerage gives no such name, but it is possible that, through the carelessness of the officials, a wrong or misspelled name was put under the picture. A German beer-house is hardly the soil for a flower of beauty and purity to grow. Nevertheless, Helene Sedlmayer, with her sweet, girlish face and the expression of a saint, grew up in her father's inn. Every three years a quaint old custom, "the Scheffertanz," takes place in this part of the town. The butchers and coopers dance in quaint mediæval costume round the fountain in the "Thal"; this festivity lasts three days and pro-

LADY ELLENBOROUGH

vides much amusement and gaiety for the working classes. King Ludwig, who was wont to mix among his subjects and whose kind-heartedness rejoiced in seeing their mirth, was there in the midst of the crowd and saw the beautiful Helene craning her pretty neck to see what was going on round the fountain. He sent his aide-de-camp to find the pretty maid a better place of vantage and to arrange for her to sit to Stieler for her portrait. The king offered to give her a dowry and marry her to one of the court officials, but she pleaded to marry her betrothed, the humble Hans, and the king gave his consent, likewise the dowry."

Life in the Danish West Indies

A FEW FACTS ABOUT OUR NEWEST POSSESSIONS

MR. H. ERNAND BEHN, who was born on the island of Saint Thomas and has lived there for many years, contributes to the *Independent* the following facts about our newest possessions:

The Danish West Indies consist of the islands of Saint Thomas, Saint Croix, and Saint John. They were discovered by Columbus on his second voyage in 1493. They are undoubtedly of volcanic origin, and form part of the Virgin group, lying southeast of Porto Rico and directly in the track of vessels running between Europe and Panama and South America. Their total area is: Saint Thomas, 53 square miles; Saint Croix, 135, and Saint John, 35. The population is about 32,000; four-fifths of the people are colored. The climate is warm but delightful, never so hot as one finds it in New York at midsummer. The thermometer seldom goes above ninety, and the warmth is tempered by the delightful easterly breeze. It is also very healthy and the sanitary conditions excellent. Yellow fever is very seldom heard of. The population of Saint Thomas in 1880 was 15,000, and at that time the death rate there was about 29 for every 1,000 persons living. There are three hospitals and an insane asylum in Saint Thomas.

Life in the islands is delightful. The people are among the most hospitable on earth. The social season there begins in December and lasts till April. During that time the harbor of Charlotte Amalia at Saint Thomas is visited by warships of almost every nation and as the officers are ready always for amuse-

ment ashore there are balls at the government house and balls at the houses of the other principal people, and more and more balls and dances on the ships, with dinner parties, picnics, and moonlight parties on the water. In spite of the large share of enjoyment which they get from life the people of the Danish West Indies live very cheaply. A fine large mansion, with ground and broad veranda, can be rented for \$25 a month, and one can have a good servant for about \$5 or \$7 monthly. Food also is plentiful and cheap. There is an abundance of vegetables and fruits. The meat comes from Porto Rico, cattle, sheep, and pigs being brought over alive. The waters about the islands are teeming with the choicest fish, and fishing is a considerable industry. The colored people in these islands are the best in the West Indies. They are faithful, kindly, moral, intelligent, and religious. When slavery was abolished in 1848 they continued to work for their old masters, and as a result there have always been the most cordial relations between the two races.

The Day and the Deed

LOWELL'S TRIBUTE TO LINCOLN

(Abraham Lincoln, Born February 12, 1809.)

Nature, they say, doth dote,
And can not make a man
Save on some worn-out plan,
Repeating us by rote:
For him her Old World moulds aside she
threw,
And, choosing sweet clay from the breast
Of the unexhausted West,
With stuff untainted shaped a hero new,
Wise, steadfast in the strength of God, and
true.
How beautiful to see
Once more a shepherd of mankind indeed,
Who loved his charge, but never loved to
lead;
One whose meek flock the people joyed to be,
Not lured by any cheat of birth,
But by his clear-grained human worth,
And brave old wisdom of sincerity!
They knew that outward grace is dust;
They could not choose but trust
In that sure-footed mind's unfaltering skill,
And supple-tempered will
That bent like perfect steel to spring again
and thrust.
His was no lonely mountain-peak of mind.
Thrusting to thin air o'er our cloudy bars.
A sea-mark now, now lost in vapor's blind;
Broad prairie rather, genial, level-lined.
Fruitful and friendly for all human kind.
Yet also nigh to heaven and loved of loftiest
stars.

THE NEWS OF THE WORLD

MONDAY, FEBRUARY 3

DOMESTIC.—The adjutant general of the army sent to the senate a report showing that the militia of the several states includes 8,751 commissioned officers and 106,998 enlisted men; the number of men available for military duty unorganized is 10,531,388. . . . Four stockmen were killed in a rear end collision at Apple River, Ill. . . . Admiral Higginson established a permanent camp on the island of Culebra, West Indies, and left a company of United States marines there.

FOREIGN.—In the reichstag Count von Posadowsky-Wehner uttered a warning against any attempt by the state to investigate the doctrine of Christian Science. . . . Reports of serious loss of life at sea in the recent storm reached London; on the Britany coast the French ship *Chanaral* was wrecked and twenty-one lives were lost; a steam trawler went down near Iceland and twelve men perished. . . . An avalanche partly overwhelmed the Austrian village of Bleiberg, many people being killed. . . . Conservatives elected Samuel Roberts to succeed Sir Ellis Ashmead-Bartlett in the house of commons for the Eccleshall division of Sheffield.

TUESDAY, FEBRUARY 4

DOMESTIC.—Elections for governors in the Philippines show that in most provinces the native candidates received a majority of the votes. . . . The senate passed the bill increasing the salaries of United States judges 25 per cent. . . . John F. Dryden, the new senator from New Jersey, was sworn in. . . . At Chicago Judge Tuley dismissed the suit against "Dr." John Alexander Dowie, the faith healer, and announced that no receiver would be appointed for the Zion Lace industries, as the case had been settled out of court. . . . Maj.-Gen. S. B. M. Young will be the first president of the new Army War college at Washington barracks.

FOREIGN.—The British government courteously declined to accept Holland's mediation in the South African war. . . . Queensland's parliament was dissolved; the premier issued a manifesto showing dissatisfaction with the federation. . . . The British steamer *Knight Companion* went ashore on the coast of Japan; passengers and crew were safely landed. . . . The granddaughter of Charles Dickens was married to Ernest Bouchier Hawksley. . . . Antiritualists created a scene at a memorial service in honor of Queen Victoria in London. . . . Jamaica's budget shows a surplus for the first time in many years.

WEDNESDAY, FEBRUARY 5

DOMESTIC.—The bill to abolish state hospital boards and centralize authority for conducting the state hospitals in the state lunacy commission passed the senate of the New York general assembly by a vote of 31 to 18. . . . Senator Wagner, after much hesitation, introduced District Attorney Jerome's bill to permit saloons to open on Sunday. . . . Governor Van Sant, of Minnesota, in his message to the legislature of that state, called attention to his fight

against the so-called railroad merge^r, and asked for an appropriation to pay legal expenses. . . . Eleven persons were killed by an explosion of illuminating gas in Chicago.

FOREIGN.—Lord Kitchener reported that De La Ray's force was surprised, seven men being killed and 131 captured; DeWet's last gun was also taken; the British losses were slight. . . . A revolutionary expedition sent out by General Herrera was captured by government forces; more troops are being organized at Panama. . . . Lord Salisbury, in a speech, at the unveiling of a statue of Queen Victoria, in London, said the Irish, as well as the Boers, were a menace to the British empire. . . . The bill permitting a man to marry his deceased wife's sister passed the house of commons again. . . . The French chamber of deputies passed in final form a bill providing an eight-hour work day for miners.

THURSDAY, FEBRUARY 6

DOMESTIC.—The industrial commission submitted its final report to congress recommending laws to regulate transportation and agriculture. . . . The full text of the treaty of cession of the Danish West Indies was made public; the transfer is to be made immediately upon the payment of the purchase price of \$5,000,000. . . . The New York chamber of commerce adopted resolutions favoring reciprocity with Cuba. . . . Miss Helen Hay, eldest daughter of Secretary of State John Hay, and Payne Whitney, son of William C. Whitney, were married in Washington.

FOREIGN.—M. Kamtcheff, Bulgarian minister of public instruction, was assassinated at Sofia. . . . The sultan of Turkey pronounced sentence of death against his brother-in-law, Damad Mahmud Pasha. . . . Germany has nearly completed negotiations for exclusive mining rights in Shan Tung, China. . . . The Opposition gained a seat in the recent parliamentary by-election in County Down, Ireland.

FRIDAY, FEBRUARY 7

DOMESTIC.—The Manila chamber of commerce adopted a memorial to congress, urging legislation for the islands, and asking for two additional commissioners; two deserters from the American army were executed in Luzon; the insular presidents will present a petition to Monsignor Sbaretti asking that the friars be expelled from the islands. . . . Admiral Sampson's counsel filed a brief with the president, making a new charge of disobedience of orders against Admiral Schley, and protesting against his claim to supreme command at Santiago. . . . Governor Taft continued his testimony before the senate committee on the Philippines, urging in particular the purchase of the friars' lands. . . . Assistant Secretary of State Hill, Adjutant General Corbin, and Rear Admiral Evans were officially designated as "the president's delegates for the reception and entertainment of Prince Henry of Prussia.

FOREIGN.—The federal parliament of Australia confirmed several clauses of the new tariff bill, imposing higher duties..

The Liberal commander on the isthmus sent a message to the foreign consuls in Panama, asking that their governments take measures to neutralize the zone of the Panama railway. . . . The filibustering steamer *Libertador* appeared off the island of Curacao. . . . Marais, a Boer commandant, was captured by the British in South Africa. . . . Thomas Sidney Cooper, R. A., died near Canterbury, aged ninety-nine; he was the oldest academician, and had exhibited without a break for sixty-seven years. . . . Prince Komatsa was appointed to represent Japan at the coronation of King Edward.

SATURDAY, FEBRUARY 8

DOMESTIC.—A concession has been granted by Peru to a group of American capitalists, who may spend millions in developing the mining resources of that country. . . . Admiral Walker testified before the senate committee on interoceanic canals, giving reasons for the commission's change of recommendation from the Nicaragua to the Panama route. . . . Rear Admiral W. T. Sampson and B. J. Cromwell go on the retired list of the navy. . . . President Roosevelt abandoned his proposed trip to Charleston on account of his son's illness. . . . Connecticut's labor commissioner announced that a system of blackmail was being carried on by overseers in various industries.

FOREIGN.—Onslow Ford's memorial tablet to Ruskin was unveiled in the Poet's Corner, Westminster Abbey. . . . The kaiser has ordered that measures be taken to stamp out Christian Science, Spiritualism, etc., in Germany. . . . The Polish nobles at Warsaw who were invited to a recent ball given by the governor declined to attend because the invitations were in the Russian language. . . . Five vessels, three of them steamers and two barges, were sunk in the Thames as the result of a series of collisions. . . . Snowstorms and fogs continue throughout the United Kingdom, it being the most severe weather experienced in twenty years.

SUNDAY, FEBRUARY 9

DOMESTIC.—Fire destroyed almost the entire business section of Paterson, N. J., and caused a property loss estimated at about \$10,000,000. About one thousand families were made homeless. . . . Official figures published at Washington show that the imports of Cuba are decreasing, while the exports are increasing. . . . George J. Kobusch, president of the St. Louis Car company, was arrested on a charge of perjury. . . . Eleven persons were killed in a fire in a lodging-house in St. Louis. . . . A pier of the Lehigh Valley Railroad company in Jersey City was destroyed by fire, with a loss of \$250,000.

FOREIGN.—De Wet, though hard pressed by twenty-three British columns and suffering severely, has again escaped through the British lines in South Africa. . . . The twenty-fifth anniversary of Emperor William's entrance into active service in the 1st regiment of guards was celebrated at Potsdam. . . . An attempt by Liberals to capture the city of Barranquilla, on the Magdalena river, Colombia, failed.

The Books of The Week

NATURE'S GARDEN. Wild Flowers. By Neltje Blanchan. Illustrations—32 full-page plates in colors, 48 black and white, pp. 414.

BIRD NEIGHBORS. By Neltje Blanchan. Illustrations—48 colored plates, pp. 234.

GAME BIRDS. By Neltje Blanchan. Illustrations—48 colored plates, pp. 358.

BIRD HOMES. By A. Radclyffe Dugmore. Illustrations—16 colored plates and 50 other pictures, pp. 183.

THE BUTTERFLY BOOK. By Dr. W. J. Holland. Illustrations—48 plates in colors and many text cuts; 1,000 species pictured, pp. 382.

THE INSECT BOOK. By Leland O. Howard. Illustrations—16 colored and 32 black and white full page; 300 text cuts, pp. 429.

THE MUSHROOM BOOK. By Nina L. Marshall. Illustrations—24 colored plates, 24 black and white; over 100 text cuts, pp. 165. New York: Doubleday, Page & Co.

THE growing interest in outdoor life demands just such works as Doubleday, Page, and Company have given us in their New Nature Library. We have here presented, in seven uniform volumes, minute and well-classified information concerning the natural phenomena that one would probably observe in a country ramble. Neltje Blanchan contributes the text to three volumes: "Nature's Garden," "Bird Neighbors," and "Bird Homes." The first named sets forth in a very interesting manner the important relationship existing between our common wild flowers and certain insects. While it has been stated by evolutionists for many years that in order to know the flowers their insect relationships must first be understood, to the author of "Nature's Garden," belongs the credit of explaining them in such a considerable number of species. She shows very clearly that almost every one of the five-hundred and some odd flowers treated in this book is what it is because of its necessity to attract insect friends, or to repel its foes; that its form, mechanism, color, markings, odor, time of opening and closing, and its season of blooming are the result of natural selection by that special insect upon which each depends more or less absolutely for help in perpetuating its species. The flowers have been classified according to color, because the author believes that the novice, with no knowledge of botany can most readily identify the specimen found afield by this method. The scientific names and classification follow that method adopted by the international botanical congress.

"Bird Neighbors" is the work of a true bird lover, intimately acquainted with "the birds that nest in our gardens and

waken us with their songs." The author has put a good deal of accurate information into popular and accessible form—short, narrative descriptions treating of the bird's size, color, and flight; its peculiarities of instinct and temperament; its nest and home life; its choice of food; its songs, etc. To aid identification the birds have been classed into color groups. The work on "Game Birds" is written in much the same spirit, though it covers a far larger field. Here, also, we are given glimpses of the live birds, in their haunts and homes, and not the technical study of the anatomy of dead ones. In her descriptions, the author especially emphasizes the marvelous cleverness of the game birds, and how positively dependent agriculture is upon their ministrations.

Mr. A. R. Dugmore supplements the work of Neltje Blanchan with a well-planned volume on "Bird Homes." Many facts which give each species and each bird family definite individuality are here presented—facts of the utmost interest and all the more valuable because they have been to a great extent ignored heretofore.

Perhaps the most beautiful book in this collection is "The Butterfly Book," by Dr. W. J. Holland, with its reproduction in color-plates of his wonderful butterfly collection. Its chief aim is to guide the amateur collector in the right paths and to prepare him for greater research. Some of the subjects treated are: The Life History and Anatomy of Butterflies; The Capture, Preparation, and Preservation of Specimens; The Classification of Butterflies. The work is confined to the butterflies of North America, north of the Rio Grande of Texas. It is written in a most engaging style. A kindred volume is devoted to the insects with which we are all familiar, and which we hold in some contempt. Dr. Leland O. Howard, who supplies the text for "The Insect Book," has given an exhaustive and painstaking study of all the various families of wasps, flies, fleas, plant-lice, etc. The text is accompanied by original plates, having been photographed from insects either collected especially for this purpose or taken from the collection of the United States National museum.

There is, doubtless, enough interest in mushrooms to justify including "The Mushroom Book" in this library. The author, Nina L. Marshall, has drawn her material largely from the monographs written by men who have made specialties of the different divisions of fungi, and so presented it that her work serves as a useful guide for those who wish to obtain knowledge about mushrooms, either for the sake of using them as food, or for the sake of studying them scientifically.

Too much praise can not be given to certain general features of this library, to the excellent make-up of each volume, to the fine quality of paper, the wide margins, clear type, beautiful color plates of flowers, birds, and butterflies, and to the complete and well arranged indices. These books are guides in the best sense of the word.

THE WATCHERS OF THE HEARTH. By Benjamin Sledd. Boards, pp. 84, \$1.25. Boston: The Gorham Press. THOSE acquainted with Prof. Sledd's "From Cliff and Scour" will welcome with pleasure the present volume. The poems of the first volume were noticeable for their delicacy of form, their sympathy with nature, and their pervasive mysticism; but, in spite of these merits, the poems were more or less slight in their appeal in that they lacked human vitality and their pessimism bordered on morbidness. "The Watchers of the Hearth" is a marked advance over its predecessors. The paternal love, the main theme of the volume, can not fail of genuine response; the love poetry has a graceful tenderness, becoming at times almost intense, as in the third sonnet to "Innominata"; the yearning love for nature has the added charm of the feeling that there is a mysterious life back of all phenomena; and the pessimism, though rising to despair in the lines "Over My Mother's Grave," is rendered attractive by the hope that shines through it. The author has so steeped himself in the great English poets, especially Tennyson and Wordsworth, that the reader is interested to come across frequent but beautiful reminders of these masters. However, Prof. Sledd is a sincere poet and a conscientious artist, and his book deserves appreciation from all lovers of our minor poetry.

THE COLONIALS. By Allen French. Cloth, pp. 501, \$1.50. New York: Doubleday, Page & Co.

A VERY interesting story of the opening days of the American revolution in Boston. The central figure of the story is a young Whig, who is driven from his home by the machinations of a grasping uncle. He betakes himself to the woods as a trapper and performs feats of valor in rescuing a young girl from the Indians and from the power of an English lieutenant into whose hands she has fallen. The rescued girl proves to be the daughter of another officer in the same regiment as her unscrupulous captor. Later in the action of the tale, the young Bostonian, now an avowed enemy of the king, the girl, and the lieutenant meet in Boston. The patriot proclaims his identity as the member of a prominent family, the Ellerys, of which he is the head since the death of his father. In Boston, the reader is introduced to many of those who are now the heroes of every schoolboy: Warren, Putnam, Adams, Hancock, Revere, and Washington himself. The inevitable dramatic end of the story is the death of the sinful lieutenant at the hands of Ellery. The plot of the tale is consistent and the action rapid and well-sustained.

SWISS LIFE IN TOWN AND COUNTRY. By Alfred T. Story. Cloth, pp. 282, \$1.35 net. New York: G. P. Putnam's Sons.

THIS is the fifth volume in the "European Neighbors" series, and is fully up to the high standard set in the preceding numbers. As in the other cases, it is the life of the people in their daily comings

and goings about their ordinary business and pleasure that concerns the author, rather than the complex problems of statecraft or lawmaking. But the political side of the subject is by no means neglected, since politics forms a very intimate part of the daily life of the Swiss. For instance, it is interesting to note that they were the first people in Europe to adopt the principle of universal liability to military service, being driven thereto by the dangerous position of Switzerland, hemmed in as she is on all sides. The system is called the "voluntary compulsory" system, evidence of the spirit in which the mountaineers surrendered their own independence in order that they might retain that of their country. The cost of the army is only \$35 per man per annum, less than one-fourteenth the cost of the British army. The prevailing tone of Swiss life is the spirit of democratic self-help that marks everything into which they enter, whether it is politics, play, labor, military organization, religion, or the organization of the workmen.

THE STRENGTH OF THE WEAK. By Chauncey C. Hotchkiss. Cloth, pp. 371, \$1.50. New York: D. Appleton & Co.

AMONG the many romances of American colonial days to which we have been treated lately this one deserves to stand well. The tale is of a young Canadian of English birth who finds himself *persona non grata* to his French neighbors in the days when Bigot was intendant of Canada. Robbed of his estate, he escapes with his sweetheart and her brother to English territory in time to see the last of the fighting between Sir William Johnson and Dieskau at Lake George and the massacre at the "Bloody Pond."

LECTURA Y CONVERSACION. A New and Progressive Spanish Method. By T. Silva and A. Fourcaut. Cloth, pp. 141, 60 cents. New York: American Book Co.

A CONVENIENT text-book comprising the fundamental rules of grammar, a series of graded reading lessons, selections from the best Spanish authors, and a vocabulary.

SELECTIONS FROM IRVING'S SKETCHBOOK. Prepared and Edited by Claude Towne Benjamin. Cloth, pp. 192, 50 cents. New York: American Book Co.

A SPECIAL edition intended to meet the requirements of the board of regents of the state of New York.

FIFTY MISSIONARY PROGRAMMES. By Belle M. Brain. Cloth, pp. 128, 35 cents net. Boston: United Society of Christian Endeavor.

SOME good suggestions for dispelling the "deadly dullness" that too often pervades missionary meetings.

SOUL-WINNERS' SECRETS. By G. F. Oliver. Cloth, pp. 137, 25 cents. Cincinnati: Jennings & Pye.

A BRIEF discussion of some of the necessary preliminaries for successful evangelistic work.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION
Dun's Review, New York, Feb. 8

Interruption to railway traffic and out-door work by severe storms was the only unfavorable factor in the business situation during the past week, while manufacturing activity increased, and distribution through retail channels was undiminished. Reports from the west are especially encouraging, but a few southern points are slow to exhibit improvement. Railway earnings continue their monotonous record of increase, for January gaining 6.8 per cent over last year and 24.2 per cent over 1900. Stock market operations exceeded those of the dull week preceding, but fell far short of the 1,500,000 shares daily in the first week of February, 1901; yet bank exchanges at New York were only 0.8 per cent smaller, while compared with the same week in 1899 there was an increase of 20.4 per cent. *Dun's* index number on February 1 was \$99.576, indicating that prices of commodities averaged about 2 per cent lower than at the opening of the year, but 4.8 per cent higher than on Feb. 1, 1901.

IRON AND STEEL

Famine conditions exist in the market for pig iron. Considering the fact that production during 1901 was far beyond all previous records, the present shortage gives indisputable evidence of the unprecedented rate at which the mills have been consuming. Controlling interests deprecate all tendencies to inflate prices, recognizing the fact that the continued heavy consumption is dependent upon quotations held at a reasonable point. Efforts are being made to repurchase iron sent abroad last year, since that may evade the duty. German billets are still arriving, but the

FOOD WILL DO IT

Made Over a Man of Sixty

Food that will put the vigor of life into a man of sixty is worth knowing about. Mr. Chas. E. Allen, of 5306 Master St., Philadelphia, Pa., says, "Five years ago at the age of fifty-nine I was advised by a friend to adopt rolled oats for my breakfast diet in the place of white bread. I followed the advice with some benefit, but was still troubled with heart weakness and general debility, requiring medicine from time to time; the bowels were also affected to an extent.

"About six months ago while still half sick and very weak I commenced to use Grape-Nuts Breakfast Food and soon noticed an improvement in my general health with the gradual disappearance of unfavorable symptoms. Heart palpitation decreased and a new feeling of vigor manifested itself in various ways. Tonics were no longer needed, bowels became natural, nerves were steady and I seemed to have returned, in a great degree, to the vigor of middle age. There has also been a gain in flesh, my weight having increased from 137 to 151 pounds.

"You are welcome to use my name if you desire to publish this voluntary testimony."

market abroad is advancing, which will tend to check the movement. Numerous new bar, billet, sheet, and tin plate plants are under consideration. Structural material supplies are utterly inadequate, and the action of the Chicago council repealing the ordinance limiting the height of buildings has placed many new contracts on the market. Railways are so urgent for supplies that an order for rails may go abroad. In the light of these reports it is not surprising that exports of iron and steel fall off and foreign contracts receive scanty attention.

COTTON GOODS

Moderate supplies continue the best feature as to cotton goods, and there is no pressure to sell. Print cloths have risen slightly, and all lines are firmly held. Exporters are bidding for coarse colored cottons, but in these, as in most grades, buyers and sellers are far apart in their views of the right price. The situation appears to favor holders.

WHEAT AND CORN

Compared with the erratic course of the cereals during the preceding month or two, produce markets have been quiet this week. Dullness and lack of special influences were not productive of weakness, however, former quotations being stubbornly maintained. In the case of corn there are many expressions of faith in lower prices without aggressive speculation on the short side. There was no support in Atlantic exports of 122,963 bushels, compared with 3,973,462 a year ago. Heavy storms curtailed the interior movement to 1,392,969 bushels, against 5,016,886 last year. Exporters of wheat evince a disposition to wait for easier terms, but shipments on old orders were 4,127,396 bushels, against 4,330,981 a year ago. There was some support in low estimates of yield from Argentina and India. It is reported that Minneapolis mills are planning to use Manitoba wheat in making flour for export, grinding in bond to avoid the duty.

FAILURES

Failures for the week numbered 261 in the United States against 269 last year, and 25 in Canada against 35 last year.

Financial**THE MONEY MARKET***Bradstreet's, New York, Feb. 8*

Supplies of money in the New York loan market have been ample. The shipment of \$4,250,000 gold to Europe was, in fact, disregarded in view of the continued movement of money from the interior to the financial center. It is estimated that, in spite of the gold shipments, the banks this week lost only \$1,000,000 from the movement of funds. The reduction of the Bank of England rate to 3 per cent on Thursday had a good effect, and tended to reassure the market as to further heavy gold shipments. Call money was plentiful, with $2\frac{1}{4}$ to 3 per cent as the extreme quotations, most of the loans being at $2\frac{1}{2}$ per cent. Time money was freely offered, the inquiry, however, being somewhat limited. Rates are quoted at $3\frac{1}{2}$ per cent for thirty to sixty days, and 4 @ $4\frac{1}{2}$ per cent for three to six months, the quality of collateral having more or less influence in determining the figures. Commercial paper is offered in larger amounts, and there is a moderate buying demand, both local and outside, rates being based on 4 per cent for endorsed bills receivable.

THE STOCK MARKET

Greater activity characterized the New York stock market this week despite disappointment at its beginning over the delay in reaching a decision in the Northern Securities case. Gold shipments failed to affect the money market, and investment demands for bonds and dividend-paying stocks are well sustained. The traction stocks failed to respond to the Metropolitan's plan for financing the contemplated improvements, and Amalgamated Copper was irregular on uncertainty about the copper market and the management's policy. Sugar was strong on favorable views about the Cuban sugar-tariff reductions. Foreign exchange is strong at a concession, due to the selling of bills

COFFEE EYES*It Attacks Many Persons There*

To illustrate how coffee can affect the eyes the words of a lady in Woodland, Ia., are quoted.

"I was brought up to believe that tea was injurious but was allowed to drink coffee from childhood. Ever since I can remember I have been subject to severe attacks of headache, otherwise my health was pretty good until a short time ago my eyes became affected; they ached and pained me continually and were often badly inflamed. I also had queer, dizzy feelings in my head almost continually.

"One time we were obliged to do without milk or cream for a few weeks, and not relishing my coffee clear I left off its use. In a short time I was surprised to find my eyes greatly improved and I felt better in every way, still I did not mistrust the coffee, and began its use as soon as we got cream again. Within a few days my eyes were worse than ever. Then I resolved to quit coffee absolutely and take up Postum. This I did and my eyes quickly recovered.

"My experience shows that while coffee caused headache and eye trouble Postum Food Coffee does not produce any bad effects whatever and is greatly strengthening and nourishing." Name given by Postum Co., Battle Creek, Mich.

against shipments of \$4,250,000 of gold to Paris on Thursday. The reduction of the Bank of England rate from $3\frac{1}{2}$ to 3 per cent has, however, a favorable effect on exchange. Demand sterling is $4.87\frac{1}{2}$.

BANK CLEARINGS

Clearings for the week ending Thursday, February 6, aggregate \$2,214,932,231, an increase of 2.6 per cent over last week, but a decrease of 3 per cent from a year ago. Outside of New York the gain over last week is 5 per cent, while compared with last year there is a gain of 11 per cent.

Profits of the Steel Underwriting Syndicate*New York Evening Post, Excerpt*

By no means the least uninteresting part of the report of the United States steel corporation to shareholders was contained in the paragraphs dealing with the operations and profits of the "underwriting syndicate." The report says that for its services in underwriting the organization of the company there was paid over to the syndicate 649,987 shares of preferred stock and 649,988 shares of common stock. Taking a valuation of 90 and 40 for these shares respectively, the syndicate received \$84,500,000, for which it contributed \$25,000,000 cash to the corporation, and its other expenses are reported at \$3,000,000. Deduction of this \$28,000,000 leaves a net profit to the syndicate of \$56,500,000, plus the dividends received on its shareholdings. Against this net profit, accruing to the syndicate, J. P. Morgan & Co. are understood to make a charge of 20 per cent for their services as managers of the syndicate, or \$11,300,000, leaving \$45,000,000 as the apparent divisible profit to the syndicate, and J. P. Morgan & Co. were, of course, the largest individual subscribers. The bankers' syndicate which underwrote the steel issues will, in short, clear the largest profit ever made on an undertaking of that kind in this country. The transaction was the largest underwriting affair yet attempted, involving the possibility of having to pay \$200,000,000 on demand at any time within fifteen months. Only one-eighth of this sum was ever called, so a single payment of \$25,000,000 in all was the extent of the actual demand made upon the subscribers.

Various Topics

Great Britain's imports in January increased £4,143,800, exports decreased £499,000.

The governors of the New York stock exchange have stricken Northern Pacific stock from the list.

The 1901 wheat crop of New South Wales is stated at 18,769,000 bushels, an average of 12.8 bushels per acre, or 13.83 bushels for each of 1,356,800 persons.

With resources of nearly \$800,000,000, the savings banks of New York city handled over their teller's counters, in deposits and payments during the year 1901, the enormous aggregate of \$360,234,083.

Last year the Pennsylvania railroad company paid to retired employees \$292,290, which sum, together with the amount expended for a similar purpose the preceding year, brings the total up to \$536,310 for two years.

WIT AND HUMOR

Too Late

The good minister of a Scottish parish had once upon a time a great wish for an old couple to become teetotallers, which they were in no wise eager to carry out. After much pressing, however, they consented, laying down as a condition that they should be allowed to keep a bottle of "Auld Kirk" for medicinal purposes. About a fortnight afterward John began to feel his resolution weakening, but he was determined not to be the first to give way. In another week, however, he collapsed entirely. "Jenny, woman," he said, "I've an awfu' pain in my heid; ye might gie me a wee drappie, an' see gin it'll dee me ony guid." "Well, gudeman," she replied, "ye're owre late o' askin', for ever sin' that bottle cam' into the hoose, I've been bothered sae wi' pains i' my heid, 't is a' dune, an' there's nae drappie left."—*N. Y. Tribune.*

The Bishop's See

A good bishop once lost his see,
To an oculist straightway went he;
"Good sir," said the bishop,
"Pray have you in this shop
Something neat in stained-glasses for me?"

—*Harvard Lampoon.*

Willing to Help

A burglar whose night entry into the parsonage awakened the sleepless pastor, said to his helpless victim: "If you stir you're a dead man! I'm hunting for money!" "Just let me get up and strike a light," pleasantly replied the dominie, "and I shall be glad to assist you in the search."—*Boston Watchman.*

A Distinction

The Actor.—Don't you think actors are quite liberal, as a rule?

The Waiter.—Well, I don't know about them being liberal as a rule, sir, but I think they are when they have any money!—*Puck.*

"I should advise," said the polite croupier as he raked in another stack of Lord Rosslyn's blue checks, "that you take something for your system."—*Exchange.*

PUBLIC OPINION

Number 8
Volume XXXII

The Week

Thursday
February 20, 1902

BY far the most important event of the week was the signing and publication of the agreement between Great Britain and Japan to preserve the *status quo* in the far east. The publication of this treaty is specifically mentioned because the haste with which it was given to the world is hardly less remarkable than the treaty itself. Official England is evidently satisfied that it has made a good bargain, and does not care who knows it. Unofficial England is beginning to have doubts—after the first few days of jubilation—and these doubts are well founded, however clear it may work out on paper, that the combination of the land and naval force of Japan with the navy of Great Britain gives the allies a united strength greater than the combined strength of Russia, France, and Germany in the east.

IF it is true that Lord Lansdowne has said that Manchuria is to be regarded as a part of China, under the terms of the treaty, a ready-made *casus belli* is at once provided, unless the treaty is to become a dead letter before the ink on it is dry. For Russia is not likely to loosen her hold on that territory, and Japan and Great Britain can scarcely stand by, in view of the professions just made, and witness the absorption, under whatever guise, of a province which is undoubtedly a part of the Chinese empire, and, which has been under its administration ever since the Manchus conquered China in 1644 and established the present dynasty. This view is adopted by the London *Spectator* in its statement that, "If the continued occupation of Manchuria by Russia is held to be a violation of the integrity of China, then we are indeed plunged into a whirlpool."

THE obvious intent behind Germany's publication, last week, of the dispatches sent by the German ambassador at Washington in April, 1898, showing that Lord Pauncefoot had acted at the instance of six powers in framing a joint note suggesting intervention between the United States and Spain, was to put Great Britain "in a hole." The object was accomplished for as much as twenty-four hours, and then it became apparent to everyone that the British ambassador had acted merely as dean of the diplomatic corps. Furthermore, the note given out as having been drawn up by Lord Pauncefoot was not approved of by his government, and was never presented to the United States government.

SECRETARY ROOT, not satisfied with the army changes made last year, has brought forward a comprehensive plan which, if adopted, would amount to a complete reorganization of the army on the lines of the most approved foreign systems. The principal features of the bill upon which congress is asked to act are the creation of a general staff, headed by the commanding general; the consolidation of the quartermaster's, subsistence, and pay departments, to which is to be added a transportation division, all under one head; and a system of promotion from the ranks, under which strictly military accomplishments would take the place of the examinations now required. Congress may make these proposals the basis of army reorganization legislation, but prompt or wholly favorable action on them is hardly to be expected.

BROOKLYN Democrats gave a somewhat noteworthy banquet Saturday night, the annual Tilden banquet of the Brooklyn Democratic club, at which Democratic aims, prospects, and policies were freely discussed in person and by letter by a number of party prophets. Harmony was the keynote of the assembly, to the furtherance of which the chairman forgot to read a postscript to Mr. Bryan's letter offering

an editorial on Steadfastness as a suitable sentiment for the occasion. Mr. Cockran and Mr. Shepard among the speakers, and Mr. Cleveland, Mr. Olney, Mr. Bryan, and Mr. Hill among those who sent letters to be read, were all indiscriminately and vociferously cheered. Thus the wolf dwelt with the lamb, and the calf and the young lion and the fatling together, but so far as the newspapers report there was not even a little child to lead them.

READERS of Governor Taft's testimony before the senate committee have been getting, from the first, a large amount of definite information, all of which led up to his statement on Saturday that the native mind is not capable of accepting or applying American ideas of justice and administration; that the constitution can not safely be extended to the islands; that to turn the government over to the natives as proposed by the Democratic tariff bill would result in anarchy and in the disturbance of vested rights to such an extent that it would be necessary for us to resume control. These are opinions and will not convince anyone who is not already possessed of similar convictions, but in such persons the belief will be confirmed that there is no way at present of getting out of the Philippines, and that, as Governor Taft said, "The great evil of the present time is the discussion of their future so long before that can be fixed."

ON this side of the water we are not accustomed to subtlety in politicians; a fact which perhaps explains why it is so difficult for us to understand the position now occupied in English politics by Lord Rosebery. He made some speeches at Liverpool last week that appear to mean anything or nothing, and yet we are told that they are regarded as the closest approach he has yet made to committing himself to the resumption of the Liberal leadership. His partisans, of course, enjoy his condemnation of the ineptitude of the government, and it is probably "good politics" to abandon the Irish policy that made him whatever he is politically—it was about the only thing left to be abandoned—but no one has explained how the Liberty party is to be resuscitated by throwing overboard every policy with which it has been identified when nothing but a "clean slate" is offered to take their place.

BETWEEN Icarus who fell into the Aegean some ages ago and Santos-Dumont, who barely escaped drowning in the Mediterranean last week, there have been many attempts at flying and all have ended in substantially the same manner. Santos-Dumont has, it is now seen, done nothing more than supply the humorous artists with suggestions for scenes of the future in which the air is filled with flying humans; he has shown that however ingenious the machine the occurrence of accidents, which on the earth are remediable but which are fatal when they occur in the upper atmosphere, can not be provided against.

FOR the fourth time the house has adopted a resolution favoring the election of United States senators by popular or direct vote. Judging from the tone of editorial opinion, there is little reason to doubt that this change is approved by a majority of the people. Up to this time, however, the senators have been singularly deaf to the popular voice on this subject, some having their hearing muffled by the fact that they could never secure election by popular vote, and others like Mr. Hoar believing that the reasoning of the framers of the constitution still holds good and that one popularly-elected house is enough.

AMERICAN

The Industrial Commission on Trusts

A REPORT BASED ON THREE YEARS' INVESTIGATION

REPORT of the industrial commission on trusts and combines favors the following remedies in addition to publicity:

1 Uniform legislation against such combinations and trusts in restraint of trade as are held to be unlawful by the consensus of judicial opinion, and the strict enforcement of such legislation.

2 Stringent laws, state and federal, against the vicious and intolerable practice of discriminating between customers and between localities, and of cutting prices below the normal rate for the express purpose of destroying local competition.

3 Prevention of inflation and overcapitalization by legislation similar to that in force in Massachusetts, and state supervision of public service corporations, with power to regulate rates and pass upon the need of additional service.

4 A federal franchise tax on corporations doing an interstate business, the minimum to be low, but the rate to increase with increased earnings.

5 Protection of the consumer from extortion by corporations selling their products at lower prices abroad and maintaining high prices at home.

6 The study of tariff revision and reciprocity by the proposed new department of commerce and labor.

The *Chicago Evening Post* (Rep.) thinks that "none of these suggestions needs elaborate argumentative support, except that for a franchise tax. The propriety of such a tax is more than doubtful, and it seems clear that the adoption of the other remedies would render it alike unnecessary and unwise. However, it is but fair to suspend judgment on this point pending the publication of the commission's reasons for proposing this tax. It may be added that the soundest recommendation is that directed against the practice of discrimination. Indeed, discrimination is the breath of life to monopoly, and it should not be endured by a people jealous of liberty and equality of opportunity."

Comment of any kind on the commission's report is very hard to find. The *Indianapolis Sentinel* (Dem.) seems to doubt if congress will take any action on the report. Perhaps this explains the popular indifference to it. The *Springfield Republican* (Ind.) offers another explanation: "In the first place, a subject was assigned by congress about as wide as the world; and in the next place, the assignment was made to a body composed in large part of men who were politicians without being students, and in small part of men who were students without being politicians. Hence there has run through the investigations of the commission a disposition to avoid matters of political controversy, no matter how closely they might be related to the industrial problem under examination. We accordingly find in the report of the commission on trusts not a word as to the bearing of the tariff in the case; but instead a recommendation that this phase of the subject be referred to another commission. If the present commission, after three or four years of taking testimony, in many cases bearing upon this particular question of the use of the tariff for trust profit, can only conclude to shirk its duty, what is to be expected of another body of the kind constructed in the same way? Congressman Phillips of Pennsylvania finds courage to offer a minority report on this point. He ridicules the idea of another commission, and declares that facts enough are in possession of the present commission to warrant a report.

He thinks the facts prove—as they undoubtedly do—that the tariff is being used to enable the trusts to charge high prices in the home market and sell at low prices in the foreign market; and he recommends that the duties be removed from metals, ores, wood pulp, logs, and raw materials generally of restricted supply. No treatment of the trust question can lay any claim to comprehensiveness which passes by the tariff side of it, and this report of the long-standing federal commission is therefore a defective document."

The *New York Times* (Ind. Dem.) criticises the recommendation of a federal franchise tax. "What is the object of this tax?" asks the *Times*. "It is surely not a tax for police regulation, like the head-money tax on immigrants, for if that were its purpose it would be uniform. Is it to provide revenue for the government? The statement of the treasury balances published yesterday shows a surplus of receipts over expenditures since July 1, 1901, of \$51,543,042. The ways and means committee of the house has given its sanction to a bill which would effect an annual reduction of \$67,000,000 in our revenue. It is plain, therefore, that the government has no occasion to reach out for new sources of income." The *Times* also objects to the taxing of corporations "merely because they are corporations," and taxing big corporations more heavily because they are big corporations. The *Indianapolis News* (Ind.) compares the proposed tax to an income tax, and says that while the tax recommended by the commission is not equitable in the same sense, it is eminently justifiable on the broadest possible grounds. To measure the approach toward a monopolistic status on the part of a corporation by the gross amount of its business, or of its interstate business, is of course a process as crude and inaccurate as can well be imagined; but unfortunately it is very difficult to get a law which will accomplish that object in a satisfactory way. And if the United States were to adopt as a public policy the principle of taxation of monopolies as monopolies, it is difficult to see what reasonable objection could be made to that course. That is the essential justification of the commission's recommendation."

Subsidiary Canal Routes

MANDINGO AND SAN BLAS

GREAT interest has been aroused during the past few weeks in the new route proposed for the isthmian canal. If all that the sponsors for the route, the American isthmus ship canal company, claim and believe should prove to be correct, they have undoubtedly discovered a waterway that eclipses the Panama and Nicaragua routes in every respect, says a writer in the *February National Geographic Magazine*. The new route, called the Mandingo route, is some forty miles south of the Panama canal. It starts from the Mandingo bay, in the gulf of San Blas, tunnels through the Cordillera for about five miles, and then cuts through hard rock, level country for about 20 miles, straight to the Bay of Panama. In certain respects the Mandingo route coincides with the San Blas route,

from the harbor of San Blas to the mouth of the Rio Chopo, on the Pacific, which was advocated several decades ago. It differs, however, from all the so-called Darien routes previously urged in that it makes use of no stream or lake, but is a direct cut from ocean to ocean. There is a deep, protected natural harbor at either end of the line, which is straight as a rod; not a single lock would be required, and the canal, the company state, for the entire distance would be cut in hard rock instead of in mud and sand and swamp. The one engineering problem, a tunnel five miles long, 202 feet high and about 200 feet wide, the company claim competent American engineers and contractors are willing to undertake and construct at such a moderate cost that the entire expense of the canal would be less than by either the Panama or Nicaragua route. Electric lights would make the tunnel bright as day, deep shafts would ventilate it, and an electric trolley pull the vessels back and forth.

The company proposes to build the canal without financial assistance from the United States government further than a guarantee of its bonds as the work progresses. In return for this guarantee the United States is to have free transit for all warships for 100 years. The company has not obtained any concession from the Colombian government, as the Panama concession does not expire until 1910. The matter of a concession is, however, for the present said to be immaterial. The great question is, which is the best and most enduring route. When the route has been found that possesses the greatest certainty of keeping open at all times and for all time, the matter of a concession can be arranged.

In the senate on Thursday Mr. Scott (Rep., West Va.) called up and had read a resolution which he offered several days ago providing for the appointment of a commission of experts to examine what is known as the San Blas, or Mandingo bay, route for an isthmian waterway and to report to the senate the cost of constructing an interoceanic canal by that route. He said that nearly one-fourth of the sum necessary to construct a canal by any of the routes proposed already had been expended in an endeavor to find a suitable route for an isthmian canal, but, confronted as congress was by a proposed appropriation of nearly \$200,-

000,000 for the building of an interoceanic waterway, it was the duty of prudent men carefully to investigate every possible route. He disclaimed any intention to obstruct the consideration of a canal bill or to delay the building of the canal itself, but he maintained that the question of route was still debatable.

For the following reasons Mr. Scott believed that the San Blas route was the only feasible and practicable sea level canal route: Its healthy location; its shortness; its magnificent harbors; its total absence of locks; the possibility of working gangs of men night and day in the wet and dry seasons under good sanitary conditions; the very important consideration that by this route, and no other, sailing vessels could be towed by electric power, by night as well as by day, thus effecting a great saving of time and expense; the economical maintenance of the canal when completed; the permanency of its rock bed and the absence of earth embankment; the desirable fact that it can be constructed within three, or at most five years.

A Ship-Builder's Views on American Shipping

LEWIS NIXON in the February *Cosmopolitan*, New York.
Condensed for PUBLIC OPINION

THE three pillars of a nation's greatness are its commerce, agriculture, and manufacturing. We have developed the latter at the expense of the other two, and the national structure is becoming lopsided. The alternate periods of financial prosperity and depression are warnings that should be heeded. Our statesmen must be brought to see that the great need of this country now is the return cargo. This problem will be met, but it is too big to be solved by small men or small measures. A blind adherence to a policy of protection simply for the sake of protection after industries are domesticated and able to endure world competition, must inevitably hurt our commerce. European statesmen will be only too glad of an excuse to apply some policy of retaliation to stop the transfer of the realized wealth of their countries to the United States. Such retaliation they know will affect the great mass of the population there fast gaining power and influence, and these must be

CHORUS: "No, I was his friend first."—*Cleveland Leader*

PHILIPPINES: "I'll bet if I had that knife I wouldn't cut myself the way he does."—*Minneapolis Tribune*

strongly appealed to before they will consent to pay more for breadstuffs, cotton, and meat. We could not supply the argument.

With the building of a Central American canal the trade of the West Indies and South America will be of overwhelming importance, and the purchase of a West India steamship company by a great German line shows that the Germans are wide awake to the prizes to be obtained through the strategy of trade. The effect of the purchase of the Leyland and Atlantic transport fleets is, of course, far-reaching. Some method will doubtless be attained by which these vessels may carry the American flag without any resulting harm to our building interests. Great Britain could not well do without these fleets for use as transports in a great war, and if vessels of this character are to be under the control of Americans, the owners will be able to exercise great influence in the direction of peace, for I do not believe that these lines will have opposition in their particular field from new British lines.

Both our great political parties have spoken for the upbuilding of our merchant marine, but until the people demand that something be done, all measures will be dependent upon party expediency. While I am opposed to any policy of discrimination by which a particular vessel or vessels shall obtain governmental aid except for special services, such as mail-carrying, it is admitted that without some form of encouragement we can not now compete with the foreign vessel in the oversea trade. While if we have any carrying to do we can always get others to do it, I am sure that no one expects foreign vessels to help along a demand for our goods or to provide freight and rail connections that will throw trade in our way instead of in theirs. The prices of farm and other unprotected products have declined, or certainly not advanced with the marvelous rise in the price of other products. Wheat, for example, must compete in price with the wheat grown in other lands, and the price at home is fixed by the price our surplus brings in competition with foreign grain. Since this surplus affects adversely our great agricultural interests, it follows that we should widen the area of its consumption as much as possible. The millions of the east are awakening to new needs and new desires, and with their development will come the capacity to gratify them.

I consider a nation which must depend upon other nations to do its carrying upon the ocean, as undeveloped and tributary to the nations that carry for it. In case of a war between Great Britain and Germany, seventy-five per cent of our export trade would be cut off. Such a bottling-up of this country would produce wide-spread disaster. A great ship-building and ship-owning policy will benefit every calling, profession, and trade, and bring the American shipyard to the front as competitor with the foreign plants, and bring back the American sailor upon the ocean to compete for the carrying trade of the world.

OUR FRIENDS IN 1898: On Wednesday the German foreign office published official correspondence showing that Lord Pauncefote, British ambassador, took the initiative in proposing joint action on the part of the powers to prevent the Spanish war. On this cabled proposal Emperor William made the following note: "I regard it as completely futile and purposeless, and therefore prejudicial. I am against this step." In the house of commons Friday, Lord Cranborne said that Lord Pauncefote had acted, on the occasion mentioned, merely as dean of the diplomatic corps and without instructions from his government.

Lessons of Recent Fire Losses

Chicago Inter-Ocean

THE fire losses so far announced mean a daily loss, for 1902, of something like \$725,000; that is to say, for every twenty-four hours of the new year the insurance companies have had to meet losses of nearly three-quarters of a million dollars. Should the ratio of \$725,000 a day be maintained, the total losses to the underwriters for 1902 would reach the enormous figure of \$250,000,000, against a total loss of \$100,000,000 for 1901. The public is no less interested than the underwriters in finding a preventive of this enormous waste of wealth. No other country on earth suffers losses from fire comparable with those in the United States. Aside from the great fires, the minimum annual destruction of property by fire in the United States is unexplainable on any other theory than that preventive measures are willfully disregarded. If the present alarm among the underwriters shall lead to an increase of rates on all risks, the business public may, perhaps, be brought to a realization of the fact that as much attention should be paid to the prevention of fires as to the extinguishing of them. The prime cause of the evil is inefficient and dishonest inspection. The building laws and the fire ordinances are generally violated here and elsewhere. Faults in construction, negligence on the part of property-owners and tenants, carelessness on the part of employees, and fire-breeding practices generally, receive little attention from those who are paid to give these very things the strictest attention. The majority of fires are preventable. It is easier to prevent them than to extinguish them. If every town and city government in the United States would recognize this fact and act accordingly, enough wealth could be saved to the country in a few years to pay the national debt.

New York Sun

Builders here sometimes complain that the regulations of the city department governing their operations are unnecessarily stringent. Our freedom in recent years from widespread fires proves the wisdom of these restrictions. They are the surest and the only preventives of such disasters as have recently come to Waterbury and Paterson. Fireproof buildings may have proved only partially deserving of their name, but a group of them is a city's best check against fire.

Congressional Summary

CONGRESS DAY BY DAY

FEBRUARY 10.—Senate and house reached an agreement upon the points in dispute in the urgent deficiency appropriation bill; the senate continued the discussion of the Philippine question, Mr. Teller speaking against the government's policy. In the house the general debate on the oleomargarine bill was closed; the friends of the bill have decided to offer an amendment to make the 10-cent tax apply to oleomargarine in imitation of butter, "of any shade of yellow."

FEBRUARY 11.—There was a notable debate on the Philippine tariff bill in the senate, Mr. Platt, of Connecticut, and Mr. Hoar taking the chief parts; Mr. Hoar's resolution for a change in inauguration day

was adopted. In the house, the day was spent in voting on amendments to the oleomargarine bill, the opposition being strong enough to force two important changes, one providing that nothing in the act should be construed to prevent the manufacture and sale of oleomargarine in any state for consumption entirely within such state, and the other to provide for the inspection and branding of renovated or process butter.

FEBRUARY 12.—The senate again took up the discussion of the Philippine tariff bill, Mr. Teller continuing his speech; there was a sharp clash between Mr. Lodge and Mr. Patterson over the matter of admission of representatives of the press to the investigation which the Philippines committee is conducting. The house passed the oleomargarine bill; there was no division on the final passage, the real test of strength having been made on a motion to recommit, which was defeated by a majority of 34; a number of war-claim bills were passed.

FEBRUARY 13.—In the senate, speeches on the Philippine tariff bill were made by Messrs. Teller and Mitchell. The house unanimously adopted a resolution proposing an amendment to the constitution for the election of senators by direct popular vote; a number of miscellaneous bills were passed, including one for the payment of claims of confederate soldiers, whose horses, side arms, and baggage were taken from them by union soldiers, contrary to the terms of the surrender of Lee and Johnson's armies.

FEBRUARY 14.—In the senate the permanent census bureau bill was considered, and a resolution to investigate charges of extravagance in connection with the clerical force. In the house Mr. Wheeler, a Kentucky Democrat, attacked the government's foreign policy, basing his speech on reports that Lord Pauncefoot had tried to form a European coalition against the United States; Mr. Boutell, of Illinois, and Mr. Grosvenor, of Ohio, replied to him.

FEBRUARY 15.—The senate spent the day in consideration of the permanent census bill, the proceedings being enlivened by efforts to so frame the bill that the present force of about 2,500 would be placed in the classified service by transfer to the new bureau; all but the char-women were finally saved.

FOREIGN

The Anglo-Japanese Alliance

AN IMPORTANT AGREEMENT AIMED TO PRESERVE THE STATUS QUO IN THE FAR EAST

IT was announced on Wednesday, at London, that Great Britain and Japan had entered into an agreement aimed to maintain the *status quo* in China and Korea and the far east generally. Article I of the treaty disclaims any purpose of aggrandizement, but "recognizes" that it will be "admissible" for either of them "to take such measures as may be indispensable in order to safeguard [their] interests if these be threatened either by the aggressive action of any other power, or by disturbances arising in China or Korea, necessitating the intervention of either of the contracting parties for the protection of the lives and property of its subjects." If either party should become involved in war, the other agrees to remain neutral and endeavor to prevent other powers from joining in the hostilities. By Article III, it is provided that "If any other power or powers should join in hostilities against that ally, the other contracting party will come to its assistance and will conduct war in common and make peace in mutual agreement with it." The treaty is to remain in force for five years. The London correspondent of the New York *Tribune* says that the alliance "created a sensation." The papers vie with one another in expressing astonishment and satisfaction at the action of the government. The London *Pall Mall Gazette* says: "The Marquis of Lansdowne has boldly grasped the nettle and has taken a step that brings us face to face with the unpleasant but very real possibility that we may have to fight for those British interests in the far east which we have been talking about so long. This is as it should be. The country secures, in the event of a contingency which is none the less possible because unpleasant, an ally of inestimable value. It is a conspicuous triumph of diplomacy of the parties thereto, and is a most satisfactory outcome of all the turmoil and trouble in China recently and in the past." The London *Daily Mail* thinks "there is no use disguising the fact that the document is aimed primarily at Russia. We are able to assert on an authority which can not be questioned that the relations of this country and the government of the czar have become regrettably impaired in consequence of Muscovite duplicity with respect to the future of Manchuria. This will be shortly solved."

The Japanese minister, Baron Hayashi, who signed the treaty on behalf of Japan, is quoted as saying that it is "the outcome of necessity. It is eminently peaceful in its objects, and is solely meant to protect the *status quo* in China against aggressive de-

signs of any power. It is not directed specially against Russia, but undoubtedly has reference to Manchuria, for Manchuria is still Chinese territory, and the agreement covers the whole of China without exception." The Japanese minister at Washington is thus reported by the New York *Herald*: "The treaty is not intended as a menace to any power whatever. It is fully in accord with the avowed policies of all the powers, without exception, which have interests in the far east. It is certainly in accord with the policy of the United States. It has no reference to the present convention being negotiated by Russia with China regarding the evacuation of Manchuria, whatever the effect, direct or indirect, may be. It is not aimed at any particular section of China, or any particular power, but is intended to do just what it says—maintain the independence and territorial integrity of China and Korea, and preserve equal opportunity for the trade of all nations in those countries."

The Paris *Patrie* believes that the alliance is a defiance to Russia. It says that France has once more been fooled and the effects will be profound and great. Germany is satisfied in regard to Wei-hai-Wei, and England and Japan are face to face with Russia and France. The *Journal des Debats* admires the fashion in which Great Britain defends her interests despite her troubles in South Africa. The paper considers that England has the best of the bargain with Japan because a coalition against Japan is unlikely, as Russia is the only enemy of the latter country. A coalition of other powers against Great Britain is more probable.

The German press of all shades of opinion regards the Anglo-Japanese treaty as a defensive alliance against the expansion of other powers in the north of China and Korea, and particularly as directed against Russia. The *Lokalanzeiger* says that Great Britain relies on the military force of Japan, while Japan relies on the financial strength of Great Britain.

The *Vossische Zeitung* sees in the agreement an answer to the negotiations of M. Lessar, the Russian minister in Peking, over Manchuria, and supposes that Wei-hai-Wei will now be handed over to Japan.

American newspapers reëcho the statement of the London *Standard*, that "The new agreement exactly coincides with the views of American statesmen," the New York *Tribune* saying that "Its execution will doubtless prove profitable to the two powers which have made the treaty. It will in equal measure prove profitable to the United States, and to every other well-disposed power, and

"BREAK AWAYSKI."—New York World

CHORUS: "Held on to it, young man."—*Washington Star*A HORSE ON JOHN.—*Cleveland Plain Dealer*

will advance the interests of civilization, justice, and human enlightenment. The strength of its appeal to the moral sympathy and approval of the world is obvious in its terms. For any nation to oppose it would be substantially to avow a purpose to spoliage China or Korea, or to secure in them exclusive privileges to the disadvantage of the rest of the world. It may be too much to hope that, amid the jealousies, intrigues, and aggressive ambitions of the powers, even so just and generous a convention as this will pass unchallenged and undenounced." The *Times* goes even further, saying: "In effect, the British proclamation of 'Hands off!' is an American proclamation also. That fact will not fail to be noted in all the chancelleries. It is entirely safe to say that 'the crime of 1895' will not be repeated."

The *New York Sun* says that "we are morally and commercially in sympathy with the main principle which the Lansdowne-Hayashi convention is avowedly designed to assert and protect. And this without prejudice to our continued friendship for any or all of the other European powers interested for any reason in China. The new dual alliance affects no power that does not hereafter depart from the assurances voluntarily recorded in the various responses to Secretary Hay's memorable initiative of September 6, 1899." The *Press* also finds in the agreement an assurance of the "open door," for which we have always contended.

The Irish Question Again

PROSPECTS FOR A REVIVAL OF THE HOME-RULE AGITATION

THERE is every indication that the Irish members in parliament are soon to make themselves felt again. In a speech at the unveiling of a statue of Queen Victoria, in London, February 5, Lord Salisbury declared his belief that the Irish were as great a menace to the empire as the Boers. On the day following, in a bye-election in County Down, the Unionists succeeded in electing their candidate, James Wood, to a seat formerly held by a Conservative. Another significant item is the position of Mr. T. W.

Russell, M.P. for South Tyrone, who had a large share in the election of Mr. Wood. Mr. Russell was formerly a Conservative, but has gone over to the Liberal Unionists, and is a strong advocate of the compulsory purchase of lands for the benefit of the Irish people.

Of this proposition, the *Baltimore Sun* says: "Those politicians who assert that a settlement of the land question on the lines advocated by the Irish people is an impossibility may be as greatly mistaken as the politicians of Mr. Gladstone's day were about home rule. Great Britain may yet conclude that her interests, as well as her conscience, demand fair and liberal treatment of the unhappy and unfortunate people of Ireland."

Lord Salisbury's declaration of the empire's danger from Ireland has been received by American editorial writers with interest strongly tinged with skepticism. "This harping on the Irish question," says the *New York Press*, "is rather depressing. It would seem that the noble orator, despairing of other means of keeping the Unionist party together, deliberately devised a recrudescence of the causes of its creation. But there is more of vital politics in the premier's Irish issue than appears on the surface, at least in the brief reports by cable of the speech. Unless the head of the Conservative party has become cynically humorous enough to give his followers false leads, the much-talked-of redistribution of seats which will reduce by at least one-third the Irish delegation of 106 is before long to be made a ministerial measure. In view of the fact that the premier's strongest support will not come from his own house of Cecil—Mr. Balfour having become since his coercion days the principal Conservative exponent of a conciliatory policy toward the sister isle—the shape which the contest will ultimately assume is matter for interesting conjecture. Should retirement by death or otherwise close the premier's career while the war was on, it is difficult to conceive of the hereditary standard-bearer pushing it energetically to its conclusion. The consequence may be that Mr. Chamberlain will be called upon to execute the ultra-Tory policy which Mr. Balfour declines."

The *St. Louis Globe-Democrat* is of the opinion

that "the mistakes of the Irish leaders of former years will not be repeated in the present instance. The constitutional agitation which O'Connell urged long ago, and which was carried on with good effect for many years under his leadership, will be resorted to again, as it was under Parnell. The ultimate outcome undoubtedly will be that self-government under the Gladstone or some other plan will have to be extended to Ireland."

The New York *Evening Post* recalls the scene on the floor of the house during the debate on the recent address from the throne, when "the persistent vitality of the Irish agitation was well shown in the two nights of the debate. It was not simply that the speeches of the Irish members were witty, and lit up what had been a dull scene by flashes of invective and gleams of sarcasm. It was not alone that Messrs. Redmond and Healy were more than a match, in eloquence and logic and law, for the attorney-general for Ireland, who intervened, with lofty official condescension, in the debate. The great fact was that these Irish orators spoke, and knew that they spoke, for a united people, a people filled with a sense of burning wrongs and animated by a determination to protest and agitate and organize until redress was won. This was really the only vivifying part of the debate. On the South African question there was no sharp division of parties, no cleavage piercing below the surface. But Irish griefs and Irish demands were pressed home upon the attention of the commons with a force and earnestness which may be temporarily rebuffed, but can not be permanently quenched."

Trend of Affairs in Spain

VIEWS OF ROMERO ROBLEDÓ

ROMERO ROBLEDÓ, independent Conservative, one of the most prominent politicians in Spain, in a recent interview in *El Heraldo de Madrid*, spoke very freely on the present political situation in that country. He said that there was not only a crisis in the two great parties, but in social order and the monarchy itself. The country is in a revolutionary state, he asserted. All the germs of sedition and anarchy are growing among the lower classes, and there is no impulse toward or indication of a plan on the part of the government to prevent the evil and find a remedy.

The 17th of May (the date of the coronation of Alfonso XIII) is approaching, and unhappy the government, we are told, if it does not reorganize itself, and give hope and courage to the disheartened people. Only thus can the coming of age of the king be the forerunner of better times. If Sagasta does not change the course of affairs, it is safe to predict that the king will take his oath of fidelity to the constitution protected by troops while the people are rioting in the streets. If the present trend of affairs is not altered, Señor Robledo sees but two courses open to public men of honor: Either they must withdraw from politics altogether, or apply their courage, without measuring the risk, to changes deeper and more profound than those which arise through a ministerial crisis.

Improvement should be sought through reduction of the budget, reorganization of the army, the working out of the problem of the navy, the improvement of internal communications, and the encouragement of the cultivation of tobacco. "I believe," said Señor Robledo, in conclusion, "that if a strong government

were constituted, the cortes would rally to its support. I do not believe that Sagasta can guide the future of his party, but I do believe that there is more than one man in the Liberal party who could do so, and who could improve the present condition of affairs."

Various Topics

NO PRIDE ABOUT DE WET: "I see that De Wet escaped the last time by getting in the midst of a stampede of cattle." "There's no beastly pride about De Wet." "What do you mean?" "I mean that he associates with the common herd."—*Cleveland Plain Dealer*.

EARTHQUAKES KILL THOUSANDS: It is reported at Berlin from Baku, Russian Transcaucasia, that thousands of persons were killed by the earthquakes in the Shamaka district, and that the towns and villages for twenty versts around Shamaka suffered severely.

ACQUIRING CIVILIZATION: Great changes have been made among the Negroes of German East Africa. They now use plates, cups, glasses, saucers, looking-glasses, spoons, knives, umbrellas, and occasionally clocks; they call for soap and for kerosene. In their market places they are seen drinking tea with sugar at table. The women have adopted European clothes and make use of sewing machines, even in the interior districts.

BOER CHARACTERISTICS: In the diary of Colonel de Villebois-Mareuil, now being published in Paris, he says: "It has been ascertained that the surrender of Cronje was official. I do not know what the effect will be among the thinking classes. As for the common people, a farmer who was told the news in our presence merely remarked, 'Think of that!' with the utmost indifference. I have heard so much about the patriotism of the Boers that I am becoming somewhat extreme in my views in the other direction. The Boer does all he can to save his skin, and he must feel that he is to be covered by an obstacle in order to make the best use of his coolness and his marvelous marksmanship."

BISHOP HARTZELL, according to the latest mail advices from the Cape, has been preaching with great force to Dutch and English congregations in Cape Colony on the moral aspects of the war, taking the British side with almost passionate earnestness, and appealing to the Boer soldiers, after their heroic resistance, to be brave enough to acknowledge defeat and desist from warfare which could not be justified on the grounds of expediency or necessity. The American bishop also boldly predicted the reunion of the warring races in South Africa, almost as speedily as the north and south had been drawn together after the Civil war.

GERMANY'S COSTLY COLONIES: Herr Richter, the Radical leader in the reichstag, analyzing the most recent government report concerning the colonies, finds that there are only 3,762 Germans in all the colonies, including officials, officers, missionaries, women, and children. Herr Richter proves from the budget of 1902 that every German colonist costs the empire 6,000 marks (\$1,428) a year. While the total colonial trade has increased in the last five years from 11,000,000 marks to 25,000,000 marks, the colonial appropriations in the same length of time have increased from slightly more than 7,000,000 marks to 19,000,000 marks. The increase in exports to the colonies is chiefly due to government works, military supplies, etc.

THE NEWFOUNDLAND QUESTION: The president of the St. Pierre and Miquelon chamber of commerce has just addressed a letter to the French ministers of foreign affairs, marine, and the colonies, which is nothing more or less than a lengthy protest against the tactics in the matter of bait, etc., which, as alleged, have been deliberately followed by the English for years with a view to compelling the French to abandon their shore in disgust. "This is the motive of their action, as if, on the one hand, we do not hamper them in the slightest degree in Newfoundland, they, on the other, have no need of the French shore owing to the extent of their fishery coasts. Now, once again, they want to demolish our fisheries, especially those of the banks, as, thanks to our valiant sailors, we procure a large stock and hinder them in the sale of theirs."

SOCIOLOGICAL

The Neglect of the Middle Class

Harper's Weekly, New York. Condensed for PUBLIC OPINION

WHAT is to become of our middle class in such places as New York, Chicago, and the other abodes of large bodies of men? The rich are provided for; the poor are provided for; but the great class which "makes history" seems to have nothing done for its comfort. Assuming for the sake of argument that the middle class is composed of persons receiving wages, salaries, or incomes of from \$600 to \$5,000 per annum. This division gives us an almost innumerable host of doctors, lawyers, preachers, teachers, artists, authors, merchants, and wage-earners of many kinds, the great majority of whom are in all essentials of education, address, tastes, and capabilities of action and sentiment not far short of our so-called "best" people, in many instances their superiors, and it is those who are slighted—discriminated against, to strengthen the charge somewhat.

We find in the fashionable sections hundreds of magnificent private dwellings, apartment-houses, and hotels provided for the rich, and in the poverty precincts are tenements of one kind and another erected for the exclusive accommodation of the poor at prices to suit their purses. But what of the middle class? Do we see anywhere rows of comfortable dwellings in good neighborhoods that the person of moderate means and some sense of refinement can rent or buy? Do we find apartment-houses of modern construction and fair appearance erected for the people who are as unwilling to live in tenements as they are unable to live in palaces? Or is there a hotel anywhere in which they may find food and shelter within their means of recompense?

In the matter of transportation, what provisions are made for the middle class? If a young woman of education and refinement, earning, say, \$900 a year, goes on a journey by rail, she must pay the same price for her ticket and her sleeping-berth as does the rich woman who may have twenty times her income; and so for the meals she gets in the dining-car. There is an emigrant accommodation for the poor, but nothing for the middle class, if we except the "tourist car" of the western-roads, which is a short step in the right direction. Ocean navigation, under the influence of European conditions, is somewhat different, but the bulk of the space on ocean-going vessels is devoted to the first cabin and the steerage.

Are there any first-class theaters open in New York city or elsewhere where the middle-class people can see current plays, or even plays a year old, at moderate prices? The good seats are at the rich-class prices, and there are galleries provided for the poor at poverty prices; but if the middle-class person wants anything in the house that meets his condition, he must literally take a back seat or stand up. One might suppose, salvation being free, that in the churches there would be some place for the middle class; but again are we disappointed. The rich class occupies the best pews in the temple, and it provides for the poor in its mission chapels, while the middle class has no other recourse than to become "side-aisle trash."

But why go on with the harrowing details? It is but a succession of discriminations in favor of the

rich and the poor classes as against the middle class, and this great body of the really best people this country possesses is left to be ground between the upper and the nether millstones. Will there ever be a tidal wave of reformation sweeping over this land of the free and equal, with the neglected middle class coming out—not on top, possibly, but coming out where it belongs? Today I look across a wide desert and see but two oases, the boarding-house and the suburban town. There the poor are not wanted and the rich do not come. The middle class controls these two spots on the body economic, and possibly from these nuclei the middle class may grow into that recognition its merits fully warrant.

The Co-Operative Element in Success

MR. CARNEGIE'S ABILITY TO USE MEN

ONE of Mr. Andrew Carnegie's recent gifts is that of a laboratory of engineering to Stevens institute, at Hoboken, N. J. On the occasion of its dedication, Mr. Carnegie made an informal address to Stevens men in which he attributed his success to the men who had helped him, and added that he hoped his own epitaph might be: "Here lies a man who knew how to get around him much cleverer men than himself."

The *Providence Journal*, commenting on Mr. Carnegie's demonstrated ability to use men, says: "It is one thing to be a good worker; it is quite another to have the faculty of leadership and of procuring faithful and efficient service. Even the distracted housewife who turns from her unsatisfactory servant, to whom she has delegated some task, with the exclamation: 'I declare, I'd rather do it myself!' may heed the significance of Mr. Carnegie's words. They remind us that the successful man or woman must have the ability to attract not merely clever helpers, but efficient helpers, and the ability, furthermore, to transfer to their shoulders a large portion of the burden that is to be borne or the task that is to be done. The man who tries to lift, alone, all the burden thrust upon him, commits a grave tactical error. He must know how to use other men and how to get the best out of them. He must not sacrifice himself in labors that somebody else can perform as well as or better than he can himself. To be ready to carry one's own share of every responsibility is proper and needful; it is foolish to exceed this share when there are others to whom it can fittingly be delegated and when, by such a course, one's own time and energies can be more effectively enlisted elsewhere. Mr. Carnegie has proved his ability to discern clever men and to put them to work at important tasks in the development of his marvelous industrial enterprises. He would not be as hale and hearty at his present age, nor would he be able to give so much money to deserving causes, if he had tried to do everything himself."

The *Chicago News* says that Mr. Carnegie not only has framed in these few words a most honorable and desirable inscription for his tombstone, but has given

a valuable recipe for greatness and power. "To be canny, to give genius its head without letting it get beyond control, to draw out of other men the best that is in them—this is greatness, this is power. Undoubtedly Mr. Carnegie has shown ability of this sort to a marvelous degree. The man who directs, conserves, and renders practical the brilliant minds which he has the shrewdness to discover and enlist in his enterprises is himself a great man. A connoisseur of brains, he yet has a liberal supply of that desirable article under his own hat; he can appreciate good service, can get together men capable of giving it, can draw it forth, can reward it generously, and can make the most of what it produces. The epitaph suggested by Mr. Carnegie should serve several useful purposes besides standing to the honor of a unique personality. It should aid other men in their efforts to achieve large successes by taking out of them that particular ingredient of their essential egotism which is offensive to others and harmful to themselves. That men are men and not tools is a lesson which some masterful captains of great enterprises find difficult to learn; Mr. Carnegie's epitaph may help them to grasp this important truth."

The Socialistic Eskimo

HEOLF WISBY, in the *International Socialist Review*, Chicago
Condensed for PUBLIC OPINION

THE natural helpfulness of the Eskimo is the basis of the socialistic state in which he lives. He will risk his life to save that of another, even his enemy. He will share the spoils of the hunt with his neighbors. If his neighbor dies, and his wife is left alone with children, he will provide for her until she marries again. He does not slander or tell tales; he does not abuse anyone; and he does not fight. He is a man of peace. He loves peace for its own sake, and his life is one long, laborious attempt at happiness for himself and his people. No wonder that the fierce Norse vikings, who first landed in Greenland, nicknamed this kind, tender-hearted people "Skrallingar," or cowards, for the Eskimos did not show fight, and when the vikings beat them, they did not strike back. In fact, their natural toleration is so great that many Christian Eskimos, understanding the Bible literally, turn the right cheek when hit on the left. There are no chieftains in the Eskimo community. They all regard themselves as free men, with an equal right to hunt and fish and sleep and eat. There is no "boss"; there is no person of authority. Everybody shifts for himself. He is absolutely and unconditionally independent. His only ambition is to be a good hunter, and to rear sons who will inherit his skill with lance and harpoon. He has helped himself against the elements for centuries, and the white man descending on his shores ostensibly to confer the blessings of a superior civilization, has never been able to improve his conditions, but only to detract from the old-time happiness and advantages of the aboriginal Eskimo community. Dr. Fridtjof Nansen, Captain Holm, Dr. Salager, and several other explorers have pointed out that an approach to civilization means to the Eskimo a slow but certain process of deterioration. In almost every instance where the experiment has been tried, such as around the Godthaab settlements, the Eskimo, confounding the virtues and vices of civilization, has even been made a victim of the latter at the expense of his own native virtues. In his natural state he leads a natural life

on natural principles. No law tells him he must not lie, yet he never lies; no law tells him he must not kill, steal, or cause suffering among his tribe, and yet he never kills, steals, or causes trouble.

A Study of Family Problems

REPORT OF THE NATIONAL LEAGUE FOR THE PROTECTION OF THE FAMILY

ACCORDING to the report of the National League for the Protection of the Family, the year 1901 has witnessed a decided increase of interest in the family and its various problems. The trend of legislation in this direction is summed up as follows: "It has covered the prescription of parties who may celebrate marriages; the adoption of the better system of marriage licenses; the more careful regulation of the returns of marriages; the exclusion of divorce advertising; the repeal of 'omnibus clauses,' and generally of the statutes permitting divorce for insanity; the increase of the term of residence required before divorce from lesser periods to at least one year; and the provision against the immediate marriage of divorced persons. A strong tendency towards uniformity holds throughout." The act of the Florida legislature, making insanity a ground for divorce, is cited as the only step backward in the year's legislation.

The league has collected the following statistics which give some interesting results: "Connecticut, once regarded as the worst of eastern states in respect of easy divorce, now shows some improvement as compared with the increase of population, and even absolutely; for she has granted fewer divorces in the last seven years than in the preceding seven. A better public sentiment and a more careful procedure of the courts seem to be the chief reasons for this. The ratio of divorces to marriages is now 1 to 15.8. In earlier years, it was as high as 1 to 9. Rhode Island, on the contrary, now grants four hundred or more annually, or 1 to 8.2 marriages. In Massachusetts, divorces are increasing, though as yet the ratio is not more than 1 to 20.2, and the number granted in 1889 was 1,163. I have tried in vain to get New Jersey figures for recent years; for although this state adds desertion to the one cause for which divorce is permitted in New York, her rate is much lower than in New York. One divorce to fifty marriages is about the highest ratio known in New Jersey. This is largely due to the peculiar conditions of the administration of the divorce laws in that state, which puts all divorce suits into its court of chancery, whose methods secure thorough trials. Three or four typical states in the interior give some striking figures. Divorces in Oklahoma increased from 2,270 in 1889 to 3,217 in 1899, and the ratio to marriages has become 1 to 10.9. There were 2,418 divorces in Michigan in the year 1900, or 1 to 9.6 marriages. Here about two-thirds of the applications are granted. In some states three-fourths of the suits are successful. In Michigan, the statistics show that nearly all the divorces are granted to residents of the state. Indiana shows a remarkable change for the worse. Almost a generation ago Indiana was notoriously bad. Then the laws were improved and her divorce-rate was no worse than that of some states in the east; but for some unexplained reason divorces of late have increased rapidly. In 1899, there were granted no less than 4,031 divorces, and 4,699 in the year 1900. In the last year the ratio of divorces to the marriages of the same year became 1 to 5.7 for the entire state.

LETTERS & ART

The Crisis in the French Theater

Paris Correspondent, *New York Nation*. Condensed for
PUBLIC OPINION

FOR some time we have been in a state of excitement over the quarrel which has arisen between the administrator of the Comédie-Française and the actors of this theater, which is considered the best school of acting in France. The choice of the plays has been left, till this year, to a chosen committee of actors and actresses, having the rank of *sociétaires* or partners, and constituting what was called the reading committee. It was a great honor for an author to have a play read before these severe judges; at the end of the reading a vote was taken—the play was refused, or admitted, or admitted conditionally upon revision. This has all been changed by a stroke of the pen of the minister of instruction and fine arts. The Théâtre-Français, receiving an annual subsidy from the state, is under the supervision of this minister. The reading committee has been simply abolished. The “Maison de Molière,” as it is often called, had to change its form of government; the administrator alone will have the right to accept or to refuse a new play. An absolute government is substituted for a republican regime.

This *coup d'état* has been the occasion of a long debate in our press. The great public really cares for but one thing: it would like to be invited to hear good plays, whether ancient or modern. All the more recent plays have met with little success; they all dilate more or less on the question of divorce, and this subject, which was new a few years ago, before divorce became the subject of a law, is now thoroughly exhausted. Many of the newer comedies have shown a sort of timid imitation of the manner introduced some years ago by a bold and intelligent actor named Antoine, in a small theater which bore his name. It is not easy to translate the word “*rosse*,” which has been given to this manner. The *theatre rosse* has for its object to be absolutely realistic, to do away with all the conventionalities of the stage which have been admitted for centuries. It does not develop an action with the usual exposition and the necessary end of a plot; it means to give to the public mere “slices of life,” and life is not made out of three, or four, or five acts—it goes on and leaves us at any time in suspense. It is not difficult to imagine why the first adepts in this new theatrical formula became very enthusiastic about it; it gave them absolute freedom, it made their work very easy, in many senses, as it did away with all complications and all intrigue. A new kind of acting, also, in harmony with it, was introduced. Actors and actresses sprang, so to speak, out of life; they needed no preparation, no long studies such as those of the Conservatoire; all that was asked of them was to be natural, to be faithful exponents of their own individuality. I will not deny that this return to nature had its advantages, that there was too much convention both in the creation and in the interpretation of theatrical works—the Théâtre-Français felt its effects in a certain degree; but, unfortunately, the new playwrights, while they attempted to get as near to life as possible, produced no plays of undoubted importance that could impress themselves on the public.

It is difficult to prophesy what will be the end of

the present crisis of the French theater. The actors and actresses who were members of the reading committee, just abolished, are partners in a sort of commercial society. They draw every year a certain sum, which might be called a dividend, out of the profits and outside of their salaries. This dividend, which, a few years ago, amounted to 40,000 francs for each of them, dwindled down to 12,000 francs last year.

Wanted: A Gilbert

Harper's Weekly, New York. Condensed for PUBLIC OPINION

GENERALLY speaking, there never was a riper period than the present for a Gilbert. We have on every side, socially and in politics, themes quite as susceptible to the Gilbertian treatment as the modern Terence found ready to his hand in the æsthetic craze which produced “*Patience*” and the British naval absurdities out of which the undying “*Pinafore*” sprang into being; but the opportunities come and the opportunities go, and the new Gilbert remains under cover. Most excellent music is wasted upon trivialities, and an art which in the history of letters has reached the most honorable distinction has fallen into decay. In England, they seem to have made up their minds that a new Gilbert is an impossibility, and have tried to fill his shoes on a plan worthy of Gilbert himself—that of having a libretto written by a syndicate of mediocrities, hoping that with seven heads upon his shoulders the resultant librettist might approximate the genius of the master. The spoiled broth that they cook for us has been seen in the airy trifles that come to Daly's every autumn from Mr. George Edwardes's playhouse in London; trifles having neither head nor tail nor middle, without beginning and without end, and all of stencil pattern, varying only in locale, costume, and incidental business. Nor do we seem to be much better off in the United States, but somehow or other, as one contemplates the work of Mr. Harry B. Smith, and notes the occasional flashes of genius which he permits his pen to emit, the case does not appear quite so hopeless.

The Gilbertian libretto has form and motive; it is literary, and abounding in the keenest kind of satire. The effort may be classed as intellectual pleasantries, and that it lost nothing of public approval because of this quality not only speaks well for the taste of the theater-goers, but should serve as an inspiration to those who are writing for a similar *clientele* today. It is inconceivable that with such an opportunity as the stage affords for the aspirant for Gilbertian honors, no one should have thought it worth while to bid for them with sincere and honest work. The psychological moment has arrived for the effort to be made. There are themes in great plenty; there are theaters without number waiting and ready for the man who will present them as they should be presented. There is a vast array of good comedians, men and women, to take the rôles they will offer; and, above all, there is a public that is quite as much athirst for an achievement of this nature as it is nauseated with the tuneful buffooneries which pass for comic opera.

Paderewski's Opera "Manru"

A SUCCESSFUL NEW YORK PREMIERE

"ONE thing was made plain," declares Mr. H. E. Krehbiel, writing for the *Tribune* of the New York premiere of M. Paderewski's "Manru," "and that is that, despite all the flaws which criticism may find in book and music, it must be permitted to stand as an amazing first opera, a virtuoso achievement akin to the achievements of M. Paderewski as a pianoforte player, and far in advance of his accomplishments as a pianoforte composer, notable as they have been. Scarcely one of his critics will say of it what one of the classics said of the first work of a colleague, also a classic, that first operas, like the first

James Huneker, of the *Sun*, says: "Dr. Alfred Nossig is a German Pole and a friend of Paderewski. A favorite Maori proverb declares that our enemies are our true friends. The converse is also true. Whether considered dramatically or poetically, the 'Manru' poem fails; it falls short in its development of an excellent thesis. This is it: 'When the full moon floods the night, errant grows the gypsy wight.' This motto has been seized upon by Paderewski as his poetic point of departure. Idealist that he is, and far from being *un homme du theatre*, or even possessing what Henry James calls the 'scenic idea,' the Polish musician has sought for the larger symbol in the rather meager and sordid tale of the librettist, a tale originally told by Kraszewski. He sees poetwise the strange conjunction of music and moonlight; and dovetailing this lunar madness with the melomania

SCENE FROM ACT I OF "MANRU"

ALEXANDER VON

litter of puppies, ought properly to be drowned. It is bound to have its day, and, be it long or short, it will be a brilliant one." Similar opinions expressed by other critics and the enthusiastic appreciation of a large audience indicate that New York is prepared to endorse the approval bestowed on "Manru" at Dresden, where it was first produced about a year ago.

The structure which Dr. Alfred Nossig has given the composer as a framework for his musical story is slight in plot. It is illustrative of the irrepressible desire of the gypsy to wander, both in the matter of environment and the affections, describing the wooing of a Galician maiden, Ulana, by one Manru, his desertion of her through the vagaries of love potions and the baleful influence of the moon, his fascination by a gypsy maiden, Asa, and finally his death by violence and the suicide of his deserted *pseudo* wife. Little praise has been bestowed on this libretto. Mr.

of the gypsy, he lets loose his fingers on the keyboard of the emotions."

"There is no disputing the suitability of this story to musical exposition," writes Mr. W. J. Henderson for the *Times*. "The question then arises, What method has M. Paderewski chosen? He has employed that of the contemporaneous lyric drama, with more than the usual amount of reliance upon Wagner. This does not mean that the composer is a borrower of musical ideas, but that he has utilized the leading motive to some extent, and that he has accorded to the orchestra a leading part in the exposition of the thoughts of the play. In no opera outside of those of Wagner is the instrumental part raised to such an important position. It is continually painting the picture of the inner life of the personages. It is always an explicator, a vivifier of text and action. That the score glows with color will not escape even the merest tyro in music. That the colors are some-

times too heavy will certainly strike some connoisseurs. As for the general public, it would doubtless willingly sacrifice some of the beauties of the score for a few more elementary tunes in the voice parts."

Mr. Henderson finds the greatest strength and beauty of the opera concentrated in the third act, which he describes as follows: "The third act takes place in a wild, rocky ravine, close to a lake. The rising of the curtain shows us Manru engaged in a last desperate struggle with himself. The composer has chosen to make a battle of the elements coincident with that in the man's soul. Wild clouds are flying across the half-hidden moon. The wind shrieks in the crannies of hills. Manru stifles for air. The moon strangely affects him. When it bursts out in full power he rises, and, with arms extended, walks toward the shining orb. When the clouds again com-

They all depart, and then enters Ulana, crying for her lost husband. Urok accompanies her and tells her what has happened. In despair she throws herself into the lake. Urok waits till Manru enters with his arm around Asa, and then seizes the recreant husband and hurls him over the cliff after his dead wife."

Mr. Huneker's verdict on the work as a whole is this: "'Manru' is not a great, original opera. It is a many-colored coat of styles. It leans too heavily in general thematic conception and development upon Bizet and Wagner—surely the prelude to the third act recalls and is dominated by 'Die Walküre'!—but there is much that is delightfully miniature and ingenious, dainty, pretty, and aspiring in its pages; much that exhibits an eager hand only waiting for the proper dramatic metal to forge musical shapes more strongly individual and more dramatically sincere. 'Manru'

SCENE FROM ACT III OF "MANRU"

pletely veil it, he falls in a swoon. The darkness of the sky is an outward and visible counterpart of the darkness in his soul. All this is accompanied by descriptive music of extraordinary potency. There are but few lines of text. Action and orchestral music and scenic panorama are employed. It is ingenious, poetical, symbolical, unique. The strains of a weird march are heard, and the gypsies descend from the hills. Asa, the seductive girl, is among them. She recognizes the prostrate Manru. Then begins a scene of enticement. The girl, in spite of the open jealousy and rage of Oros, the chief of the gypsies, tries to lure Manru to consent to join the band again and receive as a reward her love. He struggles hard till old Jagu enters and plays once more the wild strains of the gypsy fiddle. This music again sets Manru's blood on fire, and he consents. Oros throws down his staff of office in anger, and at Asa's suggestion the gypsies choose Manru to be their chief.

is, after all, Paderewski—that mystifying medley of fantasy, caprice, magnetism, poesy, charm, and illusion. It will live—until its creator composes a second opera. And then he will be the first to forget it."

The production of the opera, under the direction of Walter Damrosch, with the immediate supervision of the composer in the later rehearsals, gave general satisfaction. Von Bandrowski's Manru proved ample vindication for his importation to sing the part, and Mme. Sembrich won new laurels for adapting herself so admirably to the part of Ulana. Mr. Krehbiel writes: "We are accustomed to revelations of beauty from her, but it was something new to hear her sing and see her act like a lyric tragedienne, to find her making irresistible appeals to the emotions, instead of contenting herself with charming the senses." Mr. Bispham, as Urok, the dwarf, and Miss Fritz Scheff, as the gypsy girl Asa, have been warmly commended for their interpretations.

A Popular German Novelist

THE SUCCESS OF GEORG VON OMPTEDA

THE appearance of a new novel by Georg Freiherr von Ompteda has grown to be a literary event of some importance in Germany. According to reports gathered from all parts of the country by *Das Litterarische Echo*, he was the novelist second in request in 1901, while he stood first in 1900. Of single books, his "Eysen" was the one most called for in 1900, and held second place among all German novels in 1901. Two of his novels have reached their tenth edition, a phenomenal record for a country of so many books and such small sales. According to the leading German critics, Ompteda has won popular favor, not by sensational methods, but by good work. In a recent number of *Das Litterarische Echo*, the novelist gives a brief sketch of his life. The family is of Friesian origin, and fled to Hanover to escape the persecutions of the Duke of Alva. In the new home, it rose to prominence, and played an honorable part in the history of the adopted land. Ompteda was born at Hanover, on March 29, 1863. His father was the lord chamberlain of King George V, and voluntarily followed his master into exile after the events of 1866. The family settled in Dresden in 1872.

Here young Ompteda entered upon a gymnasial course, but was afterwards transferred to a military school and became eventually an officer in the German army. He was an inattentive pupil, and his school days were by no means happy. In 1892 partial deafness, resulting from an accident, compelled his retirement from the army. Scribbling had long been the occupation of his leisure hours, and he had, indeed, issued a volume of verse, under an assumed name, as early as 1890. It was, therefore, natural that the changed circumstances of his life should transform the officer into the novelist. Between his first book, "Von der Lebensstrasse," of the year 1890, and his last, "Cäcilie von Sarryn," of the year 1901, there is a long list of others, almost entirely novels and short stories.

According to Mr. Charles Harris, who writes of Ompteda's work for the New York *Nation*, all that the novelist has produced is not of the first order. Mr. Harris says: "His statement that almost all that he has written was years in assuming shape in his mind before he went at the easier task of putting it on paper, may be the simple explanation of both his successes and his failures, for his weaker novels do not suffer so much from imperfections in plot and character-drawing as from bungling and inadequate expression. Ompteda is a keen observer of everyday life. The unusual seems not to exist for him."

SCIENTIFIC

The Journeys of Birds

F. H. KNOWLTON, PH. D., in the February *Popular Science Monthly*,
Garrison, N. Y. Condensed for PUBLIC OPINION

IN all temperate countries the migratory birds may be separated into two classes: first, those which come in spring, spend the summer, and retire towards autumn; and, second, those which pass through in spring to a breeding-ground, nearer the pole, and in the fall while on their journey south. The origin, or perhaps better, the origins, of this habit or instinct of bird migration is exceedingly obscure. Many theories have been advanced to account for it, but perhaps none has yet been offered that explains satisfactorily all its multitudinous phases. For instance, it has been suggested that migration is the result of the development or acquirement of the power of flight. According to Mr. F. M. Chapman, "the desire for seclusion during the breeding season" is a "good and sufficient cause for the origin of bird migration." This theory may afford an explanation for the migrations of birds that congregate in such colonies during the breeding season, but it should not be overlooked that "survival of the fittest" may have been an equally important factor in weeding out those individuals of such colonies that did not seek these secluded or isolated localities for breeding sites. The theory that is, perhaps, most naturally suggested, and the one that finds widest acceptance as explaining the facts, is that migration began in a search for food.

It is now abundantly established that migration is mostly carried on at night, and further, mainly during clear nights. Only a comparatively few species, such as ducks, cranes, certain large hawks, swallows, swifts, and nighthawks, migrate during the daytime, and these, it will be observed, are either rapacious birds or mainly those that enjoy such power of rapid

flight as to be relatively safe from capture. The height above the earth at which migrating birds travel has been made the subject of some interesting observations, the first of which appear to have been by Mr. W. E. D. Scott, on the night of October 19, 1880, at Princeton, New Jersey. Most of the kinds seen were the smaller land birds, among which were plainly recognized warblers, finches, woodpeckers, and blackbirds. The flight of the birds noted was apparently nearly at right angles to the field of observation, and as nearly as could be estimated, their height above the earth was between one and two miles. Some years later observations on nocturnal flight were taken up by Mr. Chapman, who spent three hours on the night of September 3, 1887, at Tenafly, New Jersey. During this time 362 birds passed across the moon's face. Of these, 233 were computed to be at a height of from 1,500 to 15,100 feet.

The rate of speed at which birds travel during the migrations, and also at other times, has been made the subject of observation, although the results, as might be expected from the confusing elements which must enter into such an inquiry, are far from complete or satisfactory. Frank Forrester records ninety miles an hour for ducks, as noted by telegraph from point to point, and an albatross has been known to cover 3,150 miles in twelve days. The actual distance flown by the latter bird was probably at least twice as great, for they rarely fly far in a straight line. But granting that the occasional speed is very considerable, the actual speed of most migrating birds appears to be surprisingly low. Observations tending to prove this were made some years ago under the direction of Professor W. W. Cook, in the Mississippi

valley. The services of over one hundred observers were enlisted, at stations ranging from the gulf to Manitoba. The records of fifty-eight species for the spring of 1883 gave an average speed of twenty-three miles a day for an average distance of 420 miles, while in the following year a slightly smaller number of species gave exactly the same average speed over an average distance of 861 miles.

But after having described these migration routes and the wonderful journeys over continents and vast oceans, the mystery of mysteries—How is it possible for the birds to find their way so unerringly?—still remains without a wholly satisfactory answer. In the case of birds migrating over land areas, sight is supposed by some to have an all-important function, especially when it is recalled that a bird two miles above the earth is surrounded by a horizon line of ninety miles on either side. But in the case of birds migrating over hundreds or even thousands of miles of open water, vision must play an unimportant part. Möbius suggests that in such cases they may be guided by observing the roll of the waves, but while this may be true in a few instances, it can not possibly be so in the majority of cases. We, therefore, seem inevitably led to the conclusion that birds are possessed of a "sense of direction."

Becquerel Rays Made Visible

EXPERIMENTS OF PROFESSOR HALLOCK

ACCORDING to the New York *Sun*, Professor William Hallock, of Columbia university, has discovered a light which is apparently without heat. His discovery is the result of an experiment made with certain chemical substances which have long been known to radiate a mysterious energy, the source of which scientific men have not succeeded in tracing. This form of energy, known under the name of Becquerel rays, after the French scientist who discovered it, has always manifested its presence in much the same manner as ordinary light, except in the one important feature of not being visible. For instance, photographs could be made with the rays, if sensitive plates were left exposed to their influence in dark rooms, but no one had been able to see the rays. Professor Hallock hit upon a plan for rendering them visible, and as they emanate from thousands of substances, the discovery is important.

To the reporter who called on him, Professor Hallock said: "You know that X-rays were long invisible until tungstate of calcium was used in the fluoroscope to make them visible. It occurred to me that some similar substance might be combined with the radio-active products of pitchblende to make them visible. After some consideration, I fixed upon platinum-barium-cyanide. I tried it with the salts. The experiment was a success. The salts would be invisible ordinarily, but when their rays, flowing upward, strike the barium-cyanide, the latter will take on a glow.

"I am of the opinion that something practical may be made out of this general subject of phosphorescence or self-luminosity of objects. Not only have we discovered that most natural objects have the capacity for storing sunlight, but here is the apparent capacity for creating light itself possessed by many substances which heretofore were supposed to be inert. There is room at least for reflection when, as Becquerel points out, a 'quiet, peaceful bit of white

salt' is capable of shooting off rays with a velocity of over 92,500 miles a second. There is most urgent need for discovering the source of this energy in view of its utilization by mankind. Even in its present condition, enough is known of the subject of phosphorescence to admit of a little experimentation. I believe that the owners of office buildings might help out the twilight materially by the judicious use of certain luminous paints. For instance, the walls and ceilings of offices could be covered with these paints and made to emit light enough to last with the twilight on winter evenings until the close of office hours. And if the hallways of houses and public buildings were to be coated in like manner, one could get about them at night without the aid of more artificial light.

"In the efforts of Becquerel and of Mme. Curie we have something tangible. We have something to go upon. To be sure we do not know exactly what it is we have. It may be the energy of the sun stored without our present knowledge, although that is hardly likely; it may be some property of the ether; it may be, as Mme. Curie suggested, the result of a transcendental radiation more penetrating than X-ray and pervading all space, although Professor Geitel found that if such is the case the radiations easily penetrate hundreds of yards of rock, for radium was still active at the bottom of the deepest mine in which he was able to descend. At least it is the newest force with which we have to deal. You have seen how it can be turned into light, and when you think that in spite of its speed of 92,500 miles a second the waste from a half-inch of surface is only a milligram in a thousand million years, you must admit that the possibilities for the substance are great."

A New Method of Arresting Malignant Growths

New York Tribune. Condensed for PUBLIC OPINION

TO Dr. Robert H. M. Dawbarn, one of the visiting surgeons to the City and Polyclinic hospitals, has been awarded the Samuel D. Gross prize of \$1,000 for original research in surgery by the Philadelphia academy of surgery. The academy is trustee of the Gross prize fund. This prize competition is open to medical practitioners in every part of the world. According to the conditions of the fund, the prize is to be given every five years to the competitor who has done the best original work. The work must not only be original, but valuable to mankind.

The work which won for Dr. Dawbarn the prize relates to an operation for arresting certain malignant growths when they can not be cut out or when to do so would put the life of the patient in jeopardy. He has carried on his researches in this field for the last seven years. The treatise which won the competition was entitled "The Treatment of Certain Malignant Growths by Excision of Both External Carotids." It is asserted in this paper that in many cases of malignant growths of the head this operation will prolong the life of the patient. It may also bring about a restoration of the health of the patient, so that what may be called a permanent cure is effected.

The first person operated upon under this method by Dr. Dawbarn went under the knife seven years ago. He had a malignant growth of the pharynx. He is now in good health and able to attend to his business every day. In the Long Island college hospital there is a patient suffering from a cancerous growth on the

face who recently was operated on. Dr. A. T. Bristow performed the operation. He has said that the patient is improving nicely and that the size of the malignant growth of the face has been reduced one-fourth.

The chief blood supply to the head is conveyed by the carotid arteries. The common or main carotid divides part of the way up the neck into a deep branch, which practically supplies only the brain and eye, and a superficial or external branch, which supplies the face, mouth, tongue, nose, and indeed all parts other than the brain and eye. The operation is the cutting out of the entire length of the external carotids on both the left and right sides of the neck at different times, and doing it in such a way that there is less blood lost than from an ordinary nose bleed. When the first operations by this method were performed it was feared that the patients might pay dearly for their longer life by the mortification of the nose or tongue or other parts thus deprived of blood. But it has been proved that through various small channels left there remains a slight degree of circulation, and the normal flesh is able to survive with little blood, much less than would be needed to enable so vascular a thing as a cancer to be nourished and keep on growing. By the cutting away of the entire length of the external carotids the cancerous growths shrink and become inactive and harmless lumps. The only evidences left of the operation are two delicate lines, one on each side of the neck.

A New Volatile Salt

Scientific American, New York. Excerpt

MESSRS. URBAIN and Lacombe have lately discovered a new volatile salt of glucinium which presents some remarkable properties. When the hydrate of glucinium is dissolved in dilute acetic acid and the solution evaporated in a water-bath, a mass of gummy consistency is obtained. This substance presents none of the characteristics of a definite compound, although it has been supposed to contain a basic salt. If this mass is treated with concentrated and boiling acetic acid, a solution is obtained which upon cooling gives, in the first place, a deposit of crystalline needles, and then, at a lower temperature, of octahedral crystals of a well-defined form, which finally remain alone. This new compound is insoluble in cold water, but boiling water dissolves and also decomposes it. Chloroform is by far the best solvent, and takes up a large proportion. At a temperature of 284 deg. C. this body melts to a colorless and mobile liquid. It distills without decomposing at the normal pressure at 331 deg., and its vapor may be heated as high as 360 deg. in presence of air without undergoing alteration. This property enabled the experimenters to determine its vapor density at the temperature of boiling mercury by Meyer's method, and they obtained for result $D = 13.9$. This figure corresponds to a molecular weight of 401. As the atomicity of glucinium is a disputed point, the new compound may throw some light on the question. If the physical properties of this body are singular, one of its chemical properties is not less so, for this basic salt is formed in a solution which is extremely acid. Besides, in dissolving the body in concentrated acetic acid saturated with gaseous hydrochloric acid, the salt did not undergo any alteration, although it was heated for several hours in sealed tubes at 150

deg. C. It must be concluded that in this compound the basic function of the glucina is masked.

Various Topics

A BRAKE FOR SHIPS: The Montreal board of trade has lately had on exhibition a model for a contrivance to brake ships, so that they can be stopped almost instantly in case of threatened collision, or when a person falls overboard. The device consists of two or more doors on each side of the ship beneath the water line, attached outside to the sheathing and opening outward. The doors can be operated by electricity, steam or compressed air.—*Popular Science Notes.*

"A NEW CONSUMPTION CURE": The discoveries of Dr. Robin and Dr. Binet respecting tuberculosis have led to a change in treatment. Instead of attacking only the bacillus they strive to fortify the system. They find that persons predisposed to phthisis consume an enormous quantity of oxygen and generate carbon in proportion. Thus the system burns itself out. The new treatment consists in restricting the consumption of oxygen.—*Dispatch to N. Y. Herald.*

GIANT SKELETONS: Owing to the discovery of the remains of a race of giants in Guadalupe, N. M., antiquarians and archæologists are preparing an expedition further to explore that region. Luciana Quintana, on whose ranch the ancient burial plot is located, discovered two stones that bore curious inscriptions, and beneath these were found in shallow excavations the bones of a frame that could not have been less than 12 feet in length.—*New York Times.*

TELEPHONING OVER TELEGRAPH LINES: The experiment of telephoning over telegraph wires was successful recently on the southwestern branch of the Illinois Central railroad between Kankakee and Kempton, Illinois, a distance of 26 miles. The tests were successful in every case, and the telephoning done over telegraph wires was without interference with the telegraphic service. It is intended to furnish all Illinois Central trains with telephonic equipment, the instruments to be placed in baggage cars of passenger trains and engines or cabooses of freights.—*Electricity.*

AUTOMATIC RAILWAY SIGNALING: The London *Chronicle* describes a unique apparatus for railway signaling lately produced by Herr Bartelmus, an Austrian electrician, and exhibited for the first time in model form at a recent meeting of Austrian railway officials. The Bartelmus device employs a single electric current whereby signals may be transmitted from moving engines to stations or signal boxes, and vice versa. The signal in a locomotive is placed close beside the engineer and, normally, shows white. When one train approaches within a mile and a half of another on the same track the white light changes to green, which means that the engineer must proceed cautiously. If he approaches within three-quarters of a mile of the train ahead the green signal disappears and a red light, warning him to stop, takes its place. And should he disregard the red light and run within somewhat less than one-third of a mile of the danger point, the apparatus automatically applies the brakes and brings the train to a standstill.

THE DISTANCE OF ANY STAR is calculated from what is termed its parallax; that is to say, from the slight shift in the direction in which it is looked at from two different positions of the earth. This shift is most noticeable if the two observations are made at suitable dates, six months apart, when the two positions of the earth are at opposite extremities of a diameter of its orbit, and their distance apart as great as possible—viz.: 180,000,000 miles. But this shift, or parallax, in the case of most of the stars, owing to their immense distance, is found to be so small that it is impossible to measure it. It has been so in the case of previous new stars. We have only been able to say of them that we can not measure their distance, but that they must be located among the more distant stars. Of the Nova Persei, we may feel almost certain that its large parallax and corresponding nearness would have surely been discovered before now if the Nova had been anything like six times nearer to us than the well-known star Alpha, in the Centaur, whose distance of 25,000,000,000 miles is the smallest as yet found for any star.—*Nineteenth Century.*

RELIGIOUS

Religion in Women's Colleges

MOUNT HOLYOKE, WELLESLEY, SMITH, VASSAR, AND BRYN MAWR

SOMEWHAT in line with the article on the religious life of a factory town, quoted in our last week's issue from the *Congregationalist and Christian World*, is a short account in a later number of the same paper of the religious life in the eastern colleges for women. The consideration in each case is the relative position of religion among the other interests of the community.

If there is any small difference in the outward manifestation of the religious life between the colleges for men and those for women, the latter institutions show it more spontaneously, with more individuality. Two facts illustrate this point. Attendance at church and chapel exercises is in most cases required of college men. The majority of college women are not required to attend the same exercises. Consequently, full benches in Bryn Mawr or Wellesley represent voluntary expression of this side of college spirit. Again, the majority of men's colleges have an identical basis for their Christian work. The principal student religious organizations in each college are affiliated with the Intercollegiate Y. M. C. A. and the World's Student federation. But of the five largest women's colleges, each has a different basis for its religious association, only one of which is affiliated with the general federation. Which of the two situations is most desirable is a matter for discussion elsewhere.

The official religious life is much the same in colleges of all kinds the world over. Invariably there is a morning chapel service. A service on Sunday afternoon or on a week-day evening is held in addition, addressed by members of the faculty or speakers from a distance. Vassar and Wellesley have their Sunday-morning service at home, with a variety of distinguished preachers, but Mount Holyoke, Bryn Mawr, and Smith, where "gown and town" are close together, share in the ordinary local church services. As for the non-official or voluntary religious life of the students, one often wonders if the churches realize with what training in modern evangelism many women emerge from those four college years. When a girl has had a weekly mission study class of twenty other girls as clever as herself, she has an idea of the way to manage a Sunday-school class or a young woman's mission circle. When one woman's college sends out over \$2,000 a year for support of home and foreign missions, some girl knows a good deal about teaching people systematic giving. And when a cabinet consists of heads of seventeen different departments of work, the chairman has learned a sense of proportion and an understanding of human nature which is ready to be utilized in a different sphere.

The energy at work may be divided into evangelizing and home edifying. The evangel may take the shape of sending flowers to the settlement, or the teaching of gymnastics in a working girls' club, but a large part of it is concerned with the vital good news. Each college supports its own foreign missionary, one in China, one in Japan, one in India, two in Turkey. The medical missionary especially ap-

peals to the college student; Smith and Wellesley each have adopted a doctor. The mountain whites, Carlisle, Hampton, Tuskegee, Bishop Hare in Dakota, and missionaries in Alaska receive yearly tokens of remembrance. City mission work is helped, as well as the social settlements, whose origin and conduct by college women is too well known to need comment. Neighborhood work presents a most interesting variety. The Mount Holyoke girls devote several evenings a week to the factory women in Holyoke; the Emmanuel club, at Radcliffe, does similar work in Cambridge; Smith contributes most of the teachers to the Northampton Home Culture clubs; while Vassar and Wellesley have religious meetings and entertainments for the maids.

Back of the missionary giving are the monthly missionary meetings, the weekly mission study classes—nearly one hundred Wellesley students in them last year—and the student volunteer bands of girls who purpose to become missionaries. Material for interest is furnished by the growing missionary libraries. The Bible-study classes—in which are an average of one-sixth of the students—mean that these girls are fostering the habit of daily devotional study on a continuous theme through the year. Prayer-meetings are no less a problem in college than in church, though not from the same reasons, perhaps. They range in kind from the ethical discussion, or class song service, to the ten-minute daily meeting of little groups at early morning or late evening.

Much care is taken to bring the freshmen each fall into full understanding and some share in this religious life. Handbooks are mailed them in the summer; committees from the association meet September trains, and a personal touch is given each new girl. The increase of possibilities in the work has led Smith and Mount Holyoke to call general secretaries this year, especially to keep the college religious life more in touch with that of the churches, to foster intercollegiate relations and personal helpfulness. Smith has also published the first yearly report of the association.

Presbyterian Creed Revision

COMMITTEE REPORTS AGAINST "INFANT DAMNATION"

THE committee on creed revision of the Presbyterian general assembly, lately in session in Philadelphia, continuing the meetings held in Washington last December, has reported a declaratory statement of the position of the church on "predestination" and "infant damnation." Their statement was as follows: "By the decree of God, for the manifestation of his glory, some men and angels are predestined unto everlasting life, and others foreordained to everlasting death. These angels and men, thus predestined and foreordained, are particularly and unchangeably designed; and their number is certain and definite that it can not be either increased or diminished. Elect infants, dying in infancy, are regenerated and saved by Christ through the Spirit, who worketh when, and where, and how he pleaseth. So also are

all other elect persons, who are incapable of being outwardly called by the ministry of the word."

Dr. Roberts, the secretary of the committee, said that "the members denied that American Presbyterians ever taught the doctrine of infant damnation," and that "the doctrine of predestination is held in harmony with God's love for all mankind, and that no man is condemned except on the ground of his sin."

According to the Springfield (Mass.) *Republican*, the conclusion of the committee "is curiously in line with Wendell Phillips's observation. The opponents of any reform, Mr. Phillips used to say, begin by denouncing it as folly; then they charge that it is contrary to the Bible; and finally they claim that they have never opposed it at all. It will surprise some people to learn, on such good authority, that the Presbyterians in this country have never taught infant damnation, but it isn't necessary to quarrel with wise theologians who can execute such a masterly retreat."

With the exception noted above, secular papers paid no attention to the report. In case comment appears in the religious press, it will be summarized in a later issue.

English Church Legislation in the Nineteenth Century

New York Nation. Condensed for PUBLIC OPINION

THE first note of English ecclesiastical legislation of the past century has been concession. Within the twenty years that followed the Reform act, satisfaction was given to the demand for the removal of abuses which scandalized churchmen no less than Dissenters. The Ecclesiastical Commissioners' act, the Church Discipline acts, and other enactments soon made pluralism and the non-residence of the clergy matters of the past. Proper management of ecclesiastical property at once increased the resources of the church, equalized the revenues of the bishops, and all but removed, among other abuses, the scandals connected with translation from an ill-paid to an over-paid bishopric.

Concession, however, has been constantly combined with conservatism, which has often assumed the form of illogical compromise of principle. Not a step has been taken in the direction of comprehension. The national church was not, in 1901, any more than it was in 1801, the church of the whole nation. Concessions to the demands of justice or of obvious expediency have been constantly, not to say systematically, compromised or marred by deference to the principles or the sentiments of churchmen or of the clergy. The line of Marriage acts which were intended to remove the grievances of Nonconformists or Agnostics did not entirely achieve either object. They did not, till recently, place a marriage celebrated in a dissenting chapel in the same position as a marriage celebrated in a parish church. Parliament, again, has, as it would generally be asserted, abolished church rates; it has, in fact, simply abolished the compulsory payment of church rates, but has saved the dignity and consulted the interest of the clergy by allowing a church rate to be imposed while abolishing the power of exacting the payment thereof. Parliament, to give a last example, has, in the face of clerical opposition, legalized divorce, but, with a want of logical consistency which may lead to very bad practical results, has allowed a clergyman of the Church of England, and therefore an official of the national church, to refuse to celebrate the marriage

of parties either of whom has been divorced from a husband or wife still living—with the result that the clergyman is allowed to treat the morality of the state of which he is an official as opposed to the morality of the church of which he is a minister.

This system of compromise, combined with conservatism, has achieved a singular success, of which every critic must estimate the worth or the worthlessness in accordance with his own religious convictions. The Anglican establishment was in 1901 more popular and more influential than in 1801. Disestablishment has been avoided, not a single doctrinal concession has been made to Dissenters; the position of the church has rather been shifted than essentially changed.

Lent in Mexico

New York Times. Condensed for PUBLIC OPINION

LENT is observed more or less in the United States, but to learn what it really means one must go to some one of the southern Latin countries. Then they will see that never before had they any conception of its observance. During all of Lent there are almost continual services in the churches, but none of them is of especial picturesqueness or of interest to the sightseer until that of Palm Sunday. On that day, from long before sunrise, the Indians have been gathering, each one of them loaded down with palm branches or with crosses skilfully woven from bits of palm leaves. As in all Catholic churches, these palms are blessed by the priests and then carried home and carefully preserved. But, while in the north it is necessary that they should be carefully put away within doors, the opposite is the custom here. Instead of being kept in the house, the palm branches here are at once bound to the balconies fronting on the street, and there they remain throughout the year, never being taken down until they are replaced by the new ones which come on the next Palm Sunday.

On Holy Thursday, come the strangest and most remarkable services of all the Lenten season. At that hour a priest goes to the entrance of the church and selects twelve of the oldest beggars he may see. They are brought within the church and given seats near the altar. An attendant brings basins of water, and the priest, removing the sandals of the beggars, rinses and wipes their feet. Then he anoints them with holy oil, and after service they go back to begging. On Good Friday the altars are again draped in black and the services are most solemn. That celebrated in the morning is called the "Tres Caidas"—the "Three Falls"—in remembrance of the three times that Christ stumbled and fell as He was carrying the cross to Calvary. Saturday morning, at 10 o'clock, comes the end of Lent so far as church restrictions go. Then the churches are crowded. The altars are still draped in black. The choirs sing the "Gloria" to organ accompaniment, and as the first note of the music rolls through the buildings the somber draperies are stripped from the altars, leaving the rich hangings exposed to view, the bells, which have been silent all the week, ring as though to make up for lost time, and in the street fireworks are exploded and Judas is hanged with such energy that for hours pandemonium seems to reign. This hanging of Judas is one of the strangest of all the semi-religious observances of Mexico. It was originated to give the peons a chance to show their contempt for the false disciple.

It has come, however, to be more of a jubilee for the children.

Easter Sunday itself is noticeable mainly for the jollification that is seen everywhere. The bull-fight is made an especially elaborate and bloody affair; the theaters, which have been closed all during Lent, give performances afternoon and evening. The circus and all other places of amusement that have been closed are going full-blast with extra performances. Every place is crowded. The time for the denial of physical pleasure is over. Mexico is itself again.

Sects in Russia

New York Evening Post

THE recent Russian census gives some figures, believed to be approximately correct, concerning the relative numbers of the various religious sects in the country, information which, hitherto, has been guarded jealously by the Holy Synod. It appears that the largest body of Nonconformists is the Starobriadzi, or the Old Believers, who are divided into two chief groups, the Popoftzi and the Bezpopoftzi—that is to say, those whose spiritual affairs are directed by irregularly ordained clergy (popes), and those who reject the ministrations of clergymen. The Popoftzi are again subdivided into two sections, and the Bezpopoftzi into five subdivisions. Among the latter are the Beguni, whose extreme fanatics, some

few years ago, created a sensation by burying alive fifteen of its members at Tiraspol, near Odessa. There are really some fifty distinct sectarian divisions, all having their own particular creeds, customs, superstitions, and codes of morals, and differing in dogma from the original chief sects. They may be divided generally into two categories, Rationalists and Mystics. Among the former are the Doukhoborski (a great number of whom are now settled in Canada), Molokani, Stundists, the followers or disciples of Tolstoy, the Zionists, and a few others. Among the Mystics are the Skoptzi, or self-mutilators. There are some thirty smaller sects unknown by any distinctive names, whose dogmas are all more or less secret, and their religious practices extraordinary compounds of superstitious Christianity and paganism. The census gives the total number of the Russian sectarians as 2,173,738 souls, but the actual number is probably about double the official figure. The Holy Synod has recently ordained a vigorous campaign against the sectarians in provinces where their numbers are increasing.

INDIVIDUAL COMMUNION CUPS are making some progress against the common cup as is shown by statistics collected in 1900. It was found that there were 732 churches in the United States, chiefly of the Baptist, Congregational, and Presbyterian denominations, using individual cups. When it is remembered, however, that there are over 187,000 churches in the country, these figures seem rather disappointing.—*New York Evening Post*.

MISCELLANY

Euthanasia

SHALL PHYSICIANS BE GIVEN THE RIGHT TO PUT INCURABLE SUFFERERS TO DEATH?

THE London *Spectator* comments editorially on the report that a deputy in the Saxon parliament recently introduced a bill permitting doctors to put patients whose recovery was hopeless to death at their own request. The *Spectator* says: "The bill was, of course, snuffed out with some promptitude, for the Saxons are not faddists; but the incident is very significant of the twentieth century. Opinion for many years past has been softening or rotting on the subject of suicide, and especially of that form of the offense, suicide to avoid incurable physical suffering, which, in our secret sympathy with it, we term euthanasia. We can see no special argument for euthanasia, and regard the extreme tolerance with which the opinion for it is discussed as one of the many illogical results of the pity for pain which has become such a passion in our western world. A feeling has sprung up that God can not have intended the useless torture of any human being, and that accordingly to make death easy when it would be exquisitely painful must, at least for the sufferer himself, be justifiable. Why, it is said, should he endure agonies which can have only one end, and can, so far as human eye can discern, be of no profit, material or spiritual? They may even diminish, and no doubt occasionally do diminish, his capacity of faith in the mercy of God. The thesis is seldom maintained in print, though Mrs. Oliphant, who was a strong believer, openly defended it in 'Carità' in cases of cancer; but it is believed by thousands who, upon all other subjects, agree with the teachers of Christianity, and argued over in almost every society intimate enough

to touch such questions at all, the conclusion usually being, 'I hope I may never be tempted.'"

A correspondent of the *Spectator*, who personally knew the late Alfred Nobel, makes the following remarkable revelations concerning Nobel's interest in euthanasia: "Mr. Nobel told me the year before his death, when I was spending an afternoon with him, that he had offered to his Excellency Crispi, then prime minister of Italy, to create at his own expense at Milan and Rome establishments where anybody who desired it could be painlessly suffocated by a gas he had invented. The cost of each house would have been \$50,000, plus the salary of a government official to register deceases, and of a doctor. Mr. Nobel was prepared to give a first-class dinner washed down with good wine, at a fixed hour, to the guests. After dinner, when cigars had been handed round, the smoking-room was to have been instantaneously filled with the deadly gas. The bodies were to be cremated in the morning at the expense of the institution. His Excellency Crispi thought that there was much in the idea, and that the scheme was well planned, but that the reactionary parties in Italy were still too strong to permit of the government availing itself of the kind and generous offer. Nobel was quite prepared to carry out his views, which were that when he should die he would be as dead 'as a tree cut down at its roots.' He should use a poison he had invented and well tested on animals, which he said was instantaneous and impossible to detect. This he intended to use, he told myself and a friend, if ever he contracted a mortal illness. He had the preparation inside a ring he always wore, and also in a small bottle. As a

fact my esteemed friend died of sudden failure of the heart during an attack of bronchitis."

The New York *Tribune* declares that it can not be denied that the opinion in favor of euthanasia is growing, though many who believe in it do not care to make themselves unpleasantly conspicuous by avowing their views. "It is said that the belief is making headway, especially among physicians, an increasing number of whom think it would be a kindly act to terminate the sufferings of those who can not possibly be cured. Some penologists also are said to hold with Nobel that euthanasia might be wisely employed in the case of certain types of incorrigible criminals, degenerates, hopelessly insane people, and confirmed drunkards, and that thus the mental and physical standard of the race would be immeasurably raised. The science of stirpiculture has as yet hardly ventured to assert itself in regard to the human family, since any radical application of its principles to men would raise grave questions of religion and morals, as well as of the state's control over the life and liberty of the individual, that the world is not yet prepared to face. But, in an academic way, the problem is being more and more discussed, and it is asked why there should be so little care to safeguard the physical perfection of the human race, while all the resources of science are invoked to produce perfect animals."

A Filipino "Flying Dutchman"

STEPHEN BONSAL, in *Collier's Weekly*, New York.
Condensed for PUBLIC OPINION

F AINT and shadowy indeed remains the figure of Miguel Malvar even when, in pursuit of a better portrait, you have traveled as we are traveling now in the refreshing shadow of the Heights of Miquiling, in whose fastnesses he camps. He does not belong to the *gente fina*; he is a plain countryman with but little education; he has neither studied long and brilliantly at home, like the cut-throat Lukban, nor yet in the universities of Europe, like the martyr Rizal. He comes of good plain people who have lived for generations in the Batangas country, acquiring considerable wealth and a reputation for honesty and square dealing. However, I am not in the least at a loss to give you a description of Don Miguel. I have at least twenty in my possession, all vouched for by the necessary affidavits and witnessed not a few before the parish priests.

The trouble is that all these descriptions differ radically, and no man can pass along the Batangas highway without fitting in to one or another of them. He rarely camps with his troops—generally with but a friend or two, his Xanthippean wife, a boy to boil his rice, a carabao, and a bull-cart. This is the Malvar outfit. Within a mile or so of where he camps, in a circle about the place, are detached columns of twenty or thirty men each. His camp is pitched on the brink of some deep barranca, one of those fissures of the earth that run through the Batangas country. The moment a gun is fired, Don Miguel disappears and our fellows begin the unsatisfactory search for a needle in a haystack. The only hope the soldiers entertain of ever laying hands on Don Miguel is through the striking personality of his wife, Doña Placida. All descriptions agree here. Doña Placida is a squat, cross-eyed woman with a masterful voice and a temper. As a result, all the cross-eyed women in Batangas spend much time in prison, but hitherto Doña Placida has escaped.

There are many stories told of Don Miguel's visits to town, and they are not the legends which grow up around every successful guerilla chief; there is much documentary evidence to support them. He visits an army post dressed just like any other country tao, with his shirt outside his homespun trousers, riding a carabao with his favorite gamecock under his arm. He comes to town in amigo clothes to attend to his own affairs, to hear mass, or to barter with our soldiers for plug tobacco, or to remind the patriots within our lines to pay their assessments to the insurgent treasury. In this guise he has entered Calamba on market-day; Lipa, too, when all were celebrating our Lady of the Rosary. He has passed in and out among thousands of people, each and every one of whom knew and worshiped him. The secret known to hundreds was kept, and among the thousands who could have betrayed him not one was tempted to do so by the reward we offer, though that is large—far beyond the Filipino dream of avarice. I do not wish to exaggerate, but I think it well to appreciate the caliber of our antagonists.

The Day and the Deed

CONSCIENCE

(By CARDINAL NEWMAN. Born February 21, 1801)

Whether a man be born in pagan darkness, or in some corruption of revealed religion; whether he be the slave of some superstition, or is in possession of some portions of Scripture, in any case, he has within his breast a certain commanding dictate, not a mere sentiment, not a mere opinion, or impression, or view of things, but a law, an authoritative voice, bidding him to do certain things and avoid others. It is more than a man's self. The man himself has not power over it, or only with extreme difficulty; he did not make it, he can not destroy it. He may silence it in particular cases or directions; he may distort its enunciations; but he can not—or it is quite the exception if he can—he can not emancipate himself from it. He can disobey it, he may refuse to use it; but it remains. To those who use what they have, more is given. At the same time, the more a person tries to obey his conscience, the more he gets alarmed at himself for obeying it so imperfectly. His sense of duty will become more keen, and his perception of transgression more delicate; and he will understand more and more how many things he has to be forgiven. And the voice of conscience has nothing gentle, nothing of mercy in its tone. It is severe, and even stern.

Various Topics

TO RAISE THE LEVEL OF THE SEA: Russian engineers are going to raise the level of the Sea of Azof fourteen feet and eight inches by building a dam nine miles long at Kertch. There will be great seagates for the passage of ships. The cost is estimated at \$25,000,000.

GROWING POPULATION OF ALGIERS: In Algeria the native population has almost doubled in less than fifty years, rising from 2,307,000 in 1856 to 4,071,000. The European population is less than 600,000, a little over half of which is of French extraction.

SOCIAL REFORMS IN CHINA: The empress-dowager has issued an edict which removes all distinctions between Manchus and Chinese, authorizes the intermarriage of these people, forbids the foot-binding of Chinese children and orders all officials to see that these instructions are carried out.

THE TRAFFIC ON FIFTH AVENUE was recently recorded and reported to the *Sun* as follows: "In the five hours of the watch 2,668 private carriages passed, 1,231 hansom, 634 four-wheel cabs, 320 automobiles, 314 delivery wagons, 249 stages, 209 trucks and 151 express wagons." The total number of passing vehicles was 5,776.

THE NEWS OF THE WORLD

MONDAY, FEBRUARY 10

DOMESTIC.—The City savings bank of Detroit closed its doors and Frank C. Andrews, its vice-president and commissioner of police of Detroit, was arrested; it is charged that Andrews wrecked the bank by taking out a third of the \$3,000,000 in deposits by means of overdrafts and certified checks.... The great shops in Springfield, Ohio, owned by Senator Fairbanks, and which housed a dozen large industries, were destroyed by fire, the loss being more than \$1,000,000.... By a decision of the United States circuit court of appeals, the right of courts martial, composed of regular army officers, to try volunteer officers is denied; the decision, it is believed will result in the release of about two hundred military prisoners now under sentence.

FOREIGN.—Lord Kitchener's weekly report shows heavier losses on both sides in South Africa than for several months; the Boer losses for the week were 69 killed, 17 wounded, 57 surrendered, and 574 captured, while in two engagements two British officers and eighteen men were killed.... A Chinese mob burned the buildings of the German missionary station at Fuyen, near Hong Kong.... The lord chief justice of England denied the application for a mandamus sought by certain anti-Ritualists against the confirmation of Canon Gore as bishop of Worcester.... At a Spanish cabinet council the minister of foreign affairs was authorized to sign a treaty of friendship with the United States.

TUESDAY, FEBRUARY 11

DOMESTIC.—The United States senate passed a joint resolution submitting a constitutional amendment changing the time of presidential inaugurations and the termination and commencement of congresses from the 4th of March to the last Thursday of April.... Commissioner of Indian Affairs Jones gave notice that the new leases of the 480,000 acres of Kiowa Indian lands in Oklahoma, bordering on Texas, will take effect April 1.... The annual convention of the National American Woman Suffrage association began in Washington with a meeting of the executive committee.... The president has been asked to send to the coronation a naval officer higher in rank than Rear-Admiral Crowinshield.

FOREIGN.—A practical alliance between Great Britain and Japan in order to preserve the integrity of China and Korea has been formed.... Lord Cranborne, in the house of commons, forcibly denied that Great Britain in any way attempted to hamper America in the war with Spain.... Socialists who demanded universal suffrage created a riot in Brussels.

WEDNESDAY, FEBRUARY 12

DOMESTIC.—A memorial from the Federal party in the Philippines, asking that the islands be admitted to the union as a territory, with the privilege of statehood, was sent to congress by Secretary Root.... Emperor William's yacht, the *Hohenzollern*, arrived at New York several days before she was expected.... Minister Conger obtained official assurances from China safeguarding the rights of the American Canton-Hankow railroad syndicate, which were threatened by concessions to Belgians.... The Marconi Wireless Telegraph company insured the life of Mr. Marconi for \$750,000.

FOREIGN.—Lord Dufferin, former governor-general of Canada, died at his home, in Ireland.... Sir Edward Chester, who commanded the British fleet at Manila in 1898, has been made an admiral.... Three German war vessels arrived at the port of La Guayra, Venezuela, where it is reported that a German ultimatum is about to be delivered to the Venezuelan government.... Joseph Devlin, who is now in America with William Redmond, has been chosen as the Nationalist candidate for parliament from North Kilkenny, Ireland.

THURSDAY, FEBRUARY 13

DOMESTIC.—The number of dead from the clash of a sheriff's posse and a mountain band at Middlesboro, Ky., was placed at nine.... The gift of a large tract of land in the suburbs of Baltimore, as a site for Johns Hopkins university, was announced.... All employees of railroads entering Chicago are to be vaccinated at once, because of the alarming smallpox scourge in the middle west.... The Union Iron works, at San Francisco, notified the navy department that the strike, which has blocked work on naval vessels there for over half a year, has been declared off and work resumed.

FOREIGN.—The freedom of the city of London was presented to Joseph Chamberlain, who outlined British policy in regard to the war and the colonies loyal to the crown.... The Swiss government introduced in parliament the draft of a new customs tariff bill, intended to serve as a basis for future commercial treaty negotiations; the number of dutiable articles is increased from 500 to over 1,100.... The Canadian parliament was opened at Ottawa.

FRIDAY, FEBRUARY 14

DOMESTIC.—An army board has recommended 33 medals of honor and 56 certificates of merit to officers and soldiers who fought in Cuba, the Philippines, and China.... Stockholders of the United States cotton duck corporation, at a meeting in Jersey City, voted to reduce the capital stock from \$50,000,-

000 to \$30,000,000.... A Boston dispatch states that leading steamship companies, including the Atlantic Transport line, have formed an arrangement for dividing transatlantic tonnage.... Fire at South Mills, N. C., destroyed a considerable portion of the town.

FOREIGN.—M. Santos-Dumont, while making a trip at Monaco, fell into the bay, his balloon collapsing; the aeronaut was rescued unhurt by the Prince of Monaco's launch.... In a riot in Trieste troops fired on a mob of strikers, killing six and wounding twenty.... The town of Shamaka, in the Transcaucasus, was completely destroyed by an earthquake.... Terms of imprisonment and heavy fines were imposed upon directors of the Cassel Grain Drying company, an insolvent German concern.

SATURDAY, FEBRUARY 15

DOMESTIC.—Prince Henry sailed with his suite for America from Bremerhaven on the steamer *Kronprinz Wilhelm*.... The state department received cable advices that the ransom money for Miss Stone has been paid to the brigand captors.

FOREIGN.—There was a renewal of the rioting in Trieste, and troops again fired on the mobs, killing three persons and wounding others; the civil law has been suspended in the district.... Three hundred bodies have been recovered from the ruins of Shamaka, the Transcaucasian town which was destroyed by an earthquake, and there are believed to be hundreds more under the wreckage.... The British army estimates show a decrease of 30,000 soldiers on the payrolls in South Africa, and a decrease of £23,230,000 in the expenses for war service.

SUNDAY, FEBRUARY 16

DOMESTIC.—General J. Franklin Bell has made a clean sweep of insurgents in the Luzon provinces of Batangas and Laguna; the army transport *Wright*, which was raised after being sunk off the harbor of San Jacinto, arrived at Cavité in tow.... The Count de Lucenay was convicted in El Paso, Tex., of forgery, and sentenced to four years in prison.... In a head-on collision between a "light" engine and a passenger train near Marshalltown, Iowa, the engineers and firemen of both trains were killed.

FOREIGN.—In a fight south of Johannesburg in which the British were taken by surprise they lost two officers and ten men killed and several officers and forty men wounded.... The Hindoo twin Dordica, who was separated from Radica by an operation on February 9, died in Paris in convulsions due to tuberculosis.... M. Rouyer, a survivor, writes to a Paris newspaper the details of the massacre on January 1 of a French scientific mission by cannibals of New Guinea.

The Books of The Week

NEWMAN. An Appreciation in Two Lectures. By Alexander Whyte, D.D. Cloth, pp. 252. New York: Longmans, Green & Co.

DR. WHYTE has encompassed much of Cardinal Newman's life and work in the two lectures here presented. He has shown, among other things, how much Newman's special genius, his peculiar temperament, and his providential environment, all had to do with the formation and alteration of his opinions; with the career he ran in the Church of England and in the city of Rome. The volume also contains selections from Newman's writings and six of his letters hitherto unpublished. In one of these he makes the following statement concerning the doctrine of transubstantiation: "Not the most ignorant or stupid Catholic thinks that he eats physically the body of our Lord. What we all believe is that we partake the body and blood that hung upon the cross, and that, in the words of the Anglican service, 'our sinful bodies may be made clean by His body, and our souls washed through His most precious blood'; but, as to how He brings this to pass, is a mystery."

ORGANIZED SELF-HELP. By Herbert N. Casson. Cloth, pp. 211, 75 cents. New York: Peter Eckler.

MR. CASSON has attempted to set forth the apologetics of trade unions, and in the main he has done his work well. One is inclined to question, however, whether at this time there is such pronounced antipathy to organized labor as he fancies. The frank expressions of approval that we have heard of late from such men as Senator Hanna would seem to indicate that the trade union is now recognized as a natural and indispensable part of the social body. With one part of his discussion some economists would be sure to quarrel, viz.: the theory of wages. Mr. Casson holds that wages do not depend upon the productiveness of labor, but upon the pressure which the laborer can bring to bear upon the employer. This is to make wages the result of an inevitable and endless conflict and to make the interests of the workman and the employer diametrically and eternally opposed.

THE PERVERTS. By William Lee Howard. Cloth, pp. 388. New York: G. W. Dillingham Co.

THIS is what Dr. Oliver Wendell Holmes would have called a medicated novel. The family of the Newcombers has become tainted with degeneration. In each one it takes a different turn; developing in one to the highest pitch of non-moral and pitiless intellectuality, and in another descending to pure animalism. A sister plots to kill her brother's child and to ruin his life. Another sister is brought to a sanitarium, in

which the brother is one of the physicians, wrecked and crazed by dissipation. The brother elopes with a married woman, but by a *tour de force* of the author, settles down to a respectable way of living, conquers the dipsomania to which he has been a slave, and becomes a kind husband and father. The author's thesis is the liability of human beings to psychic deformity and the necessity of treatment and study with this in view.

THE CLOISTERING OF URSULA. By Clinton Scollard. Cloth, pp. 273, \$1.50. Boston: J. C. Page & Co.

MR. SCOLLARD has chosen for this, his second venture into the realm of romance, the struggles of two rival houses, the Uccelli and the Neri, in the mediaeval Italian town of Lorena. The narrative begins with a wholesale slaughter of the Uccelli at the house of the head of the Neri, where they have been beguiled under pretense of a union of the two houses by a marriage, and ends with the marriage of the last Uccelli and a protégé of the Neri. But in the meanwhile all danger of further complications has been obviated by the killing of all the able-bodied Neri. Dukes, cardinals, archbishops, popes, outlaws, and ordinary assassins add spirit and variety to the tale. There is a fight on every page, a conspiracy in every chapter, and hairbreadth escapes *ad libitum*.

OUTLINES OF BOTANY for the High School Laboratory and Classroom. By Robert Greenleaf Leavitt, A.M. Cloth, pp. 272, \$1. New York: American Book Co.

THIS outline, based on Gray's Lessons in Botany, was prepared by Professor Leavitt at the request of the botanical department of Harvard. It contains laboratory exercises in the morphology and physiology of phanerogams, directions for study of the cryptogams representing the chief groups, and a comparatively full treatment of the relationships of plants supplementing the laboratory work.

SUCH STUFF AS DREAMS. By Charles E. Russell. Cloth, pp. 149. Indianapolis: Bowen-Merrill Co.

THERE is an academic accuracy and precision in Mr. Russell's verse, and dignity and serenity, rather than any great depth of feeling, mark most of his work. The following lines from "The Sixty-second Birthday of Swinburne" are characteristic:

Singer, whose song's high flight
Wings steadfast on, serene, from star to star,
Melodious, molten, fledged with golden light
As from a mountain summit glitters bright
When noontide's stern unclouded glories are,
Has thy great soul a new more resonant sound,
Fit for this season, found,
That gave us thee while April bound
With passion flowers thy head
And music's purest effluence round thee shed?

THE SECOND GENERATION. By James Weber Linn. Cloth, pp., 305, \$1.50. New York: Macmillan Co.

THIS is a story of considerable strength. It has a good plot, a few dramatic situations, and a romantic motive, though the setting of each incident is wrought out with painstaking realism. It follows the fortunes of an Indiana lad through

his experiences on a great Chicago newspaper. He has sworn to his dying father to thwart the ambitious designs of the man who murdered him and the story concerns itself largely with his battle against the murderer, who has become a sort of Yerkes magnate in Chicago.

HANDBOOK OF THE TREES OF NEW ENGLAND. By Lorin L. Dame and Henry Brooks. Cloth, pp. 196, \$1.35. Boston: Ginn & Co.

A VERY useful handbook of the trees native to New England. It is of convenient size for field use, its plates, 87 in number, besides text drawings, are exceptionally clear and definite, and these advantages, together with the topical arrangement of the text, admirably fit the book for the use of general botanists, those especially interested in trees, and advanced students.

A GARDEN IN THE SUBURBS. By Mrs. Leslie Williams. Cloth, pp. 195, \$1.25. New York: John Lane, The Bodley Head.

THE garden referred to herein is an English garden of which the owner made very good use and now gives the results of her experience for the benefit of others. For the most part this information is given under the head of the months in which it would be most useful—in England. Whether it would be applicable here at the same time of year is questionable.

DELSARTE SYSTEM OF EXPRESSION. By Genevieve Stebbins. Cloth, pp. 507, \$2. New York: Edgar S. Werner Publishing & Supply Co.

THIS is a sixth revised edition of Mrs. Stebbins's book, containing the foundation of the system, Delsarte's Philotechnic address, the Delsarte system arranged in graded lessons for class or individual use, and the theory and practice of the system in pantomime, physical culture, esthetics, and statue posing, illustrated by a large number of pictures of Greek sculpture.

THE GOSPEL OF THE KINGDOM and the Gospel of the Church. By William B. Brown. Cloth, pp. 218, \$1. New York: Thomas Whittaker.

THE kingdom of heaven is a spiritual kingdom to be set up in the hearts of men and of which the central virtue and truth is love. For this kingdom has been substituted gradually the rule of the church which is not coincident with the kingdom. This is the author's starting point in his effort to show the content and extent of religion.

GESCHICHTEN VON DEUTSCHEN STADTEN. By Menco Stern. Cloth, pp. 420, \$1.25. New York: American Book Co.

A DESCRIPTION of eighty-six of the cities of the German empire. Aside from its historical merit, the book is a valuable exercise for English students of the German.

MINISTER'S MANUAL AND POCKET RITUAL. By C. E. Mandeville. Leather, pp. 146, 60 cents net. Cincinnati: Jennings & Pye.

MOSQUITO BRIGADES AND HOW TO ORGANIZE THEM. By Roland Ross, F. R. C. S. Cloth, pp. 100, \$1. New York: Longmans, Green, & Co.

THE author has had much practical experience in dealing with the extermination of mosquitoes and he here gives detailed information as to the proper methods to be pursued by infested communities to relieve themselves from the pests.

GRADED PHYSICAL EXERCISE. By Bertha Louise Colburn. Cloth, pp. 389, \$1. New York: Edgar S. Werner Publishing & Supply Co.

A SYSTEM of physical exercises suited to the school room and arranged to cover the first eight years of school life. The book also contains suggestions for games and plays suitable for use in periods of relaxation during school hours.

CONSTRUCTIVE STUDIES IN THE PRIESTLY ELEMENT IN THE OLD TESTAMENT. By William R. Harper. Cloth, pp. 162, \$1. Chicago: University Press.

A COMPREHENSIVE study of everything pertaining to the work of the priest in Old Testament times, as distinguished from that of the prophet and the sage. Special attention is given to the great institutions of Israel's religion, such as sacrifice, feasts, prayer.

DAS SPIELMANN'S KIND AND DER STUMME RATSHER. Von Heinrich Riehl. Edited by George M. Priest. Cloth, pp. 134, 35 cents. New York: American Book Co.

THE latest addition to the series of modern German readers, containing two folk-lore stories of the middle ages.

MY ISLAND. By Eilian Hughes. Illustrated by Lady Henry M. Stanley. Cloth, pp. 208, \$1.25. New York: E. P. Dutton & Co.

SOME chapters from the life of a little village off the Welsh coast. Particular skill is shown in the study of the whims and fancies of childhood and in the description of the religious superstition and mysticism of the Welsh character.

UNCLE BOSTON'S SPICY BREEZES. By Boston W. Smith. Cloth, pp. 255, \$1. Philadelphia: American Baptist Publication Society.

A BOOK of sketches founded upon the author's five years' experience as Sunday-school missionary for the American Baptist Publication society.

THE CHILDREN'S COVENANT. By C. V. Anthony, D.D. Cloth, pp. 240, \$1. New York: Eaton & Mains.

A WORK designed to assist parents, Sunday-school teachers, and pastors in the religious training of children.

KINSHIP OF GOD AND MAN. By Rev. J. J. Lanier. Cloth, pp. 269, \$1. New York: Thomas Whittaker.

A SERIES of sermons on the relation of the divine and the human.

ISOLATION IN THE SCHOOL. By Ella Flagg Young. Paper, pp. 111, 50 cents net. Chicago: The University of Chicago Press.

THE NEW NATURE LIBRARY

With Remarkable Color Photographs

And COUNTRY LIFE IN AMERICA

On the Little Payment Plan

NEVER before have nature books with colored plates been offered at a reasonable price. The seven books in The New Nature Library contain a total of TWO HUNDRED AND THIRTY-TWO Perfect Color Reproductions of photographs of the actual flower, butterfly, etc., besides nearly two hundred other full-page plates, all from photographs.

All these books and the current issue of COUNTRY LIFE IN AMERICA will be delivered to you on payment of

ONE DOLLAR

For
further
description,
see
Public
Opinion
for
Feb. 13.

The text of each book is accurate in every detail, but is not technical, and is so arranged that immediate reference may be made to any specimen without even a knowledge of its name. Each book is devoted to a separate subject, as follows: Bird Neighbors (Common Birds), Game Birds, Bird Homes, Nature's Garden (Wild Flowers), The Mushroom Book, The Insect Book, and The Butterfly Book.

When you send us the coupon included in this advertisement and

ONE DOLLAR

we at once send to your address, by Prepaid Express, the seven volumes of The New Nature Library and the current issue of COUNTRY LIFE IN AMERICA. You can examine the books at your leisure and pay

ONE DOLLAR

each month thereafter for seventeen months. If you do not like the books when you see them, send them back by express at our expense and we will refund this first dollar.

Marcus D. Farr, S. C. D., Department of Vertebrate Paleontology, Princeton University, says:

"I consider this the best investment in books that I have ever made, as the purchase price represents but a small part of the actual value of the set."

TO SAVE NINETY CENTS

Send \$17.10 with the order. This will be accepted as payment in full for the seven books and year's subscription.

USE THIS COUPON

Enclosed please find \$1.00, for which send The New Nature Library and COUNTRY LIFE IN AMERICA, for one year, to the following address. I agree to remit \$1.00 per month until I have paid \$18.00 in all.

Business and Finance

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, Feb. 15

Business continues to progress satisfactorily, notwithstanding heavy losses through the elements. The new year has been unusually handicapped in this way, floods and snow blockades being closely followed by fires and explosions, destroying much property and retarding traffic. The labor situation has distinctly improved during the past week. Disputes at woolen mills were adjusted except as to the weavers, threatened disturbance in coal mines averted, while some railway employees received voluntary advances in wages. A slight decrease of 3.5 per cent in railway earnings for the first week of February, as compared with the same week last year, was not surprising in view of the many severe storms and the diminished movement of grain.

IRON AND STEEL

In the iron and steel industry it is now being demonstrated that there is such a thing as too much prosperity. During the last few years there has been such a marvelous expansion in domestic business that the capacity of furnaces and mills as well as transporting facilities have failed to keep pace. The result is a gradual falling behind with deliveries, and a tendency of buyers to send orders abroad whenever needs are urgent. One case is now in evidence of steel rails to be delivered at a Florida port, which, after paying the duty, will cost about \$5 a ton more than the regular domestic price. Yet home producers are fully sold up to about September 1.

TEXTILE GOODS

In the textile industries there is notable strength and activity in silk goods, despite a slight shading of raw silk. Liberal jobbing distribution of dry goods has brought a gradually expanding demand, except on southern orders which are below expectations. Stocks of cottons, light weight woolen goods and worsted fabrics are short, and deliveries are often later than the specified date. Print cloths advanced, but quotations are generally steady, with the tendency against buyers, and many lines of woollens have already been withdrawn.

CORN AND WHEAT

Interruption to movement by deep snow and the holiday was not sufficient explanation of the decrease of western receipts of wheat to 2,294,932 bushels, against 2,940,368 last year, or of corn to 1,351,600 bushels, compared with 4,402,539 a year ago. If present high figures are not attractive enough to bring out a more liberal movement there is evidence of light supplies and prospect of continued strength. On the

Financial

THE MONEY MARKET

Bradstreet's, New York, Feb. 15

In spite of the unfavorable character of last week's bank statement money in the New York loan market has continued to be in abundant supply and rates remained easy. The extremes for call money were 2¼@2¾, and most of the business of this character was done at 2½ per cent. Time money was in moderate demand, and has been offered with considerable freedom at 4 per cent for thirty to ninety days and 4@4½ per cent for longer arrangements. Mercantile paper is in moderate supply, and there is a fairly good buying demand rates being based on 4@4½ per cent for prime double names.

THE STOCK MARKET

Hesitation in the stock market has been caused by the threatened enforcement of the recent rulings of the internal revenue department regarding the war tax in connection with securities deposited as collateral for loans. Wall street interests believe that the ruling will not be sustained, but the news has caused liquidation, especially in low-priced stocks. Previous to this news the stock market showed a broadening tendency and advancing prices under the lead of Southern Pacific, Union Pacific, and Reading. United States Steel securities respond more or less to favorable accounts of the steel trade conditions. Amalgamated Copper was heavy throughout on reports of a further dividend reduction, and traction securities were unfavorably affected by the news of a \$150,000,000 blanket mortgage on the Brooklyn Rapid Transit system. Foreign exchange is firm at 4.87½ for demand sterling.

BANK CLEARINGS

Clearings for the week (five days) ending Thursday, February 13, aggregate \$1,929,207,307, a decrease of 12.9 per cent from last week.

Good Advice

A writer in the *Chaperone Magazine* on Flannels, Blankets and Laces insists on little wringing for woollens and no rubbing for laces. Every intelligent woman has a method of her own but all agree on those two points—hard points using ordinary bar soap—harder still with penny—cheap Washing powders.

Have used Pearline a number of years, and like it very much for all kinds of flannel garments. They are soft and nice after washing. Mrs. Rev. C.T.

Am never without Pearline. Use it with the most delicate fabrics and with coarse things. Find it satisfactory in all things. Mrs. Rev. G.E.L.

Pearline — Safest and Easiest

for Coarsest and Finest Fabrics.

ELECTRO LIGHT ENGINE

"He had small skill o' horse flesh who bought a goose to ride on." Don't take ordinary soaps for house cleaning.

THE PROPER THING

is **SAPOLIO**

—Try a cake of it, and be convinced.—

\$1.00 PER SECTION

(without doors) and upwards, buys the

"Macey" SECTIONAL BOOKCASE

the only kind having absolutely "Non-binding, Self-disappearing doors." (Patented.)

ON APPROVAL—There is never any risk in buying genuine "Macey" goods—we ship every article "On Approval" subject to return at our expense if not found at our factory price 40 to 100 per cent greater value than is obtainable anywhere at retail. We prepay freight to all points east of the Mississippi and north of Tennessee and North Carolina. (Freight equalized to points beyond.) Ask for catalogue No. EE.1.

GOLD MEDAL—HIGHEST AWARD

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal—the highest award at the Pan American Exposition.

CAUTION.—Do not be misled by the deceiving advertisements of imitators. No other sectional bookcase has a self-receding door that is absolutely non-binding and automatic—the basic patents completely covering these features are owned by this company exclusively and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Circuit Court rendered a sweeping decision in our favor.

The Best Shakespeare

at Half-Price for a Limited Time

 This edition of Shakespeare will interest you. It is edited and arranged on new and original lines to meet the requirements of modern scholarship. In the preparation of the notes and explanatory matter, a trained editorial corps worked for nearly two years. This indicates the thoroughness with which the work was done. Not only does it excel in *accuracy, clearness and convenience of arrangement*, but in regard to price, it costs less than half what any other first-class edition costs. The coupon in this advertisement will bring you a set for examination, and one dollar a month will keep it.

W.D. 23 July 18

The New International Edition

This edition of Shakespeare stands based on three centuries of searching criticism. It indicates the high-water mark of Shakespearean scholarship. It contains the famous Cambridge text, which has been for forty years the standard text of Shakespeare. To this text have been added **Prefaces**, copious **Critical Comments** taken from the works of great Shakespearean scholars; full **Glossaries** defining every difficult word; **Explanatory and Critical Notes**, which make clear every obscure passage. There are over **200 illustrations**, many of them being full-page **chromatic plates** in colors and **photogravures** on Japan vellum. Included with the set is a complete **Life of Shakespeare** by Dr. Israel Gollancz, with critical estimates of Shakespeare's genius by

Walter Bagehot, Leslie Stephen and Thomas Spencer Baynes. Shakespeare's Works are given complete, including the **Sonnets and Poems**. The sets are in **thirteen handsome volumes**, containing 7000 pages, bound in cloth or half-leather, stamped in gold. The volumes are 8 x 5½ inches in size. The printing is in clear type on a fine quality of white paper. A set is a complete **Shakespearean library**.

Complete Sets Sent On Approval

The first edition—which was sold at half-price for introductory purposes—was closed out last month, but orders continued to come in by every mail. We felt that we could not disappoint those who sent their orders in good faith expecting to secure a set at the introductory prices, so we have ordered a new edition, which will be sold at half-price, and on the easy payment plan—**\$1.00 a month**. The new edition is in every way a splendid specimen of modern bookmaking. The special prices are **\$22.00 for a set in half leather**, and **\$18.00 for a set in cloth**—about one-half the regular subscription prices. You may pay in little payments of \$1.00 a month. The Coupon will bring you a set for examination (**express prepaid by us**), and if not satisfactory it may be returned at our expense, without costing you a cent.

FREE We will send **free with each set** of this edition a complete Topical Index to Shakespeare's plays (forming one volume) and a Plan of Study for each play containing study questions. The Index Volume is in every way equal to a Concordance, and no Concordance can be purchased for less than \$6.00. The Method of Study is invaluable to students. No other edition contains a complete method of study for each play.

Beautiful Specimen Pages Sent on Request.

PUBLIC OPINION

Number 9
Volume XXXII

The Week

Thursday
February 27, 1902

PRESIDENT ROOSEVELT surprised two classes of people when he suddenly instructed the attorney-general to begin proceedings against the Northern Securities under the anti-trust law—he surprised those who have been fond of asserting that the administration was subservient to the trusts and those who have been resting in fancied security from interference. The merger of interests effected by the formation of this company certainly appears to be a combination destructive of competition, and it ill-becomes the interests directly and indirectly involved to criticize the president for unsettling the stock market and injuriously affecting "great financial interests." If uncertainty, or even panic, must follow attacks upon illegal corporations, those who are engaged in forming them should have taken this possibility into consideration before they went into the trust business.

WHEN the decision in the trans-Missouri case was rendered four years ago, stocks went down, the railroads announced their ruin, and then went to work to circumvent the law in some other way. The "community of interest" dodge was then invented, and more recently the plan by which, as in the case of the Northern Pacific and Great Northern, the stock of competing lines is pooled in the hands of a securities company. Ruin did not follow upon the trans-Missouri decision, nor will it follow upon the contemplated proceedings against the Northern Securities company. On the contrary, the investing public will benefit by a judicial determination of the status of such concerns, and in this benefit the "great financial interests" will share. Furthermore, the reproach that the laws against trusts, real and so-called, are not enforced is one that no self-respecting administration could quietly rest under.

"SAMPSON was hardly more than technically in the fight." This is about all the comfort the partisans of Schley can extract from President Roosevelt's memorandum on the appeal from the decision of the court of inquiry. Furthermore, the battle of Santiago "was a captain's fight"—neither Sampson nor Schley had a great deal to do with it, and so neither should claim any great amount of credit for the result. This is the substance of the president's decision, and if anything can close the controversy with which it deals, Mr. Roosevelt has hit upon that thing—the taking away of the credit for the victory from both contestants for it and distributing it among the captains. All that is left to Sampson and Schley to do now is to join forces in attempt to regain their disputed honors from their subordinates.

IT is a familiar saying that misery loves company. It is also true that the people of one country can console themselves for their own shortcomings by contemplating the faults of other peoples. Thus we have been consoled, as we think upon Representative Wheeler, of Kentucky, by the reflection that the United States is not the only country in whose legislature wild men roam at will. Canada at least has one such misrepresentative—a certain Gourlay, of Nova Scotia, who last week declared his readiness to invade the United States within twenty-four hours, capture Washington within six months, and annex the States to the Dominion! England has her Dillon and her Bowles, France her Deroulede and her Rochefort, Germany her Socialist fire-eaters, and Canada her Gourlay. How, then, can any one of them point the finger of scorn at us for our Wheeler? But no country has yet matched our senators from South Carolina, and it is to be hoped that they will have few competitors in this country.

PRINCE HENRY reached New York last Sunday, twenty-four hours late. But it was, after all, a fortunate delay, as the weather of Saturday was distinctly unfavorable to gold braid and bunting. Promptly on his setting foot on American soil, the prince was launched upon the career of receptions, dinners, speeches, and journeyings—not to mention interviews—that have been prepared for him. At one o'clock Monday morning he was off for Washington; Tuesday, the emperor's yacht was launched at Shooter's Island; Tuesday night, a special performance of the opera and press club dinner in New York. It is rumored that an allowance has been made for four hours sleep per diem.

SECRETARY HAY'S note of February 1 to the governments of China and Russia, expressing the "gravest concern" with which the United States views any agreement conferring special privileges in Manchuria, is one of the most direct and plain-spoken documents in the literature of diplomacy. It makes it as clear as words can express that this country will vigorously oppose the control of any port of China by a foreign power, thus ranging the United States beside England and Japan in their recently declared intention to join in resisting encroachments upon the independence or integrity of China. The note is really more to the purpose than the Anglo-Japanese treaty, because the former is addressed directly to the parties concerned, and whereas they might have to be reminded of the existence of the treaty, the note is already before them and is unmistakable in its meaning and serious intent.

READERS of PUBLIC OPINION must have been prepared for last week's dispatches recounting the disturbed condition of Spain, for within a month we have printed translations from leading Spanish papers plainly forecasting the troubles which have suddenly come to a head in riot and bloodshed. So far, however, the disorders have not assumed the proportions of a general uprising of all discontented elements against the government. Scattering outbreaks against local authority can be readily suppressed so long as the government, as at present, has the army and the church at its back. The fact that Catalonia is the center of the recent disorder is to be explained by the fact that the Catalonian is inherently violent, and by the fact that the burden of taxation is arranged to fall most heavily upon industrial centers, of which Barcelona is the chief.

AFTER much backing and filling, Lord Rosebery has finally read himself out of the Liberal party, or that section of it led by Sir H. Campbell-Bannerman. What will happen next is a matter of speculation. There is no apparent reason why Liberals or Liberal Unionists should flock to the Rosebery standard, as this Hamlet among statesmen offers no adequate alternative either to the Conservative or regular Liberal program. Nevertheless such influential Liberals as Herbert Asquith, Sir Edward Grey, Sir Henry Fowler, and Richard Haldane have deserted to the Rosebery camp, and between them they may be able to effect a reorganization of Liberalism which would merit the adherence of all who oppose the policies of the present government. But, as has already been pointed out, Lord Rosebery's "clean slate" is without rallying powers.

MISS STONE is at last free from the brigands. ^{it} ^{is} and that only, do we learn from the dispatches ^{is} ^{is} according to the cable reports, she was heard from ^{is} ^{is} to Salonika. When she falls into the clutches of ^{is} ^{is} ify, that's interviewers who await her at Salonika, it ^{is} ^{is} and Plain Dealer that she will long for the peace of brigandage.

AMERICAN

Democracy and Flunkeyism

A DISCUSSION INSPIRED BY REPRESENTATIVE WHEELER'S SPEECH

CONGRESSMAN CHAS. K. WHEELER'S outbreak in the house against the official reception of Prince Henry and the sending of an embassy to the coronation of King Edward, has brought forth a wide discussion of the difference between courtesy and flunkeyism; and of Mr. Wheeler himself. Mr. Wheeler began by denouncing our foreign policy, declaring that we had been made the laughing stock at every court in Europe, and that from the very foundation of this government England had been trying to undermine us and cause our ruin. While it might be well, in the opinion of Mr. Wheeler, to treat the representatives of foreign powers with courtesy and consideration, still he would no longer treat Secretary Hay in that way. Mr. Wheeler then jumped from King Edward and John Hay to Prince Henry. "In the next few days," said the Kentuckian, indignantly, "we are to have a brother of a ruler come over to this country and take charge of a little tug, ship, vessel, or yacht, whatever you please to term it, built by some people in New York. We are appropriating thousands of dollars and people are falling over each other to get to see a little Dutchman come over and take charge of a little boat. I object to the republic of the United States undertaking to play the flunkey at the feet of a little German prince; and I object to the United States sending emissaries abroad to whistle their fingers and dance attendance at the ante-chamber of some Britisher because he is going to wear the crown."

The *Boston Advertiser* (Rep.) does not agree with Mr. Wheeler, thinking that the American people "will be honoring themselves more than their guest. They will not be, in any way or measure, conceding that old world institutions are better than those of the new world, but on the contrary, they will be demonstrating to mankind that all which is best in old world manners is here combined with all which is best in new world liberties." The *Washington Post* (Ind.) has but one criticism of the speech to offer, namely, "that Mr. Wheeler failed to distinguish between the obligations of hospitality and the instincts of sycophancy. If Mr. Wheeler had stopped short with his denunciation of the special embassy and the announcement of his reasons for that denunciation, he would have had with him the sympathy of a large majority of his hearers and of the country in general. The American people have had their patriotic pride and their sense of national dignity sorely wounded within the past few years. A slow fire of resentment is burning in many millions of loyal hearts on that account, and Mr. Wheeler might easily have fanned that fire into flame. He made the mistake, however, of leaving a sure ground. We think very much as he does of the proposed special embassy, especially in view of the revelations of the past few weeks; but the impulses and the duties of hospitality are sacred."

"Once more," says the *Chicago Journal* (Ind.), "retence more has the Pogram defiance been hurled in face of the effete and degenerate despots of Europe. Again have the aristocratic circles of the old world made to quail at the shriek of the American freedom. We know now there is at least

one member of congress who remains true to the traditions of the past and is ever ready to stand as a bulwark against the encroachments of a cankered aristocracy." The *Pittsburg Post* (Dem.) takes the matter more seriously: "The Kentucky congressman who made a speech against American flunkeyism to royalty and monarchical and imperial institutions of government may have been a little wild in some of his flights of oratory, yet there is no question that on the general subject the mass of the American people are in accord. We run to extremes both as regards the coronation and the exceptional honors to our German guest," the *Post* thinks, while the *Detroit Journal* (Ind.) has this explanation for Mr. Wheeler's attack: "Mr. Wheeler, it will be remembered, comes from the state where the close season for governors is shorter than for rabbits and citizens not in official position. This fact may have distorted his judicial perspective somewhat; but it is nevertheless clear that his brand of democracy is in danger of being seduced from the paths of virtue by recognition of the fact that kings and princes, as parts of the great human procession, may, without contamination, be treated at least as courteously as one treats the drum-major of the town band."

"If democracy," says the *St. Louis Republic* (Dem.), "indeed, is so feebly implanted in American bosoms that the courteous treatment of such a man as Henry of Prussia threatens to seriously impair our national character, then we are truly in a bad way. If American democracy is of such a nature that courtesy and good breeding are impossible to it, then democracy itself is in a bad way. Congressman Wheeler of Kentucky has simply seen fit to make an ass of himself and to misrepresent his state in an unexpectedly humiliating manner." The *Globe-Democrat* (Rep.), of the same city, characterizes Mr. Wheeler's remarks as "a disgraceful outbreak," an opinion in which many other papers concur without attaching much importance to the incident.

"Wheeler's speech had to be made," the *Memphis Commercial Appeal* believes. "There must be a fool in every play, an ass in every function. Wheeler has done double duty. Southern people will not approve a line of his speech. They are the Democrats and aristocrats of the country. No matter whether a sand digger or a planter, lord of land beyond the reach of his vision, the southerner's highest regard is for the law of hospitality. We are in the family of nations friendly with all, having special alliances with none, and if they want to visit us, let 'em come on, and if they have a celebration and we want to see the show, our democracy is not injured by the trip. Democracy does not preclude good breeding, and in a republic good manners are among the badges of nobility." The *Council Bluffs Nonpareil* is reminded by Mr. Wheeler of a story attributed to Mr. Jacob A. Riis, who tells of an Irish teamster who went to the priest in a fright; he had seen a ghost on the church wall as he passed it in the night. "And what was it like?" asked the priest. "It was like nothing so much as a big ass," said Patrick, wild eyed. "Go home, Pat, and be easy," replied the priest, soothingly; "you've only seen your own shadow."

Flank Attacks on the Merit System

THE civil service reform league has issued a circular opposing the passage of the proposed law extending preference in the civil service to all union veterans of the civil war. The points made in this circular are thus summed up by the *Baltimore Sun* (Dem.): "President Roosevelt said in his message to congress that the civil service system 'is, in its essence, as democratic and American as the common school system itself.' This would not long be the case, however, after the enactment of the veterans' preference act. Instead of each applicant having 'a fair field and no favor, each standing on his merits as he is able to show them by practical test,' the men who served in the United States army during the civil war would have the first lien upon appointment. That would be a great injustice to the young men who have grown up since the war, it would be incalculably injurious to the civil service, and it would impair, if it did not destroy, public confidence in the system. Finally, it would be an unfair discrimination against the southern states, amounting virtually to sectional disqualification. The south has borne without protest its share of the pension disbursement, although deriving practically no benefit from it. The passage of the veterans' preference act would, in effect, close the doors of the civil service to southern men well equipped to hold office under the government." The *Springfield Republican* makes the additional objection that "The scheme, in so far as it is made effective at all, is one to fasten upon the civil service men who have passed the point where their labor can be of any great value. The country could much better afford to pension outright those who need this employment."

The *Philadelphia Ledger* (Rep.) also supports the objections made by the league, and thinks that it has acted none too soon, the action of the senate on the census bill in transferring 2,400 census employees to the eligible list "showing clearly enough that the senate is bent on a civil service debauch." Of the same matter the *Boston Transcript* (Ind. Rep.) says: "It is a flank movement against the merit system in the interest of the *proteges* of senators and representatives. And of course legislators with strong 'pulls' will fare the best. The temper and purpose of the senate is as unmistakable as that of the house. It is not a sudden and sincere appreciation of the value of statistics that has induced the senate to make the salary of the chief of the census bureau \$7,500—within \$500 of the compensation of a cabinet officer."

The Extent of Pacification in the Philippines

TALCOTT WILLIAMS in the *Philadelphia Press*

FOR information as to the area of safety for Americans in the Philippines I was referred by the secretary of war to Colonel Clarence R. Edwards, chief of the insular division of the war department. I asked him to indicate on a map the regions he held today safe for Americans, civilians, called on any errand to the islands. "What I am after," said I, "is to show what parts of the Philippines an American can go about in with a walking stick."

The result is this map. The inhibited districts are of three classes. Two areas in black are in open re-

sistance. On the island of Luzon there are the two provinces of Batangas and Laguna, both in an unsafe condition. These are indicated by black. To these, as is noted below, Judge Taft added the northern part of Tagalas, a space indicated by shading. Samar is the other region in active resistance. Fighting has ceased in both regions. Both are covered with military posts. In either, twenty-five or thirty soldiers can go anywhere. These are the only areas where organized resistance exists.

WAR DEPARTMENT MAP INDICATING AREAS SAFE TO AMERICANS

The second class of territory unsafe to Americans is so because of the semi-savage character of the inhabitants. In the center of northern Luzon is a mountainous area still inhabited by savage Negrito head-hunting tribes. These are to be found in Bontoc, Lepanto, and Neuva Viscaya. They do not cover all these provinces. But they render them unsafe, just as parts of our western territories are unsafe. Mindoro is unsafe in a similar fashion because of its Moro population. American sovereignty is recognized and accepted, as in the Luzon area. These savage tribes and Moros are "friendly," but they are unsafe for a single man with a walking stick, as such tribes are the world over. So in Negros, the mountain ridges in the center are infested with robber bands, "ladrones," which make the interior risky. In Mindanao there is a disturbed district about Laguna de Lanac, part of the region under civil government east of the boundary line and part in the Moro region, if, that's this boundary.

and Plain Dealer

Foreign Trade, Trusts, and Home Prices

Springfield (Mass.) Republican (Ind.)

THE president of the United States steel corporation returns from Europe with renewed expressions of confidence in the ability of the United States to undersell all the world in this line of production. He found wherever he went the greatest curiosity as to the big trust and its methods of business and management, and some feeling of fear regarding an American invasion of the European steel markets, but he told his questioners that the trust had no intention of entering that field, but would undertake to contest for the supremacy in the neutral markets—in the far east and South Africa; and there can be no doubt as to the result, in his opinion. He goes on to say in reported interviews: "I told them also that I thought that because of the improved methods and the vast economies that are possible through the coöperation of so many companies under one general direction, it would be possible for us to get the trade. I said, too, that if we did not get it, it would be the fault of the United States government for not giving us the ships to carry the goods to the countries where they are wanted. We look to congress to make provision for the protection of our shipping. We will look after manufacturing."

This is a word for government ship subsidies—to include, of course, the lines of vessels being bought by the interests allied with the steel trust. But if the steel trust can undersell Europe in its product fashioned by the high-priced labor of the United States, how comes it that the United States government must step in with subsidies to provide the ships to carry the product?

There is another statement credited to Mr. Schwab which merits attention. He says he returns from abroad with far more enthusiastic views as to the possibilities of great combination undertakings—"I come back with my ideas broadened and my enthusiasm unbounded. We are now more than ever ready to demonstrate that the greater the scope of the combination, the greater the possibilities for economy, and consequently the greater the possibilities for the reduction of costs. With these objects in view, we must have our great plants equipped and manned to perfection, and no care or proper expense must be spared to keep those plants modern and at the highest point that ingenuity, skill, and enterprise can reach."

This is contrary to the views of many persons who have looked closely into the question. But Mr. Schwab thinks differently. His opinion on this point will greatly interest Socialists. They can quote it in advocacy of industrial combinations as broad and comprehensive as the nation, embracing pretty much all industry under government management, and all to the end of greater efficiency and economy in production! Why not? This question ought to be referred to Mr. Schwab.

Cleveland (O.) Leader (Rep.)

At last the United States stands at the head of the exporting nations of the world, its products sold abroad in the past calendar year having exceeded in value those of the United Kingdom by \$75,000,000. Mark, no advantage years ago the exports of the United Kingdom valued at about \$1,315,000,000. Last year they were valued at \$1,365,000,000 in round numbers. The exports of the United States in the past few years had been so small as to be hardly

worth considering. On the other hand, the exports of the United States have increased from \$872,000,000 in 1891 to \$1,438,746,083 in 1901, or more than half a billion dollars. Under the circumstances, it is not, perhaps, surprising that the people of the United States should have enjoyed a period of prosperity that has no parallel in the history of the world, and incidentally it may not be out of place to mention the fact that all this has been brought about with a protective tariff law in force in this country, with the gold standard for the national currency, and with a Republican president in the White House. This is worth thinking about.

Boston (Mass.) Post (Dem.)

What about trade here at home? At present, the home trade in the products of the steel trust is made to pay the cost of Mr. Schwab's foreign enterprises. He earns his big salary and his associates get their big dividends, not by selling steel to China and the orient at low prices, but by charging home consumers extortionate prices. Congressman Babcock says the average profit of the steel trust on a ton of steel rails is \$14, and that one of \$8 per ton would enable it to pay five per cent on its investment. This is probably an understatement, because the trust has been selling rails in England at \$11 per ton net less than its American price, presumably at a profit. This is the foundation of President Schwab's enthusiastic predictions. But how long will the American people submit to pay, through the Dingley tariff, \$11 a ton more than they ought to pay, simply for the pleasure of seeing Mr. Schwab conquer the orient and pose as an object of curiosity to foreign ironmasters?

The New Army Bill

SECRETARY ROOT'S LATEST PROPOSALS

THE principal features of the new army bill, recommended to congress by Secretary Root and outlined in our last issue, are the creation of a general staff, headed by the commanding general; the consolidation of the quartermaster's, subsistence, and pay departments, to which is to be added a transportation division, all under one head; and a system of promotion from the ranks, under which strictly military accomplishments would take the place of the examinations now required.

In the opinion of the New York Sun (Rep.), which approves the secretary's recommendations, the bill "is second in importance only to the army act of last year, and forms with that and with Mr. Root's militia bill a series that recreates our army from top to bottom." The New York Press (Rep.) says that "if the bill is passed, the United States will be prepared for its next war—something that never could be said of the United States before. We do not know," the Press continues, "that this legislation can pass, though it seems shrewdly designed to placate opposition in the army itself and its 'friends in congress.' If it does, the head of the service will be for the first time in our history fitted to guide and control whatever body may be supplied to it. In this latter behalf, too, there has been progress. There has been a small but gratifying actual increase in the regular army and a proposed adaptation of the state national guards to federal military purposes. This probably is the most that can be expected in army reform. It is not as much as it might be, but it is so much more than ever was had before, that, looking

back four years to the time when congress, on the eve of war, refused everything but the bare authority to levy raw recruits, we may feel grateful surprise at our advance to the point where we may even hope for the passage of the legislation introduced under the auspices of the secretary of war."

The New York *Evening Post* believes that the proposed legislation would put the officers of the service on a far higher plane of education and efficiency than they have occupied at any time in its history. But the *Post* sees one danger in the creation of a general staff: "Should the general staff not be properly disciplined and prevented from making public its views on national defense and armament, except through the secretary of war, it may easily do as much mischief in demanding large armies and great expenditures as has the navy's board of construction." However, the *Post* thinks that congress should pass the bill at an early date, that Secretary Root may have as much time as possible to personally supervise the radical changes called for.

"What is of interest and importance to the American people in this prospective rearrangement of our fighting material," says the *Philadelphia Record*, (Dem.), "is the apparent effort, through proposed legislation, to divorce the long-standing connection in management between an accidental civilian secretary of war and a

general of the army trained in military methods almost from childhood. Anywhere else the notion that a lawyer or butcher or baker or candlestickmaker would be quite as good a judge of military matters as any man whose life had been devoted to their study would be whistled down the wind; but here it is part of the unwritten law of the republic. If the nation," the *Record* adds, "were required to fight for its existence, it would be well enough to get ready and take our place among the war powers. But however desirable for some reasons the creation of a general staff for the federal army—an official mechanism that shall be practically independent of any casual and accidental secretary of war—is of profound concern to the people who pay the cost of the military establishment."

THE BANK WRECKER: Just think of it. The vice-president of a Detroit savings bank is found to have taken \$662,000 from the savings deposits of the bank, in certified checks, and \$914,000, in overdrafts—about one half of all the money deposited in the bank. The cashier, of course, knew he was doing this, and permitted it. The president and the directors let the two men run the bank. The vice-president who betrayed his trust and has brought ruin and suffering to the hundreds of people whose savings go to make up the deposits of such institutions, is released on \$10,000 bail! —*Detroit Free Press*.

President Roosevelt Decides the Schley Case

IN handing down his decision on Rear-Admiral Schley's appeal from the findings of the court of inquiry, February 19, President Roosevelt declares that the court did "substantial justice," although it should have censured Schley for his "failure to enforce an efficient night blockade at Santiago." But his offenses before the battle, including the "retrograde movement," were "in effect condoned when he was not called to account for them" at the time. In considering who was in command during the battle, he gives it as his opinion that it was a captain's battle. "Technically Sampson commanded the fleet, and Schley, as usual, the western division. The actual fact, the important fact, is that after the battle was joined not a helm was shifted, not a gun was fired, not a pound of steam was put on in the engine-room aboard any ship actively engaged, in obedience to the order of either Sampson or Schley, save on their own two vessels." Sampson's blockade, foresight, and directions made possible the victory, and Schley deserves great praise for the manful fashion in which he handled the *Brooklyn* during the fight. The president considers the famous "loop" to have been a mistake, due, however, to apprehension rather than cowardice. Had the *Brooklyn* continued on her course, it would have placed her in greater danger, but it would also have increased greatly the danger to the Spanish ships and "this kind of danger must not be too nicely weighed by those whose trade it is to dare greatly for the honor of the flag." The president concludes that neither Sampson nor Schley were entitled to unusual reward, and calls attention to the services of Clark, of the *Oregon*, and Wainwright, of the *Gloucester*.

The president's hope that this decision will put an end to the controversy is shared by all the editorial commentators, although a few agree with the *Washington Post* (Ind.) that "nothing is really changed. The controversy and its alignments remain intact. Admiral Dewey still thinks that Schley was, from a fighting point of view, in command of the fleet July 3, 1898. Mr. Roosevelt is under a contrary impression." The *Philadelphia Press* (Rep.) calls the opinion "strong, impartial, and just. It is conceived in a true judicial spirit, but presented with the vigor and vividness of the popular historian," while the *Pittsburg Post* (Dem.) thinks that it will not "materially affect the judgment of the American people that Schley has been unfairly treated, and that as Admiral Dewey declares, he was entitled to the honor and credit of commanding the fleet and winning the battle, if any one man has the right to such a distinction."

"In his anxiety to close the controversy over the battle of Santiago, without offense to the secretary of the navy, on the one hand, who is an extreme partisan of Sampson, and manifest injustice to Schley on the other," says the *Brooklyn Citizen* (Dem.), "President Roosevelt has written an opinion which will be a source of wonder to foreign navies, a fund of amusement to our own, and in the eyes of every person capable of consistent reasoning as signal a triumph over the rulers of logic as has ever been won by a hard-pressed politician. In all the other navies of the world, the rule is that, when the chief for any reason withdraws, authority is transferred to the next in rank, and it will puzzle them very much to conceive how a

people so markedly distinguished for common sense were ever brought to consent to an arrangement not only different, but so certain to result in disaster if any grave emergency had to be confronted."

The mooted point in the decision is the declaration that the "loop" of the *Brooklyn* during the action was a mistake. Two New York papers, the *Evening Post* (Ind.) and the *Times* (Ind. Dem.), take issue with the president. The former thinks that "It was simply a question of making the fastest ship tell most powerfully in the long issues of a dubious fight. The president apparently thinks that Schley should have imitated Wainwright, who 'drove his fragile craft against the foe.' But the cases were very different. The *Gloucester* might have been sunk without endangering the outcome; if the *Brooklyn* had been rashly put out of the fight, the *Colon* at least might have escaped. There is such a thing as impetuous valor swelling into a fault." The *Times* calls attention to the fact that "the loop did not cause the *Brooklyn* to lose her position. She was throughout the fight the American ship always nearest the enemy. Her guns did more damage to the enemy's ships than those of any other American ship, and after the fight she showed more wounds than all the rest of our fleet put together. But it is strange that the president should have forgotten that it was not Schley's loop, but Captain Cook's. The captain of the *Brooklyn* testified that he had already ordered the helm put hard aport before Schley turned to give him the order."

The United States vs. the Northern Securities Company

IT was announced last week that President Roosevelt had directed Attorney-General Knox to prepare a bill in equity to test the validity of the railroad merger represented in the Northern Securities company. The action was based on the conclusion of the attorney-general that the merger violated the provisions of the Sherman anti-trust act of 1890. This proceeding has no relation to the matter now pending in the supreme court touching the right of the state of Minnesota to bring action against the Northern Securities as a citizen corporation of another state which is alleged to have transgressed the statutes of Minnesota.

The *New York Times* (Ind. Dem.) comments on the fact that "this administration and its predecessors have been reproached with a willingness to let the Sherman anti-trust act of 1890 remain a dead letter. Prosecutions have not been undertaken when they seemed to be called for, and it has been said that when undertaken they have been conducted in a half-hearted manner. It is characteristic of President Roosevelt that he should refuse to remain quiet under this imputation. He not only has a due regard for his own reputation, but his mind and his conscience are attentive to considerations of the interests of the people in whatever way they may be threatened."

According to the *New York World* (Dem.), comment on the president's action is very bitter in trust circles. "But why should such resentment be felt in trustland toward the president? He has simply decided to enforce a law of the United States which declares that—every contract, combination in form of trust or otherwise, or conspiracy in restraint of trade or commerce—is illegal."

Congressional Summary

CONGRESS DAY BY DAY

FEBRUARY 17.—The treaty for the cession of the Danish West Indies to the United States was ratified by the senate in executive session; in open session the permanent census bureau bill and some other measures were passed. The war revenue reduction bill was passed by the house unanimously and without debate.

FEBRUARY 18.—In the senate Mr. Wellington attacked and Mr. Stewart defended the government's policy in the Philippines. Mr. Gillett, of Massachusetts, in the house, replied to the speech made by Mr. Wheeler, of Kentucky, on the visit of Prince Henry, and Mr. Wheeler declared that he had nothing to retract; two Democrats—Mr. Robinson, of Indiana, and Mr. Thayer, of Massachusetts—disavowed sympathy with Mr. Wheeler's utterances.

FEBRUARY 19.—Debate on the Philippine tariff bill continued in the senate, Mr. Burrows speaking for and Mr. Money against the bill; the senate committee on foreign relations authorized a favorable report on the bill reforming the consular service. The Republican members of the ways and means committee

in the house began their conferences on the subject of Cuban reciprocity; Mr. Long, of Kansas, proposed a reciprocity arrangement with Cuba reducing the rate 40 per cent in both countries.

FEBRUARY 20.—The senate spent the day in debate on the Philippine tariff bill. The Indian appropriation bill was under consideration in the house.

FEBRUARY 21.—The senate, for more than six hours, debated the Philippine bill. Several committees reported in the house; the committee on territories unanimously voted to report bills for the admission of the territories of New Mexico, Arizona, and Oklahoma; the committee on military affairs favorably reported Representative Dick's bill for the reorganization of the militia; the committee on commerce ordered a favorable report on the bill designed to remedy the alleged irregularity in London dock charges; the bill prevents the insertion in bills of lading of provisions for these charges.

FEBRUARY 22.—The lie was passed and a fist fight occurred between Senators Tillman and McLaurin, of South Carolina, in which blows were struck on both sides; after the combatants had been separated, the senate went into executive session and voted both men in contempt; they apologized, but remain in contempt of the senate, and can not vote or speak until cleared. The house was not in session.

FOREIGN*The Naval and Military Strength of England, Russia, and Japan*

HE announcement of the alliance between Great Britain and Japan has naturally excited interest in the martial strength of these two powers and of their possible antagonist, Russia. According to the latest published accounts, the British vessels complete and ready for sea in January, 1901, include the following:

First class battleships.....	14
First class battleships (building).....	15
Second class battleships.....	12
Third class battleships.....	11
Armored cruisers.....	6
Protected cruisers.....	125
Torpedo gunboats.....	33
Destroyers.....	96
Torpedo boats, first class.....	11
Torpedo boats, second class.....	71
Torpedo ships.....	2

In January, 1901, there were 174 ships in commission, distributed as follows:

Mediterranean.....	43
Channel squadron.....	14
North America and West Indies.....	15
East Indies.....	10
China.....	30
West Africa.....	16
Pacific.....	8
Australia.....	12
Special service.....	11
Surveying service.....	7
Training squadron.....	4

Japan has:

	Tons
Six first class battleships, with a gross displacement of.....	86,299
Two second class battleships.....	11,112
Ten coast defense ships.....	18,225
Six first class cruisers.....	58,778
Nine second class cruisers.....	38,518

Five third class cruisers.....	14,078
Two first class gunboats.....	3,557
Fourteen second class gunboats.....	8,013
Two third class cruisers.....	6,800

The first-class battleships are all over 12,000 tons displacement.

The Russian fleet consists of six first-class battleships. The *Borodino*, *Alexander III*, and *Oral* have a displacement of 13,400 tons each, and carry four 12-inch, twelve 6-inch quick-firing and twenty 3-inch quick-firing guns each and many smaller guns. The *Tavrichesky* has 12,480 tons displacement, and carries four 12-inch, sixteen 6-inch quick-firing, sixteen 3-inch quick-firing guns and thirty smaller pieces. The *Retvizan*, 12,700 tons displacement, has four 12-inch, twelve 6-inch quick-firing, and twenty 3-inch quick-firing guns, and the *Tsarvitch* will have the same armament, but will be of 1,000 tons more displacement. These first-class battleships, although they are put on the official list of the Russian navy's fleet, are in course of construction, and none had been completed on January 1, 1901. Since that time much progress has been made, several of the ships have been made available, and the *Retvizan*, which is being built at the Cramp yards, will be ready for delivery to the Russian government on March 16. The rest of the Russian fleet is composed as follows:

Second class battleships.....	12
Third class battleships.....	6
Coast defence vessels.....	7
Armored cruisers.....	1
Protected cruisers.....	11
Gunboats.....	30
Old armor clads.....	8

According to published reports, there are in the

British navy eighty-two vessels of more than 8,000 tons displacement, aggregating about 1,000,000 tons displacement. This includes the vessels in course of construction. The tonnage of Japan's twelve vessels of more than 8,000 tons displacement is about 146,000 tons. Russia's twenty-seven vessels of more than 8,000 tons displacement aggregate 322,900 tons.

The naval strength of France, which is also a matter of general interest at this time because of possible combinations, is reported in the recent official documents as follows:

First class battleships.....	5
First class battleships (building).....	8
Second class battleships.....	4
Second class battleships (building).....	7
Third class battleships.....	19
Third class battleships (building).....	12

The Japanese army is composed of the imperial guard of twelve divisions, the reserves, the landwehr, and the depôt. The imperial guard consists of 157,829 officers and men, the reserve numbers 179,887, the landwehr 97,151, the first depôt 81,984, and the second depôt 86,265, the grand total being 603,116 officers and men. In the far east England has only small garrisons; Russia's force in Manchuria is impossible to estimate because no official figures of its numbers have been issued since the Chinese outbreak.

The British Remount Scandal

A PARLIAMENTARY committee has been inquiring into the manner of awarding the contracts for supplying horses to the troops in South Africa (PUBLIC OPINION, 13 February), with the result that some interesting facts have been brought to light. The situation is reviewed by the London *Truth*.

The profit made by middlemen on a contract to buy Hungarian horses was £44,000 out of a payment

by us of £110,000. As a matter of fact, we not only were mulcted in this profit, but as the horses were found to be worthless after we had shipped them to South Africa, we lost by the transaction the entire £110,000, plus the cost of transport. The way in which this business was managed is a gross scandal. The war office left the purchase to the imperial yeomanry committee. The committee left it to Colonel St. Quintin. The colonel, knowing nothing either of Hungary or of the cost of horses there, on the advice of a certain Captain Hartigan, gave the contract to one Lewison, who bound himself to pay the captain for the introduction 2½ per cent on the contract price. Lewison sold the contract to a certain Hauser, and Colonel Maclean was sent out to Hungary to pass the horses that Hauser submitted to him. He was accompanied by Hartigan, who, apparently, was paid by the government for his services. These services were, *inter alia*, to pass the horses.

Hartigan had been an army veterinary officer with the rank of captain, and he left the service in 1880. General Truman, the inspector-general of remounts, states in his evidence that it had reached him that some of the officers employed benefited financially, and that Lewison had given to Hartigan some money, but that he had not investigated the specific charge against the latter, because he did not consider that any officer under him was referred to. What he means, I presume, is that Hartigan was only a retired officer. There is not a shadow of evidence that any other officer received money, or did anything affecting his honor. But, according to General Truman himself, the charge had been made against Hartigan, and, as a matter of fact, he did receive 2½ per cent on the contract with Lewison.

If the story of the Hungarian contract is to be taken as a fair sample of the mode in which our money has been spent, this war has been a golden opportunity for the "patriots" who supply us with what we need in consequence of it, and it is no wonder that they should be loud in their demand that we should fight on. In South Africa, "patriotic" contractors are fattening on our money. The cold storage

company made above a million by a single contract for meat. When a question was asked last session as to the price that we were paying for horses in Argentina, the answer was that it was undesirable to state it, and we may therefore take it that the price was high. The shipping companies have made a very good thing out of the war, and the armament companies of Birmingham have also been greatly blessed. It is an ill wind, indeed, that blows no one good.

The Growth of Italy

AN INCREASE OF 4,000,000 IN POPULATION SHOWN BY THE
LAST CENSUS.

THE popular idea that Italy's population is non-progressive is not borne out by the last census, upon which the following article from the New York *Tribune* is based:

Italy presents a marked contrast to France in point of increase of population. The returns of the recent census in Italy are now published, and they show a gratifying though not extraordinary growth of population in the peninsula, despite the large emigration and the hard times which have prevailed there in late years. In round numbers the population of Italy is now 32,500,000. That is an increase of more than 4,000,000 in the last twenty years. That is not a large increase, but it is, on the whole, satisfactory. It is not, of course, the whole increase of the Italian race. In these twenty years more than 2,000,000 Italians have emigrated to other lands. The actual growth of the race has therefore been more than 6,000,000 in twenty years, or more than one per cent a year.

This does not, however, confirm the common idea that the Italians are an exceptionally prolific race. The growth of other nations has been proportionately more rapid. That of France has not been. That of Russia has been effected by conquest and wholesale annexation. That of the United States has been due to enormous immigration, as well as to a high birth rate. But while Italy, in the nineteenth century, increased from 16,000,000 to 32,500,000, or only a little more than doubled, Great Britain grew from 16,000,000 to 41,000,000, and Germany from 24,000,000 to 56,000,000, and each of those countries suffered as great a loss from wars as Italy and a considerably greater loss through emigration.

It is not to be expected that Italy's population will hereafter increase its rate of growth. Nations seldom do that, and in Italy's case the present density of population is a strong influence against it. With the one exception of Great Britain, Italy is the most densely populated of the great civilized countries. She has 113 inhabitants to the square kilometer, while Great Britain has 132, Germany has 103, France has only 71, and Austria 69. It seems probable that Italian growth will hereafter be largely in other lands, where millions of Italians are now settled—especially in the United States and in Argentina and some other South American states. The unfortunate thing for Italy is that these emigrants and their descendants are all expatriates, and there seems little hope of the establishment of an Italian colony under Italian rule. The experiment was made in Erythrea, with little success, and if made in Tripoli does not seem likely to fare better, neither of those lands being well adapted to the purpose of empire founding. It is a pity, too, for it would be intensely interesting to see that famous, vigorous, and ambitious race take hold of such problems.

Various Topics

MISS ELLEN M. STONE, the American missionary, who, with Mme. Tsilka, was captured by brigands in the district of Salonika last September 3, has been released. No details have been received.

THE OPEN DOOR IN MANCHURIA: Both Russia and China have given most explicit and positive assurances that Manchuria will not be closed to the trade, navigation, and commerce of the United States at any time.

LAND TROUBLES IN IRELAND: The Irish party attaches great significance to the evictions of the tenants of forty farms on Lord De Freyne's estate in Roscommon county, Ireland, for refusal to pay rent, and intends to make a fierce parliamentary struggle over the matter.

PAUPERISM IN LONDON: Official reports of the pauperism existing in London show an increase of 3,726 paupers over the corresponding period of 1901, and the highest total in twenty-nine years, with the exception of a corresponding week in 1895. The increase is partly attributable to the unusual cold.

PAPAL JUBILEE: The twenty-fourth anniversary of the election of Pope Leo XIII and his entrance upon the twenty-fifth year of his pontificate was celebrated February 20, at St. Peter's, by the singing of a *Te Deum* and other impressive observances. Three hundred representatives of Catholic associations, Italian and foreign representatives of religious orders and twenty thousand spectators also listened to the services.

IRISH TOWN BANKRUPT: The extended franchise provided by the local government for Ireland act has resulted disastrously for Bandon, a market town in County Cork. The town apparently is hopelessly insolvent. The board consists almost entirely of Nationalists, but is divided into two hostile factions. The sheriff seized the gas works recently. The coke and other products were sold at auction, and the town is now in darkness.

THE GERMAN NAVAL DEPARTMENT has decided to establish a chain of wireless telegraph stations along the entire German coast, adopting either the Braun or the Slaby-Arco system. Thirty-two German warships have been equipped with the Slaby-Arco system and eight more are to be. Official reports say that the Slaby-Arco system gives the most satisfactory results, as wireless messages are transmitted 125 miles as against 90 miles by the Marconi system.

ITALIAN CABINET RESIGNS: The Italian cabinet organized under the leadership of Premier Zanardelli a year ago has resigned and Signor Zanardelli has been instructed to form a new cabinet. The difficulty appears to have been due to a general socialistic unrest, expressing itself through the chamber of deputies, although the direct cause was the failure of Signor Villa, the ministry's candidate, to secure a reelection as president of the chamber.

ROSEBERY BREAKS WITH CAMPBELL-BANNERMAN: Lord Rosebery has given a prompt and decided answer to Sir Henry Campbell-Bannerman's question whether he was prepared to coöperate with the Liberal party. His reply is "No." It is significant that Lord Rosebery has chosen the leading organ of toryism for the medium of communication. The *Times* cordially supports him in his policy of a "definite separation."—European Edition New York *Herald*.

RIOTING IN BARCELONA reached an acute stage last week. Conflicts with the troops were frequent and several of the rioters were killed and many injured. Shops and bakeries were sacked, street cars stopped running, and the newspapers were unable to appear. A member of the Spanish embassy said to a representative of the associated press: "I think the proclamation of martial law will have the desired effect. Barcelona has long been a hotbed of socialism, and must not be taken as a criterion of Spain as a country. It is a purely commercial center, and as such is almost an antithesis of the other large towns. Many of the prominent men of Spain have long wanted the government to maintain a large force of troops in the neighborhood of Barcelona, but political opposition has prevented this from being done. Had stringent measures been promptly taken by an adequate military force, the whole disturbance would probably have been nipped in the bud."

SOCIOLOGICAL

The Extension of the Woman Suffrage Movement

THE FORMATION OF AN INTERNATIONAL ASSOCIATION

MRS. CATT

President N. W. S. A.

THE most important feature of the thirty-fourth annual convention of the National Woman's Suffrage association, recently held in Washington, was the adoption of a plan for international organization. This plan was outlined by a committee of five, consisting of Mrs. Florence Fenwick Miller, representing England; Miss Vida Goldstein, Australia; Fraulein Antonie Stölle, Germany; Mrs. Gudrum Drewsen, Norway; and Mrs. Rachel Foster Avery, the United States. Mrs. Carrie Chapman Catt, president of the association, thus outlined the contention of woman suffragists the world over:

"A mile-post marking vast progress is an international woman suffrage conference, with nine nations sending official delegates, while fourteen nations have well-defined woman suffrage movements. Our question is clearly international in its scope and object. Sex-prejudice, with the old scientific blunder for its basis; sex-prejudice, with its unreason and its intolerance, is our common enemy. We must win by the use of the same arguments, the same appeals to justice. Men throughout the world hold their suffrage by the guarantee of the two principles of liberty, and for these reasons only. One, 'Taxation without representation is tyranny.' Who dares deny it? And are not women taxed? The other, 'Governments derive their just powers from the consent of the governed.' How simple and unanswerable that petition of justice! And are not women governed? These axioms have been translated into every tongue, and thundered forth in eloquent pleas in every civilized land. Before their logic the most cherished of ancient prejudices have yielded, and can their logic fail at last?"

"Woman suffrage must meet precisely the same objections which have been urged against man suffrage, and, in addition, it must combat sex-prejudice, the oldest, the most unreasoning, the most stubborn of all human idiosyncracies. The average civilized woman enjoys the right of self-government in the home of her father, her husband, and her son. The individual woman no longer obeys the individual man, and the question now is, Shall all women, as a body, obey all men, as a body? It is no more right for men to govern all women than for one man to govern one woman. It is no more right for men to govern

women than it was for some men to govern other men. A little more than a century ago men asked, 'Why are some men born to rule and others to obey?' The world answered by making sovereigns of those who had been subjects. Now we ask, 'Why are men born to rule and women to obey?' There is but one answer, and that is to lift the subject, woman, to the throne by the side of the sovereign man."

The Rochester (N. Y.) *Post-Express*, in answer to Mrs. Catt's contention, says that it is only needful to look around to see that the women are not set apart from the rest of the community and ruled as were the colonists that enunciated the immortal principles of government quoted by Mrs. Catt. "The vast majority of them are equal partners in the same household.

They have the expenditure of large sums of money that they never earned; they are free to come and go as they please. Their 'rulers,' as the address calls them, are as anxious as possible that all social arrangements shall be as just to their 'subjects' as to themselves. Without such justice the men suffer as much as the women. To talk and act upon the theory that the one is pitted against the other, and that unless one has the same political rights as the other, nothing but wrong is done, is to suggest a condition of society that does not exist. It is because of this misrepresentation that so few people pay attention to the demands of the suffragists. Most people know that if the women are not as justly treated as the men at the hands of the government, woman suffrage will not remedy the evil."

A writer in *Collier's Weekly* gives the following sketch of some of the most celebrated of the foreign representatives and what they have accomplished in their own countries. "From Norway there was Gina Krog, of Christiania, editor of *Hvae-Lende*, and the woman who won municipal suffrage for the women of her land. Germany sent the daughter of a famous scientist, Fraulein Antonie Stölle, of Berlin. Mme. Friedland, of St. Petersburg, brought the startling news that even in the realms of that autocrat, the czar, the rights of women are being recognized and the slumber of ages disturbed. She gave interesting accounts of the large opportunities offered to women for higher

education by the government university, and announced that the right of tax-paying women to exercise the privilege of communal suffrage has already been granted in that supposed land of tyranny. Spanish-America was represented by Señora Carolina Hudobro, of Chile, who is now visiting the United States and lecturing upon the social condition of the 'Spanish-American Woman.' The señorita is a direct descendant of Governor Silas Hopkins of Massachusetts, one of the signers of the Declaration of Independence, and, although a Chilean by birth and sympathies, has inherited some of the strong New England character. For some years she has advocated the cause of the "new woman" and talked for woman suffrage in the midst of the traditions and conservatism of a Spanish civilization. The mother country also sent two noted daughters, Harriet Stanton Blatch and Mrs. Florence Fenwick Miller. The former, as daughter of Elizabeth Cady Stanton, should be, according to the anti-suffragists, a masculine woman of strident tone, brusque manner, and a home-hater. The reverse, however, is the reality; and in Mrs. Blatch one finds a woman essentially feminine, of charming personality, and distinct elegance, cultured, capable, a happy wife and intelligent mother. Her co-delegate, Mrs. Florence Fenwick Miller, also belongs to a body of notables and is especially remembered from the now famous congress of women, where she distinguished herself by her brilliant English correspondence and her ardent support of woman suffrage. Since 1886 Mrs. Miller has been staff contributor of the *Illustrated London News*, editor of the *Woman's Signal*, and a lecturer. Canada presented two successful physicians—Dr. Augusta Stowe Gulen, of the Women's Medical college, Toronto, and Dr. Amelia Yeomans, of Winnipeg, Manitoba."

Successful Co-Operation in a Mining Village

New York Sun. Condensed for PUBLIC OPINION

AN interesting experiment in coöperative storekeeping has been carried on for some years at the little mining town of Banksville, Pa. Fifteen years ago eighty miners, who were dissatisfied with the prices charged at the company store, determined to set up a coöperative store of their own. Some of them were Englishmen acquainted with the Rochdale system of coöperation, and it was the success of that system that led to the experiment at Banksville. The par value of permanent stock was fixed at \$10 a share, of ordinary stock at \$5 a share. Each stockholder paid into the association \$10 or more, which was invested in ordinary merchandise such as was sold at the company store. The stockholders elected from their own number a store manager and a clerk. There were a president, a vice-president, and a board of eight directors of the association. The manager of the store was at all times subject to the instructions of the directors.

The last quarterly report of the association shows 211 stockholders. For the past five years the store has done a business of about \$30,000 annually, and each month shows increased business. The last quarterly report showed a business for the quarter of more than \$8,000. The association now owns the best business lots in the village. It has a large store-room, besides stables and a warehouse. For a time the association did a general hauling business, but the demands upon its teams for the delivery of merchandise from the store have made it necessary to discontinue

this branch of its activities. Many of the stockholders have from \$50 to \$100 drawing interest in the association's hands, and the association actually has more money than it can advantageously use in its business. The surplus for the last quarter was nearly \$1,000, and the last annual dividend was 12 per cent. For money of the stockholders held on deposit the association pays 5 per cent. One very important influence of the association has been the lesson it has taught of the moral and financial value of cash buying. Wherever the company stores have existed the credit-hardening process has reached the greater part of the community, with the result that many persons are constantly in debt and few save anything out of their earnings. Nearly all the people of Banksville who are not thoroughly credit-hardened deal with the coöperative store, and it has many customers from other communities near at hand.

The Morals of the Self-Supporting Poor

FROM A LECTURE BY ROBERT ERSKINE ELY

POOOR people are naturally more open to appeals for help than others, because they know what the sufferings and privations of poverty mean. In factories, where a certain number of accidents or cases of illness are sure to occur among the workmen, it is the universal rule, under such circumstances, for the men to "pass the hat" for a fellow-workman so afflicted. The very fact that working people are compelled to live near together in great tenement blocks tends to cultivate among them the social virtues. They have a sense of common life, of common joy and sorrow, which people who live in detached houses surrounded by ample grounds do not have.

But how about the homelier, rather unlovely, virtues of every-day honesty, truth-telling, and general reliability? Do working people pay their debts as conscientiously as other people do? Probably not. But at least they have the partial excuse of refusing to pay when they have little to pay with. It is possible that a majority of the wage-earning class are rarely wholly out of debt. In money matters they treat members of their own economic class better than they do the well-to-do and the rich.

Sensational reports are circulated now and again about the exceedingly low tone of morality which prevails in the great department stores. These reports have some foundation, in so far as they apply to the most inferior grade of shops, where the very lowest wages are paid. In such places there are instances, undoubtedly, where women do not receive the living wage, and they finally succumb to the easiest way of living, which, alas! is always within their reach. Generally speaking, however, in the shops the general sentiment among the employees themselves never favors this sort of thing, and resents strenuously the imputation that it exists. It is a bitter injustice to those who are innocent to generalize regarding the women employees of any shop, even the worst.

The moral influence of dancing and the theater upon the poor is, on the whole, not bad. It is true that balls, to which young people are allowed to go or insist on going without being allowed, too often result in the worst possible way. But in the majority of cases the bad influence of the ball is in the demands it makes upon physical vitality. Working men and women who dance until 1 or 2 o'clock in the morning can not lie in bed until 12 o'clock the next day. They must be at work at 7 or 8 o'clock, and that probably

causes bad temper. The theater is far from being what it might be, and ought to be, a great moral teacher, as well as a means of healthy amusement. However, leaving out of the question the vulgar and insufferably stupid performances of the low-grade vaudeville theaters, the so-called legitimate drama among the poor is not bad from the point of view of morals, although it often is from the point of view of art. One sees fewer problem plays in the theaters frequented by the poorer people than in the high-grade theaters patronized by the wealthy class. And it happens absolutely without exception among all nationalities and in all places that virtue on the stage is applauded to the echo, and villainy and vice are hissed with extremest disapprobation. If this indicates anything it indicates that the moral ideals of the humbler people, crude though they be, are yet sound at the core.

A Defense of the Dowry

M. LE ROUX PRONOUNCES IT A BENEFIT TO FRENCH SOCIETY

PROFESSOR ALBERT SCHINZ, of Bryn Mawr, outlines for the Boston *Transcript* M. Hugues Le Roux's views on the subject of the institution of the dowry in France.

The dowry is far from obsolete in France. With his Latin attitude toward life, we are not surprised to see M. Le Roux advocating this institution and attacking energetically those who consider it immoral. He knows by heart the old "chanson." A woman ought to be loved for her own sake, etc. As a matter of fact, a dowry has perhaps more reason for existing today than ever before. It is now more true than ever that when a man first enters on practical life he does not earn enough to have a family. Is it not just that the wife should contribute something to the common stock? The Anglo-Saxon may sternly tell him to wait until he earns enough. But such an answer does not seem to a Latin mind worthy of consideration. M. Le Roux ignores it altogether. What he would say if asked to give a reply is probably this: "Nature does not wait; we see, especially in Latin countries, the bad results of marriages that have been postponed on account of lack of money; the disorderly life before, the feeble, sickly children afterward. Therefore, the dowry in itself is an excellent institution. Whatever trouble it may cause arises from the fact that it has been made the end of marriage instead of the means."

It would seem at first sight that the man is largely responsible for this state of affairs. It is, for instance, a fact that army and navy officers are the favorite husbands in the eyes of parents, for they will not risk the dowries of their wives in rash speculation, as business men are prone to do. Again, it appears as if the guilt lay with men alone, seeing how reluctant they are to accept any but large dowries. M. Le Roux tells the following anecdote of a French magistrate of his acquaintance: "I have a nephew," he said, "who is a thoroughly upright, refined, good-hearted boy. I would like to get him married and talked to him recently about a really charming girl. 'Her parents,' I added, 'are ready to accept you. As to the girl, you will at once fall in love with her, as soon as you see her.' He answered in a tone that brooked no reply: 'My dear uncle, don't put yourself about on my account. . . . I will consider nothing under 15,000 francs income.'"

But although appearances, as we have seen, are against the man, M. Le Roux is inclined to think that the fault lies chiefly with modern women. And he is not afraid to tell them so. He cites the craze for luxury in our time. No wonder a man considers a dowry, and a large one, indispensable, if he is to marry. The true cause of the evil, however, the great enemy in M. Le Roux's eyes, is feminism and the modern education of woman. The following remarks will be understood with difficulty in America, or seem to be so many violent paradoxes: "The first effect of the higher instruction that is given to our girls is to make them very particular in the choice of a husband, as soon as money puts it in their power to make a selection." In former days girls married much younger, not only because they were in better health, but because "parents knew that it is easier to guide a girl seventeen or eighteen years old than one who is of age." In those days, also, people were of the opinion that a community ought to have a head, and it seemed natural that the man should be this head. Today, owing to her higher education, the girl will not hear of a "master" or of a "chief"; she wants a comrade.

M. Le Roux excludes from consideration the peasant, the artisan, and the "petit bourgeois" classes; for the girls of the first two classes marry without dowries, and those of the "petit bourgeois" do not marry at all, preferring, since they have no dowry, the earning of their own living to a mésalliance.

Various Topics

THE SMALL PARKS COMMISSION OF CHICAGO has formulated a plan to reclaim some part of the lake front for the benefit of the people. The money is being raised by popular subscription and the amount needed for the enterprise is nearly completed.

CHILD LABOR IN ILLINOIS: The annual report of the Illinois state factory inspector shows an increase of 39 per cent in the number of children employed. During the year there were 725 convictions on account of disobedience of the child labor law. But in many cases where the inspectors proved that children under 14 years of age were at work, their age being declared by affidavit given by their parents as 14 or more, conviction could not be secured because of the severity of the penalty named in the law.

PIERPONT MORGAN'S GIFT TO NEW YORK: The lying-in hospital, which has just been opened, is said to be unquestionably the most complete, the most modern, and the most comprehensive structure for the benefit of maternity patients yet built in this or any other country. A writer in *Harper's Weekly* says: "In a district where poverty is rampant, where more than 50,000 children are born each year, where physicians, according to statistics, reach only a little over 24,000, or less than half the suffering mothers, one can get an inkling of what such a building means to the future citizens of this city of New York." The money for running the hospital—a sum ranging from \$90,000 to \$150,000 a year, depending on the number of beds used—is to be raised by private subscription.

REGULATION OF THE LIQUOR TRAFFIC ON NEW LINES is in progress in Dubuque, Ia. The saloonkeepers' organization, the "Knights of Fidelity," have adopted a set of rules to govern the trade, rules calculated to promote order and to work for temperance in the consumption of alcoholic drink. Under the new order, saloons will close regularly at midnight, and on Sundays will not be opened till one in the afternoon. Week-days, liquor will not be sold before 5 A. M. Slot-machines, gambling-devices, and wine-rooms are barred; minors, drunkards, and intoxicated persons excluded from the saloons and refused the purchase of drinks. The saloonkeepers have undertaken, further, to refuse liquor to minors for their own use off the premises, and to make no sales to persons competent members of whose families forbid the sale in writing.

LETTERS & ART

A Rising American Portrait Painter

THE SUCCESS OF MR. IRVING R. WILES

IN our notice of the seventy-seventh annual exhibition of the National Academy of Design (January 16), mention was made of Mr. Irving R. Wiles's portrait of Julia Marlowe, but the comment quoted gave little indication of the "sensation" it has made among artists. Mr. John La Farge, whom his associates have placed at their head as president of the Society of American Artists, has said that this portrait "made the exhibition." Mr. Carleton Wiggins has enthusiastically declared that it is "the best thing ever done in this country." Mr. Charles M. Shean, secretary of the Architectural league, has called it one of the finest things ever shown here by an American painter. The most flattering recognition Mr. Wiles has received, has been in the form of commissions for portraits. Among his sitters have been many well-known people in New York and the east generally. The

where such things receive greater attention than here, it would create a genuine sensation, and its painter be flooded with commissions for portraits.

"This portrait is as good a thing as this brilliant artist has ever done. In composition, color harmony, dignity, and vivacity of portraiture there is little to be desired. Miss Marlowe sits on a sofa, her right arm thrown carelessly over the back, while her left rests on the leg, which is crossed over the other. The pose is graceful and natural. The white satin gown, with its deep flounce of lace, is low-necked and clinging, one side of the skirt rayed out in thin folds over the sofa. The bravura in the high lights of the lustrous satin is masterly. As a likeness, the painting is also a conspicuous success, the mobile expression having been admirably caught in its candor, with a nuance of permissible flattery. If there is anything to criticize adversely in this live canvas, it is the somewhat obtrusive note of a figure in the rug, and the slight accent of the pink rose at the corsage, and the jewels."

Mr. Irving R. Wiles is the son of the artist, Lemuel Maynard Wiles. He studied with his father, with Carroll Beckwith, William M. Chase, and Carolus Duran. He has received the third Hallgärten prize and the T. B. Clarke prize from the National Academy of Design; the W. T. Evans prize from the American Water-Color society, and the Shaw prize from the Society of American Artists; honorable mention from the Paris exposition of 1889, and a medal from that of 1900.

From the Art Interchange
IRVING RAMSAY WILES

February *Art Interchange* says: "In the portrait of Miss Julia Marlowe, so deservedly given the place of honor at the exhibition, Mr. Wiles has achieved a distinguished success, and one that places him among the foremost living portrait painters of the world. It is the picture of the exhibition. Mr. Sargent, who is acknowledged the best portrait painter of our time, has never shown anything more just in rendering, more sympathetic in quality, or more distinguished in composition, and when we have such a painter in our midst, it seems folly to waste time on the men of mediocre talent who come here from Europe. For several years Mr. Wiles has been showing notable portrait work, but now his brush carries both authority and distinction upon which there can be no question, and were this canvas shown in London or Paris,

Public Libraries and the Popular Novel

MR. CARNEGIE'S SUGGESTION

LIBRARIANS are seriously discussing the popular novel question. Some of them, including Mr. Herbert Putnam, advocate the application to fiction of Emerson's rule regarding books in general, and would place no new novels on the library shelves until a year after publication. Mr. Andrew Carnegie, at a reception given to him by the authors' club of New York, endorsed this position and suggested, further, that in taking account of the circulation of libraries for the estimates of their *pro rata* allowance of public support, no regard be taken of works of fiction less than three years old. The New York *Tribune* says that Mr. Putnam's position, as reinforced by Mr. Carnegie, invites the commendation of the judicious. "Putting aside the question of the good or harm done by the indiscriminate devouring of the latest novels as they come in shoals from the press, the librarian takes the ground that the primary function of a public library is the instruction of the public (the term including the forming of its taste), and that for mere amusement the reader should look elsewhere. The item of expense, too, is not to be disregarded. If the demands for the books of the moment are to be met with anything approaching promptness, the librarian in a large city must purchase from ten to twenty copies of each popular success, to find most of them junk at the end of the year; whereas the money thus spent might have

been invested in standard works or new books of acknowledged value which would have been a permanent addition to the library. It may be urged that the librarian should read all the new fiction, sifting the chaff from the wheat, but sober second thought will surely reject such a proposition as cruel."

"There is hardly a circulating library in the country," says the *Detroit Free Press*, "that is not compelled to sacrifice some of its real functions in order to gratify a gluttonous appetite for current fiction. Now current fiction, like vaudeville, is good enough in its way; but there is no very good reason why it should be furnished in unlimited quantities at public expense. Most of it has no literary value; almost none of it has educational value. It may offer a satisfactory means of passing what otherwise might prove to be a tedious quarter of an hour; but it is not the function of the public to furnish amusements. So far as the legitimate purposes of the library are concerned, they would all be served by the purchase of fiction only after it has withstood the test of a year's criticism. All the ephemeral novels would have faded out of existence by that time. A few that possessed slightly more substance might still exist; but the demand would be small, and to supply it would require no great sacrifice of the pecuniary resources of the library. The works of fiction that had a real or a possible literary merit would survive, and would be entitled to a place on the shelves. But a public library is under no obligations to furnish the fiction wet from the press. To attempt to cater to this particular public taste is to waste money that might far better be expended in more intelligent directions. To say that there is a demand for these novels is to argue unconvincingly; for there is a demand for many things that are not supplied at public expense. There is a still greater demand for vaudeville performances; but nobody would seriously propose to transform the library buildings into public homes for the coon song and the cake-walk. Yet the coon song and the cake-walk have as much literary and educational merit as the average popular novel, and the appetite for the one is as legitimate as the appetite for the other."

The Comparative Musical Taste of American Cities

Harper's Weekly, New York. Excerpt

MR. CARL ARMBRUSTER, the eminent traveling Wagnerite, has been saying unkind things of the New York musical public. He has, in fact, said the very worst that could have been said—he has affirmed that the musical public of New York is "considerably inferior to that of Chicago"—inferior, he implies, in taste and intelligence. That is, one would think, a sufficiently bitter pill; but the *Chicago Tribune*, in an editorial comment upon Mr. Armbruster's remarks, must needs proffer it to us coated, not with saccharine, but with an added bitterness. "Chicago," proclaims the *Tribune*, "is not the only city which is superior to New York in musical matters. Boston, Cincinnati, and St. Louis are also its superiors. New York is inferior not only to the cities mentioned, but to smaller places, like Worcester and Springfield, Massachusetts, in part from its inability to support a permanent public orchestra, and in whole because all musical functions, and particularly the opera, are regulated and dominated by fashion—a control always fatal to artistic success." These be hard words; and if they must have been said, we could wish that Chi-

cago had not been the one to say them. And yet we are constrained to acknowledge, galling as the acknowledgment is, that both Mr. Armbruster and the *Tribune* are speaking something very like truth. Not only are we inclined to believe that the musical public of New York is, in point of sincerity, penetration, and intelligence, measurably inferior to that of Chicago (even, perhaps, of Worcester and Springfield), but there are moments—moments of profound and oppressive gloom—when we are almost ready to believe that the New York musical public is the most uncultured, the most essentially unmusical urban public in the world. Not only have we, as the *Tribune* reminds us, no permanent orchestra—in the sense in which the organizations of Mr. Thomas, Mr. Gericke, and Mr. Herbert are permanent; not only is our opera established upon an utterly anti-musical basis; but—and this is the deadly evil—the personal equation, the personal attraction in music is, with us, paramount to a most deplorable degree. We go to the Metropolitan to hear, not "The Magic Flute," but Madame Sembrich or Madame Eames or M. Edouard de Reszke; not "Manru" for itself, but because M. Paderewski wrote it. We are, it may be, nearer to regeneration, nearer to Chicago, than of yore; for we have of late years learned to appreciate the concerts of the Musical Art society and the playing of the Kneisel quartet; and that way, so we persist in it, lies our musical salvation.

The Jealousies of Artists

London Saturday Review. Condensed for PUBLIC OPINION

EVERYONE must at some time have asked himself, Why on earth should artists—poets, good or bad, painters, musicians, actors—be so fearfully jealous of one another? Of course, jealousy is not unknown in other professions. But yet, when all is said, it is in the artistic professions that jealousy is most common, most virulent. The hatreds of men of letters are notorious. Painters occasionally say a good word for one another—occasionally; not, we fear, very often. Actors also have been heard to speak well of one another; and, seeing how often they speak ill of one another, it is merely fair to remember this. We do not know if any operatic artist has ever spoken well of a rival. We should be glad to hear of it. For if jealousy pervades artistic life, it is to be found in its most acute form in operatic circles. In word and in deed those people are constantly trying to hurt each other. Who has forgotten Van Dyck's description of Jean de Reszke as "the last of the *prima donnas*"? Why, we repeat, should connection with an art engender jealousy like this? In the continental opera houses things are much worse than in England. Jealousy may be said to be organized there, to be developed into a regular system. Our musical critic described a few weeks ago how the artists in a provincial French town paid a sort of counter-claque to whistle and shout down their rivals. What is the reason for it all?

The question is a very complicated one. You can not be a poet and live by your trade. If you are going to live by poetry, you must be the poet, the man of the day. In painting, the same holds in a lesser measure; more people can live by painting than by poetry. In military matters also the same is true; a man gets his promotion less through his merit than by being known. In music a composer must be head and shoulders above his fellows before he can earn his daily

bread. And in singing, especially opera singing, a man or woman must have a "name" before he or she can consider his or her position assured. This struggle for preëminence would alone account for much of the jealousy of the operatic profession—and also, it might be added, of the actor's profession. But has not the fact of appearing under the public gaze some connection with the matter? There are few people who can be looked at without deteriorating. They become self-conscious, vain, and as soon as vanity comes in jealousy joins it.

There remains another fact to be noted. Artists, actors, singers, all talk a terrible amount of gossip. They begin by talking shop; talking shop entails talking of one another; a slight remark made by one is exaggerated as it is passed round, and ultimately becomes something in the nature of a libel. Then it is handed on to the person about whom it was spoken, and, to speak as the vulgar, the fat is in the fire. Of course if all the world were big-minded, generous, there would be neither scandal talked nor any of the jealousy caused by scandal talking. We do not believe that any really great poet, painter or musician was jealous, not even of his more successful rivals. But the world is not made up of great artists. It contains a great many small ones, and they are as we have described them. They are madly jealous of each other, and the psychology of the subject is worth a moment's thought.

The Death of Albert Bierstadt

A FAMOUS AMERICAN LANDSCAPE PAINTER

ALBERT BIERSTADT, one of the foremost landscape painters in this country, died February 20, in the seventy-second year of his age. He was born near Düsseldorf, Germany, and when only a year old was brought by his parents to New Bedford, Massachusetts, where his youth was spent. He began to paint in oils when twenty years old, and four years later returned to his native town in Germany, where he studied for some years under Lessing, and afterward at Rome. In 1859 he returned to the United States. In tours in the west and in the Rocky mountains he gathered material for important pictures, and in subsequent visits to Europe, in 1867, 1878, 1884, and 1885, he collected material for Alpine and Italian subjects, the most important of which is his "Storm of the Matterhorn." Other important works are "The Discovery of the Hudson River," and its companion, "The Settlement of California by the Spanish Priest, Father Junipero Serra," which are in the Capitol at Washington. "Lander's Peak" and "Mount Rosalie" are in London, and "Estes Park" is owned by the Earl of Dunraven. The great gallery of the Hermitage, in St. Petersburg, contains "A View on the Kern River," and a sunset among the Sierra Nevada mountains; and a painting of a scene among the great trees of California is in the Imperial palace, Berlin. Mr. Bierstadt was the recipient of medals from Austria, Germany, Bavaria, and Belgium. In 1867 he was decorated by the French emperor with the Cross of the Legion of Honor; in 1869 and 1872 by the czar of Russia with two degrees of the Order of St. Stanislaus, and in 1886 with the Imperial Order of the Medjidii by the sultan of Turkey. He was a member of the National Academy of Design, the National Institute of Arts and Letters, the Century association, the American Geographical society, the Musical Art society.

The New York *Evening Post* speaks as follows of Bierstadt's place in art: "Bierstadt's was a name comparatively unknown of late, although he represented a very characteristic movement in American art. Trained in the painful methods of the Düsseldorf schools, he early came to America, and gave himself to the painting of the panoramic landscape of the west. In this field he encountered as his friendly rivals Moran and Church. Their common effort was to render the grandiose effect of American scenery, particularly that of the Rockies and the Sierras. The attempt corresponded very closely to the mood of America in the time immediately preceding and following the civil war. In fact, the taste for wild scenery, held as a fad by European romanticists, is probably deeply felt only by Americans among civilized nations. In view of this fact, it is a pity that Bierstadt and his fellow-painters, through various technical deficiencies, seldom achieved anything beyond somewhat crude panoramic effects. The tendency now is away from these painters of the west. Small, intimate, and tame landscape is the preference of our foreign-trained painters. And yet the time will probably come again when our painters will try to render something of the sublimity of nature, as well as its intimate charm. When that time comes, the late Mr. Bierstadt will have the recognition which belongs to a pioneer. Even now his great paintings, like the valley of the Yosemite at the Lenox library, must, for the largeness of their intention at least, command great interest and respect."

Various Topics

ST. GAUDENS TO MODEL PARNELL: Augustus St. Gaudens, the American sculptor, has been selected to make the heroic figure of Parnell for the monument to be erected in Dublin. The work must be completed in five years, and will cost from \$40,000 to \$50,000. Of this sum there has already been subscribed \$30,000.

A REMARKABLE SALE OF PAINTINGS: At the sale of E. F. Milliken's collection of paintings, held recently in New York, \$128,325 was realized for twenty-six works. Corot's "St. Sebastian" reached \$20,000. The painting which brought the highest figure was Titian's "Portrait of Giorgio Cornaro." The first bid was \$20,000, and was quickly followed by \$2,000 and \$5,000 bids until \$42,000 was reached.

POETRY THAT PAYS: Mr. Stephen Phillips's volume of "Poems" is now in its twelfth thousand, "Paolo and Francesca" in its twentieth thousand, "Herod" in its twenty-first thousand, and "Marpessa" in its tenth thousand. Decidedly Mr. Phillips has performed the difficult feat of making poetry pay. During the last four years he has made \$5,000 a year from poetry, exclusive of dramatic royalties.

SUDERMANN'S NEW PLAY: The new drama by Hermann Sudermann, entitled "Es Lebe das Leben" was recently produced in Berlin, and was the greatest dramatic incident of the season. The verdict of the audience was rather disappointing. There was some hissing at the close of the performance, which was answered by strong demonstrations on the part of the friends of the author. The play is based on the aristocratic life in Berlin of today.

MORE ABOUT TROUBETZKOY: Mr. William Jarvis contributes to *Scribner's Magazine* some interesting facts about Paul Troubetzkoy, the sculptor, whose work was discussed in our issue of January 23. He is the son of a Russian prince, but his mother is an American, and he was born and educated in Italy. At the age of seventeen he was sent to Russia with the hope that the allurements of a high military position might draw him from his chosen field of art. He soon returned to Milan, however, and seriously began work under the sculptor Bazarro. He is now thirty-five years old, the successful competitor for the equestrian statue of the late Emperor Alexander III, soon to be erected at St. Petersburg, and the winner of the Grand Prix in Russian sculpture at the Paris exposition.

SCIENTIFIC

Animal Life in Desert Places

London *Spectator*. Condensed for PUBLIC OPINION

THERE are cold deserts and hot deserts, but it is in the latter that the presence and continuance of animal life are more remarkable. There are almost no places, however hot the sun or waterless the land, where some life does not exist, often of an unexpected kind. The Afghan delimitation commission found that a horrible, sandy desert which had to be crossed to reach the boundary swarmed with large snakes; and the waterless plains of Arizona abound in reptiles and insects. Probably the least-known desert in the world is the Great Sahara, because the oases in its center are occupied by intensely hostile and warlike tribes, whose hatred of the French is a kind of delirium. But on its northern fringe two animals are found which seem specially adapted for life in this forbidden land—the addax antelope and Loder's gazelle. There is a group of khaki-colored animals at South Kensington, most of which are the natural inhabitants of sandy wastes, and are colored to match the soil. They form a kind of happy family which have put on the uniform of the desert, but have nothing in common but their preference for that kind of life. Among them are cerastes (Cleopatra's asp), two or three sand lizards, jumping mice, desert larks, sand grouse, and sand vipers. A specialized family of snakes related to the boas have been given the name of sand snakes. They are found in north Africa and in southeastern Europe and southern Asia, and all have the habit of frequenting sandy deserts.

There are also creatures even more specially adapted than by protective coloration for this life. Among them are the sand rat, the sand mole, and a mole-like marsupial found in the Australian desert. The sand rats show that life in the desert has dealt hardly with them. They are found in Somaliland, and are very sadly degenerated from the rat's estate generally. They are naked, or nearly so, have lost their ears, and have nearly lost their eyes. They burrow like moles, and throw up little volcanoes of hot sand from their tunnels. The most highly specialized desert birds are the various kinds of sand grouse. They exactly resemble the color of sand, and are more difficult to see than are ptarmigan on a Scotch mountain. But they have special wing equipment quite unlike that of ordinary grouse, without which they could never live where they do. Their wings are as strong as those of a pigeon, and can carry them great distances at a high rate of speed. This enables them to fly every morning and evening to the drinking-pools, however distant.

Darwin saw a curious instance of the persistency of life in nearly impossible conditions on the mountain rock desert of Chile, between the coast and the Cordillera. There were only traces of one living animal, but this was found in abundance. It was a species of snail, the shells of which lay in extraordinary numbers in the driest spots. "One humble little plant sends out a few leaves in spring and on these the snail feeds." Darwin also noticed that on the Patagonian plain, on the borders of the salinas, where not a drop of fresh water can ever be found, except dew, mice swarm. He considered that next to the lizards, mice are best able to support existence

on the smallest and driest portions of the earth. As long as there is the least vegetation they are found, even on tiny ocean islets.

Where life exists there must be something for it to feed upon, and the question occurs, What is this ultimate source which supports the other forms? There are deserts in which there is almost no vegetable life at all, but where insects, and consequently insect-feeding creatures, abound. What is the fly doing in the desert? What does he find to eat? Flies and winged creatures and creeping things innumerable are sometimes found in deserts, and swarms of lizards, which eat them. It is said that on the borders of certain north African deserts a phenomenon closely corresponding with the Mosaic manna is seen as soon as the sands are wetted by rain. Next morning the surface is seen covered with little white globes like tiny puff-balls, the size of a bird-cherry, or like spilled globes of some large grain, which is gathered and eaten by the Arabs; but it is said to be so unsubstantial that, like other fungus growths, it melts or rots in the course of a day or so. Something analogous occurs under exactly opposite conditions in England. In very dry years, green, jelly-like masses will appear on the driest and hottest gravel walks, or swell up from between the interstices of paving-stones, both of them most unlikely sources from which to expect a spontaneous growth of life.

Ten Thousand Horse-Power Motors

Chicago (Ill.) *Inter-Ocean*

WHEN the project for the development of the power of Niagara falls was undertaken, a few years ago, all previous efforts of electrical engineers were far outdone. It had been found possible at that time to build electric generators which would deliver an output of 1,500 horse-power, and it was said that possibly it would be practical to increase the size of generators to 2,500 horse-power. The Niagara falls power company undertook and accomplished what was then thought little short of miraculous, in building, installing, and putting into successful operation dynamos of 5,000 horse-power size.

It was then thought that the limit in the development of electric machinery had been reached, at least for this generation. The plant at Niagara, with its mammoth units of energy, was considered one of the industrial wonders of the world and excited as much interest among visiting scientists from this and other countries as the spectacle of the great Niagara falls itself. There have been a number of immense electrical plants built since then in various parts of the country, and the Niagara plant has been increased in size. But the enormous generators first built there remained up to a short time ago as the limit of electrical development. Now the Niagara falls plant is about to be outdone. The Niagara Falls power company, through its affiliated concern, the Canadian Niagara power company, has undertaken to build a plant on the Canadian side of the falls which will be as far ahead of the present plant as the latter out-

distanced all others. In this new plant, which is expected to have an output of 200,000 horse-power or more within a few years, it is planned to install electric generators which will each have a capacity of 10,000 horse-power, and contracts have already been let to an American company for building them. These new dynamos are to be the industrial wonder of the day. Each of them is to be capable of producing as much power as is used to run a transatlantic steamer. Up to a short time ago the entire power of the Chicago Edison company's downtown plant was not as great as one of the new dynamos. All the industries of a fair-sized city could be carried on by the power from one of these machines. The undertaking is an enormous one, but has proceeded successfully so far and is assured of success. The lesson it teaches is that the limit of electrical achievement was not reached at Niagara and doubtless has not yet been reached. In fact, judging from the progress of the last fifteen years, electrical development has no limit in sight.

The Operating Room of a Telegraph Company

New York Electrical Review

THE main operating-room of the Postal Telegraph company in New York occupies a floor of a large office building. A working force, divided into three shifts for night and day service, aggregates some four hundred and fifty men and women, three hundred and fifty of whom are regular operators, the balance being made up of clerks, chief operators, and special workers. An average total of fifty thousand messages per day is handled on the two hundred and twenty-five instruments. Of this number, forty are on duplex circuits and fifty on quadruplex circuits, the rest being simple single Morse circuits. At some periods all of these instruments are working simultaneously, and in addition to this about one hundred independent circuits from the stock exchange and brokers' offices in different parts of the city pass through this office. Current is supplied by means of twenty-three Crocker-Wheeler motor-dynamos, with a total output on the secondary side of about one hundred amperes at forty volts, seventy-five per cent of which is used for the local circuits. These machines

are handled as units of battery were formerly handled, plugged into series for long lines, etc.

The fastest circuits are operated on a piece system, notably the through lines between Boston, Philadelphia, Buffalo, Chicago, St. Louis, Pittsburg, and San Francisco. The operators on these circuits are expected to send a minimum of two hundred and eighty messages per day, for which they receive a stated salary. For each message in excess of two hundred and eighty a bonus of one cent is awarded.

An important innovation is the "Morsegraph," the creation of Mr. J. F. Skirrows, assistant manager of the operating department, and Mr. Shirley. As its name signifies, this instrument "writes Morse." A series of circuits is connected with a printing apparatus, and upon an endless tape a faithful record in dots and dashes is kept, in parallel lines, on both sides of the paper, the whole series up to as many as twenty-four circuits printing at one time, each synchronously with its appropriate sender, no matter where the latter may be situated.

A careful research as to the causes and probable remedy for "operator's paralysis," by Mr. Shirley, has led to the invention and introduction of a new form of sending apparatus. This provides a leverage medium of contact and is mounted upon a metal base, so that it may be operated in any position. The lever is capable of indefinite adjustment and the concentration and rigid movements of the old key entirely obviated. By bringing a new and vigorous set of muscles into use, otherwise capable men who, under ordinary conditions, would have to be discarded because of breaking down, have been practically redeemed and are now operating on some of the fastest circuits.

A New Local Anaesthetic

PRODUCT OF THE INDIAN "GASU-BASU"

THE London *Lancet*, in speaking of the uses of a new local anæsthetic obtained from an Indian plant called "gasu-basu," the active principle of which is an alkaloid, says that experiments were made with a salt obtained by treating the alkaloid with hydrochloric acid. The salt has been named nervocidine. In weak solutions it produced a marked local anæsthe-

From the Electrical Review

MAIN OPERATING ROOM OF THE POSTAL TELEGRAPH COMPANY, NEW YORK CITY

sia of the cornea of warm-blooded animals. Two drops of a one-twentieth per cent solution applied to the human conjunctiva produced a burning sensation, accompanied by lachrymation, and followed, after twenty minutes, by anæsthesia of the cornea, lasting for five hours. After seven hours the cornea regained its normal condition. A one-tenth per cent solution of nervocidine brushed over the mucous membrane of the cheek caused local anæsthesia of the brushed surface and of the tongue, accompanied by loss of the sensation of taste and the perception of touch, but without loss of the perception of heat and cold. Attempts to produce local anæsthesia by subcutaneous injections of nervocidine in animals have not yet been successful. The general action of nervocidine on the system was that of a poison producing death by paralysis of the motor centers of the nervous system and of the peripheric nerves. All the experiments proved that nervocidine was a powerful local anæsthetic, which had the advantage of producing a much more sustained action than cocaine, for the effect of a one-half or one-fifth per cent solution might last for two or three days. It is, however, not without its drawbacks, such as the local irritation to which it gives rise, the slow production of the anæsthetic state (from ten to twenty minutes being required), and a liability to the occurrence of nausea, vomiting, salivation, and other symptoms of general poisoning of an even more unpleasant nature.

A Simple Method of Etching Pictures

Scientific American, New York. Excerpt

BENJAMIN HAWLEY, an artist of Philadelphia, is the inventor of a device which has been recently patented, by which works of art can be produced by anyone without any previous tuition or particular aptitude for handling the pencil. The instrument is called the etchograph. On the top plate of a tripod, a support is carried, comprising a longitudinal bar and a lateral bar. At one end the longitudinal bar carries an adjustable frame to receive a glass plate coated with a transparent film of gelatine or collodion; at the other end, the bar is formed with a slot to receive a holder for a vertically adjustable lens. The lateral bar serves as an arm-rest. The tripod having been set up in proper position, the engraver looks through the lens, and sharply focuses the image transmitted through the glass plate by sliding the holder in the slot of the longitudinal bar. The reduced image, being apparently projected on the plate, can then be engraved on the prepared surface of the glass. By this means anyone can make a satisfactory picture without the least knowledge of art or even acquaintance with the use of the pencil; but with the skill which soon comes of practice and observation, some very artistic effects can be obtained.

RELIGIOUS

An Example of Church Federation

REV. CORNELIUS G. BRISTOL, in the *Sunday School Times*, Philadelphia.
Condensed for PUBLIC OPINION

THE organization of the church federation of Hartford, Connecticut, was effected, after mature deliberation, in the autumn of 1900, very largely through the efforts and enthusiasm of one who is now no longer a citizen of Hartford, the Rev. Dr. Alfred T. Perry, president of Marietta college. The chief objects were to unify the working forces, and to simplify the machinery as much as possible. The organization has from the first been simple and compact, consisting of four officers and a small executive committee, in addition to a few subordinate committees to carry out the details of the work. For the purpose of facilitating one of the chief objects of the federation, the city has been carefully divided into four districts, or divisions, embracing in all about thirty churches and religious organizations. In each district there is a local committee of five—three laymen and two clergymen. Each district committee holds its own meetings, calls together its own churches, considers its own needs, adopts its own policy, but always acts in concert with the main body through the executive committee.

The federation began its work with no extended or elaborate plan of campaign. A few matters only were proposed during the first year, but most of those have been accomplished. Mention has been made of the districting of the city. The purpose of this was, of course, to facilitate the work of each church in the district, and to learn its exact religious condition. In one district—the central, embracing ten congregations—this work has been done in a most efficient and thorough manner. Here the agent and officers of the Connecticut Bible society were engaged for several weeks making a thorough house-to-house canvass of the district, and rendering a printed report of its work

to each church. The cost of this work was defrayed by the several churches of the district. This canvass revealed the existence of about two hundred families unvisited by any minister and unattached to any church. Their preferences, if any, were asked, and their names sent to the respective churches of the district.

Two works of reformation and cleansing have engaged the attention of the federation through that branch of its working force known as the Committee on Public Morals. For some time people of refinement and decency have been offended and disgusted by the frequency and growing vulgarity of billboards whose pictures violated every canon of decency and morality, to say nothing of art and beauty. This very early came to the attention of the Committee on Public Morals. The matter was brought before the Amusement committee of the common council through its chairman. Interviews were held with him and other city officials. It was shown that existing conditions were wrong, and that public sentiment demanded a change. All this required time, but at length the change came, and the character of these public exhibitions throughout the city has been decidedly modified and improved.

Another object accomplished, if not by the federation as a definite organization, at least by a body of men who are members of it, and by a sentiment which it has fostered and sustained, is worthy of note. In direct violation of the law, and against an unexpressed sentiment of the people, the theaters and public gardens had for some time been giving exhibitions on Sunday afternoons and evenings. They were called sacred concerts—why, is difficult of conjecture. It was due entirely to the efforts of men who felt the

inspiration of the federation, and to a sentiment which it kindled, that these violations were stopped, and at least a semblance of the former sacred character of the day was restored.

It has been the constant policy of the executive committee of the federation to pursue its work, and gradually bring about reforms and correct abuses, not under the sting of any lash nor any threats of publicity. And this leads to the conclusion that perhaps the best result that has thus far been attained by the church federation is the establishment of a better relation and feeling between the officials and the religious workers. I am not speaking of the more distinctive material affairs of the city, such as gas, water, streets, etc., but of the matters which bear directly upon the morals of the community—the proper housing of the poor, the suppression of vice, the restriction of the number of saloons, the observance of Sunday, etc. In these and kindred matters there is little likelihood that official action will be better than public sentiment—and that sentiment is represented by the church federation. I have dwelt upon this phase of the subject with the strong conviction that no greater profit has been derived from the year's work of the federation in Hartford than the gradual establishment of a better understanding and a closer relation between the religious workers of the city and the municipal authorities.

Is Hell Preached Enough?

Christian Endeavor World, Boston. Excerpt

CERTAINLY hell is not much preached. The love of God is preached. The glories of heaven are preached. The comforts of our religion in sorrow and pain and failure are preached. Sometimes even to the exclusion of these, the social bearings of Christianity are preached—the gospel of generosity, of honesty, of helpfulness. Sometimes, quite to the exclusion of any gospel, politics are preached, and current history, and science at fourth hand. But there is no doubt that hell is very little preached. And yet it should be preached. Because, in the first place, hell exists. We see many men growing worse and worse up to their dying day. We see their characters becoming absolutely fixed in evil and impenitence. Often they are unconscious of it, but we can see their punishment gathering slowly but surely around them, even in this life. We have no grounds in reason or revelation for expecting any change to be forced upon them in another life. It is not our reason, but our pity and our horror, that objects to the doctrine of hell.

In the second place, hell should be preached because millions are going there. The world is growing better all the time, but it is still fearfully wicked, and no one can look abroad over it with the thought of eternity in his heart, and not tremble to view the enormous mass of misery speeding recklessly to its infinite doom.

In the third place, hell should be preached because "the fear of the Lord is the beginning of wisdom." The love of God is the end of wisdom; fear must come first. The reason why the church's love of God is often so weak is because it is not firmly founded upon respect for His authority and awe at His majestic power. Sinners must be made to feel the terrors of the law, before they will appreciate the graces of the gospel.

In the fourth place, even Christians need to be reminded of the peril of hell. We need to see the pit whence we were dug. We need to put more spirit into our daily prayer, "Deliver us from evil." Again, men will honor a preacher that deals with such a strong theme. Men long for virile preaching, preaching that has to do frankly and forcefully with the eternal truths, and not with the surface reflections of them on our current history. We are not advocating a return to the preaching of Jonathan Edwards, though there were much salt in that. We do not care to have men fall swooning in our churches, and women half frantic with fear. But we do urge a preaching of hell in the same measure in which Christ preached it, and in the same manner He used.

The Undoing of Dowie

JUDGE TULEY SCORES THE MODERN "ELIJAH"

IN rendering a decision in the suit recently brought by Samuel Stevenson against John Alexander Dowie to compel a settlement of the claim of \$200,000 made by Stevenson against Dowie, Judge Murray F. Tuley, of the circuit court of Cook county, Illinois, unsparingly denounced Dowie and his methods. A receiver was appointed and afterwards removed, a settlement of the claim having been made out of court. Adverse criticism from such a source appears likely to prove to be a serious check to the spread of Dowieism. *The Ram's Horn* says: "All is gloom in Zion. The college building, the divine-healing home, and the Zion home were crowded to the doors with those who have traveled from afar to hear of the 'doctor's' expected victory. The disappointed ones now gather in groups, pale and trembling, and talk over the decision in whispers." *The Chicago Chronicle*—presumably a much more unprejudiced observer—declares: "A mere determination of Dr. Dowie's rights under the law would hardly have sufficed in this instance, for the reason that the question of motives and methods was inseparable from the matter. Dr. Dowie is not content to conduct his business as other men carry on their professions and industries.

"YOU FURNISH THE SOAP AND I'LL BLOW THE BUBBLES."—*Ram's Horn*

He sets up a claim to divine guidance and inspiration and the influence which he seeks to exert over his followers and partners is not that of reason but that of superstition and fear. In determining the rights of his associates, therefore, it became necessary for Judge Tuley to take into account the nature of the business which was being prosecuted in Dr. Dowie's name, and in finding against that custodian of the money and property of others he was in duty bound to give his reasons. These appear in judicial terms in the exceedingly luminous decision which has been rendered. There is no looseness of expression in this judgment. Every word is fully weighed. It amounts, however, to the severest indictment that has yet been brought against Zion, and it is severe because the judge who uttered it is esteemed by all, while the subject of his condemnation is esteemed by the few.

"The people of Chicago and the northwest, among whom Dr. Dowie has made an astonishing impression, have the deliberate judgment of a great and universally respected magistrate that, so far as his business methods are concerned, Dr. Dowie is a pretender and a fraud, exerting an influence as an agent of the Almighty which is to be challenged, if for no other reason, by the fact that his methods are destructive of the rights of others, and assuming to conduct his affairs and those of his dupes in contempt of human law and human ideas of honesty and justice. When business matters are removed from the sphere of law and are made to depend upon the divine or religious pretenses of a single individual, the motives of that person must be judged by the results. In the case of Dr. Dowie it has been seen that all of his supernatural claims contributed to one end—his own enrichment. Money and property passing out of the possession of his disciples came inevitably into that of himself. On examination the genuineness of his greed became as evident as the genuineness of the renunciation of his victims.

The Psychology of Conversion

PROF. GEORGE A. COE, in the *Advance*, Chicago. Condensed for
PUBLIC OPINION

IT is reasonably certain that very few conversions occur before the age of ten or after that of twenty-five, and that most of the conversions taking place within these limits fall within the period from twelve to twenty. Further, the largest number is found at the age of sixteen. This conclusion is gathered from several thousand cases collected in various ways in various parts of the country. Looking a little more closely at the critical years from twelve to twenty, we find that, though the conversions are spread out through the whole period, they tend to occur most often in three waves—at twelve and thirteen, sixteen and seventeen, and about nineteen—the middle wave being considerably higher than the others. The largest number of conversions falls at sixteen, because this is the time of most active mental fermentation, and this fermentation, in turn, is connected with the most rapid part of the organic change as its counterpart or supplement. When we ask for the meaning of the other accentuated ages, twelve and thirteen, and nineteen, we tread on less firm ground. But in general the first wave can be traced to mental conditions incidental to the passage from one physiological period to another, and the last one to an intellectual or deliberative settling down after the tumult of new emotions has begun to wane.

Leaving out of account New Testament usage, we may say that in the everyday speech of the people conversion means one or more of three things, namely: first, returning to God after a vicious, rebellious, or deliberately neglectful life; second, a personal desire on the part of a child or youth upon reaching religious self-consciousness; third, certain emotional and impulsive experiences which frequently accompany conversion in the first sense, and sometimes in the second. Many persons, apparently, would not give the name conversion to anything short of the third of these meanings, while others would apply it to the first and third, and still others to all three. It appears that the second wave of adolescent religious interest represents the most favorable time for conversions in the third sense, and in general for those that involve strong agitation.

A further result of the psychology of conversion is clearer insight into individual differences, and particularly into the emotional and impulsive experiences already mentioned as constituting one of the popular meanings of conversion. These phenomena are made possible by the concurrence of definitely ascertained conditions. They occur in persons of certain temperaments and tendencies under the influence of expectation, or emotional appeal, or social contagion. This does not imply that conversions of this type are less genuine than others or that emotional pressure and social contagion are altogether out of place in revival work. But we should see to it that methods that tend to produce such phenomena are strictly subordinated to the religious end.

We may sum up what has been said by a brief enumeration of the main contributions of psychology to our knowledge of conversion. First, it has given us relatively definite statistical information as to the proportions in which conversions occur at certain ages. Second, it has shown, from the nature of mental development, why conversions occur most frequently at certain specific periods. Third, it has analyzed various types of conversion, compared them with religious development that is unbroken from childhood to maturity, and shown the common element in all. Fourth, it has traced to ordinary laws of the mind the striking phenomena which have often, if not generally, seemed to the persons who experience them to be inexplicable or miraculous. Finally, though little of this is entirely new, all of it has been taken out of the region of guesswork and placed upon a solid basis of definite evidence. The practical result should be twofold—improvement in revival methods and unification of the evangelistic and the teaching function of the church.

Various Topics

THE REV. DR. NEWMAN HALL, former chairman of the Congregational union, who had been ill for some time, died in London, February 18. Dr. Hall was born in Maidstone, England, May 22, 1816. He was educated at Tottenham and at Highbury college, and he took the degree of B.A. at London university. In 1842 he became pastor of the Albion Congregational church, in Hull, and he remained there until 1854, when he succeeded the Rev. James Sherman in Surrey chapel, London, known as Rowland Hills chapel. Dr. Hall remained pastor of the church until 1892, when he was succeeded by the Rev. F. B. Meyer. Dr. Hall devoted himself thereafter to literary and evangelical work. His "Autobiography," which appeared in 1898, was widely read by his admirers and was commended by critics. He wrote many poems, and they were published in several volumes, one being "Lyrics of a Long Life."

MISCELLANY

Southern Educational Problems

ILLITERACY AMONG THE WHITES—THE TEXTBOOK QUESTION

WO educational problems of the south have been brought into discussion during the past week: one by the statement of Professor O. A. Hillyer, of the Atlanta theological seminary, that there are twice the educational facilities for Negroes in the south that there are for the whites; the other by the meeting at Charleston, South Carolina, for the purpose of establishing a great southern publishing house for textbooks. The Philadelphia Press, commenting on the first, says: "Professor Hillyer is undoubtedly right when he says that the education of the southern whites has been neglected and that it is to the advantage of good citizenship that attention be paid to this phase of development in the south. The census of 1900 showed that thirty-five years after the close of the war for the union over one-seventh of the white males of voting age in Alabama were illiterate. About one-tenth of the white males of voting age in Arkansas also were illiterate, one-seventh of the white Kentucky voters, about one-fifth of the white North Carolina voters, and a little less than one-seventh of the white Tennessee voters. Many of these are survivals of the period before the war, when schools were rare in the southern states. It is impossible to make an exact comparison with previous conditions, as the census of 1890 did not give the literacy of voters, but as near as a comparison can be made there was no marked decline of white illiteracy in the south during the last decade. There should be more vigorous effort to reduce white illiteracy. The movement recently started in the north, which has attracted the liberality of Mr. John D. Rockefeller and other rich men, gives promise that the near future will see something done."

The Baltimore Sun declares it to be a fact that a Negro can go to college and secure an education in the south at far less cost than can a white boy. "It is a fact that a colored girl can go through college with inconsiderable expense, while white girls must practically pay the expense of maintaining the institution they attend. The southern whites are paying practically all the expenses of the common schools for their own children and for the Negro children. The schools are yet far from what they should be, but they are fast improving. There is a deep, intelligent, public interest in education, and the ablest men in the section are devoting themselves to bettering the educational conditions for both races. They have not appealed for help from other sections, because they bear their own burdens, and are working out, as best they may, their own salvation. But nowhere is aid so much needed, and in no other section would it be so much appreciated."

The proposal to establish a southern publishing house has called forth a letter from Governor Candler, inviting all the southern governors to join in the movement, in which he says: "As a result of the thought and investigation I have given the subject, I have concluded that every dictate of local pride, patriotism, and business interest demands that such an enterprise be inaugurated. To put in the hands of 5,000,000 school children of the south books free from the taint of sectionalism, and in which the history of

our section is taught as it is, and not as others would have it, is surely a patriotic duty, while as a business proposition it can not be doubted that a great organization of capital in the hands of prudent, honest business men, for the purpose of manufacturing the \$4,000,000 or \$5,000,000 worth of books annually bought by the southern people, would be an investment promising as profitable results as any other that now presents itself to capitalists of the south and elsewhere."

The Macon Telegraph takes issue with the governor. It says that "there is no more reason why the \$4,000,000 or \$5,000,000 worth of general literature annually bought by southern people should be published here than that the equal or greater amount annually bought by western people should be manufactured in the west. In time there may be great and flourishing publishing houses in southern and western cities; but they will be the result of gradual growth. They can not be forced, for unless they are able to compete with what is done elsewhere they will fail." The Courier-Journal declares that a project to conduct a publishing house to profit by and stimulate sectionalism would deserve to fail. "If the south makes books on a large scale, it must do it as it makes cotton cloth or sugar—for the benefit of everybody that wants them—and must adapt its products to the wants of the market as other branches of business are obliged to do. There is no such thing as an exclusively northern publishing house, and there is no legitimate field for an exclusively southern publishing house."

The Day and the Deed

THE WORLD RUNS WELL

(By EDWARD ROWLAND SILL, Died February 27, 1887)

The world, runs round,
And the world runs well:
It needs no prophet when evil is found
Good to foretell.

One man's noisy years go by,
Rich to the crowd's shallow eye,
Full of big and empty sound,
Brandished gesture, voice profound,
Blustering benevolence,
Thin in deeds and poor in pence.

Out of it all, so loud and long,
What one thread that's clean and strong,
To weave the coming good,
Can the great Norns find?

But where some poor child stood,
And shrank, and wept its faultiness,
Out of that little life so blind
The great web takes a golden strand
That shall shine and that shall stand
The whole wide world to bless.

When will the world believe
Force is for him that is met and fought:
Storm hath no song till the pine resists;
Lightning no flame when it runs as it lists;
So do the wise Norns weave.

THE ELEVENTH D. A. R. CONGRESS shows an increasing registration in this patriotic organization. Since the last congress, it appears, 3,680 women have been added.

THE NEWS OF THE WORLD

MONDAY, FEBRUARY 17

DOMESTIC.—The senate ratified the treaty with Denmark for the cession to the United States of the West Indian islands of St. Thomas, St. John, and St. Croix....The president sent to the senate a message recommending the retirement of Naval Constructor Richmond P. Hobson....The eleventh congress of the National Society of the Daughters of the American Revolution opened in Washington....The National American Woman Suffrage association re-elected Mrs. Carrie Chapman Catt, of New York, president.

FOREIGN.—There have been changes in the cabinet at Seoul, Korea, as the result of the Anglo-Japanese alliance, new ministers of war and finance, of neutral politics, have been appointed....The British government was asked to furnish transportation for fifteen hundred Welsh settlers from Patagonia to Canada....Forty thousand men have struck in Barcelona and serious rioting is reported in that city, which is in a state of siege....Two thousand persons perished in the recent earthquake at Shamaka, in Transcaucasia....Yang Yu, Chinese minister to Russia and former minister to the United States, died at St. Petersburg.

TUESDAY, FEBRUARY 18

DOMESTIC.—Governor Taft testified again before the senate committee on the Philippines, explaining the sedition laws passed by the Philippine commission....President Roosevelt nominated James P. Platt, son of Senator O. H. Platt, for United States district judge for Connecticut....Woman suffragists appeared before committees of congress to plead for the right to vote....Col. O. H. Ernst, of the Isthmian Canal commission, testified that the Darien route would be impracticable.

FOREIGN.—The Spanish government was questioned in the senate at Madrid on the disclosures in reference to intervention in 1898....The German government asked the reichstag for an appropriation to keep up the regiment at Shanghai....Sir Neville Bowles Chamberlain, a British field marshal, and Rev. Dr. Newman Hall, a noted London minister of the Congregational church, died....Riots continue at Barcelona, Spain, where 80,000 persons are on strike.

WEDNESDAY, FEBRUARY 19

DOMESTIC.—President Roosevelt, in his reply to the appeal of Admiral Schley, approves the verdict of the court of inquiry, and says that the question of command at Santiago was settled by President McKinley in favor of Admiral Sampson....Secretary Root, in a statement sent to the senate, denies charges of cruelty against American soldiers in the Philippines, and says

that no war was ever more humanely conducted....The largest band of insurgents in Batangas province, Luzon, surrendered to the Americans.

FOREIGN.—Papers were signed in Paris forming the basis for the resumption of diplomatic relations between France and Venezuela, which were severed in 1895....The National Liberal federation, in session at Leicester, England, urged a policy of concession to the Boers....Vigorous measures have been adopted by the Spanish government to suppress the rioters at Barcelona; the mobs and military have been in serious collision, several persons have been shot and many arrests made.

THURSDAY, FEBRUARY 20

DOMESTIC.—Governor Taft finished his testimony before the senate committee on the Philippines....It was announced from Peking that Secretary Hay had sent a note to China and Russia warning them that the United States would not permit the integrity of the Chinese empire to be interfered with to the detriment of any nation, and demanded equality of treatment for all nations in the matter of commercial privileges.

FOREIGN.—Advices from Barcelona say that five hundred persons were killed and wounded in an encounter between troops and strikers in that city....The twenty-fifth year of the pontificate of Leo XIII. was celebrated at Rome....King Victor Emmanuel opened the Italian parliament; he spoke favorably of the country's foreign relations....The empress dowager and emperor of China gave two audiences to the foreign representatives; reports say that the affairs were undignified, the diplomats scrambling to get near the throne and that the emperor openly sneered at the gathering....The Newfoundland parliament was opened and the colony's finances were reported to be in a favorable condition....The Venezuelan congress met, but did not ratify the agreement with France; a defeat of Matos's troops was reported.

FRIDAY, FEBRUARY 21

DOMESTIC.—The Kansas Populists met in convention in Topeka to decide upon a future policy; the leaders favor complete union with the Democrats....The Civil Service commission has forwarded to the president new charges against Joseph Perrault, the surveyor general of Idaho; his renomination has been held up for further consideration....Secretary Long confirmed the report that he intended to leave the cabinet....The celebration of the twenty-fifth anniversary of the foundation of Johns Hopkins university was begun in Baltimore.

FOREIGN.—The Italian cabinet resigned, owing to the failure of the gov-

ernment's candidate for the presidency of the chamber of deputies to be re-elected....The situation in Barcelona is less serious, and the authorities are making many arrests of anarchists and revolutionists; the troops control the situation, the civil officers being powerless.

SATURDAY, FEBRUARY 22

DOMESTIC.—A fist fight occurred in the senate between Senators Tillman and McLaurin of South Carolina....The Republican members of the Ways and Means committee voted in favor of a reciprocity arrangement with Cuba, granting a reduction of tariff duties not to exceed 20 per cent, the action to be subject to the approval of a Republican caucus, which will be held Tuesday night....The United States government received positive assurances from Russia and China that the door of Manchuria will not be closed to American commerce....Washington's birthday was appropriately observed throughout the country; at the Chicago Union League banquet, Baron D'Estournelles Constant, of the French chamber of deputies, was the principal speaker....The employment of Italians led to a riot by striking native trolley men at Ponce, Porto Rico.

FOREIGN.—There was a boom in "Kaffirs" in London, due to the removal of restrictive legislation on the mining industry in South Africa: Lord Kitchener reports the capture of 164 Boers by a force of National Scouts, ex-burghers who are fighting in the British ranks....The official *Journal de St. Petersburg* publishes a statement regarding the meeting of diplomats in Washington on April 14, 1898, in line with the recent statement in the German *Reichsanzeiger*, saying that Russia opposed Lord Pauncefote's proposal as being unjustifiable interference in the affairs of the United States.

SUNDAY, FEBRUARY 23

DOMESTIC.—The *Kronprinz Wilhelm*, of the North German Lloyd line, having on board Prince Henry of Prussia, reached New York....The insurgent leader Cortez, second in command to Malvar, has been captured in the Philippines; an active campaign is being made against the ladrones in Cavité province, Luzon, by General Trias and the native constabulary.

FOREIGN.—Miss Ellen M. Stone, the American missionary, and Mme. Tsilka, her companion, and the latter's baby, were released at Strumitza, in Macedonia, at 3 a. m.; no one was present to meet the women, the brigands having giving no notice of where they would release them....The British shipping industry is suffering from a severe depression; large numbers of old steamers are being broken up, and prices for building new steamers are 20 per cent under the best figures of 1900.

The Books of The Week

THE SOCIAL EVIL. With Special Reference to Conditions Existing in the City of New York. A Report Prepared Under the Direction of the Committee of Fifteen. Cloth, pp. 188. New York: G. P. Putnam's Sons.

THE committee of fifteen is a body of public-spirited men of New York who undertook to discover and expose the rottenness existing in the official and private life of the city. The social evil was made the subject of especial investigation, the results of which, or rather, the conclusions from which, are set forth in this report. The history of prostitution and the methods of dealing therewith from the earliest times to the present are briefly sketched. As summed up at the end of the volume, the conclusions of the committee are opposed to licensing, but favor such regulation as would prevent the flaunting of vice in the public eye, secure the disassociation of vice and legitimate pleasures, relieve children and respectable persons in the poorer districts from association with vicious persons, result in the coercive confinement in asylums or reformatories of the notoriously debauched, the punishment of prostitution as a crime, and the creation of a morals police analogous to the sanitary police.

RUSSIAN POLITICAL INSTITUTIONS. By Maxime Kovalevsky. Cloth, pp. 310, \$1.50. Chicago: The University of Chicago Press.

PROFESSOR KOVALEVSKY traces the growth and development of Russian political institutions from the beginnings of Russian history down to the present time, giving a greater part of the book to an examination of the liberal reign of Alexander II, and concluding the volume with two chapters on the position of Poland and Finland in the Russian empire. The work is characterized by clearness of exposition and broadness in its conclusions, the author showing that the empire is slowly evolving into a constitutional monarchy, despite the struggles of the bureaucracy which usurped the despotic powers of the czar following the reaction after the reign of Alexander II, and notwithstanding the slight impression which the European grafts appear to have made upon the old Tartar and Byzantine trunk.

THE METHODS OF LADY WALDENHURST. By Frances Hodgson Burnett. Cloth, pp. 305, \$1.50. New York: Frederick A. Stokes Co.

THOSE who became acquainted with Emily Fox-Seton in Mrs. Burnett's "Making of a Marchioness," will not be surprised to observe her pursuing the same quiet methods of unselfishness and appreciation that won the heart of Lord Waldenhurst. In the sequel her genuine goodness works even greater miracles,

it saves her life and that of her child from the intrigues of designing relatives, and regenerates, to a certain extent, a thoroughly bad woman. She so dominates the story that her stately calmness redeems from cheap sensationalism some of the theatrical devices of the plot.

ALLIN WINFIELD. By George Ethelbert Walsh. Cloth, pp. 326, \$1.50. New York: F. M. Buckles & Co.

A STORY of Boston, soon after the revolution, in which ship-building, piracy, and love-making are the chief ingredients. Allin Winfield is "shanghaied" in Boston harbor and finds, when he recovers consciousness, that he is on the high seas on board a pirate vessel fitted out in his uncle's ship-yards with that gentleman's full knowledge and consent. How his cousin fits out a ship at her own expense to pursue the pirates, is herself captured and taken to the freebooter's stronghold, is rescued by Winfield, and rewards him by marrying him should interest people who like their romances strongly flavored with adventure and blood-letting.

WISTONS. By Miles Amber. Cloth, pp. 346, \$1.50. New York: Charles Scribner's Sons.

MR. AMBER'S "Wistons" has been selected by Mr. Fisher Unwin of London to inaugurate a new series of novels to be called "The First Novel Library." Mr. Unwin informs us that he "will require each book to reach a certain level of excellence." If Mr. Amber's level is to be taken as the standard, we can not speak with enthusiasm of Mr. Unwin's venture. The "Wistons" is a tedious performance, chronicling the annals of three generations of an English family. It was evidently designed as a study in heredity, particularly in tracing the baleful effects of mingling Saxon and Romany blood.

CAESAR'S COMMENTARIES ON THE GALLIC WAR. With Introduction, Notes, and Vocabulary. By Albert Harkness, Ph.D., Assisted by Charles Forbes, A.B. Cloth, pp. 593, \$1.25. New York: American Book Co.

THIS is a familiar edition of Cæsar for school use, differing from previous editions only in the amplification of the historical introduction and the grammatical notes. The illustrations, too, have been somewhat improved. That there are no striking improvements over earlier editions under the same editorship probably arises from the fact that these earlier editions were books difficult to surpass.

ULYSSES. A Drama in a Prologue and Three Acts. By Stephen Phillips. Cloth, pp. 178, \$1.25. New York: The Macmillan Co.

AN outline of Mr. Phillips's drama and quotations of the two most impressive passages were given in our issue of February 6, with the comments on Mr. Tree's production of the play in London. Whether or not it proves adequate as a drama, one may confidently assert that it stands the test as literature. It is splendidly imaginative, and full of

strong, stirring lines that could only have been kindled by genuine poetic fire.

THE JEW AS A PATRIOT. Madison C. Peters. Cloth, pp. 236, \$1. New York: Baker & Taylor Co.

DR. PETERS sets out to prove that the Jew is a patriot and a man of martial achievements, by showing that certain representatives of the race have been patriotic and martial. Of course he has no difficulty in showing that there have been brave and patriotic Jews, just as he once before proved that there have been witty Jews, wise Jews, eloquent Jews, and Jews of all good descriptions. But the question, if there is one, as to the patriotism or what not of Jews as a people, is left unsettled.

CENTENNIAL SURVEY OF FOREIGN MISSIONS. A Statistical Supplement to Christian Missions and Social Progress, being a Conspectus of the Achievements and Results of Evangelical Missions in all Lands at the Close of the Nineteenth Century. By James S. Dennis, D.D. Cloth, pp. 401, \$4. New York: Fleming H. Revell Co.

A WORK involving immense labor and setting forth in tabulated form the extent, organization, field, etc., of the evangelical mission organizations of all countries in all parts of the world.

WOLFVILLE DAYS. By Alfred Henry Lewis. Cloth, pp. 311, \$1.25. Frederick A. Stokes Co.

WOLFVILLE and its denizens are already familiar to many readers through the medium of Mr. Lewis's previous books dealing with the same characters and places. The stories in this volume extend our acquaintance with some very interesting personages, mostly "cowmen," who appear in a variety of situations peculiar to pioneer days in Arizona.

THE RIDDLE OF LIFE. By J. Wesley Johnson. Cloth, pp. 399, \$1.50. Cincinnati, Ohio: Jennings & Pye.

A RATHER artificial tale of modern life having for its motif the attempt of the villain to defraud an old man and fasten the implication of fraud on the old man's son. Some understanding of the worst side of modern commercial methods is displayed. The action centers in New York city with occasional excursions to Montana and the country town of Ridgeburg.

TYPICAL MODERN CONCEPTIONS OF GOD. By Joseph Alexander Leighton. Cloth, pp. 190, \$1.10 net. New York: Longmans, Greene, & Co.

THE views taken as typical by the author are those of Fichte, Hegel, Schleiermacher, and Spencer. The author's own idea is that God is the absolute, self-conscious, and self-intuitive unity, which is the center of the system of which all finite individuals are organic members.

THE WEST-BROOK DRIVES. By Henrietta Payne-Westbrook. Cloth, pp. 394, \$1.25. New York: Peter Eckler.

PSYCHOLOGY AND SOCIAL PRACTICE. By John Dewey. Paper, pp. 42, 25 cents net. Chicago: The University of Chicago Press.

THE EDUCATIONAL SITUATION. By John Dewey. Paper, pp. 104, 50 cents net. Chicago: The University of Chicago Press.

THE two volumes mentioned above are the first numbers of a series called "Contributions to Education." Its aim is to bring the discussion of educational problems down to the level of concrete practice and to eliminate the element of vague, purposeless enthusiasm. To this end, theory and practice are united in the discussion.

LEIBNITZ. Discourse on Metaphysics. Correspondence with Arnould. Monadology. Translated by Dr. Geo. R. Montgomery. Paper, pp. 272, 35 cents. Chicago: Open Court Publishing Co.

A NEW volume of the "Religion of Science" library. The statement of the theories of Leibnitz is comprehensive and useful.

THE BOOK OF BULBS. By S. Arnott, F. R. H. S. Together with an introductory chapter on the botany of bulbs by the Editor. Cloth, pp. 114, \$1. New York: John Lane, The Bodley Head. This is volume V. in the series of Handbooks of Practical Gardening, edited by Harry Roberts.

PORTER AND CLARKE'S SHAKESPEARE STUDIES—"MACBETH." By Charlotte Porter and Helen A. Clarke. Cloth, pp. 144, 56 cents. New York: American Book Co.

A THOROUGH study of "Macbeth," specially planned for college entrance requirements.

EGYPT, THE HOLY LAND AND OTHER COUNTRIES. Giving the principal sights of cities in Europe generally visited by American Tourists, also Reminiscences and Incidents in Europe, Asia, and Africa as the writer saw it. Cloth, pp. 223, \$1. Mishawaka, Indiana: Vincent Brunner.

JOSH BILLINGS' OLD FARMER'S ALLMINAX. Cloth. New York: G. W. Dillingham Co.

A REPRODUCTION of the famous "Comic Allminax," which ran from 1870-1880.

REV. DR. TALKWELL SKETCHES. A Preacher Preaching to Himself. By Dr. C. S. Carr. Paper, pp. 304. Columbus, Ohio: Light of Truth Publishing Co.

THE MORMONS AND THEIR BIBLE. By Rev. M. T. Lamb. Paper, pp. 152. Philadelphia: Griffith & Rowland Press.

SOME LETTERS OF ALFRED HENRY THE THIRD FLOORER. Cloth, pp. 78. Cleveland, Ohio: The Informant Co.

THE WOMAN WHO DARED. By Lawrence L. Lynch. Cloth, pp. 471. Chicago: Laird and Lee.

IN WHITE AND BLACK. By W. W. Pinson. Cloth, pp. 357, \$1.50. Akron, O.: The Saalfeld Pub. Co.

SCRIBNERS For MARCH

A STORY BY RICHARD HARDING DAVIS

One of the best stories Mr. Davis has written and in a vein altogether new to him. It is the story of a Dog, told by the dog, and written from his point of view. The charm of the story is irresistible. It is full of life, humor, and dog character—the kind of story that one not only reads with delight, but tells all of his friends to read.

THE AMERICAN "COMMERCIAL INVASION"

Frank A. Vanderlip's remarkable articles have created more comment and aroused more interest than any magazine feature of many months past. A Reviewer says: "Scribner's announcement did not convey enough about this important and highly interesting chronicle. It was manifestly impossible for any announcement to do that, and the articles must be read to be appreciated." The article in the March number tells of conditions in England, France and Germany, and, like the other articles, is fully illustrated.

EX-PRESIDENT GILMAN'S REMINISCENCES

are most timely now just as the celebration of the Twenty-fifth Anniversary of Johns Hopkins University takes place. Ex-President Gilman's first article is entitled "The Launching of a University," and tells of the founding of Johns Hopkins, and of the many notable men identified with the Institution.

RICHLy ILLUSTRATED by CASTAIGNE

"The Heart of England," by John Corbin, describes the picturesque docks and waterfront of London, with many beautiful illustrations by Andre Castaigne, printed in tint.

F. HOPKINSON SMITH'S SERIAL STORY

"The Fortunes of Oliver Horn" grows better and better with every instalment. Readers who never read serials are making an exception of this charming story.

OTHER CONTENTS

"The Sanctuaries of the Pennine Alps" by Edith Wharton, illustrated by E. C. Peixotto; an article on "War and Economic Competition" by Brooks Adams; a Sea Story by William B. McHarg, illustrated by Reuter Dahl; a Story of the Adirondacks by Clara B. Green, illustrated by D. V. Wilcox; "A Bridal Memory," a story of sentiment by Frances B. Dillingham, and Poems by Robert Bridges, Margaret R. Schott and Albert Bigelow Paine.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, Feb. 22

Along the Atlantic coast business was temporarily checked by the storm, and some interior points also suffered from unfavorable weather, but consumptive demands give no evidence of abatement. Hence, each interruption is followed by an accelerated distribution that is often only limited by transporting facilities. Prices of perishable goods advanced sharply, and the whole range of staple commodities tended upward. Jobbing trade in spring lines of wearing apparel is of ample proportions, and all heavy hardware and products of iron feel the pressure in that industry. Prospects are most encouraging as to the labor situation, extra help being secured with difficulty, while conflicts between employers and wage-earners should reach prompt conclusion now that the committee of conciliation has been organized in permanent form. Railway earnings thus far reported for February show a decrease of but 2.6 per cent from last year's figures, which is fully

MUST BE SHOWN

Coffee Drinkers Require Proof

When persons insist on taking some kind of food or drink that causes disease it is not fair to blame a doctor for not curing them.

Coffee keeps thousands of people sick in spite of all the doctor can do to cure them. There is but one way to get well. That is to quit coffee absolutely: a great help will be to shift over to Postum Food Coffee.

A case of this kind is illustrated by Mrs. E. Kelly, 233—8th Ave., Newark, N. J., who says, "I have been ailing for about eight years with bilious trouble and indigestion. Every doctor told me to give up coffee. I laughed at the idea of coffee hurting me, until about three years ago I was taken very bad and had to have a doctor attend me regularly.

The doctor refused to let me have coffee, but prescribed Postum Food Coffee. I soon got to making it so well that I could not tell the difference in taste between Postum and the common coffee.

I began to improve right away and have never had a bilious spell since giving up coffee and taking on Postum. When I started I weighed 109 pounds, now I weigh 130. My friends ask what has made the change and, of course, I tell them it was leaving off coffee and taking up Postum.

I know husband will never go back to the old fashioned coffee again. You can use my name if you print this letter, for I am not ashamed to have the public know just what I have to say about Postum and what it has done for me."

explained by weather conditions, while compared with 1900 there is an increase of 16.1 per cent. Bank exchanges for the week at leading cities outside New York show a gain of 15.5 per cent over last year's, while the loss at New York is but 5.9 per cent from the total in 1901, which is more than accounted for by decreased activity in the stock market.

IRON AND STEEL

While by no means inflated beyond the point fully warranted by urgent purchasers, prices of pig iron have made decided advances despite the opposition of leading interests. Enormous transactions are recorded, most new contracts being for delivery late in the year. On large orders for distant shipment Bessemer commands \$16.75 at Pittsburg, but for small quantities or earlier delivery fifty cents more is readily paid. Southern foundry iron has been more steadily maintained, but in this also the tendency is upward. More imports are reported, but foreign markets are also advancing now that there is less prospect of American competition because of the unprecedented home demand. Railway supplies and structural material are still the most eagerly sought of finished steel products. Scarcity of rails for prompt delivery is such as to put second-hand rails higher than the official list price for standard goods. Record-breaking building permits indicate the business that will be done by structural mills, and it is reported that two large producers have refused to accept any more orders. Lack of billets is closing plants, and iron furnaces are handicapped by the slow movement of coke.

COTTON AND WOOL

Following the advance in print cloths to 3¼ cents, there has been an equivalent gain in many divisions of the cotton goods market. Stocks are small, and many sellers have contracts so far ahead that they do not seek business. Reports of the jobbing trade are encouraging from the west and north-west, but disappointing from the south-

west and south. Exporters are bidding for China, although holders now refuse to accept business at the terms they offered early in the month. Woolen and worsted fabrics for fall have received less attention, but sales are still fully up to the average.

CORN AND WHEAT

Farm staples are remarkably well maintained at the recent advance in quotations. This is especially notable in wheat, because speculation continues inactive and the cash demand is somewhat irregular, although Minneapolis mills are grinding more flour than at this time last year. Atlantic exports of the finished product fell to 108,663 barrels for the week, against 249,674 last year, but exports of wheat and flour from all ports of the United States made a better comparison, amounting to 3,257,833 bushels, against 4,244,924 in 1901. In so far as anything developed concerning the next crop, it was of an encouraging nature. The situation as to corn is unchanged. Stocks are too light and the new crop too far distant to permit any aggressive speculation on the short side, while the present price level is so high that further efforts for an advance would be dangerous. Interior arrivals of corn were but 1,734,117 bushels, compared with 4,730,221 a year ago, while shipments from the Atlantic

FRESH AND STRONG

Food That Sends One Along

"I found a food at last that I could work on and that would keep me fresh and strong. I have been a school teacher for eleven years, and every year toward the last have felt more or less worn out, and have been bothered particularly with my stomach and serious constipation.

Last year I used Grape-Nuts regularly at both morning and evening meals and the result was really wonderful. I have been entirely cured of the troubles spoken of, and don't know what it is to take a dose of physic any more. The old nervousness and sleeplessness have gone. No more do I lie awake nights until my brain is in a whirl. Now I sleep all night long like a healthy child.

I was the only teacher out of fourteen, in our public school, who did not miss a day on account of sickness during the last session. I have been able to do more hard studying than ever before, and took up the teachers' state reading work, completed the course, and passed a successful examination at the last institute.

Grape-Nuts in my case has proved the truth of the assertion that it is a brain and nerve builder. I would especially recommend it for tired, over-worked school teachers, or any other brain workers." Name given by Postum Co., Battle Creek, Mich.

It is far wiser to build up health and strength naturally with food than to clutch along on some kind of medicine and let the disease finally do its work.

coast aggregated 200,332 bushels, against 3,409,073 last year.

FAILURES

Failures for the week numbered 250 in the United States against 253 last year, and 31 in Canada against 39.

Financial

THE MONEY MARKET

Bradstreet's, New York, Feb. 22

In spite of the large increase in loans and decrease in surplus shown by the bank statements of last Saturday and that for the current week, which was issued on Friday, supplies of money in the New York loan market continued to be ample. The liquidation which took place in the stock market during the last two days apparently had a further tendency to decrease the requirements of Wall Street. It was noted that the banks had been shipping more or less money to the interior, and, in fact, as is shown by the clearing-house averages for the last two weeks, have lost money instead of gaining it. Call loans have been generally made on the basis of $2\frac{1}{4}$ @ $2\frac{1}{2}$ per cent, and in some instances bankers' balances were quoted at the stock exchange at as low as 2 per cent. There was a fair demand for time money for five to six months, the supply being very good, and rates were $3\frac{1}{2}$ @ 4 per cent for thirty to sixty days and 4 @ $4\frac{1}{4}$ per cent for longer arrangements on mixed collateral. Commercial paper has been rather inactive, the buying demand being smaller, while the offerings were on the whole below the average. A fair amount of business was, however, done, rates ranging from 4 to $4\frac{1}{2}$ per cent for prime double names.

THE STOCK MARKET

Stock values at New York generally declined after the announcement on Thursday that the law department of the government would begin proceedings to annul the Northern Securities deal. Liquidation by timid holders was general, although the declines were checked by support from large financial interests. The steel stocks have shown strength on reports that the preferred stock will be retired by an issue of 5 per cent bonds. Union Pacific received support at its decline, and there was also buying at concessions in Northern Securities stock on the "curb" market. The pool interests which have been active in Southern Pacific, the Gould stocks, Metropolitan Street railway and other parts of the list have generally curtailed their operations. Amalgamated Copper was firmer on short covering and better reports about copper-trade conditions. London sold stocks freely in the New York market, but showed a tendency to buy the steel shares. Commercial bills were very scarce, and a fairly good inquiry strengthened foreign exchange. Demand sterling is $4.87\frac{1}{4}$ @ $4.87\frac{1}{2}$.

BANK CLEARINGS

Clearings for the week ending Thursday, February 20, aggregate \$2,183,420,091, an increase of 13 per cent over last week, but a loss of 1.7 per cent from a year ago.

Railway Earnings in 1901

Bradstreet's, New York. Excerpt

Though railway gross receipts for the calendar year 1901 were exceptionally favorable, the net earnings for the same period were even more so. As respects the gross revenue the gain for the year was 10.6 per cent as compared with 1900, while the increase on the net amounted to no less than 15.3 per cent; or, to be more specific, the net earnings of roads that have thus far reported for 1901 aggregate \$488,017,181, as contrasted with \$442,746,768, whereas gross earnings amounted in 1901 to \$1,412,380,114, which sum compares with \$1,276,562,103 for 1900. It is hardly needful to say that the gains now recorded are progressive in that they follow successive increases that have been making for the past five years. The coal roads report the heaviest percentage of gain on net earnings, 29.7 per cent. Granger roads showed an increase on gross earnings, 10.2 per cent, while their net earnings increased 11.6 per cent. Looking at the south-western roads, one will find that with gross revenue increasing 15.3 per cent their net receipts gained 20.4 per cent. Another example similar to this is found in the case of the Pacific coast lines, which return an increase of 14.5 per cent on gross and a gain of 17 per cent on net. Central-western lines, while showing a gain of 9.6 per cent in gross earnings, report an increase of 12.2 per cent in net, and the trunk lines show a gain of 9.6 per cent as regards gross receipts, but an advance of 15.4 per cent in the case of net earnings. Eastern roads earned 5.3 per cent more on gross in 1901 than they did in 1900, and 9.3 per cent more on net. Southern roads contribute an increase of 8.2 per cent to the gross earnings and 14 per cent to the net. One group, the Mexican, reports a loss in net earnings of 7.9 per cent.

Various Topics

Deposited in the state and national banks of Nebraska is \$87,072,436, an average of \$79.16 for each man, woman and child in the state.

The annual report of the Berlin Kaserverein, which serves as a stock exchange clearing-house for that city, shows a heavy decline in transactions for 1901. The total volume of clearances reached only £630,193,000, against £842,055,000 in 1900 and £910,526,000 in 1899.

At the annual meeting in Glasgow of the Wilsons & Union Tube company, the chairman said that no dividend could be declared on account of the unparalleled slump in prices, due to American competition and the dissolution of the combination of tube makers.

The Cunard steamship company has adopted a regular schedule of rates for wireless messages, effective with the sailing of the *Lucania* from Liverpool. The rates are 6d. per word for a message from ship to station and 1s. per word from ship to passing steamer and thence to station.

HAND SAPOLIO

FOR TOILET AND BATH

"Cleanliness"

Is the watchword for health and vigor, comfort and beauty. Mankind is learning not only the necessity but the luxury of cleanliness. SAPOLIO, which has wrought such changes in the home, announces her sister triumph. :: :: ::

HAND SAPOLIO

For Toilet and Bath

It makes the toilet and bath something to be enjoyed. It removes all stains and roughness, prevents chapping and leaves the skin white, soft, healthy. In the bath it brings a glow and exhilaration which no common soap can equal, imparting the vigor and life sensation suggested by a mild Turkish bath. :: ::

IT IS A PURE ARTICLE, FREE FROM ANIMAL FATS, ONLY HEALTHY VEGETABLE OILS BEING USED AS A MEDIUM. IT IS LOW-PRICED, AND VALUABLE FOR THE DAINTEST TOILET AS WELL AS FOR THE HANDS OF FARMERS, MECHANICS, ETC.

Whenever you use for a toilet soap, be sure to keep a cake of HAND SAPOLIO on your wash-stand.

WIT AND HUMOR

Kipling Out-Kiplinged

The rubber-shod rough with a racquet;
the ass on the asphalted path,
The half-witted hurler of hammers; the
lubber that leaps at a lath.
The ruffian riding in red, and the gaby
in gaiters that shoots.
The fatuous flapper of flies, and the
scoundrel with skates on his boots;
The lout that loafs on the links with his
lingo of "lies" and "the like."
The blundering bent-backed bouncer
that buckets along on a bike,
The bare-legged boobies in boots, each
bent on becoming a "blue."
The crass-headed crocks playing croquet,
the crapulous cad with a cue,
The maniacs mounted on motors that
murder a man every mile.
(And I think you will freely admit that
I've bettered my earlier style.)

—*Westminster Gazette.*

Man

How wonderful is man! The sea, the
air
He traverses, and maps the stars on
high;
He looks through solid substances and
where
One lives in lordly ease a thousand
bear
The pangs of want and miserably die.

How like a god is man! He laughs at
space;
He girds the earth with iron rails; the
might
Of cataracts he holds in his embrace;
He moves the frowning mountain from
its base,
And fears to meet his fellow man at
night.

—*Chi. Record-Herald.*

In a Misanthropic Mood

"What is your impression of society?"
asked the old-time friend.

"Well," answered Mr. Cumrox, "I
wouldn't like to have you mention it to
mother or the girls; but my impression
is that society is a place where a man
who has worked his way up in the world
from nothing to a billion dollars is like-
ly to get sneered at because he can't
play ping pong."—*Washington Star.*

Danger

"It seems the queen will wear more
than a peck of diamonds at the corona-
tion."

"Goodness! I should think she would
be afraid of being mistaken for one of
the American guests!"—*Life.*

"Papa," said the small boy, looking
up from his book, "what is a curio?"

"A curio," replied the father, thought-
fully, "is something that costs ten
times what it's worth."—*Chi. Even-
ing Post.*

"While I was engaged to her, she
made me give up drinking, smoking and
golf. Last of all I gave up something
on my own account."

"What was that?"

"The girl."—*Judge.*

THE HOUSE *with the* GREEN SHUTTERS

By George Douglas

THE FOURTH BEST-SELLING
BOOK IN NEW YORK LAST WEEK

ANDREW LANG calls it the most impressive novel published in 1901.
HARPER'S WEEKLY names it as one of the two best novels of the year.
Three of the leading English papers list it among the twelve best books.
Critics, reviewers and readers in all parts of England and America
almost unanimously greet it as a notable addition to our literature. It
has power. It has vigor. It has humor. It is real as life itself. You
cannot afford to let it go unread.

5th Edition.

PUBLIC OPINION

Number 10
Volume XXXII

The Week

Thursday
March 6, 1902

LATER impressions of Prince Henry and the significance of his visit to us find expression in the summary of press comment printed in this issue. The better perspective in which the visit is now viewed results in the popular estimate of its importance being largely expanded. For the present and perhaps for a considerable time to come a new era of good feeling between Germany and America has opened. But would this new friendship stand the test of, for instance, increased tariffs on our exports? It is by asking ourselves such questions that we arrive at a more exact estimate of the true importance of the prince's visit. Nor do we think that there is any ground for the fear expressed in England that we shall be led to view complacently German aggression in China, going hand in hand with the policy of Russia to which we have just strenuously objected.

PRINCE HENRY is now on his tour through the west, where he will get, we hope, a different impression than that he obtained from the character of his reception in the east. There has been nothing in this reception to find serious fault with, but \$60,000 operatic performances and \$20,000 luncheons, tendered by "Captains of Industry" ("Dollar Majesties" a German Socialist calls them), certainly do not give a foreign guest a very exact idea of American democracy. However, there has been less "slopping over" than there was reason to expect, the Germans have been pleased and are very gracious in their expressions of appreciation, the *Berlin Post* saying that "the German people will never forget the chivalrous, sympathetic attitude of the Americans toward the Hohenzollern prince."

THE SENATE'S LABORS have resulted in the passage of a Philippine tariff bill which provides that articles imported into the archipelago from the United States shall pay the duties levied against imports from all countries by the Philippine commission; that imports into this country from the islands shall pay a duty of 75 per cent of the Dingley rates, less export taxes fixed by the commission. Duties collected are to be turned into the Philippine treasury. All efforts to hitch general legislation and definitions of our attitude toward the Filipinos to the bill were properly defeated, and the senate having on Saturday agreed to the conference report on the bill, it will become a law in its present form, which, while not ideal, is as good as could be expected.

A WAY OUT of the Cuban tariff difficulties has apparently been found in the plan to enter into a reciprocity agreement with the island under which the Dingley duties will be reduced one-fifth in consideration of an equal concession on the part of Cuba. Representatives of Cuban tobacco and sugar interests have repeatedly said that a twenty-five per cent reduction in our tariff would not give the needed relief, and if this is so, of course twenty per cent will not be sufficient. But it is probable that the Cubans will find that they can, if compelled to, get along under the arrangement proposed, and May 1, the day on which Cuba becomes actually free, may not be such a dismal occasion after all.

OF GREATER IMPORTANCE than is generally recognized is the action of the Brussels international sugar conference in agreeing to the suppression of all bounties, the reduction of the customs surtax to \$1.20 per 100 kilograms (which would render impossible the maintenance of the German and Austrian cartels), and the imposition of countervailing duties on sugar from states which continue to grant bounties. British influence or fear of what Britain might

do in the future doubtless had much influence with the congress, but all the governments concerned must have been glad to subscribe to an agreement which will relieve them of the burden of supporting the sugar manufacturers. When the sugar industry is left to take care of itself the result will be a reduction in the price of the product the world over.

THE attested statements of Marconi show that he has now succeeded in sending a message of seven words a distance of 1551½ miles by means of his wireless telegraph system, the sending station of which is at Poldhu and the receiving station, in this case, being the steamer on which the inventor was returning to this country. This is a great advance over the sending of a single letter signal from Poldhu to St. Johns last December, and justifies reliance upon Mr. Marconi's promise that he will be ready to send commercial messages between these two points within a few months.

A TREATY has just been concluded between Costa Rica, Honduras, Nicaragua, Salvador, and Guatemala by which they agree that all future disputes which may arise between the signatories shall be referred to a local court of arbitration for settlement. Another clause of the treaty binds each contracting party to expel on the demand of the interested government any political refugee which seeks asylum in its territory, thus removing a fruitful source of dispute and bickering. This step, while by no means a positive pledge of future peace in Central America, promises an improvement of the conditions which have existed for some time, and which, in view of the prospective construction of an isthmian canal, becomes a matter of great importance to the United States.

ACCORDING to last week's dispatches President Castro of Venezuela, who, we have been told, has been tottering to his fall for months, has been elected by congress for a term of six years. What is probably meant is that the Castro dictatorship has been confirmed by a congress subservient to him. But taking the news in this light it is still surprising, partly because of the insecurity of Castro's hold upon the country, and partly because (although these may be considered mere details in a South American state) the constitutional term of the president is two years and the congress has nothing to do with his election.

GENERAL KITCHENER made the announcement on Majuba Day (February 27) that the latest "bag" of Boers had been 600, with a large amount of munitions, the largest capture made by the British for many months, and made when the Boers can ill afford to lose a man or a cartridge. This and other recent successes have enabled the British to make modifications of the conditions of surrender such as they could not make before without an appearance of weakness, but which are now freely granted in the reasonable hope that some leaders, who would not submit under the terms of last September's proclamation, may be induced to yield.

THAT is an interesting story from London which intimates that the kindness with which the London *Times* views Lord Rosebery and his political plans is due to the fact that the Rothschilds have acquired an interest in the *Times* large enough to enable them to exercise control over its editorial policy. The *Times* in anything but Tory garb would be an anomaly, and furthermore if Englishmen are anything like Americans in such matters newspaper support gained through such an influence as that suggested would not be a very valuable political asset.

AMERICAN

Trusts According to the Census

WILLIAM R. MERRIAM, in the *March Atlantic Monthly*, Boston
Condensed for PUBLIC OPINION

THE officials of the census office, in order to prevent misconceptions and insure consistency in the plan and system of tabulation of industries, have formulated the following definition of the term "industrial combination": "For the purpose of the census, the rule has been adopted to consider no aggregation of mills an industrial combination, unless it consists of a number of formerly independent mills, which have been brought together into one company under a charter obtained for that purpose." So far as can be obtained from the data in the census office, the number of these industrial consolidations is 183. They control 2,203 separate plants, scattered throughout the United States, 2,209 being active and 174 idle during the census year. For 56 of the idle plants no returns could be obtained, making the total number of reporting plants 2,147. The 183 combinations extend to almost all lines of industry, producing articles of luxury, materials essential to the upbuilding and growth of the country, and even the very necessities of life. Fully fifty per cent of these combinations were chartered just before, prior to, or during the census year; and it is noteworthy that the epidemic of industrial consolidation, as far as the so-called monopolies are concerned, has been practically confined to the past four years.

Naturally enough, iron and steel, with 69 combinations, heads the list. The number of reporting plants engaged in this industry is 469, and the capital invested, consisting of land, buildings, machinery, tools and implements, and cash and sundries, is valued at \$348,000,000. The value of the output during the census year was something like \$500,000,000. The steel concerns employed during the year 146,000 wage earners including piece workers, and paid \$81,000,000 in wages, to which should be added about 6,000 officials receiving \$7,500,000 in salaries. It is a matter of vital interest to wage earners and the public generally to know that 23 combinations are engaged in producing articles of food, their total annual output, \$282,000,000, being second in importance to that of the iron and steel industry. The number of reporting plants in this industry is 277, and the capital—by which is meant land, buildings, machinery, tools, implements, cash, and sundries—is valued at \$247,000,000. There are 29 combinations engaged in the production of beer, liquors, and beverages. The total output is \$93,000,000. The number of reporting plants is 236, and the capital employed is valued at \$120,000,000. A division of combinations interesting to the general public is that of textiles. Seventy-two reporting plants engaged in this industry are controlled by 9 of these corporations, and their capital is valued at \$92,000,000. Lumber and its allied industries are represented by 18 combinations. There are 65 reporting plants, representing a capital of \$25,000,000. Six combinations relate to leather and its finished products. The number of reporting plants is 100, and the capital amounts to \$63,000,000. One hundred and nineteen paper-making plants were reported, which were under the control of 8 combinations, and represented a capital of \$59,000,000. In the line of chemicals and allied products there are

287 reporting plants, controlled by 19 combinations, and having a capital of \$187,000,000. The clay, glass, and stone industry, which includes cement and brick companies, and others of like character, comprises 201 reporting plants, controlled by 17 corporations. The capital is \$49,000,000. Under the division of metals and metal products, other than iron and steel, are included the Amalgamated Copper company, a brass company, a shot and lead company, a smelting and refining company, a metal, a lead, and a zinc company—16 combinations, representing 94 reporting plants, with a capital of \$120,000,000. The tobacco industry, with 5 combinations, controls 41 reporting plants, with a capital of \$16,000,000. Six combinations are interested in the manufacture of vehicles for land transportation. They control 66 reporting plants, which represent a capital of \$86,000,000. Their output during the census year was also valued at \$86,000,000. In this census classification, 30 combinations, organized for various purposes and operating a total of 120 reporting plants, have been grouped under the head of miscellaneous industries. These corporations were reported as employing \$45,000,000 of capital.

The total property of the 2,147 reporting plants controlled by the various combinations, including land, buildings, machinery, tools and implements, cash, bills receivable, etc., is valued at \$1,458,522,573, of which \$24,717,653 represents the property of the reporting idle plants. The entire capital issued by the 183 combinations which operate these plants is as follows:

Bonds	\$ 216,412,759
Preferred stock	1,066,525,963
Common stock	1,802,262,146
Total.....	\$3,085,200,868

To this should be added the capital stock issued by the United States Steel company, over and above the capital stock of those of its constituent companies, which were included in the census statistics. This additional sum is \$484,414,940, comprising \$298,189,000 of bonds, \$93,112,970 of preferred stock, and the same amount of common stock. This makes a total capitalization of \$3,569,615,808. The value of the land, buildings, and other assets upon which this capitalization is based is \$1,458,522,573.

Exclusive of the Standard Oil company and the Pullman Car company, which should be regarded as exceptional, the par value of the preferred and common stocks of 50 "industrials" listed among active or inactive securities on the New York stock exchange is \$2,463,553,708. The market value of these stocks computed at the prices current December 7, 1901, was \$1,506,743,990. It appears, therefore, that the public has promptly discounted the face value of the promises of these leading industrials by the enormous figure of \$956,809,718, and that it purchases this class of securities (par \$100) at the average price of 61.8. This significant fact indicates that, with the lapse of time and increase of knowledge, due to increasing publicity, that part of the problem of industrial combinations which relates to overcapitalization is likely to become less important by reason of the caution of investors.

The total industrial combinations employed 23,000 managers, superintendents, clerks, etc., and 399,000 wage earners, including piece workers. They paid out during the census year, in salaries, \$195,000,000, and the value of their entire output was \$1,661,000,000. Contrary to the general impression, these great combinations do not control a very large proportion of the industrial output of the country. In 1890 the entire output of manufacturing industry was about \$9,000,000,000. The total product of the manufacturing industry for the year 1900 has not yet been compiled, but it is safe to say that the total will be in the neighborhood of \$13,000,000,000 or \$14,000,000,000, so that the output of these combinations, although it seems enormous, does not represent much more than one tenth of the total industrial product of the United States.

It is interesting to note the different localities which seem to afford the most advantageous abiding places for these various combinations. There are certain states which apparently offer special attractions as the normal homes of these combinations. We find that 358 plants are located in Pennsylvania, 227 in New York, 225 in Ohio, 163 in Illinois, 123 in Massachusetts, 100 in Indiana, while the rest are scattered through other states. I think it may be safely stated that nearly all are organized under the beneficent laws of the state of New Jersey.

Rowdyism in the Senate

PERSONAL ENCOUNTER BETWEEN TILLMAN AND MCLAURIN

THE long-standing quarrel between Senators Tillman and McLaurin, of South Carolina, came to a climax in a physical encounter between the two men on the floor of the senate during the debate on the Philippine tariff bill, February 22. Tillman had repeated his old charge against McLaurin of being corruptly influenced to change his vote on the Philippine treaty. McLaurin, in reply, branded the statement as "a willful, malicious, and deliberate lie." This provoked the assault. Both men were suspended for a

time, and the president's invitation to Senator Tillman to the White House banquet for Prince Henry was withdrawn by the president. On Friday the senate passed a resolution of censure on both offenders.

"Mr. Tillman was the original offender," says the *New York Tribune* (Rep.). "He passed the first insult, and when he was answered too much after his own blackguardly fashion he resorted to violence and treated the senate to a brawl. Mr. McLaurin, under such circumstances, naturally defended himself. In forcing this quarrel Mr. Tillman acted in line with his conduct ever since he became known to the public. He has been the common blackguard of Washington, habitually violating the decencies of debate." The *New York Press* (Rep.) lays the burden of the blame on the senate itself. "Tillman is the logical senator. We do not know but that he is the typical senator. Physical violence is the natural and proper sequence of the sort of language the most august deliberative body has habitually allowed on its floor for years. In the course of this Philippine 'debate,' Tillman himself has been repeatedly permitted to use such terms as 'damnable,' 'despicable,' 'cowards and hypocrites' toward his party opponents. He has not unreasonably concluded that when taxed with the utterance of 'a malicious and deliberate lie' he would be permitted to go a step further and use his fists." The *Chicago Inter-Ocean* (Rep.) considers that there is something to be said for McLaurin's share in the affair. "He has the misfortune to represent a community abounding in men who seem unable to understand that even such an insult as Tillman's should not be resented in the United States senate as it would be on the streets of Charleston. This fact explains, though it does not excuse, McLaurin's forgetting for an instant that he was not in South Carolina, but in the United States senate."

The *Chicago Chronicle* (Dem.) advises both men to resign. "Neither one of these deplorable specimens of thuggism has the right, either by virtue of official position or of social ethics, to await even the decision of the committee in whose hands their unparalleled offense rests. It will be an easy matter for

THIS COMBINATION OUGHT TO BE ABLE TO KEEP THE DOOR OPEN.—*Chicago Record-Herald*

RUSSIA(N) THE GROWLER.
—*Minneapolis Tribune*

the state these two ruffians represent to immediately fill their seats with respectable officials." The Philadelphia *Record* (Ind. Dem.) finds some basis for the charges brought against McLaurin by Tillman. "It is a fact, as asserted by Senator Tillman, that Senator McLaurin was opposed to the Paris treaty, and that when a vote was badly needed by the administration he was suddenly and mysteriously converted in its favor. It is also a fact that immediately after this miraculous conversion Senator McLaurin became the dispenser of government patronage in South Carolina. He had the run of the departments; and post offices and revenue collectorships in the state were at his exclusive disposal."

The southern newspapers can find no words of justification or palliation for either man. The Charleston (S. C.) *News and Courier* (Dem.) thinks that "it would be better for the state and for public decency if the country could be spared the humiliation of being represented by men who can not control themselves." Another staunch Democratic organ, the New Orleans *Times-Democrat*, declares that "there can be invented no explanation that will even in the least degree extenuate the unbecoming behavior of either of the offenders, and it is to be hoped that the American people, irrespective of political affiliations, will visit upon both Mr. McLaurin and Mr. Tillman the smiting rebuke which an indignant and outraged nation well knows how to administer." To quote further would be only to deepen the impression already given, that both men, and Tillman especially, have been unsparingly condemned by editorial writers everywhere without regard to section or party.

Miss Stone Released

MISSIONARY SURRENDERED BY BRIGANDS

MISS ELLEN M. STONE, the Congregational missionary to Bulgaria who, in company with a Bulgarian woman, Mme. Tsilka, was captured by brigands near Samakov, September 3, has been released after the payment of a ransom of \$72,000. The money was raised by popular subscription, as our state department declined to interfere. There is some editorial guessing as to the political outcome of the affair now that our government is free to act without danger to Miss Stone. The Boston *Advertiser* makes the most radical suggestion. "Either the United States must do something to follow up the Macedonian brigands or else the missionaries must understand that hereafter they can expect no protection if they insist on going into bandits' territory. Will not the Stone incident give the United States a good chance to get a new colony in the old world? The other European countries get colonies that way. Every time a European missionary is hurt, the country which he represents gets a new 'concession.' If the United States is going into the colonial business, is not this a good chance to put in a claim for a new American colony near the Mediterranean?"

The Philadelphia *Public Ledger* is more conservative—or less facetious: "With the political aspect of the case this country has nothing whatever to do, neither has it, for that matter, any concern regarding other motives that inspired the outrage on one of its citizens. It has to deal entirely with the simple fact of the abduction, and to hold the countries in which it occurred responsible; also to so deal with them that in the future missionaries or any other citizens of this

country may travel either in Turkey or Bulgaria in perfect security. The repayment of the ransom money should also be insisted on. Unless this country exacts reparation, no foreigner will hereafter be safe in the levant from brigands and other criminals posing as patriots."

Arguments Against Immigration

JOHN CHETWOOD, in the March Arena, New York
Condensed for PUBLIC OPINION

IT has been repeatedly shown, and indeed is a matter of common observation, that a very large majority of our tens of thousands of immigrants go to the great cities, especially those of the Atlantic seaboard, and that they stay there. And in so doing they come into direct and often ruinous competition with the struggling masses of those cities. No other civilized nation dreams of permitting, much less encouraging, such competition. Why should we continue a policy so singular? As for diverting any large proportion of immigration to the country or to the great west, such talk, with due deference to the talkers, seems quite idle. To illustrate by the figures of a single census year, taken at random, the labor commissioner's report shows that in 1895, of 343,269 arrivals, 224,650 went to New York, Pennsylvania, and Massachusetts. Of the remainder, 4,572 went to Wisconsin, 1,516 to Louisiana, and 1,043 to Nebraska. Three thousand one hundred and seventy-four arrivals of one month were traced after landing; 31, less than one per cent, went to states west of the Mississippi, and only 14 to the south.

Such a situation is causing, and has for years been causing, incalculable injury. Can it possibly be justified by the plea made frequently, and in a recent striking presidential message officially, that there is still plenty of room for the immigrant in the country, and especially in the great west? With all the respect that is due to the numerous, and in some cases eminent, persons who appear to hold such a view, there would seem to be four distinct answers to it. The first is that, as already pointed out, the immigrant in the great majority of cases does not go to the west; and it might be added that under the economic conditions referred to he can not go there. The second answer has also been sufficiently indicated in the preceding pages, and need not be dwelt upon. It is simply this: That even if a much larger European immigration could be diverted to the west, the benefit to the country could not possibly counterbalance the injury being wrought in the east, especially at the great centers of population. The third answer to the plea of immigration is that the west evidently does not desire the kind of immigration that is coming. An immigration investigating committee, appointed in 1895, sought and received information from the governors of fifty-two states and territories as to the nationality and character of immigrants desired in each. Two governors, and only two, reported a demand for those from southern or eastern Europe, but not for "laborers." The other fifty, after stating in many cases that labor, even "skilled labor," was no longer desired, expressed a universal preference for the population from the north or west of Europe, or from the United States. But the records for 1901 show that only 22.5 per cent of the immigrants came from the sections preferred, while nearly 70 per cent came from southern or eastern Europe. As for the "labor" character of immigration, it appears that in 1895 only 90,000 of the new-

comers did not enter into direct competition with our toiling masses, being rated as "farmers," etc.

The fourth answer to the plea for foreign immigration, whether for west or east, is that if it stopped tomorrow our growth would not diminish, and neither would the surplus population available for developing the country, except, perhaps, temporarily; for it has often been pointed out, though the fact is most persistently ignored, that immigration checks our natural birth-rate to just about the extent of that immigration. Therefore, our bewildering immigration policy is not making us grow faster, but is merely preventing the natural increase of our own population, and is in effect to that extent supplanting it! And, as just said, if it stopped we should very soon have just as many pairs of hands, and quite as skillful ones, with which to settle, develop, or reclaim.

Canada, England, and the United States

HERMAN WHITAKER, in the March *Ainslee's Magazine*, New York. Excerpt

UNTIL the recent wave of imperialistic feeling swept over the colonies, Canada discriminated in her tariffs against Great Britain and favored the United States. England found herself very much in the position of a wholesale merchant who sets up his son in the retail business, to find the unfilial youth buying his supplies from the rival house. Today Great Britain enjoys commercial privileges which the United States might envy if they were detrimental to American trade. But the plain fact of the case is that the preferential tariff with Great Britain has not appreciably altered the lines of trade that seem fixed by more powerful laws than human statutes. After several years' experience, the Canadian authorities report that the increase of imports shows a little higher percentage from Great Britain and a slightly lower percentage from the United States.

	Great Britain	United States
Imports into Canada.....	\$ 45,000,000	\$117,000,000
Exports from Canada.....	108,000,000	69,000,000
Volume of Trade.....	\$153,000,000	\$186,000,000

Gradually, year by year, there seems to be an increase in Canadian exports to the United States and a decrease in the exports to Great Britain. Comparing the year 1900 with the preceding year, these fluctuations are represented by a percentage of five and one-third and six and one-third; the former is the decrease in exports to Great Britain as compared with the total exports, and the latter the increase in exports to the United States as compared with the total exports. This shows that in her dealing with England, Canada has had a large balance of trade in her favor, but the difference has not been paid in cash. There has been no movement of bullion from one country to the other. The bulk of the shipments in both directions having been carried in British bottoms, the earnings of the shipping, plus the interest on English capital invested in Canada, have been almost sufficient to settle the balance. And the difference has been settled through the intermediation of the United States. British financiers see the disadvantages of settling by this roundabout method; and, in order to avoid the payment of brokerage commissions to American bankers, they are urging Canada to cultivate the British import trade.

To hold her own, it will be necessary for the United States to do two things: Abolish artificial trade barriers on the continent of America, and take the needful steps to secure her trade in the far east. She needs the nickel of Sudbury, the coal of Cape Breton and British Columbia, and the logs and lumber of Ontario. She must draw her supplies from the largest possible territory, and manufacture on the largest possible scale if she is to maintain her economic superiority in the markets of the world. And in this, Canada's interest is identical. She can not hope to stand alone. Her trade destiny is inextricably involved with that of Great Britain and the United States. Her imports from these two countries are eighty-five per cent of the total imports, and her exports are ninety-one per cent of the total exports. English statesmen have long foreseen that commercial unity means economic strength, and are trying to draw together and federate into one mighty economic empire Britain's scattered colonies, but there is in this,

THE EAGLES IN CHORUS: "Well, you're a bird!"
—*Minneapolis Journal*

NOW FOR GENUINE ROUGH RIDING
—*Detroit News*

should they be successful, no menace for the United States. In their commercial policies England and the United States are as one. They both require open markets. Great Britain, because she is essentially a manufacturing nation, importing her supplies and most of her raw material; and the United States because she is the greatest manufacturing nation in the world, with the largest volume of exports.

Mr. Hill on Democracy

HIS MANHATTAN CLUB SPEECH

HON. DAVID B. HILL'S speech at the Manhattan club banquet, New York, has occasioned considerable comment. "Democracy," the speaker said, "means the maintenance of popular rights; imperialism means exclusive privileges to the few. Democracy favors the preservation of the personal liberty of the citizen; imperialism exalts the nation and belittles the individual; imperialism makes what its apologists call a 'splendid' government; Democracy makes a happy and liberty-loving people." He would have the opposition with which he identifies himself stand for hard money, taxation for public purposes embodying a tariff for revenue only, a cleaner administration of our public affairs at home and abroad, recognition of the power of the people, and a higher sense of official accountability. "Let us oppose against the Republican government of syndication and syndicates, a Democratic government laid in the written law of the land, strictly construed and headed for the benefit of the many, not for the enrichment of the few."

The Brooklyn *Eagle* (Ind. Dem.) sees in the speech and the gathering of representative Democrats to which it was addressed reason to hope that the next election in New York state will be carried by the Democrats by way of preface to Democratic victory in 1904. "The signs of the Democratic times are distinctly auspicious." In the opinion of the Brooklyn *Citizen* (Dem.), Mr. Hill's platform is "broad enough for every Democrat to stand upon. It dismisses the silver proposition from further consideration, and in this respect may possibly give offense to a few extreme victims of the white-metal craze, but as the Democratic party can not hope to receive the approbation of persons of that type without alienating nearly all the rest of America, this will have to be accepted philosophically. In other respects the Democratic party, if placed on the platform suggested by Mr. Hill, would be at once consistent with its own record and in a position to deal intelligently with the problems now before the country."

Among other speeches made and letters read at the banquet was one from Henry Watterson, which in the opinion of the Pittsburgh *Dispatch* (Ind.), and some other papers, is a better model for Democratic rehabilitation than Mr. Hill's speech: "He sensibly urged the party to address itself to the consideration of the business interests of the nation. Moderate counsel, he truly said, was generally wise counsel. The fewer and simpler the issues, the surer they were of popular comprehension and approval. The Democracy should have done with quack specifics and endeavor to discover a remedy for some one trouble. But neither gentleman produced a definite policy, save that of opposition to Republicanism. It will require something more enthusing than a calamity cry and a howl about the 'rascals in office' to sweep the country in the next presidential campaign." The Detroit *Free*

Press (Ind. Dem.) does not think the Hill program could be improved upon, but, this paper asks, "Can he rally his scattered and divided party to his declaration of principles? Can he procure a burial of dead issues and a union of forces to solve live issues? Could he unite his own state? Would he accept a nomination upon compromise terms? Could he solidify the old Democratic party upon the Jeffersonian ideas indicated, and could then convince the people that those ideas would control the administration of national affairs, he would be elected by an overwhelming majority." The Cleveland *Plain Dealer* (Dem.) thinks "Mr. Hill's advice may be condensed in a sentence. It is to abandon issues on which the Democratic party has repeatedly gone to defeat, and stand firmly by the fundamental principles on which it has in the past won its most important victories."

Southern papers attach more importance to Mr. Hill's utterances than do northern and western journals. The Richmond *Times* (Dem.) is enthusiastic over the prospect: "We believe," the editor declares, "that if the Democratic party will adopt a platform substantially as outlined by Mr. Hill and nominate that distinguished gentleman for the presidency, it will have a splendid chance to win. The Republican party will find itself in a more or less embarrassed condition in 1904. There is no telling how much more mischief President Roosevelt will work before his term shall have expired. It will be awkward for the party to throw him down, and it will be suicidal for the party to put him up as its nominee. The Democrats will be in fine position to take advantage of the Republican predicament." The Savannah *News* (Dem.) leans toward the policy recommended by Mr. Watterson: "There are other things in which Democrats believe, but concerning which they are divided. Would it not be as well to let them remain in the background for the time being? Against them the majority has decided, and under existing conditions would likely do so again. The wise thing for the Democratic party to do, therefore, is to battle for principles which have the approval of all its members. There may be a few irreconcilables—men who prefer defeat to surrendering any portion of their prominence as leaders—but it is hardly probable that the party will permit itself to be handicapped by them."

Later Impressions of Prince Henry's Visit

PRINCE HENRY has now been received and welcomed in a variety of ways—by president, our greatest cities, by congress, by the press, and by private citizens. The prince himself has "won all hearts," as President Roosevelt said, or, in the words of the Brooklyn *Standard-Union*, "He has shown that as a man and for his own personality, aside from his character as a representative of the kaiser and the German people, he is entitled to the warmest welcome." But it is as the representative of Germany that he is most generally considered. This is natural, especially in view of the significant statement made by Prince Henry at the press banquet on February 26: "It will interest you, I know, to learn something about the nature of my mission to this country. The facts are as follows: His majesty, the emperor, has minutely studied the recent and rapid development of the United States, and his majesty is well aware of the fact that yours is a fast-moving nation. His sending me to this country may therefore be looked upon

as an act of friendship and courtesy, with the one desire of promoting friendlier relations between Germany and the United States. Should you be willing to grasp a proffered hand, you will find such a one on the other side of the Atlantic ocean."

In the opinion of the *Chicago Inter-Ocean*, "The prince has been welcomed to the United States in a way to disarm the most captious European critic and to satisfy the most exacting American. In all the ceremonies there have been the fine dignity of an international episode and the warmth of courtesy that goes only with a friendly personal greeting." And, says the *Minneapolis Times*, "Many years will pass before the friendship typified by these ceremonies will be broken." Again and again the reception of the prince is referred to as a "testimonial of friendship from nation to nation"—the words of the *Kansas City Journal*—or "the cementing of a friendship of which we would have more and more," as the *Pittsburg Dispatch* puts it. The *Brooklyn Eagle* says no one can fail to see that Prince Henry "has spread around him an atmosphere of good-will, and he is in the process of becoming our most popular visitor. The effect of this interchange of national good-will and national understanding upon international politics may not be immediate—the prince is not here upon any official mission—but it can not help being far-reaching. Good-will comes of mutual understanding, and the knowledge which this country and Germany have of each other will be widely increased by this visit."

The attitude of the prince toward "German-Americans" and their attitude toward him have not escaped attention. In speaking to the members of the German societies of New York, he congratulated them as citizens of a "brilliant country," who had brought with them from their old homes the German's devotion to duty, and added: "My wish is that you, as citizens of this beautiful land, manifest toward it the same loyalty that your brethren display toward theirs, in your old homes." The *Philadelphia Times* finds "peculiar significance in this statement when we reflect how many of our previous diplomatic quarrels with Germany grew out of Germany's denial of expatriation and her claim upon the continued allegiance of

emigrants naturalized here. We have passed that stage of international dispute, and we have passed the period when there could be any question here of the Americanism of our citizens of German origin or descent."

Congressional Summary

CONGRESS DAY BY DAY

FEBRUARY 24.—Prince Henry visited both branches. The senate passed the Philippine tariff bill after seven hours of exciting debate, by a vote of 46 to 26, on strict party lines, Senators Tillman and McLaurin not being allowed to take any part in the proceedings; many amendments were offered, but, except those offered by the committee, only one, an amendment restricting the operation of the sedition laws enacted by the Taft commission, was adopted.

FEBRUARY 25.—In the senate, Mr. Frye, the president *pro tem.*, ordered the names of Senators Tillman and McLaurin restored to the rolls, in order that their case might be decided by the senate; debate on the case was cut off by adjournment after a session of only fifteen minutes.

FEBRUARY 26.—The senate adjourned without transacting any business. The senate amendments to the Philippine tariff bill were non-concurred in by the house, and the bill was sent to conference.

FEBRUARY 27.—Both houses united in holding memorial services for President McKinley, the eulogy being delivered by Secretary Hay.

FEBRUARY 28.—A vote of censure on Senators Tillman and McLaurin was adopted; the majority report of the committee on privileges and elections held Tillman to be the greater offender. All records in private pension legislation were broken, 159 bills being passed in three hours by the house.

MARCH 1.—In the senate the Hansbrough bill, providing for the irrigation of arid lands, was passed, Mr. Frye's ship subsidy bill was taken up and made the unfinished business, the omnibus claims bill was passed, and the conference report on the Philippine tariff bill was agreed to.

The Issues of the War Between Colombia and Venezuela

NEWSPAPER readers may easily be pardoned if they fail to catch the point of the controversy between Colombia and Venezuela that flares up now and again in active hostilities. Is there a state of international war or is there not? The presidents of both countries agree in proclaiming that war does not exist. Some light is thrown on the situation by Mr. Edwin Emerson, Jr., writing in the March number of the *American Monthly Review of Reviews*.

It was borne in upon me that the apparently senseless hostilities that were ruining two countries were but a resumption of the old strife between liberalism and the heritages of Spain's clerical *regime* over her colonies. New circumstances have arisen to fan the old fight to fiercer flame. One is that the govern-

A brief historical retrospect over recent events in South America makes the issues fairly clear. At the time when Spain was losing Cuba, the last congress of Colombia sat in Bogotá. The Liberal party had but one spokesman in the congress—to wit, Rafael Uribe-Uribe. The government majority championed the cause of Spain. Uribe-Uribe was the only man in the congress who spoke for America as against Spain. He was hissed down. Next, the Panama canal question came up. The French concession was to be extended for ten years. Again Uribe-Uribe spoke for America as against France. The project was voted down. The congress was dissolved. Then the revolution broke out, and Uribe-Uribe took the field, in Santander, the richest coffee-growing state of Colombia.

While affairs were thus disturbed in Santander,

From the Review of Reviews

PRESIDENT CASTRO AND HIS CABINET—CASTRO IN THE CENTER

ments and peoples of all the neighboring republics by which Colombia is hemmed in on the north and south are liberal in sentiment. These people, for the most part, are ready to help their fellow-liberals up in arms on the other side of the frontier. Colombian insurgents, when beaten in the field, can always find a safe refuge in Costa Rica, Guatemala, Nicaragua, Honduras, Ecuador, or Venezuela, and can prepare new expeditions across the line. Another moving impetus toward war is the low price of coffee, produced by the overproduction of Brazil. For the coffee planters of Colombia and Venezuela, the shipping cost of coffee almost corresponds to its present selling price. As a result, the coffee plantations lie idle, and the starving peons readily take to soldiering. The presence of large bodies of soldiers, rapacious and destructive, as all soldiers are, in its turn, increases the difficulties of coffee production. A third moving issue is the long-promised sale of the isthmian canal. The Isthmus of Panama is the last paying asset of Colombia. Whoever holds the isthmus, with its two ports of entry, with its valuable canal and railroad properties, thereby comes into possession of the country's cash.

Cipriano Castro, a Venezuelan exile living in Cúcuta, profited by the occasion to lead a small band of Colombian Liberals into Venezuela. After a crushing defeat at Valencia, President Andrade fled the country, and Castro entered Carácas in triumph. His early Colombian adherents got Venezuelan government jobs. All went well for a while, especially after the prompt suppression of a counter-revolution, until Castro's sympathies with the Colombian Liberals in the field began to tell on his foreign policy. Uribe-Uribe had been badly beaten in Colombia. He was made welcome by Castro in Venezuela, and was intrusted with the command of a division on the Colombian frontier. Then the government forces in Santander, to bring relief to the stricken district, tried to open the closed rivers by a sudden armed invasion into that region of Venezuela through which the rivers flow to the sea. For the sake of appearances they were led by Rangel Garbiras, a Venezuelan revolutionist. They made for the prosperous town of San Cristóbal, but Uribe-Uribe had managed to gather his corps of insurgents, and beat off the attack in a three days' battle. Uribe-Uribe promptly prepared a counter-invasion. He was aided

in this by Castro, who practically put all Venezuelan forces in the Cordillera at his disposal.

The expenses of Castro's various armed expeditions ate up all his ready finances. When he could no longer maintain Uribe-Uribe's troops, Uribe cut loose and recrossed the border, to join forces with other insurgent leaders in the interior of Colombia. Uribe's cousin proceeded to Panama, and the civil war there broke out with fresh vigor. By their recent brilliant stroke in the harbor of Panama, the Colombian Liberals have won the command of the sea on the Pacific side. To assist them in doing the same on the Atlantic side, Castro has now supplied them with a torpedo-boat and a small gunboat. Threatened by Germany's financial demands on one side, and by internal revolution on the other, Cipriano Castro still puts the advancement of the Liberal cause in a neighboring state ahead of everything. It remains to be seen whether the triumph of the Liberals in Colombia shall mean Castro's ruin in Venezuela.

Some Italian Statesmen

SOME MEMBERS OF THE CHAMBER OF DEPUTIES AND THE RECENT CABINET

IN view of the recent resignation of the Italian cabinet (PUBLIC OPINION, 27 February), it is worth while to read what William J. D. Croke has to say in the March number of *Munsey's Magazine* about a few Italian politicians and statesmen.

Giuseppe Zanardelli is a luminary in the law, a practitioner of national distinction, the framer of the penal and commercial codes, one of the finest intelligences in politics, a man consistent in principle. Prime minister of Italy, Zanardelli is the young king's experiment in government through the Liberal party. He is younger than Saracco, whom he succeeded, being only seventy-five years of age. His face is lit up with the expression of a very strong and remarkably sharp intelligence, while his attenuated frame lends itself with naturalness to the rapid gestures of his fluent and classical orations.

There is none of this Lombard fascination about Giovanni Giolitti, a Piedmontese, born at Mondovì in 1842. He is a product of the bureaucratic machine—the working chief of a department who became head of the state. An astute politician, lacking a sufficient following in parliament, his premiership has been marked by a lack of consistency of purpose. As minister for the interior under Zanardelli, Giolitti is proving a greater success than ever he did as premier.

Guido Baccelli, the minister of foreign affairs, was born in the Eternal City, in 1832, and is, therefore, at seventy remarkable as an active scientist. His latest discovery he explained last autumn in a typically eloquent address to the medical congress at Pisa. Shortly before, in the Virchow celebrations at Berlin, he signalized himself as a Latinist. An enthusiastic archaeologist and a ripe classical scholar, he used his power as minister for public instruction to advance education in Italy. Most recently his revelation of a remedy for foot and mouth disease has shown how versatile is Italian intellect. As minister for agriculture, he introduced a program of radical reform.

Luigi Luzzatti, classed in the public mind with Baccelli, is one of the younger generation of politicians. He was born in 1842. He is a many-sided economist, a financial theorist, the author of much and the organizer of more. The apostle of coöperative

effort, the successor of Gladstone in the French institute, he has ventured in lectures and books into questions historical as a relief from the serious studies that have made him world-famous.

Enrico Ferri, the leader of the opposition in the chamber of deputies, is such a leader as the unruly and acephalous Extreme Left, composed of Radicals, Republicans, and Socialists, may boast of. A parliamentary debater of unusual skill—tall for an Italian, slim-figured, pale, curly-haired, frantic at moments, and always intense, with a voice rising to a scream in excitement, with a woman's soul in a man's body, un-resting, versatile, witty—Enrico Ferri is the most remarkable composite of modern Italy. A professor in the Royal university at Rome, he is a scientific au-

From *Munsey's*

GIUSEPPE ZANARDELLI

thority whose triumph in the Congress of Criminal Anthropology at Amsterdam, in September last, gained him enthusiastic praise from the most staunch of monarchical organs. In 1886 he entered parliament as a deputy. Since then he has been the most active of Italy's public men, teaching in the university, orating in the chamber of deputies, writing books, lecturing on scientific subjects all over Europe, and urging his Socialist crusade wherever he could gather an audience.

A framer of cabinets who has never yet held office as prime minister is Baron Sonnino. Since the fall of Crispi, he has held the premiership in his gift. Born in 1849, Sidney Sonnino is in the prime of a successful political career. By his unalluring gravity, he is the reverse of Ferri, his rival in the chamber. Like Luzzatti, Sonnino is of Hebrew stock, and thus the more naturally recognized as an authority on finance. His reputation is established by much writing and by long cabinet experience.

Like Giolitti, the minister of the interior, in his poverty of following, is Antonio Starabba, Marquis di Rudini. Conservatives see in him an ideal administrator. The antithesis of Enrico Ferri in political be-

lief, he is his rival, despite his sixty years, in looks and fascination. Yet with all the softness of tone in his aristocratic appearance, the marquis is a man of blood and iron on occasion. As premier in 1898 the Marquis di Rudini stamped out the abortive revolution of that year. By his strength the government was saved.

German Corporations and an Artificial Market

W. BERDROW, in the *March Forum*, New York. Condensed for PUBLIC OPINION

AMONG the features common to the industrial life of the United States and that of the German empire are the vast corporations, which are nowhere else developed in an equal degree. Some of them, as, for example, the German *Electrizitäts-Gesellschaft*, were originally stock companies, while others later became such, in order to attain the degree of independence enforced by financial conditions. The phenomenon of great corporations of which I purpose to speak in this paper is the artificial creation of an outlet for products which can be no longer advantageously sold in the open market. The rise of the great German electrical companies, several of which employ 10,000 men and control a capital of 100 to 160 million marks, is not due solely to the operation of the time-honored economic principle of supply and demand. That the electrical companies of Germany have, nevertheless, grown to "American proportions" is attributable in some degree to the fact that they succeeded in increasing production by artificial means; and although this policy has been in operation for ten years, and apparently with good results, the supply is now greatly in excess of the demand.

The beginning of this movement was of a very simple and harmless nature. The electrical companies organized for the purpose of illumination or transportation could not afford to wait for public sanction, for the simple reason that the value of electricity was not yet understood by the public at large, which, therefore, had to be convinced of its practical utility through the initiative of enterprising corporations. Under these circumstances, it was but natural that the corporation, either by an increase of the capital stock or by the acceptance of loans, should have been willing to dispense with immediate profits, and to inaugurate the undertaking and conduct it temporarily at its own expense. Moreover, no one was injured by this proceeding, which proved most advantageous to its promoters, who, by constructing their own machinery, conduits, and other apparatus, increased the scope of their business, and at the same time secured good prices by the avoidance of competition. The public now cheerfully placed any amount of capital at the disposal of an electrical enterprise, providing it was conducted by a large corporation, which could decide whether to continue the management of the industry or to dispose of it by sale or by a special arrangement with separate stock companies. From an economic point of view, the latter would have been the more correct method, as the great firms of the electrical industry had been organized for the purpose of building machinery, plants, and conduits, but not with a view to operate these. Moreover, the operation of the electrical companies proved to be far less remunerative than their organization.

Another cause of serious trouble to the large industrial corporations was the enforced consumption of their own capital. During the last ten years or

more several of them have employed the greater part of their capital no longer for the extension of their own immediate enterprises, but for the purpose of financing central and branch organizations, established for no other reason than to create a market commensurate with excessive production. A limitation of business, furthermore, deprives the corporation of the privilege of establishing rates; the prices being regulated largely by the law of supply and demand. Herein lies another cause of decline. The remunerative orders, self-created by the corporation, cease, and the industry becomes dependent upon private enterprise—a precarious matter at times of financial depression.

Undeniably such industrial organizations are sometimes very prosperous, and prove to be fortunate speculations. In an economic sense, however, they can never be regarded as harmless, inasmuch as they are primarily established for the purpose of immediate profit without regard to their ulterior productivity.

The Next Emperor of China

WHO SHALL SUCCEED KUANG HSÜ?

IN view of the threatened retirement of the dowager-empress of China and the probability of her death, in any event, within a comparatively short time, this interesting discussion from the *North China Daily News* of the succession to the Dragon throne is especially pertinent:

When the last emperor, Tung Chih, died leaving no heir, his wife soon following him to the tomb, the two empress dowagers, his own mother, the present empress dowager, and the first wife of the former Emperor Hsien Fêng, who constituted themselves the joint regents of the empire, should properly have selected a prince standing to Tung Chih in the position of a nephew, who might have been adopted as Tung Chih's son and performed the duties which a son owes to a deceased father. The present empress dowager selected a son of her brother-in-law Prince Chun, and that son was made emperor under the title of Kuang Hsü; but the difficulty remained that he was the first cousin of, and therefore of the same generation as, the deceased Emperor Tung Chih. Very strong objections were made at the time to the choice. The empress dowager, however, stuck to her guns; but a solemn covenant was drawn up and sealed by H. M. Kuang Hsü's sponsors, (he was only four years old at the time), and this covenant is still in existence, whereby as soon as Kuang Hsü had a son, that son was to be proclaimed emperor as the direct heir, not of his real father but of his uncle Tung Chih, H. M. Kuang Hsü was to abdicate, and his reign was to be treated as an interregnum.

H. M. Hsü has no son, and the best authorities are agreed that there is no likelihood of his ever having a son. He, of course, can adopt one for himself, but this does not settle the succession to Tung Chih; and it is this which, we are told, makes it impossible for the empress dowager to give the whole power into H. M. Kuang Hsü's hands. By the agreement made by his sponsors when he was chosen to succeed Tung Chih, he is virtually only temporary emperor. The empress dowager was persuaded by Prince Tuan to solve the difficulty by proclaiming his son Pu Chun heir-apparent; but he turned out such a scapegrace, and his father brought so many sorrows on the head of the empress dowager, that he had to be deposed.

The *Yokohama Japan Weekly Mail* is authority for the statement that an exit from the dilemma is to be found in marrying a daughter of Yung Lu to Prince Chun, the emperor's younger brother, and proclaiming their son—if they have one—heir to the throne. This son will then appear in the dynastic record as the successor of Tung Chih, and the fifty years that have elapsed since Kuang Hsü became heir will be counted an interregnum.

SOCIOLOGICAL

The Growth of a New Civilization

AN ANALYSIS OF THE PEOPLE OF SIBERIA

THE civilization that is now developing in Siberia is discussed in two of the March magazines; Mr. S. M. Williams, an American, writing for *Munsey's*, and Mr. John Foster Fraser, an Englishman, for the *Pall Mall*. Both writers are of the opinion that Siberia is rapidly springing into a position of supremacy in Asia; Mr. Williams says that "with its farms like the wheat fields of Dakota, its mines like those of Colorado, its rivers like the Mississippi, and its forests like those of Canada, Siberia is a country of marvelous promise—an eastern California." The new civilization that is springing up in this promising country is made up of Russian immigrants and fortune-seekers from all parts of the globe, agriculturists, miners, business men, and adventurers. Both writers call attention to the fact that the convict element, so closely associated with Siberia in the popular mind, is a very small factor. Life convicts, murderers, the scum of Russia, are now sent for the most part to Kamchatka and the island of Sakhalin, off the far northeastern coast; and the convict-descended "native Siberians" constitute but a small proportion of the population. Of the Russian peasant element, Mr. Foster writes:

"Glowing inducements are held out to the *moudjiks* of the barren southern steppes to emigrate into Siberia; free passages are provided, and each spring three hundred thousand poor are taken to Chelyabinsk, the first town beyond the Urals, where there are huge buildings for their accommodation until they can be sorted into groups and sent off into the wilderness to start life afresh. Big plots of land are given the newcomers; instructors are constantly traveling about showing how best the land can be cultivated; the government purchases American farming machinery, and lets the peasantry have it at cost price, payable on the installment plan. Yet, with all this, Siberia is at present little more than a neglected prairie. The fact is, the Russian has not got it in him to be a successful farmer. He has not the faculty for understanding the nature of soils; manuring is beyond his comprehension—indeed, he would rather not eat food raised on manured land. You never see ranches, as in America. The Russian is fraternal, and he will not live at a farm ten or fifteen miles from a neighbor. He must herd in villages, even though he is obliged to go ten miles to his land. He seizes all opportunities to avoid work.

"He is fond of gaiety, fond of drinking, fond of music, is the Siberian; but he lacks initiative, and even gold is little of an incentive to him. He is something of a fatalist, and if he can get enough food to stave off hunger, and enough *vodki* to kill melancholy, he doesn't mind. The Siberian is jealous of the foreigners, chiefly Germans, who come into his country and grow wealthy; but it hardly ever strikes him he might be wealthy also. He scrapes along from year to year. The Russian immigrant soon gets homesick for the southern steppes; and so, though the trains that cross the Urals in spring are full of newcomers, those that recross in the autumn are nearly as full of the discontented returning. The struggle being made by the Siberians to throw aside their uncouthness and take to civilized ways is entertaining. The man who wears his shirt outside his trousers and tucks his trousers inside his boots is regarded as uncivilized, and is much looked down upon by his brother who wears his shirt in its proper place and whose trousers come outside his boots. So anxious are they to cast off their old habits, that notices are found in the restaurants stating that customers wearing flannel shirts will not be served; and in the saloon on the Amur boats there is a general request for passengers not to get drunk, and to remember that they belong to a civilized nation. It doesn't matter where you go, you notice that most of the trade is in the hands of Jews

—From *Munsey's Magazine*

THE WINTER HOME OF THE ENTIRE TOWNSHIP OF KIZHI, AND THE LOWLY HABITATION OF THE PEASANT FROM THE WEST.

or in the hands of Russians from the Baltic provinces, and therefore really Germans. The Russian, despite his striving after the ways of the west, is the slowest man on earth."

Mr. Williams says that there are, in reality, two civilizations in Siberia, and that the city of Irkutsk is the dividing point. "To the west, the development has been by Slavonic agency; to the east, development has come from a curious mixture of races—the yellow and the white; the never-changing Chinese and the restless, cosmopolitan crowd that fastens upon every new country. It is from the east that Americans have reached Siberia. They have found the Germans already there, and have entered with them into a rivalry that means the commercial development of Siberia. Against these men of brains the helpless Russian immigrant stands no chance. The yellow races do the labor, the Americans plan the fortunes. From Lake Baikal to the Pacific the mountains are filled with gold, with iron, and coal. It is a new California, and the Americans are not blind to its potentialities."

Compulsory Insurance in the United States

A PLAN TO PROTECT EMPLOYERS AS WELL AS EMPLOYEES

ANDREW A. BRUCE, in the *March Forum*, proposes a plan of compulsory insurance that would, he thinks, put an end to the workman's temptation to manufacture a case against his employer and force him to make some sort of a settlement, on the theory that it would be cheaper to pay a few hundred dollars than to waste a thousand in defending an action. The plan is not altogether a new one; it has already been adopted in modified forms by a number of corporations in the United States; its essential features are as follows:

"Every employer, as a prerequisite for employment, is to compel the employee to insure himself against death and accident for a certain amount, say \$2,000, either with a company in which the employer is interested or with one which is independent; the employer, if necessary, paying part of the premiums. In such instances the policy is to contain a provision that in case an attempt is made to recover damages of the employer under his common-law liability for negligence, no recovery can be had on the insurance policy in question. This method gives the employee a choice of remedies, but takes away neither. It secures to the injured man compensation for his injuries in the form of insurance money, in cases where his employer would not be liable under the common law and where, therefore, no recovery could be had against him as in cases of contributory negligence. It does not, however, release the employer from the liability to which he is legally subject under the common law. It is of paramount importance to the community, as well as to the injured man himself, that such a person should have some means of support. Every cripple who is unable to recover damages from his employer becomes of necessity a burden on the community. Accordingly, the corporations or trusts that would institute such a system and provide for that support would become agencies of great public good. The courts have time and again held that an employer can not by any means contract against liability for his own negligence. But in such cases, that is, in cases where the negligence of the employer is beyond doubt and the insurance comparatively small, the employee could and would resort to his common-law remedy against his master."

The Club Habit Among American Women

EDWARD BOX, in the *March Ladies' Home Journal*. Condensed for PUBLIC OPINION

THE passion for forming clubs among American women appears to be absolutely unbridled. There would seem to be no limit to it. One can only reach the deduction, from the number of these clubs formed, that women have not the courage to stand alone on any single subject. Everything they do must be organic. For folks to come together and truly and openly discuss vital themes is always helpful. It is no doubt true that there is something in every life from which we can extract some lesson, some help. But it is, nevertheless, a fact that in this very multiplicity of clubs is found one of the worst elements in the complex lives of modern women. There are thousands of women in this country who have the club habit without rhyme or reason. They are nothing short of club-crazy. The club is rapidly becoming a veritable intoxicant among women. It has been one of my dissipations to study woman's clubs, both at close range and at a comfortable distance, and I must confess that what I have seen of them and read of them is not to their credit. So far as I have been able to see and find out, hundreds of women belong to clubs without knowing why they do belong, and, as a rule, they get little benefit from them.

I firmly believe that if one-half the women who belong to clubs would take an honest accounting of themselves and decide the actual good derived from their membership in this or that club, it would have two results: fewer clubs and fewer women of scattered energies. Now, the club idea of itself is to be commended for man or for woman; provided it is productive of some good and it is kept in its rightful place. If a woman who is busy all day amid the routine of her household work belongs to some one good club to which she can go, and, leaving domestic cares behind, get into an entirely different atmosphere, and secure mental stimulus or physical refreshment from the change, it is beneficial. It does that woman good. Therefore, it is worth while. It matters not what kind of a club it is: if it appeals to her dominant taste, and she derives a distinct benefit from it, it is a good factor in her life. The question for her to honestly decide is: Does she come away from that club refreshed or bettered? If she can not honestly say that such a result comes to her, then she should be honest with herself and, resigning from that club, join some other from which she will derive some distinct benefit, or devote the time now given to that club to some other recreation which will do her, or some one else through her, some distinct good.

All this senseless rush into which she plunges herself, whether it be in a maze of clubs, or a whirl of social life, or into a bewildering confusion of housework made difficult by permitting her home to be littered up with useless trash—all this, I say, and the woman who is honest with herself will agree with me even inwardly if she has not the courage to declare herself outwardly, is not worth the while. Nothing is gained from it: nothing but irritating worries, shattered nerves, and a premature decline of health, spirits, and the freshness of womanhood. Why not be honest with ourselves, and separate the chaff from the wheat, the externals from the vital things, the things unprofitable from the things worth while? There is happiness for many an overtired woman in a calm and sensible readjustment of her life.

LETTERS & ART

The Death of a Distinguished Patron of Art

HENRY G. MARQUAND AND THE METROPOLITAN MUSEUM

IN the death of Henry G. Marquand, New York loses its most distinguished art patron. Since the corporation of the Metropolitan museum of art was founded, Mr. Marquand had been connected with it, first as a trustee, then, from 1878 to 1890, as its treasurer, and, finally, as its president. His gifts, both in money and in works of art, enriched the museum more and more each year, and his knowledge of art was of great value to it. Gallery 6 is entirely filled with pictures presented by him to the museum. There are sixty-one in all, representing the old masters of the Flemish and Dutch schools and the early English school. The *New York Evening Post* characterizes the masterpieces of the collection as follows:

"The portraits of 'The Painter and His Wife,' by Franz Hals, are both examples in the painter's more refined style, and the latter among his very best works. Better known, perhaps, is the fine portrait of James, Duke of Lenox, by Van Dyck, which dominates the collection. With it may be compared the more energetic portrait of an unknown man, a superb early example of the same master, but still bearing the name of Rubens in the catalogue. The Dutch school is, perhaps, best represented by a wholly charming example of that very rare master, Oermeier of Delft. The two Rembrandt portraits, representing both the earlier and

later periods of the artist, are fine specimens. The minor examples of the school are authentic and of considerable interest, including, among others, a characteristic Cuypp. The main strength of the collection lies in its examples of the Dutch and Flemish schools, but the portraits attributed to Velasquez, with one exception, the 'Olivares,' which is of doubtful authenticity, are of great artistic value. The English landscape school has at least one masterpiece in Turner's 'Saltash,' and a Crome is not far behind it in quality. Two important, if not wholly satisfactory, Constables, a big Gainsborough in his best vein, and a brilliant little Bonington are in this list. Hogarth's entrancing Miss

Rich is one of the finest portraits of the English school, and a good Sir Joshua and a romantic Gainsborough bear it company. The Italian school is represented by a masterly portrait of an unknown man, attributed to Moroni, which certainly is one of the best pictures of the north Italian school. The proportion of pictures of the first class is uncommonly high, constituting a notable tribute, not only to the donor's generosity, but to his sound judgment and good sense. His gifts to the museum included antiques of all kinds, ceramics, bronzes, marbles, casts, etc., as well as money, and the total amount of his benefactions was not far short of \$1,500,000."

The *New York Tribune* says that more than any other object of his care, the Metropolitan museum of art will feel the loss of Mr. Marquand. "Its president for many years, he has devoted to its growth a large share of his time and thought, served it with unsurpassed sagacity as an administrator, enriched some of its most important departments with treasures for which it is envied by every kindred association in the world, and has been a chief instrument in perfecting the foundations on which it is securely rising to a foremost rank among the great art collections of modern times. It is impossible to overestimate the influence which he has exerted in the councils of the museum, or the results which will accumulate as the genera-

tions pass from his material contributions to the fulfillment of a great design." The *Times* adds: "The Metropolitan museum is by no means what it might be and should be, and doubtless will be. But it is only necessary to compare its status now with what it was when Mr. Marquand began to contribute to its collections to recognize the greatness of the work that has been done for it in that interval. It has become really one of the museums not merely of the United States, but of the world. And among all the men who have contributed to that advance, the name of Henry G. Marquand is deservedly put first by all his fellow-citizens who are interested in the advancement of art."

From the *New York Tribune*

HENRY G. MARQUAND

(From the Painting by John S. Sargent)

The New English Academy

HAS IT ANY EXCUSE FOR BEING?

A WRITER in the current *Pall Mall Magazine* accuses the promoters of the English academy of borrowing from France an institution of which England has no need. "Why are we instituting it?" asks this writer, Mr. G. K. Chesterton. "If," he answers, "we are instituting an English academy because there is a French academy, because other nations have institutions of this kind, and we must have one better than all the rest, then there lies over all our plans and triumphs the shadow of 'Watkin's Folly.' The Watkin tower in Wembley park unquestionably was erected with the idea that France had produced the highest iron tower in the world, and that we must build one higher. To do something which you do not want to do, which it is no part of your personal plan or instinct to do, but which the triumph of some one else has stung you into doing, is to confess the most fundamental weakness. It is the haunting suspicion that this spirit is really the spirit at the back of the proposal for an English literary academy which constitutes the one real doubt and dread about its fulfillment. That this suspicion is no idle or fanciful one, any man who possesses any insight or historical imagination can test for himself by reading the current publications, which announce the causes which have led to the proposed foundation of the new academy. The ground specifically stated in all the notices which I have seen is, that we suddenly awoke to the necessity of such an institution on discovering that we were not represented properly at a Paris exhibition." In further proof of this, Mr. Chesterton quotes the actual words: "The steps by which this desirable consummation has been reached were briefly as follows: At a meeting of the representatives of the chief European and American academies held at Wiesbaden in October, 1899, a proposal was drawn up for the organization of an international association of the principal scientific and literary academies of the world. This scheme provided for the division of the association into two sections: viz., a section of 'natural science,' and a section of 'literary science,' the term 'literary' being used to indicate the sciences of language, history, philosophy, and antiquities, and other subjects, the study of which is based on scientific principles, but which are not included under the term 'natural science.' While the Royal society of London represented the United Kingdom at the association in the section of natural science, no existing institution was at that date deemed competent to attend on behalf of this country in the section dealing with historical, philosophical, and philological research. In consequence of this defect in the existing English institutions, these branches of study in the United Kingdom were not represented at the first meeting of the 'International Association of Academies' held in Paris in 1900." Again, as another paper expresses it, 'At the congress of representatives of the chief academies of the world, held in Wiesbaden little more than two years ago, it was decided to form an international association of the chief literary and scientific academies of all countries, . . . then the blank in our midst, due to the absence of any outstanding literary academy such as every other nation of eminence is proud to possess, made itself felt.'

Mr. Chesterton says that "in the journalistic en-

comiums lavished upon the new scheme, there is this universal and distinct implication, that we are founding something which we not only never possessed before, but never desired before, because we have realized that many other nations possess it. We are ordering it, not as a great decorative genius would order a new scheme of decoration, but as a man anxious to be in the fashion would order a new cut of frock-coat. The eulogists of the scheme evidently infer that the absence of such an institution in some degree humiliates us before the other nations. The absence of such an institution does not humiliate us; the failure or insignificance of such an institution would humiliate us to the lowest depths. An academy of learning is not necessary to a nation, any more than a great school of painting, or a concession in China, or a house of peers. Nations have thriven, and been wise and valiant and enduring, and laid the whole world under everlasting obligations, without any of these things. But there is one thing which is supremely necessary to a nation, and that is its own soul. In so far as the soul of France is in love with learning, it produces a great learned institution. In so far as the soul of England is in love with other things, it will gain everything and lose nothing by seeking first to bring those things to perfection. A nation does indeed borrow, and borrow wisely, from other nations, but only when it has itself felt the need of something which the other nation can provide. But it must not borrow because other nations possess something and it is standing before all men naked of that thing. In other words, it must not borrow as the promoters of the English academy proudly boast they are borrowing."

The Point of View in Fiction

AGNES REPPLIER, in the March *Harper's Magazine*
Condensed for PUBLIC OPINION

MR. HENLEY voiced the convictions of his sex when he declared his readiness to accept, "with the humility of ignorance, and something of the learner's gratitude," all of George Eliot's women, "from Romola down to Mrs. Pullet" (up to Mrs. Pullet, one would rather say), and his lively mistrust of the "governesses in revolt," whom it has pleased her to call men. Heroes of the divided skirt, every one of them, was his verdict. Deronda, an incarnation of woman's rights. Tito, an improper female in breeches. Silas Marner, a good, perplexed old maid. Lydgate alone has "aught of the true male principle about him." This is a matter worthy of regard, because the charm of a novel is based largely upon the attraction its hero has for women, and its heroine for men. Incident, dialogue, the development of minor characters—these things have power to please; but the enduring triumph of a story depends upon the depth of our infatuation for somebody that figures in it, and here, as elsewhere, the instinct of sex reigns supreme. Why is it impossible for a man who is not an artist or an art-critic to acknowledge that the great portraits of the world are men's portraits? Because he has given his heart to Mona Lisa, or to Rembrandt's Saskia, or to some other beauty, dead and gone. Why do we find in the Roman Catholic church that it is invariably a man who expounds the glory of Saint Theresa, and a woman who piously supplicates Saint Anthony? The same rule holds good in fiction.

Does this mean that femininity backed by genius, can not grasp the impalpable something which is the soul and essence of masculinity? Because then it fol-

lows that masculinity, backed by genius, can not grasp the impalpable something which is the soul and essence of femininity. Such a limitation has never yet been recognized and deplored. On the contrary, there are novelists, like Mr. Hardy and Mr. George Meredith and Mr. Henry James, who are considered to know a great deal more about women than women know about themselves, and to be able to give the sex some valuable points for its own enlightenment. Mr. Boyesen, for example, did not hesitate to say that no woman could have drawn a character like Diana of the Crossways, and endowed her with "that nameless charm," because "the sentiment that feels and perceives it is wholly masculine." Why should not this rule work both ways, and a nameless charm be given to some complex and veracious hero, because the sentiment that feels and perceives it is wholly feminine? Mrs. Humphrey Ward strove for just such a triumph in her portrait of Edward Manisty, but did she succeed? Yet if the attraction of one sex for the other be mutual, why should it enlighten the man and confuse the woman? Or is this enlightenment less penetrating than it appears? Perhaps a rare perfection in recognizing and reproducing detail may be mistaken for a firm grasp upon the whole. There are fashions in novel-writing, as in all things else, and a determined effort to be analytic is imposing enough to mislead. We usually detect this effort when men are writing of women, or women are writing of men. The former seek to be subtle; the latter seek to be strong. Both are determined to reveal something which is not always a recognizable revelation. If to evolve a sphinx and to answer her riddle, is to interpret femininity, then there are modern novelists who have entered upon their kingdom. But one remembers Rochefoucauld's wise words, "The greatest mistake of penetration is, not to have fallen short, but to have gone too far."

Opinion and Preaching in Literature

March Atlantic Monthly, Boston. Excerpt

ARE we ready to part with "preaching" in literature? Can we really spare from our books the didactic and, what would needs go with it, much of the *obiter dicta* that make to many of us the spice of writing and of conversation? For myself, frankly, I would as soon have a man without prejudices as a book without opinions. It is these that give the flavor: they are of the essence of individuality, and if we are to accept the dictum of the greater critics, that a book is to be loved because therein is embalmed a life, we must surely take some account of the opinions in which the life had its most marked expression. For, after all, is there anything more veritably a man's own than his guesses at truth, his predilections, his notions of the universe, his surmises as to human fate? It is these, and the loyalties, devotions, whims, prejudices, ideals, tastes, loves, and hates the world has left or brought him, that measure the effect of life upon him, tell what he has undergone at the hands of circumstance, how borne himself in all time of his prosperity, in all time of his tribulation. The poet Sill was at least partly right in liking "In Memoriam" because it reflected the views of a man much experienced in life. He was acting on the same instinct that leads some hundred thousands of us, gentle and simple, to watch for Mr. Dooley's latest comment on events. We want opinions, and, in short, preaching.

Tributes to Victor Hugo

THE PARIS FESTIVITIES—THE DRAMATIZATION OF "NOTRE DAME DE PARIS" IN NEW YORK

THE series of festivities to celebrate the centenary of the birth of Victor Hugo opened February 26 with a grand ceremony in the Pantheon, under the auspices of the government, and continued for five days, according to the program outlined in our issue of February 6. The Hugo monument, the work of Louis Barrias, was presented to the city; a concert and reception were held in the Hall of Festivities at the Hotel de Ville; foreign delegates were entertained by the municipality; a grand ball was given at the expense of Paris; and the fêtes culminated in a magnificent celebration on the Place des Vosges. The New York *Nation* accounts for the extravagance of Paris in honoring Hugo as follows: "He was one of the last universal geniuses, essaying successfully all the literary forms, and doing nothing which did not find an echo among all the readers of France. The prefaces to his early books became the doctrine of his fellow-writers; all Paris turned out in emulation to hiss or applaud his plays; his greatest historical novel, 'Notre Dame de Paris,' conveyed a kind of revolutionary theory of aesthetics; that compilation from his journalism and miscellaneous social studies, 'Les Misérables,' was welcomed as a kind of evangel for a troubled social order; he castigated a charlatan emperor, and bade the Germans withdraw from a conquered land. In all the history of literature there has seldom been an example of such sublime self-confidence. In the preface to 'Les Orientales,' which was written in his twenty-seventh year, he meets the critics who might taunt him with extravagance in his subjects and style with the affirmation 'that he knew not wherein the "limits of art" consist; that he knew not the exact geography of the world of intellect; that he had not yet seen the road-maps of art, with the borders of the possible and the impossible marked out in red and blue; that, finally, he had done what he had done.' Many a young poet, before and since, has expressed himself in some such fashion, out of sheer bumptiousness—only to be ridiculed or ignored. Hugo's world took him seriously, and the young poet, at thirty, had for some years been 'master' to a rising generation of poets."

Other cities joined Paris in honoring her famous son. The presentation of a bust of Victor Hugo to the city of Rome by the Franco-Italian league was made the occasion for a great Francophile demonstration. New York celebrated the occasion by inaugurating a dramatization of Victor Hugo's greatest historical novel, "Notre Dame de Paris." The *Times* voices the general verdict on the play in these words: "In a concluding chapter of 'Notre Dame de Paris,' when sketching the after-life of the poet Gringoire, Victor Hugo says: 'As regards his dramatic triumphs here is what one finds in a record of accounts of the date of 1483: "To Jehan Marchand and Pierre Gringoire, the carpenter and the author who have built and composed the mystery play produced at the chatelet de Paris . . . one hundred francs."' Without wishing in any way to disparage the excellent melodrama which Mr. Paul M. Potter has fashioned for Mr. Daniel Frohman and his company at Daly's theater, it has much the same relationship to the other ingredients of the evening's entertainment that poor Gringoire's play bore to the work of that fifteenth-century stage carpenter."

SCIENTIFIC

The Nature of Nerve Impulse

PROFESSOR MATTHEWS DESCRIBES HIS EXPERIMENTS

In an article in the March number of the *Century*, Professor Albert P. Mathews describes the researches made by himself and Professor Loeb in the chemical laboratory of the University of Chicago into the nature of nerve impulse. The first part of his treatment of the subject is given over to a discussion of the experiments, by which the facts were established that the chemical stimulation of protoplasm is really an electrical stimulation, and that the poisonous action of inorganic salts is due to the electrical charges of the salts, and probably to the movements of these charges. Then he turns to a consideration of the manner in which the negative charges cause stimulation of protoplasm while the positive prevent it.

Let us endeavor to get some idea of what happens in the nerve when stimulation takes place, because a picture of this will make clear the nature of the nerve impulse. A nerve consists of a bundle of fibers. Each of these fibers consists of protoplasm, or living matter, drawn out in a very long process of microscopic diameter and called the axis-cylinder. This process, like all protoplasm, contains albuminous sub-

stances combined with fats and particularly with the nitrogenous fat lecithin. These substances are largely in solution. When such substances as fats, albumins, or common gelatines dissolve they form what is technically called a colloidal solution, or hydrosol, to distinguish it from the true solutions, such as those of salts. A solution of gelatine or other colloid possesses certain properties differing from those of true solutions, and as the nerve consists largely of such colloids, it is obvious that we must study the properties of such colloidal solutions to understand the nerve. One of these properties is the power of forming gels. Ordinary gelatine, if cooled, will set or gel. It forms a kind of tissue of gelatine particles with water in the interstices. In this state it is known as a hydrogel.

It has been established by Hardy and others that a colloidal solution the particles of which are electropositive—that is, carry positive charges—is precipitated or coagulated or gelled by electrically charged negative ions. They are held in solution by the positive particles, such as hydrogen. In technical language, the stability of the solution is diminished by negatively charged particles and increased by positive. Furthermore, the efficiency of each precipitating negative ion is roughly proportional to the number of electrical charges it carries. Assuming for a moment that such a change in the colloids is at the bottom of the nerve impulse, as is indicated by the identity of reactions of colloidal solutions and nerves, let us see

whether the stimulation will consist in the passage of the colloids from a state of a jelly to solution, or from solution to the jelly. The answer is given by our observations that the extraction of water stimulates the nerve; for as water is the solvent, its removal can have no other effect than the precipitation or jellying of the solution. This conclusion is confirmed by the behavior of the nerve to cold and heat. If a nerve be cooled to about 12 degrees above zero, Centigrade, its irritability increases; it is more sensitive than it was before. But if it is gently warmed it becomes less sensitive until a temperature is reached near its point of coagulation, when its irritability rapidly increases, and at coagulation the nerve is stimulated. Coagulation is a form of jellying. So we have here further evidence that stimulation is gelation.

DIAGRAM ILLUSTRATING THE CONDUCTION OF THE NERVE IMPULSE

by this precipitation, the negative charges are regenerated. This is possibly brought about in the following way (see diagram): The colloidal particles are positively charged. Those charges induce in the water about each particle negative charges, the number of negative charges being proportional to the surface of the particles. Now when two adjacent particles are thrown together mechanically (B), or by heat, or in any other way, they coalesce, and the surface of the coalesced particles is smaller than the sum of the surfaces in the separate particles. There is a sudden diminution in the number of positive charges holding the negative charges. A certain number of the latter are at once set free (C). These immediately precipitate the next layer of colloids (E). By the coalescence of these particles, negative charges are again liberated (F) and the nerve impulse is thus propagated. The speed of its propagation is probably connected with the minute diameter of the axis-cylinder process, which makes the movement take place altogether in one direction. If we prevent precipitation we can stop the nerve impulse and the negative variation also.

It appears to me probable that the immediate practical consequences will very likely occur in the following directions: First, the physical explanation thus attained of one of the phenomena of life will, if it proves true, bring us a step nearer the understanding of other life-phenomena, the artificial synthesis of living matter, and the prolongation of life. Second,

it looks as if we had at last secured a rational basis of pharmacology. If the poisonous action of salts is due to the electrical charges their particles bear, and we are able to offset this action by particles with the opposite charge, there is every reason to believe that the poisonous action of drugs is also so caused and may in the same manner be counteracted.

Third, we have at last secured, apparently, a basis for attacking the great problem of fermentation, for the peculiar fermentative or catalytic powers of colloidal solutions are probably, in their essence, electrical. A solution of the problem of fermentation probably means a revolution in some of the great industries of the world, for it will enable us to build up our food-stuffs from the soil, the air, and sunlight, as plants do.

The Measurements of Science

CARL SNYDER, in the March *Harper's Magazine*,
New York. Excerpt

THE eye and the ear have long been regarded as marvels of mechanism, quite the most wonderful things in the world. But compared with the implements of a present-day laboratory, the sensitiveness of all human organs seems gross enough. A photographic plate, coupled with a telescope, will reveal the presence of millions of stars whose light does not affect the retina in the least. The microscope, too, with its revelations of the world of the infinitely small, tells us how crude, after all, is this most delicate of the senses. Indeed, we may liken it to a piano where only a single octave, towards the middle, sounds. From the ultra-violet to the lowest reaches of the spectrum is a range of some nine octaves of light vibrations, of which, save for our new mechanical senses, we should never have been conscious of but one.

The ear hears little of what is going on around us. By means of a microphone the tread of a fly sounds like the tramp of cavalry. Our heat sense is very vague; we need a variation of at least one-fifth of a degree on a thermometer to realize any difference in temperature. Professor Langley's little bolometer will note the difference of a millionth of a degree. It is two hundred thousand times as sensitive as our skin. A galvanometer will flex its finger at the current generated simply by deforming a drop of mercury, of pressing it out from a sphere to the shape of an egg. The amount of work done by a wink of the eye would equal a hundred billion of the units marked on the scale of a very delicate instrument. It is at least ten thousand times as sensitive as the eye or the ear. But even this astonishing performance is far surpassed by the exquisitely sensitive coherers, discovered by Professor Branly, of Paris, by which the Hertz waves of wireless telegraphy are caught in their pulsings through space. The range of impressions which we get from lifting an object in the hand seems rather small. An ordinary chemist's balance is about twenty million times as sensitive. It will weigh down to the two-hundredth part of a milligram.

Wherever we turn we shall find instruments which surpass each and all of our senses in a most humiliating way. Without them we should know very little of the world about us. Lacking them, Sir Isaac Newton knew very little of the world about him. But with them—and this is a capital point—we have come to know a great deal. We have come, for one thing, to see that *our senses give us reports only of a comparatively small number of comparatively gross stimuli.*

The Loud-Talking Telephone

EUGENE P. LYLE, JR., in the March *Everybody's Magazine*
Condensed for PUBLIC OPINION

THE loud-talking telephone, or *haut-parleur*, has been recently invented in France. It means briefly that a man can sit at his ease in his arm-chair and talk to another man at a distance as though he were right there in the arm-chair opposite. This other man, far away at the other end, may be at his ease, too, or he may be footing it up and down his office pulling at a cigar, or, for that matter, he may be in his bed in the next room.

There are several different systems of *haut-parleurs* that have been constructed by Frenchmen. Three at least have been reported upon favorably by officials present at the explanations and trials. The telephone of M. P. Germain was tested some time ago by the ministère des postes et télégraphes, with the result that it has been adopted by the state to some extent. Inside the transmitter of this instrument there are delicate membranes of silicate of potash and magnesium, which are extremely sensitive to every vibration of sound-waves. The ordinary induction coil, such as is used in the state telephones, completes the microphone. This coil has a resistance of 1.5 ohms for its primary circuit and 150 ohms for its secondary. The receiver may be lengthened by a tube a yard long, which is slightly conical, like a slender trumpet, and throws the sounds a distance of fifteen or sixteen yards at their normal tone, even when out of doors. The voice is heard clearly, without any of that hazy snuffling so common to telephones and phonographs. Singing and musical instruments sound more intense than spoken words, though they are equally distinct. The Germain microphone supports currents of from ten to twenty-five volts and from one-half to twenty-five ampères. Five-tenths of an ampère suffices for ordinary conversations, but when there are many hearers, as around the theatroscope, the currents may have to be made stronger. M. Germain has recently obtained much more satisfactory results by substituting micro-telephones for the micro-phones that he first employed. One of the most important phases of the loud-talking 'phone is its collaboration with the phonograph. Harness these two together and you have a team capable of some interesting work. A second *haut-parleur* is intended primarily for short distances, as between the departments of a large manufacturing plant, foundry, or other busy place where noise prevails. Such a telephone will doubtless prove of great value in the industries.

Work and Rest

"ONE SELF-APPROVING HOUR WHOLE YEARS OUTWEIGHS"

IN the March *Popular Science Monthly*, Dr. A. F. Chamberlain institutes an inquiry as to how far the history of the individual and of the race justifies the belief that one day is as good as three, one hour outweighs whole years. The intention is to defend the view that intense activity for comparatively brief periods, alternating with longer periods of greater or less quiescence, is, whatever incidents of environment, artificialities of civilization, exaggerated sex influences, etc., have at times interfered to disturb it, the normal phenomenon of work in so far as it is best and most genially productive and profitable racially and individually.

In the life of animals, Professor Chamberlain finds plenty of support for his view, and also in the suddenly developing powers of children, who by their performances move us to admiration when the critical moment arrives. And "when we consider woman in the fields in which her highest genius asserts itself, we find that in general she conforms to the theory here advanced. Altogether, the life of woman furnishes more evidence than one would be inclined at first to suspect, in support of the theory set forth in these pages. And were her individual emotional and intellectual life given more sway, the evidence would probably be even greater, for, emotionally, she illustrates the theory in its most genial form, and her best first efforts in many lines of thought and action indicate vast possibilities in the right direction."

The criminal and the savage also provide the author with illustrations of the truth of his theory. Havelock Ellis is thus quoted: "While he is essentially lazy . . . the criminal is capable of moments of violent activity." The vacuous lives of criminals, with whom inertia is practically normal and continuous for long periods, have their brief epoch of excitement, explosion, diversion, uproar, intoxication, exhilaration, and "breaking out," adds Dr. Chamberlain. He also calls attention to the rapidity of the transition in the savage from extreme inertness to extreme activity. The ability to change from the commonplace to the intense is a manifestation of the same element. The

genius's periodical inspirations and the periodicity of eras of artistic activity in the history of all nations, such as, among others, the Elizabethan age in England and the age of Pericles in Greece, are thus brought forward in support of the author's contention. He sums up as follows:

We have now considered the life of the animal, the child, the woman, the genius, the criminal, the savage, the race, the theory that brief periods of work at the very highest possible tension alternating with longer periods of rest or changed activity represent the best working conditions and have found not a little evidence to support it in every quarter. The experience of other than mere professional athletes, the methods of animal trainers, the results of half-time schools, the progressive reduction of the hours of labor for working-men and shop-employees will furnish many more data of the same kind. It has been argued that two hours physical labor *per diem* would suffice, were the product economically distributed, to keep the whole world well supplied, so great has been the advance in labor-saving machinery, methods of transportation, etc. Is it altogether unreasonable to suppose that two hours, intellectual work, under right conditions and with economic distribution of the product, would suffice to keep the whole world supplied here also? Two hours of every one's best would be something worth achieving, physically and intellectually. An end something like this is the ideal to which things are bound to tend. Some poet of the future may be able to sing: 'Better the New World hour than the long European day.' The racial nervousness of the American people, non-pathological in reality, is perhaps the groundwork for this achievement.

RELIGIOUS

A Substitute for Religion

PAUL TYNER, in the March *Review of Reviews*, New York. Condensed for PUBLIC OPINION

NEW departure, characterized at once by sturdy optimism, earnest purpose, and settled confidence, is the metaphysical movement of today. Essentially American in its origin, it has already made its way across the sea, with other American products, and claims an international scope, not losing its Americanism, however, in its transatlantic extension. There is reason to believe that what is somewhat vaguely known as "the new thought" now numbers more than a million adherents, of whom more than half a million are in the United States. To most of these, the cult stands for a practical, every-day working philosophy that takes the place of a religion and is, indeed, to these people, the only possible religion. At the same time, thousands of its followers retain their conventional affiliations, finding in the "new thought" welcome aid to understanding and appreciation of the living spirit under the dead letter in all religions. Thus, the new teaching appeals equally to people in and to those out of the churches, emphasizing the essentials on which people of various beliefs, or of no belief, may very humanly unite. One reason for its rapid spread in popularity is here apparent, and makes interesting an examination of its development. The

movement has for its basic purpose nothing less than a lively realization of the metaphysical truth at the base of all religion and philosophy, not as mystical or intellectual abstraction, merely, but as a working force in actual life, eligible to all men everywhere.

Speaking in the large, this "new thought" is new only in its distinct insistence on the metaphysical basis of all physics, and on the consequent emergence of metaphysical principles in physical phenomena. It proves the practical availability of this right relation of physics and metaphysics. For this, the power of the will is asserted in larger control and dominion over "the forces of nature." As a result, we find men, more than ever before, ordering and directing for good all conditions and environment, all tendency of habit or circumstance. The new metaphysics, in fact, calls for faith behind works, and for works proving faith. The reality in being of an infinite, eternal, and intelligent energy, principle, or substance, perceptibly active everywhere and always in the phenomena we call life, is its basic premise.

Two of the "new thought" writers whose vogue rivals that of the popular novelist are comparatively young men. Horatio W. Dresser's first work, "The Power of Silence," might be regarded as the produc-

HORATIO W. DRESSER

RALPH WALDO TRINE

tion of a contemplative student essaying an interpretation of the German philosophers with amplification of the bearing of their thought on the problems of the man in the street. In his latest book, "The Christ Ideal," he seems to have exchanged this coldly judicial attitude for the fervor of the early Christian mystic. Another of the younger writers whom the new movement has carried on a flood-tide of favor is Ralph Waldo Trine, a westerner by birth and breeding, a graduate of Knox college, and one who found his way into the "new thought" by the broad path of interest in sociological study, in which he had the advantage of post-graduate work at Johns Hopkins university. Although transcendentalism is brought down to earth and given immediate and practical meaning by the followers of this movement, Emerson is regarded almost as its prophet and patron saint, his essays and poems forming foundation for nearly all its teachings, and inspiring most of its writers.

Significant evidence of the larger freedom and unity of the new teaching is furnished by a glance at the names of the speakers and at the subjects that furnished the marked features of the program at the convention of October, 1900, in New York. These included the Rev. Dr. R. Heber Newton, of New York; Prof. George D. Herron, lately of Iowa college, Iowa; Mr. John Jay Chapman and John Brooks Leavitt, LL.D., men widely esteemed as among the foremost representatives of New York's younger generation of publicists, the late Dr. Lewis G. Janes, Mr. Bolton Hall, distinguished as a valiant apostle of the single tax, and Prof. John M. Tyler, of Amherst.

The Secularization of the Church of England

AT the recent confirmation of Canon Gore as bishop of Worcester, an attempt was made by the anti-ritualists to challenge the appointment according to privilege offered in the ceremony of confirmation. The matter was taken before the king's bench division of the high court, and the lord chief justice decided against the right to oppose the confirmation. The *London Spectator*, while commending the decision, sees in it an assertion of the supremacy of the secular power. "We do not refer to anything in the tone of the judges. On the contrary, they were careful to repudiate the argument put forward by Mr. Haldane, that if the confirmation was to be treated as a mere form, consecration would, by inference, be relegated to a like position of insignificance. But, none the less, the effect of the judgment necessarily is to throw into relief the secular principle in the selection of persons for the office of bishop, even though the mode of setting apart the individuals so selected for that office is left untouched in its sacred solemnity and significance. The election by the dean and chapter, and the confirmation by the archbishop's vicar-general, with its notice to opposers, if any, to present themselves, may hitherto have seemed, while no one has talked much about them, to embody, in however imperfect and rudimentary a form, the assertion of valuable principles. But now, it may be thought, this view can no longer be cherished. The judgment of the king's bench division has seemed to some minds to tear all veils away, and to have exhibited the Church of England as being, in regard to the vital matter of the appointment of its chief ministers and rulers, an 'Act of Parliament Church,' entirely subject to state authority. The poor little ceremonies which, coming down from pre-

Reformation days, seemed to suggest at least some recognition on the part of the state of a more spiritual theory, have been mercilessly held up to the light, and shown to have no semblance of reality about them. And the strange double irony of it all is that this has happened on the occasion of the elevation to the Episcopal bench of a clergyman who has been one of the most prominent advocates of the right of the Church of England to greater spiritual autonomy; while his defeated opposers, who for the nonce have sought to avail themselves, though in vain, of the relics of days of greater ecclesiastical independence, represent bodies whose usual rôle is to press the authority of state courts against the claimants of ritual liberty."

The Rallying Place of Sects

L. S. DuBois, in the *Standard*, Chicago. Condensed for PUBLIC OPINION

IT would be perfectly safe to say that outside of Constantinople, Chicago is the most religious city in the world. There are in Chicago upwards of 1,100 places for public worship of the Deity. Of course, we expect to find the largest number among those professing Christianity, but there are none the less congregations of the disciples of Confucius, of Buddha, of Zoroaster, and of Mohammed. In the heart of the city are Handel hall, Masonic temple, Studebaker hall, and Steinway hall, where gather Christadelphians, Babists, Truth-seekers, Spiritualists, and groups the names of which are known only to themselves. Out on Taylor street is a Mohammedan mosque. There are four large church edifices, filled every Sunday, too, with Latter-day Saints. Mennonites and Quakers have flourishing congregations within the city limits, and the number is not small to whom ethical thought appeals with religious satisfaction.

Of the orthodox bodies, the Catholic church stands at the head, with its 172 buildings erected exclusively for divine worship; 269,795 persons are counted on its rolls as members, and its church buildings have a value of \$5,082,157. The Catholic bodies of Chicago comprise in their congregations Roman Catholic, Greek Catholic, Russian Orthodox, Greek Orthodox, Armenian, Old Catholic, and Reformed Catholic. There are other organizations bearing the name Catholic Apostolic, but these are not Catholic as generally understood. In one Catholic church, that of St. Agnes, at Chicago Heights, the congregation is so cosmopolitan that it is necessary to hold service in the English, Italian, Polish, German, Bohemian, Lithuanian, Croatian, and Swedish languages. Next to the Catholic is the Methodist denomination, with 145 churches, 25,500 communicants, and churches valued at \$2,123,000. It will be a surprise to some to learn that there are seventeen varieties of Methodists in Chicago alone. All nationalities are reached, but the English language prevails, being the language of 101 churches. There are thirteen German, seven Norwegian, sixteen Swedish, four Bohemian, and one French. The Congregational denomination numbers seventy-seven churches and thirteen missions. It counts 14,427 on its church roll and owns church property valued at \$1,460,930. The church edifices will seat 33,615 persons. The Baptists number 15,635. They have fifty-one churches and forty missions, and the auxiliary societies attached. Their church holdings are valued at \$1,147,100, with a seating capacity of 22,630 in the main auditoriums, some hundreds more being accommodated in hired halls and chapels. In a city whose population is composed of so many

Germans, it is not surprising to learn that the church founded by Martin Luther is a potent factor in its religious life. Many of its adherents are also to be found among our Swedish, Danish, Norwegian, and Finlander folk. The Lutherans have eighty-seven churches and 36,800 members; while the Lutheran evangelical body has twenty-three churches and 11,500 members. Of the Protestant Episcopal denominations, there are 7,450 members, with forty-one church buildings and four missions. These edifices are valued at \$1,351,500, and will accommodate 16,753 worshipers. There are also seven organizations of the Reformed Episcopal church, numbering about 2,250 communicants, with church holdings valued in the neighborhood of \$200,000; and a few scattering bodies holding allegiance to the Church of England. The Presbyterians number 15,291, with fifty-one church buildings and twelve chapels, sufficient to care for 35,120 attendants. There are fifty-four organized Presbyterian bodies, with a value of church edifices of nearly \$2,000,000. The Disciples of Christ (Christian) number twenty churches, with a membership of 6,000, occupying twenty church buildings and one hall. The Spiritualists have eighteen organizations, each of which is practically an independent entity. This list of organizations includes also Seventh-day Adventists, Christian Scientists (worshiping in three superb temples), Dunkards, Swedenborgians, the Salvation Army, the Volunteers of America, Unitarians, Universalists, Plymouth Brethren, Friends of the Temple, Schwenkfeldians, Church of God, and other organizations having no official connection with any religious body, all of which have no published statistics available. The Hebrews worship in twenty-three synagogues. Thirteen of their organizations belong to that wing of Judaism known as Orthodox, ten to the Reformed congregation. Their church property reaches a very comfortable figure, \$536,500, and the number of members is set down as 9,187, but we must take into account a peculiar method of enumeration. In Jewish congregations, the head of the family only is counted; using the ordinary method of estimating the number in a family, and multiplying by five, we have 45,935 Jewish church-going people in Chicago.

The Miner-Minister

REV. A. B. CHALMERS, in the *Christian Endeavor World*,
Boston. Condensed for PUBLIC OPINION

IN the list of Congregational ministers in the Year-Book for 1900 you will see the name, "William Ethridge, Glenroy, Ohio." Mr. Ethridge is no longer pastor of the Congregational church of Glenroy, but, instead, is working in the coal mines of Saginaw, Michigan, and preaching on Sunday to the Genesee Avenue Congregational church, of that city. The story of how he left the pastoral work for the hard manual labor of a coal miner is a very interesting one, and the Rev. William Ethridge is in many ways the most heroic minister anywhere today. He was born in England more than forty years ago, and as a boy knew all about the coal mining of the north of England, where his father worked day by day in the mines. His father had the ambition for him that he should not spend his life in a mine, but should, instead, become a minister. Many of the younger men of the mines began to move to America, and some of the older ones. The friends of his father and mother, and their children, went, many of them settling in the coal mines of Coalton and Glenroy, Ohio. He came to

America and lived with his childhood friends in Glenroy. There was a powerful revival of religion among the miners, and Ethridge was converted. He determined to give himself a better education so that he could preach to his people, the miners. When he was prepared by study, a council was called, and he was regularly ordained to the gospel ministry. After his conversion and before his ordination, he would work in the mines all day, and walk six miles at night, and preach the gospel in another mining district. Before his ordination he preached to the miners of Glenroy. They would rather hear the minister who was a miner with them than any other. After his ordination, the miners paid him a salary such as he would make in the mines, and he became their minister, devoting all his time to the work of preaching and to pastoral work.

When he had been the shepherd of the flock for a few years, the mines gave out in Ohio, and his people had to seek employment elsewhere. By far the great majority of his people went to work in the newly opened coal mines of Saginaw, Michigan. He went with them, for his people had all gone from Glenroy. When he reached Saginaw, there was no church for him to preach in, and he cast aside his ministerial garb and put on the miner's suit, and went every day down the shaft in the cage with his men, and worked with them all day, hundreds of feet below the surface of the earth. On Sunday he found a hall over a store, where he gathered his people together and preached to them. They organized a Sunday-school for the children. He conducted a prayer-meeting. Within a few months they had the nucleus for a church, and a council was called and a church was organized with thirty-two members. One of the strongest Christian Endeavor societies in the city was organized by him in the new church. Many of the charter members of this church were members of his church in Glenroy. He continued to preach for them every Sunday while working in the mines every day.

The church soon grew strong enough to support, with a little home-missionary aid, a pastor. They gave the miner-minister a unanimous call to the pastorate at a far larger salary than he could earn in the mines. When the call was presented to him, he declined it, although he would rather preach than do anything else in the world. He felt that there would be many others besides the miners that would be members of the church, and that he could be the miner-minister to them who were particularly his own and who remembered him at Glenroy, and his father before him in England. When the miners wanted a man to represent them before the representatives of the company to arrange the scale of wages for the year they sent their miner-minister. When trouble arises among the men, he is the peacemaker. There has never been a strike in the Saginaw coal mine, and his presence among the men, and his acceptance of the wage-scale, are largely responsible for the good habits and peace and prosperity among the miners. The company could well afford to pay him double wages—one as a miner, and another as a minister.

THE NATIONAL FEDERATION OF CHURCHES and Christian workers, organized a year since at Philadelphia, was able, at its annual conference in Washington, February 4 and 5, to report gratifying progress. Nearly a hundred delegates from state and local federations were enrolled. State organizations now exist in eight states, comprising nearly one-third of the population of the country, and local federations in twenty-four cities and towns, with a total population of nearly seven millions.—*Outlook*.

MISCELLANY

An Imperial American Yacht

THE METEOR DESCRIBED BY ITS BUILDER

WALLACE DOWNEY

THE kaiser's yacht, *Meteor*, launched from Shooter's island, February 25, has fairly become an international institution. Mr. Wallace Downey, the builder of the boat, furnishes the following description of it for *Leslie's Monthly*:

"The vessel, from stem to stern, is the product of American designers, of American builders, of American workmen. When the order was given the several component materials of the vessel were scattered over the United States from the Atlantic to the Pacific. Only a few months ago the polished masts of

white pine were growing wild in their native Oregon forest; the steel angles and plates were unmined ore in the Pennsylvania hills. The hardwoods for the finishing of the interior were all hewn by American hands in American forests; the interior appointments, the plumbing and the like, are all the work of American factories; the sails will be made by American sail-makers, from American canvas; the rigging will all be the work of our own countrymen. The christening of the yacht by an American girl gracefully emphasized the national character of the whole performance, and it remains for the boat to acquit itself according to the best American traditions to make its Americanization complete.

"It is a large yacht, having a length over all of 160 feet, and a water line length of 120, a beam of twenty-seven feet and a draught of seventeen. There is thus deck room enough for a court reception; accommodation is furnished in the forecabin for a crew of at least thirty men; there are two saloons, the main and the ladies' cabin, and three large staterooms, in addition to the emperor's spacious suite. In size, indeed, the *Meteor* is the largest schooner yacht ever put forth from an American shipyard. In her design speed has not been a negligible quantity. His majesty has taken pains to emphasize this point, and whereas, in all matters of pure technique, such as the sheer of the hull, he has wisely left the details to the designers, the interior arrangements have largely been his own work. Thus the supplementary mushroom ventilators, with which the vessel is supplied, have been made from designs furnished by the kaiser himself. A fair idea of the size of the main saloon is gained when it is said that it will contain an extension table capable of seating twenty-four persons. Aft of the saloon, on the port side, are three large staterooms and a bath for the gentlemen-in-waiting. Comfort, rather than mere display, is also the point aimed at in the arrangement of these rooms. Each room will be provided

with a bureau, a brass bedstead, a marble washstand and a sofa. Directly opposite these rooms, on the starboard side, will be the emperor's suite. This is a large saloon, thirteen feet long, and besides a brass bedstead, contains a writing desk, several wardrobes and a dressing table. In addition to the dead lights at the side this room will be ventilated by a large skylight. The woodwork throughout the kaiser's quarters will be of mahogany enamel, painted ivory color, touched up with gold, a small amount of the trim showing the natural wood. Aft of the owner's saloon is a bathroom and the quarters of his personal attendants. Directly behind is the ladies' cabin, which will contain two berths, sofas, writing tables, and will be decorated with carved mahogany and other hardwoods. The ladies' cabin leads into a vestibule, which, in its turn, leads to the stairs up to the deckhouse, which will be built of steel, encased in teakwood, serving both as a companionway, and, in rough weather, as a lookout. All the woodwork on the deck, the skylight, etc., will be of teak. The metal work, the winches, capstans, etc., will all be of bronze; the wheel, a fine piece of workmanship, will be of rosewood, the rim inlaid with white holly. The cost will be in the neighborhood of \$150,000."

Renunciation

MARGARET RIDGELY SCHOTT, in *March Scribner's*

The lips we love and may not kiss,
The self we love and cast aside,
The flowery ways we choose to miss
For paths where rue and thorns abide;

The wistful eyes that see the shore,
They may not seek beyond the seas—
Ah! Life to Come, hast thou in store
A fit exchange for gifts like these?

Various Topics

MRS. ELIZABETH WELLS GALLUP, the Detroit woman who has stirred up the new Bacon-Shakespeare row, contributes to the current *Pall Mall Magazine* an explanation of the nature of her laborious investigations. The *London Outlook* hits off the controversy as follows:

He thought he saw a mystery,
A new Rosetta stone.
He looked and saw a cipher which
Has recently been shown.
"The same old dish again," he said;
"I thought we cleaned the bone."

SAMUEL RAWSON GARDINER, the distinguished English historian, is dead. Dr. Gardiner wrote "The History of England from the Accession of James I to the Disgrace of Chief Justice Coke," 1863; "Prince Charles and the Spanish Marriage," 1869; "England under the Duke of Buckingham and Charles I," 1875; "The Personal Government of Charles I," 1877; "The Fall of the Monarchy of Charles I," "Introduction to the Study of English History," conjointly with J. Bass Mullinger, 1881; "The First Two Stuarts and the Puritan Revolution," 1875; and "The Thirty Years' War," 1874. His "History of the Great Civil War," is one of his greatest works. In 1894 he published vol. I of a "History of the Commonwealth and Protectorate," and on the death of Prof. Froude was offered the Regius professorship of modern history at Oxford. He was still engaged in carrying forward his historical work at the time of his death, having come to within a year of Oliver Cromwell's death.

THE NEWS OF THE WORLD

MONDAY, FEBRUARY 24

DOMESTIC.—Tomas Estrada Palma and Señor Estevez were formally chosen by the electoral college at Havana respectively first president and vice-president of Cuba; senators were also elected....Prince Henry of Prussia arrived in Washington, exchanged calls with President Roosevelt, called on the foreign ambassadors, received the members of the diplomatic corps, at the German embassy, visited the Capitol, and was the guest of honor at a state dinner at the White House....The United States supreme court denied the application of the state of Minnesota for leave to file a bill of complaint against the Northern Securities company, on the ground of lack of jurisdiction....The senate passed the Philippine tariff bill.

FOREIGN.—A majority of the business places in Barcelona resumed work; the number of persons killed during the rioting is placed at fifty-seven....Sixty-four men were killed or wounded during fighting on the Montenegrin frontier between Albanians and Turkish regular troops, due to the assassination of an Albanian chief....A convention has been concluded between Russia and Korea under which Korea agrees not to grant to any state or individual the island of Ko Je, the shore opposite or any part of the coast from that point to Chemulpo.

TUESDAY, FEBRUARY 25

DOMESTIC.—The German emperor's new yacht, *Meteor*, was launched at the Townsend & Downey Shipbuilding company at Shooter's island by the hand of Miss Alice Roosevelt, daughter of the president, in the presence of Prince Henry of Prussia....Lieutenant Johnston, of the 15th infantry, captured the battleflag of Malvar, the insurgent chief in the Philippines, as well as his personal jewelry; Governor Flores has organized a native expedition to rid Rizal province, Luzon, of Ladrões....Rev. Joseph W. Cook, pioneer of Indian missionary work in Wyoming and the Dakotas, died at St. Louis.

FOREIGN.—In a vote over a labor measure in the house of commons, the government was defeated, 155 to 154....The revolutionary steamer *Libertador*, renamed the *Bolívar*, appeared at Dominica, in the Leeward islands....There were anti-Semitic riots at Bucharest, Rumania, and the hospitals were filled with wounded rioters as a result of fighting with the police.

WEDNESDAY, FEBRUARY 26

DOMESTIC.—The notorious rebel chief Lukban was captured on the island of Samar....Lieutenant-Governor Tillman of South Carolina withdrew the invitation to President Roosevelt to present a sword to Major Micah Jenkins at the

time of President Roosevelt's visit to Charleston....Governor Odell signed the bill prohibiting the killing of live pigeons in state tournaments.

FOREIGN.—The Liberal League has been formed in England with Lord Rosebery as president; its purpose is to carry out the policy outlined by the ex-premier in his speech at Chesterfield....Lord Kitchener reports smart fighting in South Africa; the Boers captured a British convoy, and the British inflicted severe loss on a force of Boers who were trying to break the blockhouse line....The centenary of the birth of Victor Hugo was celebrated in France and other countries; in Paris elaborate exercises were held within the Pantheon, and a monument to the poet was dedicated.

THURSDAY, FEBRUARY 27

DOMESTIC.—Services in memory of President William McKinley were held in the house of representatives by both branches of congress, Secretary Hay being the orator....Edward Tuck, of Boston, has given a large sum to found a hospital for Americans in Paris....M. C. D. Borden announced an increase of 10 per cent in the wages of his Fall River operatives....The congress of mothers, in session at Washington, elected Mrs. Frederic Schoff, of Philadelphia, president.

FOREIGN.—Sir Michael Hicks-Beach gave assurance that Russia would respect the rights of foreigners at New-Chwang....The empress dowager and emperor of China gave another audience to foreign women in Peking....The Duke of Devonshire, on behalf of the Liberal-Unionists, repudiated the leadership of Lord Rosebery....The Venezuelan congress ratified the election of President Castro.

FRIDAY, FEBRUARY 28

DOMESTIC.—Reports from many points east of the Mississippi tell of great damage and peril and some loss of life from storm and flood; Minnesota and the Dakotas report a great blizzard raging....Scores of miners lost their lives in two great snowslides at Telluride, Col....Prince Henry of Prussia visited the naval academy at Annapolis....The senate committee on privileges and elections reported, and the senate adopted a resolution of equal censure in the cases of Senators Tillman and McLaurin, of South Carolina....Former Secretary of the Treasury Lyman J. Gage accepted the presidency of the United States Trust company, of New York.

FOREIGN.—Lord Kitchener reports the killing or capturing of 600 Boers in the Orange River Colony, with a great quantity of live stock....Notice was served by Colombia on the Panama canal shareholders that they could not

transfer the canal concession without the assent of Colombia; there was a stormy meeting of shareholders in Paris....There was a fresh outbreak of the working people in Spain, including Barcelona and the mining regions....The tariff committee of the reichstag voted to raise from two to five marks the import duties on maize....The czarina gave 10,000 rubles for the benefit of the sufferers from the Shamaka earthquakes.

SATURDAY, MARCH 1

DOMESTIC.—Miss Stone, the released missionary, arrived in Constantinople from Salonika....The city council of Charleston, South Carolina, renewed its invitation to President Roosevelt to attend the exposition, and repudiated the action of Lieutenant-Governor Tillman....Guglielmo Marconi arrived at New York and reported that a message had been sent from Cornwall and received on the steamship *Philadelphia* a distance of 1,551½ miles; his instrument was so tuned that no other vessel received the same message.

FOREIGN.—Advices were received at Curacao that the revolutionary leader, Garbiras, attempted a new invasion of Venezuela, and was completely routed by the government forces and driven back across the frontier, with heavy loss....Robert Greville Williams, the inventor of the telopantograph, committed suicide near Manchester, England....Forty-five Moscow rioters were sentenced to from four to fifteen years' penal servitude.

SUNDAY, MARCH 2

DOMESTIC.—A band of ladrones captured Señor Ampil, the presidente of Cainta, Morong province, Luzon, Philippine islands, and a majority of the police of the town; fears are felt for Señor Ampil, who was an ardent American sympathizer; merchants of Manila object to the insular tariff, alleging that it cripples the resources of the archipelago....United States Minister Loomis, at Lisbon, presented to the captain, officers, and crew of a Portuguese steamer, chronometer, binoculars, and medals sent by President Roosevelt in recognition of their rescue of an American crew.

FOREIGN.—A revolt, headed by Abdul Aziz Ben Feysul, has occurred in central Arabia; the rebels captured the city of E'riad, killing the governor and thirty of his retainers....The Victor Hugo ceremonies in Paris came to an end with the presentation to the city of Paris of the poet's home in the Place des Vosges for a museum....The text of the convention agreed upon by the International Sugar conference, was made public in Brussels; the abolition of all sugar bounties is recommended.

The Book of The Week

NAPOLEON'S LETTERS TO JOSEPHINE, 1796-1812, for the First Time Collected and Translated, with Notes, Social, Historical, and Chronological, from Contemporary Sources. Cloth, \$3 net. By Henry Foljambe Hall, F. R. Hist. S., 1901. London: J. M. Dent & Co. New York: E. P. Dutton & Co.

A GENERATION which has manifested a voracious appetite for the love letters of persons famous, infamous, and imaginary, should find the correspondence of Napoleon and Josephine full of the greatest interest. The fate of the latter, appealing, like that of Mary Stuart and other unfortunates, to the romantic sympathy of all readers, has induced a prejudice in her favor, which has undoubtedly led to a false impression of her character, and of the nature of the relations between herself and Napoleon. To this has been added the influence of enthusiastic, reckless, or mendacious memoirs and collections of apocryphal correspondence. Such were the letters published by Mme. Ducrest, in the twenties, of which Frédéric Masson says, "*pas une n'est authentique*," and those of Las Cases, whose work Lord Rosebery aptly calls, "an arsenal of spurious documents."

The letters in the present collection have all seen the light before in other places. Most of the early love letters are taken from Charles Tennant's *Tour of 1821-2* and almost all the remainder from the collection published by Didot Frères in 1833. But here they are all brought together for the first time, and their value in their present form is very greatly heightened for the general reader by the short notes of contemporary events, inserted in the body of the book, between the various letters. The latter half of the volume is given up to very full and admirable commentaries upon each letter, and the circumstances surrounding the writing of it. To this feature of the work too much praise can not be given. It is evidently the result of infinitely painstaking labor among original and contemporary papers, by a faithful student in love with his subject.

"With regard to the character of Josephine," says Mr. Hall, "opinions still differ about every quality but one. Like the friend of Goldsmith's mad-dog—

A kind and gentle heart she had
To comfort friends and foes.

"From early days she had learnt 'how to flirt and to fib.' Morality was at a low ebb during the French revolution, when women often saved their necks at the expense of their honor, and there is, unfortunately, no doubt that Josephine was no exception. It is certain, however, from his first letters to Josephine, that Napoleon knew nothing of this at the time of his honeymoon

(solus) in Italy. Gradually, but very unwillingly, his eyes were opened, and by the time he had reached Egypt he felt himself absolved from the absolute faithfulness he had hitherto preserved towards his wife. On his return Josephine becomes once more his consort, and even his friend—never again his only love. Josephine's main characteristic henceforward is to make everybody happy and comfortable—in spite of Napoleon's grumblings at her reckless prodigality; never to say No! (except to her husband's accusations) suits her Creole disposition best, especially as it costs her no active exertion, and the emperor pays for all. And so, having been in turn Our Lady of Victories and Saint Mary the Egyptian, she becomes from her coronation to her death-day 'The Mother of the Poor.'"

The collection begins with a letter dated, "Seven o'clock in the morning," and apparently written early in March, 1796. Napoleon and Josephine were married on the 9th of that month: "My waking thoughts are all of thee. Your portrait and the remembrance of last night's delirium have robbed my senses of repose. Sweet and incomparable Josephine, what an extraordinary influence you have over my heart. Are you vexed? Do I see you sad? Are you ill at ease? My soul is broken with grief and there is no rest for your lover."

Two days after his wedding, Bonaparte, who has just been appointed commander-in-chief of the army of Italy, leaves to join his army in the field, and it is during this pitiful honeymoon that most of the love letters are written. On March 14th, he writes: "Every moment separates me further from you, my beloved; and every moment I have less energy to exist so far from you. You are the constant object of my thoughts; I exhaust my imagination in thinking of what you are doing. If I see you unhappy my heart is torn, and my grief grows greater. If you are gay and lively among your friends (male and female), I reproach you with having so soon forgotten the sorrowful separation three days ago; thence you must be fickle, and henceforward stirred by no deep emotion. . . . If I were asked how I slept, I feel that before replying I should have to get a message to tell me that you had had a good night. The ailments, the passions of men influence me only when I imagine they may reach you, my dear. May my good genius, which has always preserved me in the midst of great dangers, surround you, enfold you, while I will face my fate unguarded."

Other striking epistles follow:

"PORT MAURICE, April 3d.

" . . . By what art have you learnt how to captivate all my faculties, to concentrate in yourself my spiritual existence—it is witchery, dear love, which will end only with me. To live for Josephine, that is the history of my life. I am struggling to get near you, I am dying to be at your side; fool that I am, I fail to realize how far off I am,

A Word About Editions.

Now the book collectors are after George Douglas' novel, *The House With the Green Shutters*. They already foresee a great future for the young Scotchman, and, therefore, a lively demand for first edition copies of his first work.

So they write to us inquiring what premium we are asking. We write back that we have no first edition copies.

This is hard on the collectors, but no one else need repine. We are printing *The House With the Green Shutters* right along. As long as the demand continues—and it is steadily increasing—we shall continue to print it, and you will always have a chance to get some edition, just at present the sixth.

After all, the book is the thing; in any imprint it is equally worth reading, worth keeping, impossible to forget.

Apropos of editions, it is a curious fact that Dr. L. O. Howard's book, *Mosquitoes*, has gone into a third edition—perhaps "brood" would be the more scientific term—almost in midwinter. Unseasonable but none the less gratifying.

Presently we shall have some news about three books which we publish this month: *The Blazed Trail*, *The Madness of Philip*, and *Next to the Ground*.

that lands and provinces separate us. What an age it will be before you read these lines, the weak expression of the fevered soul in which you reign."

"ALBENGA, April 7th.

"I have received the letter that you break off, in order, you say, to go into the country; and in spite of that you give me to understand that you are jealous of me, who am here, overwhelmed with business and fatigue. . . . I am not satisfied with your last letter; it is cold as friendship. I have not found that fire which kindles your looks, and which I have sometimes fancied I found there. But how infatuated I am. . . . I desired more frigid letters, but they gave me the chill of death. Not to be loved by Josephine, the thought of finding her inconstant—but I am forging troubles—there are so many real ones, there is no need to manufacture more!"

"PISTOIA, TUSCANY, June 26th.

"For a month I have only received from my dear love two letters of three lines each. Is she so busy, that writing to her dear love is not then needful for her, nor, consequently, thinking about him? To live without thinking of Josephine would be death and annihilation to your husband. Your image gilds my fancies, and enlivens the black and sombre picture of melancholy and grief. A day, perhaps, may come in which I shall see you, for I doubt not you will be still at Paris, and verily on that day I will show you my pockets stuffed with letters that I have not sent you because they are too foolish."

"ALA, September 3, 1796.

"We are in the thick of the fight, my beloved; we have driven in the enemy's outposts; we have taken eight or ten of their horses with a like number of riders. My troops are good-humored and in excellent spirits. I hope that we shall do great things, and get into Trent by the fifth.

"No letters from you, which really makes me uneasy; yet they tell me you are well, and have even had an excursion to Lake Como. Every day I wait impatiently for the post which will bring me news of you—you are well aware how I prize it. Far from you I can not live, the happiness of my life is near my gentle Josephine. Think of me! Write me often, very often; in absence it is the only remedy; it is cruel, but, I hope, will be only temporary."

"MILAN, November 27, 1796, 3 P. M.

"I get to Milan; I fling myself into your room; I have left all in order to see you, to clasp you in my arms—you were not there, you gazed about the towns amid junketings; you run farther from me when I am at hand; you care no longer for your dear Napoleon."

"MILAN, November 28, 1796, 8 P. M.

"I have received the courier whom Berthier had hurried on to Genoa. You have not had time to write me, I feel it intuitively. Surrounded with pleasures and pastimes, you would be wrong to make the least sacrifice for me.

"I reopen my letter to give you a kiss—Ah! Josephine—Josephine!"

After the last of these early letters occurs a gap of more than three years.

[May 29, 1800] "11 P. M.

"I hardly know which way to turn. In an hour I start for Vercelli. Murat ought to be at Novaro tonight. The enemy is thoroughly demoralized; he can not even understand us. I hope within ten days to be in the arms of my Josephine, who is always very good when she is not crying and not flirting. Your son arrived this evening. I have had him examined; he is in excellent health. Accept a thousand tender thoughts. I have received M.'s letter. I will send her by the next courier a box of excellent cherries."

"AUSTERLITZ, December 3, 1805.

"I have dispatched to you Lebrun from the field of battle. I have beaten the Russian and Austrian army commanded by the two emperors. I am rather fagged. I have bivouacked eight days in the open air, through nights sufficiently keen. Tonight I rest in the chateau of Prince Kaunitz, where I shall sleep for the next two or three hours. The Russian army is not only beaten but destroyed.

"I embrace you."

"January 16, 1807.

"My Dear—I have received your letter of the 5th of January; all that you tell me of your unhappiness pains me. Why these tears, these repinings? Have you then no longer any fortitude? I shall see you soon. Never doubt my feelings; and if you wish to be still dearer to me, show character and strength of mind. I am humiliated to think that my wife can distrust my destinies.

"Adieu, dear. I love you, I long to see you, and wish to learn that you are content and happy."

After the divorce:

"February 19, 1810.

"My Dear—I have received your letter. It is, perhaps, not desirable that we should be under the same roof for the first year. Yet Bessières' country-house is too far off to go and return in one day; moreover I have rather a cold, and am not sure of being able to go there.

"Adieu, dear."

"TRIANON, August 25, 1811.

"I have your letter. I see with pleasure that you are in good health. I have been for some days at Trianon. I expect to go to Compiègne. My health is very good.

"Put some order into your affairs. Spend only £60,000, and save as much every year; that will make a reserve of £600,000 in ten years for your grandchildren. It is pleasant to be able to give them something, and be helpful to them. Instead of that, I hear you have debts, which would be really too bad. Look after your affairs, and don't give leave to every one who wants to help himself. If you wish to please me, let me hear that you have accumulated a large fortune. Consider how ill I must think of you, if I know that you, with £125,000 a year, are in debt.

"Adieu, my dear; keep well."

Advertising Instruction

—BY A—

Famous Expert

and

Designer of Advertising

GEORGE H. POWELL

The Powell System the Greatest Aid To a Large Salary

REMARKABLE ENDORSEMENTS OF STUDENTS AND AUTHORITIES

The wonderful development of the advertising business has opened up great opportunities for ambitious people to earn salaries ranging from \$25.00 to \$100.00 weekly, and even more. Advertising managers are paid higher salaries than any other class of subordinate workers, some receiving \$10,000 to \$15,000 yearly. Advertisers are calling for young men and women who have been properly trained to write advertisements, and the supply of good help does not equal the demand.

The Powell System of Instruction the most complete and scientific advertising correspondence course in the world, will fit any intelligent man or woman to achieve success and become a somebody instead of a nobody. Mr. Powell is the leading American expert engaged in teaching advertising and his achievements are unrivaled.

Students, prominent publishers and well-known authorities say the Powell System is a wonderful revelation, and the best in every respect.

Every reader of PUBLIC OPINION who is ambitious to enter the advertising field and earn a big salary, and every business man who desires a broader knowledge of publicity should send at once for a

booklet describing the Powell System of Instruction and giving endorsements of leading advertising successes.

Mr. F. A. Partenheimer, who made Ralston Breakfast Food famous, is now advertising manager for the C. D. Gregg Tea and Coffee Co., St. Louis, Mo., of national renown. He writes:

"No one could give more valuable instruction in the art of advertising than George H. Powell, because there is no other man in the United States who has had so much practical experience with successful advertising."

Mr. H. M. Jones, Office of Clerk of Superior Court, Des Moines, Ia., writes: "The lessons are highly satisfactory, and I can hardly wait for the next one. If you think a testimonial from me later on would be of benefit, please call on me, for I feel from what I have already had, that your course of instruction is going to do me a world of good."

If you want a beautiful Prospectus—a booklet that will prove highly interesting—address

GEORGE H. POWELL, 125 Temple Court, New York.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION

THE GENERAL SITUATION

Dun's Review, New York, March 1

Although the shortest month in the year was further curtailed by two holidays and handicapped by the most severe storms of the winter, industrial and trade results were most satisfactory. The closing week brought a general resumption of activity in lines that suffered from the weather, and preparation for an exceptionally heavy spring business was reported at many points; southern cities alone being backward. Numerous interruptions would account for a considerable loss in railway earnings, yet reports thus far available for February show a decrease of only 2.8 per cent from last year's figures, and a gain of 13.5 per cent as compared with the traffic in 1900.

IRON AND STEEL

Insufficient motive power and bad weather combined to restrict the movement of coke from Connellsville, and pig iron production suffers at a time

ANYONE CAN

Prove the Value of Scientific Food

A good straightforward test of food is worth much to humanity. The following is interesting:

Mr. T. K. Durboraw of Greenfield, O., says: "After 3 months' sickness with grip I found I had lost 42 pounds, with little appetite and almost no digestion. Wife finally put me on Grape-Nuts and I actually lived on this food, taking it three times a day, and a cup of Postum Coffee at each meal for about four weeks.

"When I began I was so nervous and weak that my strength was exhausted even by dressing, and, of course, I was unable to do the work loaded upon my desk, but I hammered away without any tonics or medicines, only my diet of Grape-Nuts and Postum three times a day. I found at the end of 23 days my nervousness gone, strength greatly increased and that I had gained 16 pounds.

"Finally, after getting back to good health again I, of course, took on different kinds of food, and, as a change, began using—for breakfast. After a while some peculiar spells began to appear in the morning with deathly sickness and nervous lassitude. I took treatment for biliousness, but that did not avail.

"About a month ago I gave up the ——— for breakfast and took on Grape-Nuts again. These morning attacks left me entirely in a day or two and I feel that I have had sufficient evidence of the scientific value of Grape-Nuts as a vitalizing, perfect food, that does not require the heavy work of the stomach occasioned by the use of starchy foods we use so much nowadays."

when a maximum output would not be excessive. This difficulty extends all along the line, retarding operations up to the finished steel product. Pressure for structural material is already severe, and will probably be still more so as the regular building season draws nearer. Further hardening of quotations is reported, and inquiries for delivery in 1903 are not exceptional. Recent heavy purchases of pig iron for the latter half of the year have satisfied the needs of many consumers, and there is less anxiety regarding deliveries. More foreign steel has been engaged, and domestic concerns are still bidding in the German market. The international situation is somewhat confusing, exports being reported despite the unsatisfied demand at home.

COTTON AND WOOL

Makers of cotton goods are very cautious about undertaking future deliveries, owing to the uncertainty as to labor and raw material. The wage question will probably reach a settlement without much interruption to work, as the leading concern has offered an advance of 10 per cent. Export orders are still available, but at prices slightly below the views of holders. This is the situation in most branches of the cotton goods market, holders having a distinct advantage, and in many lines the mills are sold so far ahead that agents are out of the market. As a rule woollen goods are well maintained and in brisk demand, but new lines of heavy weights are not sought.

CORN AND WHEAT

Cereals opened the week with a decided reaction. Statistics of supplies and movement were not satisfactory to speculative holders, storms had interrupted communication and restricted new operations, crop news was generally satisfactory, and foreign purchasers were less interested. As usual, speculative liquidation carried the decline too far, and there followed the customary recovery. Wheat came into sight rather more freely than a year ago, and the Atlantic shipment of flour made a better comparison than in recent preceding weeks, but total exports of wheat from

Shaw Knit
TRADE MARK

half hose never fade, stain, or crack, neither do they lose their shape; they are knit to fit. As to wear, there's no stocking in the world their equal. This is no hearsay, but a fact; ask any dealer, ask any one who really knows, what a SHAW-KNIT sock is for wear.

SUPER SILK LISLE

looks like silk, wears ten times longer, and colors are absolutely unchangeable. More you wash them the more silky they become. Are extra light weight, four threads throughout, finest combed and gassed Lisle sea-island cotton yarns. Customers when unable to buy from local dealers should select colors by following stock numbers, and order from us. Made in the following colorings:

SNOWBLACK, XX^o B.
HAVANA BROWN, XX^o T.
ROYAL PURPLE, XX^o R. P.

50c. per pair; one-half

dozen, \$3.00. Sent prepaid upon receipt of price to any address in the U. S. Sizes, 9 to 11 1/2 inclusive. When ordering specify size and colors. Sold by dealers. Be sure you get Shaw Knit. Our catalogue, with over eighty different styles and colorings, in Cotton, Lisle, Merino, Wool, Linens, and Cashmeres, sent free for the asking.

the United States, flour included, were but 3,185,052 bushels, against 4,324,249 bushels a year ago. Corn showed the customary loss in both movements; receipts amounting to only 2,312,664 bushels, against 4,849,783 last year, while Atlantic coast shipments were 184,682 bushels, compared with 3,421,682 in the same week of 1901.

FAILURES

Failures for the week numbered 215 in the United States against 179 last year, and 35 in Canada against 31 last year.

Financial

THE MONEY MARKET

Bradstreet's, New York, March 1

No visible effect was produced in the New York loan market by the unfavorable bank statement last week, though the shipment of \$3,500,000 gold to Europe and the prospect of a further loss of specie has created discussion as to whether this movement will not cause higher rates for money here. It is also noted that funds have been called for at western cities, and the New York banks are estimated to have lost \$5,800,000 in net cash this week, another poor bank statement being expected today. The dullness of the stock market has a quieting effect on the money situation, though it is known that syndicate operations connected with industrial combinations create some large borrowings. Money on call has, however, been abundant, and the range of rates for it was only between 2 @ 3 per cent, the bulk of the business be-

GET MAD

When Friends Tell the Truth

Many people become coffee toppers before they realize it, and would be angry if thus described even by a close friend.

It will pay anyone to examine carefully into whether or not coffee has gained the mastery over them. A coffee toper may suspect that his or her ails come from coffee drinking, but they will invariably charge the disease to some other cause, for right down in the heart they realize that it would be practically impossible to give up coffee, so they hope against hope that it does not hurt them, but it goes on with its work just the same and the result is complete collapse and nervous prostration, lasting sometimes for years, unless the poison that causes the disease is discontinued.

There are hundreds of thousands of illustrations of the truth of this statement.

Any person addicted to coffee can make the change from common coffee to Postum Food Coffee without trouble provided the Postum is properly prepared so as to bring out the color, flavor and food value. It has a rich black brown color and changes to the golden brown when good cream is added.

The change will work wonders in anyone whose nervous system or stomach has been unbalanced or disturbed by coffee.

ing at $2\frac{1}{4}$ per cent. Time money was freely offered, but the demand was small, except for long periods, rates being $3\frac{1}{2}$ @ 4 per cent for thirty to ninety days and 4 @ $4\frac{1}{2}$ per cent for four to six months on mixed collateral. Commercial paper was quiet, with limited offerings of choice names and a moderate buying demand, the rates being based on 4 @ $4\frac{1}{2}$ per cent prime doubles.

THE STOCK MARKET

The New York stock market is dull and heavy. Public buying of investments continues and bonds are strong. Uncertainty about the Northern Securities litigation, however, checks speculation in standard railroad shares, and gold shipments, with expectations of a poor bank statement and the possibility of dearer money, are restraining factors. Large interests have, however, supported prices, and bears seem timid about attacking the market. The steel stocks were strong and had good support. Many inactive railroad specialties and cheap stocks of the same class were the objects of manipulation and were marked as to price. Foreign exchange is very firm at 4.87 $\frac{3}{4}$, and \$3,500,000 gold was shipped to Paris on Thursday, the impression being that further specie exports will ensue.

BANK CLEARINGS

Clearings for the week (five days) ending Thursday, February 27, aggregate \$1,952,097,679, a decrease of 10 per cent from last week, but a gain of 11 per cent over a year ago. Outside of New York the decrease from last week is 11 per cent, but compared with last year there is a gain of 8 per cent.

Trade with Germany

The fact that Prince Henry's visit is said to have had a commercial inspiration and that it is expected to influence future of trade between the United States and Germany lends interest to the figures published at Washington showing that this commerce has grown from \$29,878,845 in 1865 to \$292,226,329 in 1901.

An examination of the details shows that the percentage of increase in imports from Germany has been greater than the percentage of growth in exports to Germany, the figures being: Imports into the United States from Germany in 1865, \$9,563,743; in 1901, \$100,445,902. On the other hand the exports from the United States to Germany were: In 1865, \$20,315,102; in 1901, \$191,780,427. Thus the imports into the United States from Germany are more than ten times as much in 1901 as in 1865, and our exports to Germany about nine and a half times as much in 1901 as in 1865.

Finished manufactures form the chief features of the imports into the United States from Germany, and foodstuffs and manufacturers' materials form the chief features of our exports to Germany. Sugar, chemicals, cotton manufactures, silk manufactures, leather manufactures, toys, earthen, stone, and china ware, wool manufactures,

iron and steel manufactures, and cement are the principal items in our imports from Germany, while raw cotton, corn, wheat, flour, pork, and beef products, mineral oils, tobacco, oil cake, and meal, naval stores, wood and manufactures thereof, and copper form the chief features of our exports to Germany. In a few classes of manufactures, however, notably iron and steel, the exports to Germany are considerable, but, as above indicated, the bulk of the movement from the United States to that country is composed of the articles required in Germany for food or manufacturing and which it does not produce in sufficient quantities at home, while, on the other hand, the bulk of the imports into the United States from Germany are foodstuffs not produced at home or the higher grades of manufactures, such as sugar, wines, coffee, rice, chemicals, gloves, laces, and knit goods, woolen dress goods, silk dress goods, cutlery, porcelain, and china ware, and toys.

Various Topics

The Canadian government has reduced the duty on news printing paper from 25 per cent to 15 per cent as a result of the decision that a combine existed among Canadian paper manufacturers.

The commissioner of internal revenue has decided that, under the attorney-general's recent opinion, a memorandum used in delivering stock as security for the future payment of money printed on an envelope or any similar memorandum requires a revenue tax stamp.

The German government has decided that artificial indigo is superior to the natural product, and all military cloth will be dyed with the artificial article in the future. The decision will be a great help to manufacturers of artificial indigo, and means a considerable increase in that article's yearly output.

In a summary of results of strikes in Great Britain last year the *Colliery Guardian* notes that 27 per cent attained their object, 33 per cent were absolute failures, and 36 per cent wound up in compromise. In quite a number of cases settlements were made by direct negotiations, and thirty-three by conciliation and arbitration.

The Russian minister of finance has authorized the opening of a stock exchange at Simbersk, which is the center of an extremely busy district. Three annual fairs are held there, and the transactions reached last year about 7,500,000 rubles, while the business done by the local banks alone exceeded 107,000,000 rubles.

For the first time Japan's foreign trade has aggregated over 500,000,000 yen. The figure for 1901 was 502,291,054 yen, being an increase of 21,133,588 yen over the total for 1900. The increase was altogether on the side of exports, which grew from 198,753,827 yen in 1900 to 248,407,576 yen in 1901. Imports, on the other hand, fell from 282,403,639 yen to 253,883,478 yen.

WIT AND HUMOR

A Sky Lark

When Sirius was the Dog-star, 't was a
very gay affair
That took place not on earth at all, but
'way up in the air;
The ball-room was well lighted with
electric Northern Lights,
Which thus enabled all to see most
truly wondrous sights.
The music for the dancing was the sort
one seldom hears,
And was rendered very sweetly—'t was
the music of the Spheres.
Old Father Time said, with a sigh: "I
think I'll go to sleep;
My hour-glass is not needed, for the
Stars their Watches keep."

The company arrived by scores. The
Sleet was Hailed with joy;
The Fogs all came in Clouds, of course,
and acted strangely coy;
And those who came on Trade-winds
were the ones that bought and sold,
But higher classes came in state, and
e'en the Thunder Rolled.
The Frost came on his Icicle—a chain-
less bevel-gear;
Said Mr. Ice: "I see you ride, but
Peddle nothing here."
Before they danced, there came a sound
of "Ting-a-ling-a-ling!"
At which each one exclaimed: "I know
that that is Saturn's ring!"

Now, at all balls, it is a fact, some Wall-
flowers there must be;
The Wall-flowers here were old Fixed
Stars, as lonely as could be.
And Satellites, they sat till lights began
to fade and wane,
But not a partner asked them out; their
waiting was in vain.
When heated with the dancing, guests
would pair off hand in hand
Where the Great, Big Dipper and the
Small were always in demand;
While those who wished to take Ice-
cream strolled down the Milky Way,
And with their cream were served
Snowflakes—nor were they asked to
pay.

At last old Father Time awoke as
rested as could be.
A little Meteor cried out: "Oh, look!
Time's up!" said he.
And so the guests all had to go. The
Shooting Stars went first,
And in their haste to get ahead, a
number of them burst.
Orion's Belt Line Train appeared, and
to it he was led.
"Go home at once, you Fogs!" called he.
"You're surely Missed," he said.
And so the dance was ended, and the
Comets took their flights,
The Pleiades remaining to turn out the
Northern Lights.

Though Sirius was the Dog-star, that
ball was gay, you see.
I'd like to see a Planet Plan It better
than did he.

PUBLIC OPINION

Number 11
Volume XXXII

The Week

Thursday
March 13, 1902

ADVICES from Germany would have it that the visit of Prince Henry to these shores has been without important results. The prince himself holds a different opinion, or so, at least, we judge from his remarks at his last public appearance in New York Saturday evening, when he said: "I am convinced that the hopes and the desire of my imperial brother have been fulfilled; namely, that the measure of confidence placed by two great nations in each other has grown and expanded." This might be admitted and the visit might still be pronounced a failure—whether or not it was a failure depending largely upon one's conception of its object. That "the measure of confidence placed by two great nations in each other" has expanded no one can deny. This may or may not have any important result.

OF all the absurd motives that have been attributed to Emperor William in sending his brother to see us, the most absurd of all is that coming from London in the form of a report that the kaiser wanted to pave the way for negotiations looking toward the transfer of the Philippines to German control. Last week London was interested in the story that the visit was a means of averting our protests against German designs in China; this week the *Herald* attempted to stir up excitement over its exclusive information that the visit was to serve as a cloak for the kaiser's intention to secure a naval station in the Caribbean, and the week closes with the yarn already referred to in regard to the Philippines. All of which is evidence of disordered imagination and of nothing else.

THE habit of attributing all sorts of Machiavellian designs to the kaiser is a confirmed one, as again witnessed by the story that he has already formed plans for the absorption of Holland. But so far as China is concerned, the anxiety of England, not to mention the United States, is doubtless justified. Only it is rather late now to protest against the exclusive concessions in Shantung which she obtained three years ago. These she intends to keep, of course, but as to the rest she is resolute for the open door, quite as resolute, in fact, as Russia is except as to Manchuria. As one paraphrase of the German chancellor's statement puts it, her attitude is not one of renunciation, but of repletion, and she may safely ask, in the language of the late sovereigns of New York, What are you going to do about it?

PHILIPPINE affairs have not been shelved, as some seem to think, by the passage of the tariff bill for the islands. Another bill is now before congress, or rather before the committee that has been listening to Governor-General Taft's testimony for the last three weeks. It is provided in this bill that when it shall be certified to the president that the insurrection has ceased, a general election shall be held for delegates to a popular assembly. When this has been accomplished, the control of the islands shall pass into the hands of the assembly and a commission. Three resident commissioners to the United States are also to be elected, the powers of which, as well as the powers of the assembly, are somewhat obscure. But it is fairly certain that the commission will not lack clearly defined powers in whatever legislation is enacted at this session of congress.

GENERAL FUNSTON has added his testimony to that of the many others who claim that the Philippine rebellion has been encouraged by anti-imperialist support in this country. At a banquet in his honor in New York, Saturday night, he asserted that "all of those men who have fallen since January, 1900, have been killed not because the Filipinos really cared to fight against us, but because certain Filipinos were held up and encouraged by people right here

in the United States." One of his authorities for this statement was Aguinaldo himself, and surely no anti-imperialist will question the testimony of the Tagal George Washington. "For heaven's sake," General Funston continued, "let us keep still until the sovereignty of the United States is established, and then we can get together and pull hair and settle things." Those addressed are willing to pull hair and settle things seven days a week, but as for keeping still—impossible!

IS there less opposition to the ship subsidy bill, have its opponents given up hope of defeating it, or is it the general opinion that it can not get through congress? These questions are suggested by the fact that comparatively little opposition is manifested now that it has been agreed to vote on Mr. Frye's bill next Monday. There is still time, of course, for the arguments against the bill and the principle it embodies to be heard, but unless our observation is at fault, opposition to the proposed measure for rehabilitating the shipbuilding industry greatly decreased when it was promised that the bill would be changed so as to exclude foreign-built ships from its benefits. Perhaps the Democrats are willing to let the Republicans have their own way in the belief that they are making effective campaign ammunition to be used against themselves.

BY the exercise of a little strategy, President Roosevelt has circumvented the plans of congress to secure the transfer of several hundred temporary census employees into the permanent classified service. It was doubtless expected that the director of the census would include his whole force under the permanent bureau law and then reduce it by transfers to other departments. But the president has directed that only those employees who are actually needed in the new bureau shall be retained; if the others wish to enter the classified service, they will have to do so by the regular means of a competitive examination. This action was only just toward the hundreds who by hard work have secured places on the eligible lists, and shows again that civil service reform is, as he once claimed, the president's "long suit."

NOW has begun the effort of the state department to collect from Turkey the ransom paid for the release of Miss Stone and to secure the punishment of the brigands responsible for her detention. The porte, of course, disclaims all responsibility, and it would seem rather unreasonable to ask the sultan to pay money which, according to reliable accounts, was extorted from the friends of Miss Stone to be used in financing a Macedonian revolt against Turkish authority. We are inclined to think that the demand on Turkey was merely a formal proceeding to conserve any rights we might have, and not an indication that the state department intends to force the repayment of the ransom money.

THE CZAR has invited President Loubet to visit him at St. Petersburg, and the invitation came at a very convenient time. It shows that the charge that the present French ministry has weakened the Russian alliance is untrue, and this is a very useful thing to have shown on the eve of a general election, greatly improving, as it does, the already excellent chances of the government candidates. For the rest, foreign affairs are in a very dull and uninteresting condition. General Kitchener has had occasion not only to "regret," but to "greatly regret" to report the capture of General Methuen, 200 men, and four guns by De La Rey. China supplies its usual quota of news but this is of poor quality even for China—an alleged rebellion in the lower Kwang and warlike preparations by Russia at Port Arthur. Both stories come from Shanghai.

AMERICAN

American Newspapers

HOW EMPEROR WILLIAM REGARDS THEM AND HOW THEY
REGARD THEMSELVES

PRINCE HENRY'S statement at the press banquet in his honor, that his brother had said to him: "You will meet many members of the press, and I wish you, therefore, to keep in mind that in the United States they rank almost with my generals in command"—this statement has, of course, been taken very agreeably by the press in general, the *San Francisco Call* saying, for instance, that "if anyone can beat that he is invited to try. As is well known, the kaiser never loses an opportunity to tell his people that their empire rests upon his army and his generals; that they stand guard over the German tribes and protect their federation from all foes who offer. When he gives the newspaper men of the United States rank equal to his generals it is saying that this country rests upon the press in the same sense as his rests upon the army. Of course, newspaper men knew their position before this was said, but they were too modest to tell it, and were not aware that it had got out. Journalism in this country owes its best features to the freedom of our institutions, and it may not be ungracious or amiss to say that freer journalism in the empire of the kaiser might finally shift the maintenance of the empire from a costly and dependent army to the keeping of an independent press."

The *Pittsburg Press* also believes that beneath the prince's hyperbole there is a deal of truth. "The free press of America is not only the most powerful single educational force, perhaps, that we have, but it is naturally at the same time a prime factor in the development of events. If it does not actually mold public opinion, it enlightens it and presents the facts upon which public judgments, and even public prejudices, are based. It can not be ignored by those who would reach the American heart or the American conscience, and Prince Henry and his sagacious brother must be credited with having discovered something of which a few of our own public men are still more or less unaware." The *Columbus Dispatch* is another paper which is not inclined to reject the prince's compliment. It has in mind the emperor's well-known antipathy to over-activity on the part of German and foreign journals when it says: "A study of the American press during the period of the prince's visit ought to be useful in mollifying the emperor's harsher judgments and should lead him to suspect that toleration is better than suppression where his power to suppress exists, and generous thoughts are better than hatred of the newspapers that exist where his power is *nil*. As a rule newspapers are not mischief-makers, unless acting under the passion of such injustice as the restriction of their liberty; and, behind their partisanship, and in some cases sensationalism, there is to be found the sterling spirit of defense for what is right and punishment for what is wrong."

That the emperor entertains "harsher judgments" is indicated by the statements of Wolf von Schierbrand, formerly Berlin correspondent of the Associated Press, in an article in the *March World's Work*. Here we find the assertion that "the emperor has a strong dislike of the press. It is mainly owing to his own influence that that very modest measure of comparative liberty which the German press enjoyed

under his grandfather and his father has been curtailed, until even the semblance of it has almost disappeared. The principal reason for the emperor's antipathy to the press is his personal experience, especially during the first five years of his reign, when public opinion was considerably prejudiced against him, and when a great deal of bitter and unfair criticism was hurled at his head. The French papers he cares little about, because no German emperor has the right to expect anything but abuse from his hereditary foe. The German press is securely and effectually muzzled, and the few editors or correspondents who now and then kick over the traces are silenced. The rest of the European press does not count for much, but the English and the American press, powerful, wealthy, enterprising, and fearless, has always been a great thorn in his side. He minds the English leading papers more, of course, than the American, for obvious reasons. But of late, since the United States has developed an unexpected military, naval, and political strength and commercial supremacy, he devotes much greater attention to its press than he formerly did."

We hesitate to mar the chorus of self-congratulation indulged in on the strength of the comparison made by Prince Henry, of which samples are given above, but this seems as good a place as another to refer to the Confessions of a Provincial Editor in the *March Atlantic*, in the course of which the bold statement is made that "a small newspaper sells its space to the advertiser, its policy to the politician—the ultimate editor of a small newspaper is the advertiser, the biggest advertiser is the politician. This is a maxim experience has ground with its heel into the fabric of my soul. We all remember Emerson's brilliantly un-New-England advice, 'Hitch your wagon to a star.' This saying is of no value to newspapers, for they find stars poor motive power. Theoretically, it must be granted that newspapers, of all business ventures, should properly be hitched to a star. Yet I have found that if any hitching is to be done it must be to the successful politician. Amending Mr. Emerson, I have found it the best rule to 'yoke your newspaper to the politician in power.'"

How Prince Henry's Visit is Viewed in Germany

HOW do the German press and public regard the reception of Prince Henry and the exchange of courteous and carefully phrased assurances of international affection between Germany and the United States? The Berlin correspondent of the *New York Herald* answers this question as follows:

I have reviewed and carefully digested the utterances of all the leading journals, reflecting all shades of political opinion, and have come to the conclusion that every one who makes a similar attempt to gauge public opinion must admit Prince Henry's mission to be a failure so far as any political importance attaches to it. The *reichstag* tariff commission replies to the salutations from across the water by demanding a tar-

iff on the United States imports of wheat, rye, and other foodstuffs, which means either exclusion or a tariff warfare.

One of the main objects of Prince Henry's trip was to cultivate friendly trade relations and convince the members of the foreign relations committee in the United States senate that much friction might be avoided by passing the reciprocity bill, framed on behalf of Germany by Mr. John A. Kasson, commissioner, under the tariff act, which now lies in a dusty pigeonhole. No assurance of any kind has been received by the German government that congress will "tinker" with the tariff.

So ridiculous and over-zealous are the descriptions of homage, and of the desperate efforts to unbend to the prince made by the United States, with which the daily press is flooded, that even the cartoonists here are beginning to use Prince Henry and Mr. Roosevelt as their favorite themes. A horde of correspondents from local journals were offered the opportunity to accompany Prince Henry, and instructed to "boom" his reception, but their vivid discolorations are so palpably forced and so plainly "made to order" as to deceive nobody.

Since the departure of Prince Henry, your correspondent has mingled with members of all circles, high and low. It would be a severe strain on the imagination and veracity to describe the prevailing feeling as one of enthusiasm. "The man in the street" regards the whole affair as another of the many "diplomatic missions" of the prince, which are usually regarded as signs of a coming breach rather than genuine manifestations of friendship.

The emperor doubtless entertains most friendly intentions toward Mr. Roosevelt, the Monroe doctrine, and the United States in general, but, like most other monarchs, he can not curb public sentiment or force the obstreperous agrarians, for example, to modify their harsh anti-American attitude.

It is folly to imagine that Prince Henry's trip will induce owners of iron ore, coal, and copper mines, the agriculturists and the other German producers of raw material to desist from their bitter campaign for a prohibitive tariff to protect them against still cheaper

products of copper, grain, and machinery. Reports from Westphalia, Upper Silesia, and other industrial centers just now all agree that the fight is being waged with more bitterness than ever, especially in view of the activity of the United States steel corporation in buying the leading Norwegian iron mines and in seeking harbors here as a base of operations. It is equally true that the ordinary business man, merchant, or retail dealer is closely pressed by American shoes and novelties in typewriting, furniture, and other "Yankee" branch concerns, with which the Friedrichstrasse and Leipzigerstrasse, in Berlin, are crowded, and will not be pacified by the so-called "epoch-making" visit of Prince Henry.

The Proposed New States

Washington Correspondent New York Tribune

THE house committee on territories has partially opened the door of statehood to the only four remaining territories—Oklahoma, Arizona, New Mexico, and Indian Territory. The committee already has reported favorably bills for the admission of Oklahoma, Arizona, and New Mexico, and on the bill introduced by Mr. Moon, of Tennessee, for the creation of the Indian Territory into the Territory of Jefferson. This, of course, is preliminary to statehood legislation for the Indian Territory, in that the Moon bill provides for the immediate abolition of the anomalous political condition, where what little government there is is administered separately and independently by tribes of Indians.

Indian Territory is Democratic, while Oklahoma is Republican by a small majority. Political conditions similar to these in all respects exist in the other two territories. Arizona is usually Democratic, and New Mexico is at present Republican, but with strong Democratic leanings. Thus, from the political aspects of the case, the Republican managers are not encouraged to look favorably upon the application of any of these territories for admission to the sisterhood of states except Oklahoma.

HENRY PLANTS A TREE—AND UNCLE SAM PROMISES TO KEEP IT GREEN.—*Minneapolis Journal*

THE LATEST THING IN PRETZELS.—*Minneapolis Tribune*

There is a still more potent reason for keeping them out of statehood for some time yet, and that is that Oklahoma is the only member of the quartet whose citizenship can be said to be fit for the responsibilities of full participation in national government. The last census shows that the population of both Arizona and New Mexico is largely of Mexican and Indian descent, and the vast tracts of arid lands in both of them are not inviting to hasty settlement. Should they secure representation in congress, the huge scheme of irrigation now being so energetically promoted would be advanced at the expense of the national revenues, and the tariff question would become more complicated in the senate than it is at present. The wool and live stock interests would send to the senate from these new states representatives pledged to higher duties than the manufacturing interests of the east now care for. In view of all of these phases of the question, it is thought that none of the bills for the creation of new states which the house is now considering will receive favorable attention in the senate for a long time.

Boston (Mass.) *Globe* (Dem.)

The favorable report of bills for the admission of Arizona, Oklahoma, and New Mexico as states looks to the tardy performance of a duty which has long been urged upon congress. The Democratic national platform, adopted at Chicago in 1896, favored "the admission of the territories of New Mexico, Arizona, and Oklahoma into the union as states, and the early admission of all the territories having the necessary population and resources to entitle them to statehood." The Kansas City platform, adopted in 1900, declared: "We denounce the failure of the Republican party to carry out its pledges to grant statehood to the territories of Arizona, New Mexico, and Oklahoma, and we promise the people of those territories immediate statehood and home rule during their condition as territories." The Republican party has just got around to the redemption of its pledge, under the pressure of Democratic persistence. It remains to be seen whether the majority in control of congress will carry out the purpose of the bill which its committee has brought in.

Congressional Summary

CONGRESS DAY BY DAY

MARCH 3.—In the senate, Mr. Frye explained the provisions of his ship subsidy bill. In the house the bill to classify the rural free delivery service was considered; the minority filibustered against adopting the conference report on the Philippine tariff bill.

MARCH 4.—The senate passed a number of minor bills, and Senator Frye completed his speech on the ship subsidy bill; the legislative, executive, and judicial appropriation bill was reported. The house adopted the conference report on the Philippine tariff bill; the vote was on party lines, except that Messrs. McCall, of Massachusetts; Littlefield, of Maine, and Heatwole, of Minnesota, voted with the Democrats.

MARCH 5.—Debate on the ship subsidy bill continued in the senate; the legislative, executive, and judicial appropriation bill was passed. The rural free delivery bill was under consideration; the death of Representative Polk, of Pennsylvania, was announced in the house.

MARCH 6.—In the senate, Mr. Frye, in charge of the pending shipping bill, obtained an agreement that

the senate should vote on the measure and all pending amendments at 3 p. m. on Monday, March 17; Mr. Hanna made a speech on the bill, and there was an extended debate on the measure providing for the protection of the president of the United States. The house devoted another day to debate on the bill to classify the rural delivery service and to place it under contract.

MARCH 7.—The diplomatic and consular appropriation bill was passed by the senate, and there was some debate on the bill for protection of presidents. Debate on the bill to classify the rural free delivery service continued in the house.

MARCH 8.—The house closed the general debate upon the bill to classify the rural free delivery service and place the carriers under the contract system; bills were passed to authorize the South Omaha bridge company to construct a bridge across the Missouri river, and to add Baxter, Marion, and Searcy counties to the western judicial districts of Arkansas.

Art and the Tariff

AN APPEAL FOR THE MODIFICATION OF THE TARIFF ON ART IMPORTS

AMERICAN artists are evidently not fearful of the competition of foreign artists. At least, they do not fear the "pauper labor" of fifty years ago; for a number of distinguished American artists have made a plea for the abolition of the duty on all works of art created fifty years before the date of importation, though they would be glad to have the tax wholly removed. They cite certain facts concerning the retention in Europe of masterpieces which have recently been purchased by Americans who, rather for the sake of principle than to save expense, are averse to bringing their treasures across the Atlantic, and remark the loss which this country is meantime suffering in consequence. They say further: "It seems scarcely necessary to argue at this day against that view which considers as a mere luxury one of the greatest of civilizing forces and one of the most permanent forms of wealth, and to point out that no one consumes works of art, but that they remain in the country, ultimately devolving by gift, bequest, or purchase to museums or other public institutions, where, as the property of the people, they diffuse education and culture forever."

"There are," says the *New York Tribune* (Rep.), "only three grounds on which a duty on works of art can ever have been sincerely advocated, namely, that it is required for revenue; that it diminishes competition and so fosters native talent, and that its abolition would be a step toward undermining our protective system. As for the last of these arguments, it seems sufficient to say that examination of the actual free list deprives it of all logical support. The plea that our government needed the money was weak when it was most reasonable, for the revenue from this source was never important, while at the present time, with an embarrassing surplus of which congress is trying to relieve the treasury, it plainly possesses less than no force at all. There remains to be considered the contention that American artists need and want protection, which the tariff gives them. But the fact is that those best qualified to represent the class in whose behalf the retention of the duty is advocated frankly and emphatically favor its abolition. Yet, with creditable appreciation of practical obstacles, they ask only for such a change in the law as would encourage wealthy Americans to purchase and bring home works

not less than fifty years old. So much at least it would seem as if congress might concede without hesitation or misgivings."

The Philadelphia *Times* (Ind. Dem.) asserts that "the only reason that can be given for rejecting the artists' appeal is the disinclination to subject the tariff system to scrutiny. It is so full of absurdities that if even the slightest amendment were allowed, the demand for the correction of other faults could hardly be resisted. Statesmen who are capable of sacrificing Cuba to the sugar beet do not shrink from the sacrifice of the fine arts or from any other outrage upon civilization that is a consistent part of their barbaric system. They dare not remove even one brick from their Chinese wall lest the rising tide of national progress sweep the whole foolish structure away."

The McKinley Postal Card

THE FAMILIAR JEFFERSON CARD TO BE REPLACED

A NEW one-cent postal card is now being printed at the bureau of engraving and printing, and when the first issue of 4,000,000 has been counted and bundled, the new card will be placed on sale. Its distinctive feature is that the new card contains a vignette of President McKinley in lieu of President Jefferson's portrait. The official description of the new card is as follows: "In the upper right-hand corner is a portrait of the late President McKinley, three-quarters face, looking to the left, with the words: 'Postage One Cent' above and '1843-McKinley-1901' below the stamp and following its elliptical contour. The portrait used for the subject of the stamp is one which was preferred by Mr. McKinley himself. The stamp is practically devoid of ornament. To the left of the portrait are three straight lines of lettering, the top line being one and one-sixteenth inches below the upper edge of the card and containing, in small capital letters, the words, 'The Space Above is Reserved for Postmark.' The second line is made up of the words 'Postal Card' in large, plain capitals. The third line is in the same type as the first, and reads, 'The Space Below is for

the Address Only.' In the upper left-hand corner is a coat-of-arms of the United States, its position balancing that of the stamp in the upper right-hand corner. Above the coat-of-arms, in the same style of capital letters used above the stamp, are the words, 'United States,' and below it the words, 'of America,' following the contour of the coat-of-arms."

"MR. HILL is the leader of those who would make the Democratic platform so nearly like the Republican platform that a Democratic victory, even if possible, would mean nothing to the people at large."—W. J. BRYAN, in the *Commoner*.

SECRETARY LONG has resigned and has been succeeded as Secretary of the Navy by William H. Moody, an active member of Congress from Massachusetts. Mr. Moody is a lawyer by profession, and a young man for his new office, being but forty-nine years of age.

THE FEDERAL SURPLUS is steadily growing, the excess of receipts for the fiscal year being now \$52,759,000. The month of February added \$2,060,000. The expenditures for the eight months of the fiscal year so far expired fell off \$32,300,000. There has been little change in the gold fund, which has now reached \$544,596,900.

ADMIRAL EVANS'S DISGRACE:—Out west here it was generally believed that the president appointed Admiral Evans to represent the navy because it was known that "Fighting Bob" could "keep his end up" in the festivities. Instead he seems to have failed miserably. The claim that he was indisposed does not excuse the maneuver. Admiral Evans may assert that his powers of digestion had been impaired and that he was threatened with a bilious attack; but this did not justify his turning his helm to port and getting out of range of the drinks and delicatessen that the German visitors were facing without a tremor. What is his liver or his digestive apparatus to the honor of the nation? No explanation on the part of Admiral Evans or palliation on the part of his friends can obscure the shameful fact that he, an American officer, was eaten and drunken and smoked to a standstill by the naval representatives of an effete European monarchy.—*Detroit Free Press.*

FOREIGN

The Abolition of Sugar Bounties

ACTION OF THE INTERNATIONAL SUGAR CONFERENCE

AS stated in our last issue, an agreement has been reached by the international sugar conference which has been in session in Brussels since last December. The convention adopted binds the countries represented to suppress the existing direct and indirect bounties, beginning September 1, 1903. Cane and beet sugar are to be treated alike in taxation, and a maximum rate of \$1.20 per hundred kilograms is fixed, which shall not be exceeded in levying tariff duties on imported sugar. Disputes arising out of the new arrangement shall be settled by a permanent international commission, to sit at Brussels. This commission is also to have power to admit non-contracting states to the convention.

The *Baltimore Sun* says: "The European governments instituted the system of sugar bounties on the assumption that there would be no countervailing duties. The United States has undeceived them on this score, while the Indian tariff act has closed the market of India to the continental beet-sugar producers. The European statements assumed that through bounties to sugar producers they could build up great industries which would be of enormous value to the continental nations. They have undoubtedly increased the production of beets and stimulated the manufacture of sugar, but they have done this at a tremendous cost to the taxpayers. The bounty-fed sugar industry has been a veritable old man of the sea on the shoulders of European nations. It has cost them hundreds of millions of dollars, and it has proved profitable to only the beneficiaries of the bounties."

"It is reasonably clear" to the *New York Evening Post*, "that this decision was hastened by intimations from the British government that, unless the bounties on exportation were abolished, a countervailing duty would be imposed upon the bounty-fed product. Such a duty levied in Great Britain would take the entire profit out of the exports from the continent. Hitherto Great Britain has refused to take this step, but the wail of the West Indian colonies has at last touched the heart of the mother country. The sugar-growers of the Lesser Antilles and of British Guiana have suffered from the competition of the bounty-fed product of Europe till they are at the last gasp. They must either adopt some other means of earning a living, or the competition in sugar-growing must be put upon the normal basis. If, as is supposed, Great Britain intimated her purpose to adopt countervailing duties, she did so in pity for her West Indian colonists. The German government, too, will be glad to be rid of the bounties, which have been a sore burden to the budget, but which could not be thrown off while other countries continued to pay them."

The effect of this step on the American treatment of sugar, especially in Cuba, is an interesting speculation. The *New York World* recalls that "apologists of our sugar tariff have urged in its defense that foreign refineries are enabled by the bounty system to market their sugar below the cost of production. It was a poor argument—for if we could at the expense of Germany and France buy sugar below cost, why should we not?—but it was all the argument they had, and soon they will have lost it." On the other hand,

the *Philadelphia Record* says: "In the view of American experts in the traffic, the effect of the Brussels convention's action should be to establish an advanced price for raw sugar wherever the cheap German article, with its bounty rebate, has been forced upon the market. Here is a fresh string for the bows of opponents of Cuban reciprocity; for if the price of raw sugar is to go up, and the normal sources of supply for the United States are to be relied upon as formerly, the administration's point that Cuba will be ruined in the lack of reciprocity concessions would be somewhat blunted."

The *Record* also sees trouble ahead in France. "An effort of the French government to agree with the action of the Brussels conference would be eagerly hailed by the enemies of the Waldeck-Rousseau ministry as an opportunity for its overthrow. In the approaching elections for the chamber of deputies the beet-sugar producers would be likely to prove a formidable opposition to the ministry should they incline to abolition of the bounties. Hence there is little immediate prospect of an end of the sugar war, in spite of the Brussels conference."

The New Liberal Party

LORD ROSEBERY'S PROGRAM

LORD ROSEBERY'S letter cutting himself off from the Liberal party as led by Sir Henry Campbell-Bannerman, and the ex-premier's recent speeches, are taken as a pledge to form a new National Liberal party, the watchwords of which are to be "Empire and Efficiency." Home rule and pro-Boerism are barred from the new platform.

The *London Times* receives the project kindly: "Lord Rosebery's speeches make it clear that he has indeed returned to public life, and that his object is to create a renewed Liberal party, inspired by the best traditions and emulating the great achievements of the statesmen who have made the name of Liberal famous in the annals of England." The *Standard* complains that Lord Rosebery has merely "cleaned his slate," but has not filled it up again. "He can only tell the party to give up its programs, and has nothing better to offer than such meaningless phrases as his exhortation to come up to the Spirit of the Age." The *Daily News* asks where he is going to find the energy for political reforms, pointing out that "empire" of the kind to which Great Britain is accustomed "synchronizes with a degree of inefficiency at home and abroad, the full extent of which it will take years to ascertain."

The *Morning Leader* looks upon Lord Rosebery as an "impressionist." "He does not give us a reasoned body of doctrine." Nevertheless, the Liverpool *Daily Post* claims that his speeches are full of "pearls of true wisdom," and the Liverpool *Mercury* declares that "the prospect of his resuming the Liberal leadership is full of encouragement." Lord Rosebery's abandonment of home rule is characterized as "unworthy" by the *Scotsman* and as "base apostasy" by the *Freeman's Journal*, Dublin.

What is the strength of the rival Liberal camps? A "Liberal Imperialist" answers this question as follows in the London *Daily Mail*:

Sir Henry Campbell-Bannerman's strength is in the house of commons and in the machine; Lord Rosebery's is in the constituencies. In the house there are probably not more than twenty or thirty Rosebery stalwarts—men, that is to say, who are prepared definitely to throw over Sir Henry Campbell-Bannerman should that issue be forced upon them. The number of pro-Boer stalwarts is probably about the same, or a little larger. The great majority are "center" men who do not want to have to commit themselves irretrievably either way; many of them have electoral reasons for not wanting to alienate the Irish vote.

It is in the constituencies that the real battle will be fought. Lord Rosebery's object is clear; it is to create an alternative to the present government on national lines.

At present those who are opposed to Gladstonian home rule and are in favor of the national policy in South Africa are obliged either to support the present government or to take no part in politics. Lord Rosebery's aim is to give them an alternative choice by building up a party of efficiency and progressive reform. It is a patriotic aim in which many even of those who do not in all respects see eye to eye with Lord Rosebery may heartily wish him Godspeed. He has an up-hill task; but energy, decision, and courage may bring him to the summit sooner than for the moment seems probable.

Is Germany Following Russian Example in China?

GERMANY has taken official notice of the report that she was following the exclusive policy in Shantung that Russia has adopted, or is accused of adopting in the north. In the course of the budget discussion in the *reichstag* last week, the imperial chancellor, Count Von Bülow, in reply to questions raised by the vote asked for to maintain the German troops in China, said Germany had only economic and not territorial interests in China and Korea, and would not interfere in the quarrels of others. So far as Germany knew, the only effect of the Anglo-Japanese convention was to maintain the *status quo*. Therefore, it did not prejudice German interests and did not

affect the Anglo-German Yangtse valley agreement. Germany only desired the open door. The telegram from Peking published in London declaring that Germany sought special concessions in China was a canard. Germany secured railroad and mining concessions in Shantung province in 1899, and she had no wish to acquire more than she could digest.

The London correspondent of the New York *Evening Post* says that the disclosures concerning Germany's attempt to secure an exclusive mining monopoly in Shantung "emphasize the reflection that what the *Times* calls Secretary Hay's powerful and unanswerable note to Russia is now due to be sent to Germany also. It is understood that the British foreign office is seeking further and detailed particulars from Peking. It can not be doubted that representations will be made to Berlin if the facts are as represented. British mining interests in China have powerful ministerial backing here. Thus the reality of the Anglo-Japanese alliance may soon be put to a serious test, for Peking news indicates that, despite official disclaimers from St. Petersburg, Russia is pursuing the same exclusive tactics with regard to mining in Manchuria. Russia, Germany, and France stand for exclusiveness; England, Japan, and America for the open door; with this significant new factor in the situation, that England and Japan are committed to action."

It is also pointed out here that the German chancellor did not deny that Germany had some exclusive concessions, and that she has evinced no intention of giving them up—her position is not one of renunciation, but of repletion. She desires the open door in China—except in Shantung, just as Russia desires the open door—except in Manchuria. The *Philadelphia Record*, among other papers, thinks that Chancellor Von Bülow's explanation is "not calculated to allay doubts as to the purpose of his government to observe the rule of equality in the matter of trading privileges in China." And, says the *Record*, "since it has been intimated to the Russian government that efforts on its part to secure a commercial sphere of influence within the Chinese empire, or in any other way to impair American rights under treaties with China, would be regarded with grave concern by the United States, the state department would be guilty of inconsistency if it should fail to address itself to the same effect to any other power contemplating a veiled expropriation of Chinese territory."

German Designs on Holland

PROFESSOR HALLE'S "VOLKS UND SEE-WIRTSCHAFT"

THE Vienna correspondent of the London *Times* calls attention to a new book by Professor Ernst Halle, called "Volks und See-wirtschaft." It contains, says the correspondent, an unblushing statement of Germany's intention to absorb Holland, first economically and then politically. It sneers at Van Houten's recent expression in magazine articles of the Dutch protest against the German idea of absorption. Professor Halle, adds the correspondent, is one of the ablest of the younger professors of Germany. He advocated Emperor William's views in favor of an increase of the fleet some years ago. His new book is issued by the official publishing house of the German war and navy departments.

The correspondent thinks that Holland will find in the book something worthier of her attention than

SAVING KOREA FROM THE BEAR.—*Minneapolis Journal*

the war in South Africa. He also remarks that it is interesting at the present time, when Prince Henry of Prussia is in the United States, to note that Professor Halle ignores the Monroe doctrine, though, says the correspondent, doubtless the United States would never permit Germany to secure control of Dutch Guiana and the Dutch West Indies.

Professor Halle reproaches the Dutch with coolness toward Germany in former grave crises, and suggests that the combined influences of Queen Wilhelmina's German consort and the fear of Great Britain and the United States will open the Netherlands' eyes to the desirability of a closer union with Germany. Professor Halle admits that the position of Holland at the mouth of the largest German river (the Rhine) is the cause of Germany's failure to secure naval prestige. A proposed naval convention and a customs and commercial union between the Netherlands and Germany are outlined by Professor Halle, who urges Holland to consider the fate of Spain.

The New York Times, to which we are indebted for the information in the above dispatch, refers to Professor Halle's book as a mare's nest, and says that

"the central absurdity of the whole scheme of which this professor makes himself the mouthpiece is that the neutralization of the Netherlands and of Belgium is the very first condition of the balance of power in Europe. The whole European system depends upon this neutralization and involves it. The "European concert" would at once break up into a discord if any one of the powers should seriously propose to destroy it." The Times is not greatly impressed by the fact that the book comes from an official press. The funds of one of these departments may have been levied upon for the expense of publishing the volume as a trial balloon. "But that is a very different matter from a willingness to declare war on Europe, which is what an attempt to seize the Netherlands would amount to." And so the Times relapses "into a state of mild human curiosity to know what can have induced anybody to publish the book."

The Commercial Advertiser remarks that "if as tough a racial individuality as the world contains has lost none of its persistence, Germany has a difficult task in the absorption of Holland, and the combination of craft and force necessary for that purpose must be truly extraordinary."

SOCIOLOGICAL

A Dutch Welfare Industry

WM. H. TOLMAN, in the March *World's Work*
Condensed for PUBLIC OPINION

NOT far from the quaint and historic town of Delft, in Holland, is one of the most interesting industrial towns in the world. Until a few years ago it was a low-lying tract of nearly deserted land. In 1870, Mr. J. C. Van Marken, with some thirty assistants, began the manufacture of yeast and spirits there. Today he employs thirteen hundred people, and Agneta park, as he named the place, is a veritable garden spot. Mr. Van Marken has always been deeply interested in the problem of bringing into closer touch and sympathy the men who furnish the capital and the men who do the

work, encouraging the scholars with frequent visits and offers of prizes for good work. Gradually the town was built up as the needs of the factory grew, and other plans were carried out. The largest building in the park is the community house, with accommodations for twelve hundred people in its large hall, which can be subdivided by an ingenious system of partitions into six smaller rooms. Here are held the flower shows in summer, band concerts three times a week in the winter, dances, lectures, and social gatherings.

For the promotion of thrift, a savings bank for

From the *World's Work*

MR. VAN MARKEN'S VILLA IN AGNETA PARK IN THE MIDST OF THE HOMES OF HIS EMPLOYEES

work. As a result he has tried, and he has worked out to a successful end, many plans for such community of interests. He began by building for the workmen one hundred picturesque cottages, with small gardens attached. They were small and the newer constructions will be larger, but they served. The people showed Dutch thrift in the way they made use of every inch of ground. Vines and flowers, dove cotes and chicken coops, tiny as bird cages, filled every available space. Kindergartens and schools were prepared for the children, in whom Mrs. Van Marken took particu-

lar interest, encouraging the scholars with frequent visits and offers of prizes for good work. Gradually the town was built up as the needs of the factory grew, and other plans were carried out. The largest building in the park is the community house, with accommodations for twelve hundred people in its large hall, which can be subdivided by an ingenious system of partitions into six smaller rooms. Here are held the flower shows in summer, band concerts three times a week in the winter, dances, lectures, and social gatherings. For the promotion of thrift, a savings bank for

or more children under fifteen. They receive the premiums in full. The following scale of deductions is made:

	PER CENT
Married men with 3 children under 15.....	10
" " " 2 " " ".....	20
" " " 1 child " ".....	30
" " " no children " ".....	40
Bachelors over 23 years of age.....	50
Bachelors from 18 to 23 years of age.....	75
Bachelors under 18 years of age.....	90

This capital, paid in premiums, is the property of the individual depositor, and is paid him in full when he reaches the age of sixty, or whenever he leaves the service of the company. Any workman may withdraw on the occasion of his marriage a sum equal to twenty-five weeks' salary, and on the birth of a child the equivalent of two weeks' salary; four per cent per annum interest is allowed. There are the usual plans for sick-benefit funds and insurance payable at death. An order of industrial merit has been instituted with the decoration of a gold cross, which is presented on the anniversary festival to every employee who has completed twenty-five years of service in Mr. Van Marken's employ. The names are inscribed in the Golden Book, as it is called, consisting of large pages mounted on a winged frame, thus honoring the workmen in their own community and bringing their names to the notice of visitors from other communities.

The American Aristocracy

Saturday Evening Post, Philadelphia (Pa.). Condensed for
PUBLIC OPINION

It is always interesting to follow the efforts of the ambitious persons who try to set new bounds and limitations to the social superiority of Americans. A reverend gentleman of New York, claiming descent from a Scottish king, has devoted much attention to the important matter, and has gravely declared that the president of the United States is a gentleman in the society meaning of the word. This assurance relieves us inexpressibly, for in his opinion the masses of American voters are not gentlemen and are not inclined to elect real gentlemen to office. The New York arbiter has supplied us with a list of Americans who are entitled to enter society by the front door, and an examination of it is wonderfully enlightening. We find that with few exceptions all the ladies and gentlemen live in New York city or at Newport, where they can escape the New York tax rate. Some of the largest states have only two or three names credited to their entire population, and other states, according to the list, have no society people at all. On further examination we find that all the members in this selection are wealthy, and that some of them are not more than one generation from day labor to the possession of millions. In reality, therefore, this is an aristocracy of bank accounts.

At the same time another arbiter is at work in Virginia, and his list differs entirely from the golden circle of New York. He makes his selections entirely from ancestry. He traces each candidate through the graveyards as far back as the epitaphs and family Bibles will carry him, and he gives us a most interesting lot of names. Some of them are known in the industry and politics of the present, but it is disappointing to find that they do not include the great leaders of our age or the big men who have done the largest things in modern civilization. Many of them are just getting along, and others weep over family

tombstones and wonder why they do not have more of the plenty of this superabundant century.

It is useless to try to reconcile the two judges. Each is an impossible person fretting vainly at an impossible task. There are in the United States over four thousand millionaires, and as a family averages five persons, we have a total of twenty thousand which the best of experts can not well squeeze into a circle of Four Hundred. There are millions of descendants from the good old stock of the eighteenth century, and the most reverent worshiper of ancestry can not compress the total into a practical social list. Therefore, with wealth increasing and ancestors multiplying, there is no hope for the poor zealots who fancy they can set up the metes and bounds of social excellence. The only hope for an aristocracy is to base it on achievement, to bound it by culture, and judge it by gentleness.

The Raines Law Hotels

STATE PROMOTION OF VICE

JOHN DE WITT WARNER, writing for the current issue of *Municipal Affairs*, says that the great vice of the Raines law, its crowning infamy in practice, is the hotel provision, which permits that "on Sunday, after five o'clock a. m., the keeper of a hotel, that is to say (if in or within two miles of a village or city of 1,200 inhabitants or more), having ten furnished bedrooms, with sundry other hotel accommodations, may sell to one who in good faith occupies a room." The requirement amounts to this, that throughout the state, especially in its great cities and peculiarly in New York, three-fourths, at least, of those who under proper regulation would deal in liquor, must either go out of business, actually keep a hotel where none is needed, or pretend to do so, though they actually do not. Of these hotels there are three classes:

First—Those which are legitimately such; and which find their profit in general provision for guests of which liquor selling is but a factor. Second—Those which, though practically established for the exclusive purpose of the liquor trade, do maintain at a loss, and not intentionally for otherwise than for desirable guests, the legal accommodations required. Third—In greatest measure, the 'Raines Law Hotels'—mere excuses for liquor selling on Sunday and during the night. In perhaps half such cases, generally—and in most of the remainder occasionally—they are used as houses of assignation—the one use to which can be put groups of bedrooms so undesirably situated for other lodging purposes, as in the average are those over saloons in our more densely populated districts. Moreover, in connection with their use—in addition to greater rent than any other use would produce—is to be made most profit from liquor selling and panders' commissions.

Mr. Warner goes on to say that the "law burdens the majority of the more responsible class of liquor dealers in this city by unconscionable requirements for the privilege of selling liquor, unless they also keep assignation houses; in which case they can not merely use their 'hotel accommodations,' but realize largely from increased liquor sales at double or quadruple prices, and the commissions they can exact from women for whom, as well as for themselves they may find customers. The result is the natural one. However hard it may be to make proof in any one case—

however little wilfully guilty many a dealer may be—the law is so constantly violated that he is at the mercy not merely of every police and excise officer, but of every citizen. He must have ‘protection.’ For this the rates are as well known in the neighborhood as the current price of sugar, and are graded by the extent and normal profit of the infamy permitted and the definite aid that, as distinguished from mere disregard, he may require from officials against good citizens who may attempt to prosecute him. While the foregoing is a moderate statement of the situation, it would be unfair to charge full responsibility upon the liquor dealer, even for exploiting it; though conditions thus inviting depravity tend to drive from the business the better class of dealers. This is specially the case in some localities, while others are less affected. Not merely, therefore, is the weakness, rather than the depravity, of the ‘hotel’ keeper responsible for many of the worst results; but perfectly good intentions would not suffice to prevent misuse of accommodations thus required by law.”

Divorce Complications

MARRIAGE WITH CORRESPONDENTS. THE RIGHTS OF CHILDREN

THERE has been a good deal of comment of late on the fact that in the marriages of divorced persons a very large majority are with correspondents or persons who might have been correspondents. The New York *World* cites the following authenticated instance to show in what complications such marriages may result: “A well-known New York woman, divorced from her husband in South Dakota seven months ago, has just married again in Indiana. Her former husband married, immediately after the divorce was granted, a woman whom he had ‘learned to love’ during his wife’s temporary absence from home, and who was divorced in order to marry him. Likewise the man whom the first wife has just married out west was divorced from his wife, by whom he had three children, that he might marry his new ‘affinity.’ To add to the complications of these triple divorces and remarriages, they would not be legal if contracted in the state where the parties originally lived. It only remains for the one deserted and unconsolated husband in this state to marry the abandoned wife out west to complete the serio-comic complexities and compensations of this medley of marriage-and-divorce up to date.”

A writer in the *Outlook*, who signs herself “Laica,” vouches for this incident: “Mrs. M., divorced, and with a son, married Mr. N., divorced, having a daughter, who remained with the former Mrs. N., who had also remarried. At a dancing-school these children met. Said the little girl, ‘So you have a new father at your house, I hear?’ ‘Yes,’ replied the little boy, ‘and a jolly good sort he is, too—nicest chap I ever saw.’ ‘Pooh!’ said the little girl, ‘I know all about him; he was my father once.’” This writer continues: “Twelve years ago a young friend of mine in New York, just married, called my attention to one name on her visiting list as that of a woman who had been divorced and married again within a short time. It was the only name of the kind on the list. Last summer the same woman, a fashionable young matron, told me that her list now had the names of thirty-two such cases! In my own town, smaller than New York, I have counted up the divorced people I personally know. There are twenty-three cases. Of these, at least one out of each couple

has married again, except in two instances, and of these two one died and the others are Roman Catholics. Ten years ago I knew one case, and it was socially ostracized. Of the twenty-three cases I have just mentioned as personally known to me, only one couple had no children; therefore the light went out in twenty-two homes, as far as ‘home ideals’ to those children went. Allowing an average of three children to a family and twenty-two families, there will be in that small social world in the next generation sixty-six men and women minus much thought of home ties or their sacredness. Can any thinking person ask what will be the result on our morals?”

“The heart of all parenthood must throb with a great pity at the thought of the children of such second marriages as we have spoken of. But the children, ah! the children have come with no volition and have no redress, and their rights are only the rights we give them, and they can not claim them for themselves! An unwritten but universally accepted law forbids the marriage of those suffering from horrible mental or physical disease, for the sake of the possible children; why are we less careful in such cases of moral leprosy as divorced marriage threatens? For the sake of the actual children, are we not bound to take some measures for their protection? We must see that they get their rights. To secure pure morals in the next generation, this generation must live cleanly; and a high moral standard is an impossible product of homes where there are ‘exchanged partners.’”

Various Topics

THE FREE LECTURES OF NEW YORK are attended by about 10,000 every night, workingmen and women who throng into the fifty-five centers, after a hard day’s work, for an hour of instructive entertainment. The Brooklyn free course has been as successful as that of Manhattan, and has secured a large attendance at each of the lecture centers within a few weeks after they were opened.

THE CONGRESS OF MOTHERS, in session at Washington recently, presented several interesting and unusual features. Prominent among them was a model nursery, under the direction of Mrs. Dubois, wife of Senator Dubois, of Idaho. There were cribs and cradles and beds in infinite variety, designed to show the latest improvements in sleeping arrangements. Even an incubator was there and a baby is not lacking, for within the nickel and glass box that looked like an up-to-date gas range lay a Washington infant that may live to be a president. Another attractive exhibit was the child’s model library, containing a collection of entertaining books for children and booklets of instruction for mothers. Mrs. Herman H. Birney, of Philadelphia, chairman of the committee on literature, was in charge of the model library. At the first business meeting an important resolution was introduced to change the name of the society, to include fathers as well as mothers.

THE GROWTH OF CO-OPERATION IN ITALY: The Coöperative union at Milan has established the first Rowton house in Italy, a huge building with 530 bedrooms, with everything of the most faultless make and perfect pattern. Coöperative pharmacies are much appreciated by the working-classes. There are seventeen general stores in connection with the Turin Coöperative alliance, and excepting with regard to bread, the Turin alliance has adopted the old Rochdale principle. Bread is sold under current rates. The stores are open to all the world, and all who deal receive the same amount of dividends, but provident benefits, free medical treatment, and education at the popular university are reserved for members only. The productive societies are for the most part humble. The societies of bricklayers and stonemasons undertake contracts for executing buildings, and give general satisfaction. Italian coöperators do little as yet in respect of providing laborers’ dwellings; but, on the other hand, the Agricultural banking movement has spread far and wide throughout Italy.—*Economic Review*.

LETTERS & ART

Recent German Dramatic Literature

SUDERMANN'S TRAGEDY OF THE ARISTOCRACY AND HAUPTMANN'S COMEDY OF THE SLUMS

DRAMATIC interest in Berlin is now centered in the new plays by Sudermann and Hauptmann, "Es Lebe das Leben" and "Der Rote Hahn." The first is described as a tragedy of the aristocracy in modern Berlin, the second as a tragi-comedy of the slums. The Berlin correspondent of the *New York Nation* says that Sudermann deals with a gruesome theme. "The pre-supposition of the whole is a case of marital infidelity in the higher circles of Berlin. It is hardly fair to call it a drama of adultery, for the degree of grossness of the infidelity is veiled in the discreetest silence. In any event, fifteen years of correct living have passed since then, and the secret seems forever safe, when the action of the play begins. The persons are, with few exceptions, Berlin aristocrats of today. The time is the end of the nineties, when the new civil code was taking shape in the *reichstag*. The title (whatever else it may also mean) points to a passage toward the close of the fifth act, where the guilty wife proposes a *toast to life* at the moment when her own self-inflicted end is near."

According to this writer, the whole basis of the drama is improbable. "It is improbable that a woman so pure of heart as Beate, so high-minded, so discreet, so tactful, would enter into such a relationship. It is improbable that two people who have lived a lie for fifteen years would hesitate to tell one, especially if they thought they could not be caught. It is improbable that a Prussian nobleman of today would permit party considerations to hold him back from a duel when he thought the honor of his family at stake. In fact, the whole is a tissue of improbabilities, which the skill of poet and actor makes for a brief season seem most real."

Sara Cone Bryant, writing of Hauptmann's "Der Rote Hahn," for the *Boston Transcript*, says: "This 'tragi-comedy' of 'The Red Cock' is a dreary, repulsive presentation of a sordid act in commonplace environment. It is told in the indescribably vulgar dialect of the lower class Berliner, a fashion of speech somewhat comparable with that of the Bowery. It is unrelieved by a single situation of dramatic intensity or moral stress. If there is any plot, it is of a sort too discursive for general recognition. Nothing in the *motif* or the execution seems to warrant the perpetuation of such a picture. Why, then, do we get just this, 'Der Rote Hahn,' from the man who is so unquestionably capable of a higher order of work? The reason is the same one, I believe, for which German drama as a whole today, thoughtful as it is, strenuous as it is, alive as it is to present conditions, still does not seriously appeal to any public

save its own—does not win an adequate hearing outside of Germany from any but professional students. Hauptmann—and with him the smaller men—is drowning the artist in the partisan; the poet in the sociologist; the observer in the theorist. He is determined to hold before the eyes of Germany this one hideous aspect of her modern civilization till he forces a cry from her soul. Seeing the horror of this underlying world of petty, sordid, wretched materialism, this social residuum absolutely untouched by the new ideals and awakened longings of new Germany, he refuses to paint anything else till that has been amended. Over and over again he strikes the oppressive reiterant note of poverty—poverty of body, mind, and spirit, one consequent on the other. This is; this is the actual; life contains this; look, and shudder!—his dramas shriek from the stage; and the dominant strain is echoed by all serious current drama of his country. It is the strength of his convictions which is wronging his art; his humanitarian argument is usurping the place of the 'divine spark.' He will not even use the artist's methods, since his prime object is no longer an artist's results; the artist uses contrasts, lights and shades, beautiful progression toward a climax; Hauptmann will have none of these, he will have the dull, unrelieved dirt-color of squalor—this is to be a 'realist' today, in Germany."

Victor Hugo as a Moralist

M. EMILE FAGUET, in *La Revue Bleue*, Paris. Translated and Condensed for PUBLIC OPINION

IT is perhaps as a moralist that Victor Hugo will be best known in the future. The reason for this is that Victor Hugo loved the commonplace moral and the commonplace moralizing, and that he is the most

optimistic of all optimistic writers. There can be no doubt that the masses love two things: first, the repetition of that which has always been taught; and second, consolation. With these two and a little talent, one should go far, and with this and genius, one should have no limits. Hugo will always live.

It is to be remarked that Victor Hugo is different from all the moralists in prose or verse who preceded him. The moralists, properly speaking, have only seen evil in humanity, or if they should happen to speak fair words, it is with an originality and an elegance which prevents them from entering into communion with the spirit of the masses. If we consider the moralists who were poets or who wrote in verse, we see that they are few; and second, that they do not respond at all to the needs of the com-

VICTOR HUGO

From a Wood-cut by Robert Bryden

mon people. Further, the poets who have been moralists have almost always been satirists.

Victor Hugo is optimistic: he is confident of the future; he is confident of the powers of humanity to realize progress and happiness. It consoles humanity that one observes it as he observes it, not only with indulgence, but with respect and feeling. All the true ingenuousness of a Condorcet, of a Ballanche, and of a Quinet, taken together, do not equal the least of Hugo's reflections on the old and new worlds, on the past, on the present, and on the future. The secret of his continual popularity is that he has appeared always young, and that he has no doubt that he will always be so. Happy himself, he sees on earth infinitely more happiness than unhappiness, infinitely more good than evil, and infinitely more virtues than crimes.

The Associated Illustrators

THE Associated Illustrators made their debut in an exhibition held in the International gallery, New York, March 1-8. This organization was

one of the best features of the exhibition.

The general excellence of the work displayed is indicative of the high place illustration holds in American art. Many of the pictures have a distinct artistic value, independent of their illustrative quality, that would entitle them to an important place in any exhibition. One does not forget, however, that these pictures were all designed for reproduction and that they must be judged by their final appearance as half-tone or wood-cut, as the case may be. The illustrated catalogue enables the spectator to compare a number of the originals with their reproductions, to note how well they stand this final test, and what is gained or lost thereby. Another interesting question raised by this exhibit is "To what extent is the artist's work illustrative of the author's idea?" This does not apply, of course, to the pictorial scenes, but to such works as Mr. Arthur I. Keller's illustrations for "The Right of Way" and Mr. Louis Loeb's for "The Mantle of

CAFE DE LA PAIX

By Oram Lowell

formed about a year ago for the purpose of furthering the interests of graphic art. The list of members includes thirty-four of the leading American illustrators; the names most conspicuous by their absence are those of Maxfield Parrish and Andre Castaigne. The exhibition consists of one hundred and seventeen pictures, representative works of the Associated Illustrators and of five non-member exhibitors—Howard Pyle, Alice Barber Stephens, William L. Jacobs, T. K. Hanna, Jr., and Max Klepper. Edwin A. Abbey, honorary member, contributes a pen-and-ink drawing that is

Elijah." Those who are familiar with Mr. Zangwill's graphic description of the manner in which Lord —'s wife quelled the mob that had insulted him will be pleased to see how well Mr. Loeb has caught the spirit of the scene in his picture of "The Mob." This gift of sympathetic interpretation marks all of Mr. Loeb's work, and is also noticeable in Mr. Albert E. Sterner's illustration for "The Wife."

The most conspicuous pictures in the exhibition are the three huge canvases by Mr. A. B. Wenzell, "The Gift," "Greek Girl," and "Café de la Paix." These are all elaborate compositions, painted in color, with that touch of brilliancy that appears in the reproduction. The first two are purely idyllic, and a pleasing variation from the familiar society pictures of Mr. Wenzell. Two characteristic examples of the spirited work of Mr. Frederic Remington appear, "A Reconnaissance in Force" and "An Indian Legend." Mr. Henry Hutt has pictured society in a series of pleasing compositions, "After the Opera," "The Wed-

ding," "Polo at Newport," and "Song of the Yacht." Mr. W. T. Smedley contributes four pictures in the vein with which all magazine readers are familiar. Mr. T. de Thulstrup, Mr. F. Luis Mora, and Mr. Henry Reuterdaahl are represented by well-chosen examples of their characteristic workmanship. Mr. Robert Blum's "Arrival in Japan" is sure to command attention.

The quality of the pen-and-ink work displayed makes one wish that there were more of it. Mr. Orson Lowell contributes, in addition to the two sketches we have reproduced, drawings of the "Castle of Sant Angelo and Bridge, Rome," "A Wet Evening in the

Plazza Colonna," and two headings for "Saracinesca"; Mr. Reginald Birch is represented by a half-dozen sketches in the spirit of the one here reproduced. The work of Mr. Lowell and Mr. Birch, and the drawing by Mr. Abbey, to which we have already referred, all attest the artistic value of pen-

happy level and the golden average, and the best rule for the greatest number, and the only safe course *a priori* if you have a family to support. Not that they say one thing when they particularly want to say another. There is no deliberate heterophemy about it. But people who get on in the world have developed a sort of market nerve and can feel it throbbing in the back of the brain. Of many thoughts, it automatically thrusts forward the one that is most presentable, and by an instinctive arithmetic counts votes on every sentence before it is written down. This is the general law of successful literary composition, though not so stated in the books. The uniformity of American fiction, about which so many lose their temper, merely shows that our writers have never felt like risking much for self-expression.

Success, like a flatiron, smoothes out the little irregularities that might just as well have been left in, and there are whimsicalities about the people that we are apt to miss in their books. Caution and self-repression to the extent of holding back certain mat-

ILLUSTRATION FOR "HOUSE OF DE MAILLY," BY A. I. KELLER

and-ink as an effective medium for illustration.

Taken altogether, this first exhibition of the Associated Illustrators makes an excellent showing of what has already been accomplished in this branch of art, and is rich in its promise of future achievement. The collections will be shown in a number of other cities after the New York exhibition closes.

The Fatal Consequences of a Literary Success

F. M. COLBY, in the *March Bookman*. Condensed for
PUBLIC OPINION

SUCCESS is usually the result of a sharpened sense of what is wanted. As a general rule, the successful writer, especially the successful American writer, is a man who is disciplined by demand. The vagaries of self-expression may do for a few privileged characters, but the steady, substantial incomes are for those who do what is expected of them. Taking it altogether, it is the line of least resistance, the

ters that might with perfect safety be let go certainly do seem a little over-developed in our writers. What with wondering whether the editor will like it, and whether the public will take to it, and whether the critics will see through it, there is little chance for merely personal preferences of their own. And by the time the habit of pleasing everybody is formed, the soul has caught a color that will not come out in the wash. The saddest thing about our young authors is the exchange of possibilities for dead certainties after they have struck their pace.

SCIENTIFIC

Go Utilize the Earth's Interior Heat

THEODORE WATERS, in the March *World's Work*, New York
Condensed for PUBLIC OPINION

THE suggestion recently made by Professor T. C. Mendenhall (see PUBLIC OPINION, 7 Nov., 1901) that the internal heat of the earth be utilized as a source of industrial power, may prove to be practical. The British association for the advancement of science is making a series of measurements of underground temperatures, and Professor William Hallock, of Columbia university, says that the idea is feasible. He outlines a plan for obtaining steam from the earth's interior, and has recently measured the temperatures of some of the deep holes of the earth.

A comparison of underground temperatures has been made, and a theoretical rate of increase of one degree for every sixty feet has been determined. But there are exceptions to the rule which prove that the earth's crust is hotter in some places than in others. Professor Hallock lowered thermometers into the wells near Pittsburg and Wheeling, and found an increase of one degree for every fifty feet. The temperature of the Pittsburg well at the bottom is 129 degrees. On the other hand, Doctor Agassiz, of Cambridge, Massachusetts, found the temperature at the 4,900-foot level in the Calumet and Hecla mine, at Houghton, Michigan, to be not more than 100 degrees. The heat of the 2,500-foot level in the Comstock lode is 145 degrees. The Schladebach well shows a temperature of 135 degrees at the bottom, and the Sperenberg well 118 degrees. The Cornwall mines show a temperature of 100 degrees, and at Ronchamp, France, the temperature of the coal mines at 3,609 feet is 117 degrees. In short, it is proved beyond doubt that although it varies in different localities, the heat of the earth's crust grows gradually greater from the surface inward; and upon this Professor Hallock bases his argument for a new and universal source of power.

"There would be not the slightest difficulty in obtaining steam from the earth's interior," he said to me, "because that involves merely a little extra labor in boring down into the very hot area, and it is as easy comparatively to bore 10,000 feet as it is to bore 6,000; but in order to give the steam commercial value, a method must be provided for dropping the water to the hot area, allowing it time to heat, and yet having it returned to the surface as steam without for a moment interrupting the flow.

"Suppose two holes were bored directly into the earth 12,000 feet deep and, say, fifty feet apart. According to the measurements I made in the Pittsburg well, at the bottom there would be a temperature of more than 240 degrees—far above the boiling point of water. Now, if very heavy charges of dynamite or some other powerful explosive were to be lowered to the bottom of each hole and exploded simultaneously, and the process repeated many times, I believe the two holes might have a sufficient connection established. The rock would be cracked and fissured in all directions as in deep oil wells when they are shot; and if only one avenue were opened between the holes it would be enough.

"The shattering of the rock around the base of the holes would turn the surrounding area into an immense water heater. The water poured down one

hole in the earth would circulate through all the cracks and fissures, the temperature of which would be over 240 degrees, and in its passage it would be heated and turned to steam, which would pass through the second hole to the earth's surface. The problem is a mechanical one, and the chief difficulty would be the connecting of the holes at the bottom. This accomplished, the water-heater would operate itself and a source of power be established that would surpass anything now in use. Such a system might change the commercial aspect of the world, since the greatest manufacturing communities might gather in those regions which yielded up heat the most readily."

It is the intention of the owners of the Pittsburg deep well to continue the hole down into the earth until some remarkable demonstration of the pent-up heat is experienced, a course for which the owners of the well are to be commended, as the expense is great and the gain mostly for science. This was originally an oil well, but below the oil sand a natural gas fissure was struck and each product was used in turn to furnish power for the boring. The latter is a simple operation. A heavy drill attached to a derrick cable is hoisted up and down in the hole after the method of a pile driver. The constant blows of the drill on the rock cause it to sink gradually downward.

Earth Telephone Experiments

Scientific American, New York

M. E. DUCRETET, a well-known electrician of Paris, has been making some interesting experiments in telephonic transmission by using the earth alone as a conductor. The transmitter in this case consists of a microphone and a few cells of battery connected directly to two earth plates of considerable surface and buried six feet below the ground. The plates are placed facing each other and only a few yards apart. For the receiver he makes use of a quarry well about sixty feet deep which communicates below with the Catacombs. The orifice terminates at the ground level by a cast-iron pipe four inches in diameter and twelve feet long. An insulated conductor descends in the vertical well and brings a metal sphere three inches in diameter in contact with the soil of the Catacombs. On coming out of the well the wire is fixed to one end of an ordinary telephone receiver, whose other end is connected with the iron pipe at the surface of the ground. The two earth circuits which are thus made are separated by a building with cellars and thick walls, and therefore the layer which separates the two parts is considerable.

When the microphone is spoken into, all the vibrations of the voice, even the feeblest, give rise to variations of current in the circuit which is closed through the earth, without any metallic connection between the two parts, and in spite of the multiple variations of the currents and the nature of the medium, earth, which is used, the reproduction of the voice is made at the receiving end with remarkable sharpness, and, besides, there are none of the extraneous noises which

are so common in the ordinary circuits. The dynamos, which are working in the neighboring building, both continuous and alternating current, have no effect upon the circuit. It is difficult to give a satisfactory explanation of this phenomenon of earth transmission, but M. Ducretet thinks that the current is diffused from the transmitting station by derivations from the principal circuit between the plates, and that this current is sufficient to operate a certain number of receivers placed at different distances. With the arrangement of circuits described above, the experimenter was able to send through the earth a current sufficiently strong to operate a relay and electric bell. If the sphere which rests upon the soil of the Catacombs is raised from the ground, all reception ceases, but recommences when the contact is again made with the earth, which, it should be remarked, is dry. M. Ducretet is continuing his experiments over greater distances and under varying conditions.

"Tuned" Wireless Telegraphy

MARCONI'S LATEST ACHIEVEMENT

DURING his voyage from England to America on board the *Philadelphia* recently, Mr. Marconi succeeded in receiving a six-word message from Poldhu, Cornwall, when 1,551 miles at sea. The signal letter S was received at a distance of 2,099 miles. But much more important is his device for "tuning" the instruments so as to secure exclusive transmission from one point to another. The method is described in the *New York Tribune*:

Every electrical circuit—a continuous sequence of wire, either with or without instruments along the route—shows a preference for some particular frequency when conducting a rapidly alternating current. This phenomenon is called

DIAGRAM ILLUSTRATING THE LATEST DEVELOPMENT OF THE MARCONI SYSTEM

"electrical resonance." Mr. Marconi makes use of that principle when he "tunes" his receiving circuit to accord with the sending circuit. Reference to the accompanying diagram, which roughly illustrates the arrangement at the transmitting station, will help to an understanding of the process. Those who are at all familiar with the mechanism of the earlier methods of Mr. Marconi will have no difficulty in following the description. The battery is shown at A and the operator's key

at B. These are connected with an induction coil (C) which intensifies the current and sends into the circuit D D D D. The latter may be called the transmitting circuit. It is broken at E, where a series of sparks leaps across from one brass ball to another. The imperfect barrier presented here imparts to the oscillations in D D D D an enormous frequency. Another instrument in this circuit is a condenser (F). At G is shown only the lower part of the famous vertical wire, in which similar oscillations are produced, and from which radiate sideways into space the so-called Hertz waves. The frequency of the latter depends on that of the former. A few turns are made in the vertical wire at L, for a purpose about to be explained. The extreme lower end of the wire (H) is not attached to anything.

The oscillations get out of D D D D into G in the following manner: Two distinct coils of wire (I and K) are combined in such a way that a sympathetic current is excited in the latter by the former. The coil I forms a part of the transmitting circuit, while the upper end of K can be adjusted so as to come in contact with any of the convolutions of G. Thus, K, whose lower end is in the earth at M, is practically a continuation of the vertical wire. By shifting the point of contact between the upper end of K and the lower part of the vertical wire the length of the combination may be either increased or lessened. Since the natural rate of oscillation depends on length, the adjustment is made so as to make G and K together as long as D D D D. The two then oscillate in harmony. Similar steps are taken at the receiving station.

As a matter of fact, the inventor has two circuits in his sending apparatus, and two at his receiving station, all of which must be brought into tune in order to secure the best results.

The Separation of the Xiphopagous Twins

THE *British Medical Journal* gives an account of the separation of the twins Radica-Doodica—a xiphopagous connected by a band extending from the ensiform cartilage (the appendage of the sternum) to the center of the body. This description is based, we infer, upon the statement of M. Doyen, who performed the operation rendered necessary by the fact that Doodica was the subject of tuberculous peritonitis.

The operation was done in twenty minutes. The skin was divided in front, the conjoined ensiform cartilages easily separated with a bistoury, the peritoneal cavity opened and a thin bridge of hepatic tissue exposed. Doodica showed, as expected, the signs of tuberculous peritonitis. The hepatic bridge was compressed with a double-lever forceps which exercised a pressure of 2,000 kilograms. Two interlocking catgut ligatures were applied on Radica's side, then the bridge was cut beyond the ligatures towards Doodica, three large arteries also required tying. Then two interlocking ligatures were applied to the bridge on Doodica's side; on dividing the posterior part of the peritoneal channel and the skin forming the posterior aspect of the band, the twins were separated entirely. The edges of the wound in Doodica were held together with forceps. Then the wound in Radica was closed with sutures, but a small strand of gauze was left in for drainage. The "toilet" of the peritoneum, in this case affected with tubercle, was carefully done when Doodica was attended to, and then the wound was closed and drained as in the sister. As the integuments of the band retracted no trace of it remained on either side except a linear suture. On the night of the operation, and for a time, the separated twins did

well, but six days later Doodica died suddenly after a slight convulsion, from the rupture, as was proved at the necropsy, of a tuberculous abscess into the abdominal cavity. Radica, the surviving sister, continues to make good progress.

Oil as a Marine Fuel

THE newspapers report the arrival at Thames Haven of a steamer which has just completed the longest voyage on record under steam generated by the combustion of crude petroleum. It is the *Murex*, of the Shell line, built about ten years ago for coal, but changed last year for oil. She left Singapore December 18, and reached Cape Town January 11. From that port she cleared January 15, and reached the Thames in about thirty days. We take these particulars from the *Times*:

The consumption of oil, which on account of heavy weather somewhat exceeded the expectation, ranged from 17 to 18½ tons per day. Had she been burning coal, the requirement of Welsh would have been about 25 tons per day, and of Japanese or other inferior steam fuel about 32 tons. Making allowance for differences in price, this comparison would show a saving in fuel cost great enough to engage attention, but

not revolutionary. Much more significant, it would appear, are the economies in cargo-carrying capacity and labor. The crude petroleum is stored in the fore-peak, in the double bottom of the steamer, and in other places which could not very well be utilized for coal. The whole central area of the ship, enclosed fore and aft by copper protecting dams, is available for oil, grain, or other freight in bulk, or for mixed cargo. As the oil is moved through pipes by pumps, the *Murex* made the voyage with three stokers, instead of the twenty-four which would have been needed to handle coal out of the bunkers into the furnaces.

Various Topics

THE LARGEST INDUCTION coil, which produces the longest spark for service in wireless telegraphy, is said to be the one which was recently made for flashing messages between the coast of Japan and Korea. It can produce, in fact, a miniature streak of lightning 45 inches in length, capable of killing any number of persons who might get in its way, and when in operation sends out something like thunder

PHOTOGRAPHS IN COLOR:—Mr. A. Hyatt Verrill, of New Haven, Connecticut, has succeeded in making photographs which show all the natural tints and colors. Mr. Verrill calls his process autochromatic and said that the secret lay, first in the highly sensitized paper that he uses; second, in the emulsion on the paper, which is his own invention, and, third, in the sharpness of the lenses, which he has had made on his own specifications. The paper is five times as sensitive to red and yellow as ordinary paper.

RELIGIOUS

The Disappearance of the Devil

FRED C. CONYBEARE, in the March *International Monthly*, Burlington, Vt.
Condensed for PUBLIC OPINION

THE time-spirit has filched away from the minds of the most intelligent believers of today the belief in an evil being, or ruler of the visible world, forever troubling men, especially the righteous, with corporeal apparitions of himself. Instead of exorcising the mad, we send them into asylums, where they are properly looked after. In Great Britain, except in remote corners of Cornwall, of Ireland, and of the Scotch Highlands, and among Celts, one never hears of magical cures and incantations which will alleviate sickness and arrest bleeding. In the age of the Gospels, everyone, from the beggar in the streets to the emperor on the throne, believed in the existence of demons infesting men and animals, haunting trees and rivers, even inhabiting statues as their tenements. It was only a question of which name was most potent in exorcism. In that age, as in the ages that followed, there was a background of demonological belief into which fitted the stories which are a stumbling-block to modern divines like Farrar and Ian Maclaren. In the age of the Reformation, this background of belief in evil spirits causing madness and sickness and bad weather was still intact, and entered as a factor into men's lives and conduct to a degree which only those can realize who will consult the literature of that age. Even Luther, who burst so many bonds of superstition, never questioned the reality of the visits which the devil paid him.

With the disappearance from the minds of the cultivated of the belief in Satan and his angels, a great part of the narrative of the New Testament has been left hanging in the air, and without any points of attachment in the minds of believers. On the one hand, our divines are bound by a traditional reverence for

the letter of the Bible not to question openly any of its narratives. On the other hand, their views of man, of the universe, of Providence, and of the general course of history, of what is possible and probable, have undergone such a revolution that narratives like the temptation, the swine of Gadara, even the angelic apparitions are mere stumbling-blocks. In the English church, moreover, their ordination vows and in the Non-Conformist congregations the chapel deeds commit them to an outworn belief; and there is always a minority of obscurantists ready to hurl at them hard words like "skeptic," "rationalist," "backslider," and "atheist," if they venture to speak out. Most of them, therefore, feel the ice so thin that they carefully avoid a discussion of miracles or of evil spirits. If they can not avoid it, they mechanically restate standpoints which they have really overcome, repeating, parrot-like, the formulæ of another age. Small wonder that the English clergy are given up to petty quarrels about lights and incense, when they may not boldly grapple with the great issues of belief, which yet are in everybody's mind. The result is that an ever-increasing number of laymen dispense with their ministrations, and leave a blank too often filled by weak women who want a priest assuming miraculous attributes to direct their consciences.

Nor is it in Anglo-Saxon and Teutonic communities alone that there has set in a decay of those demonological beliefs, which, after it has gone a certain way, can not but give an air of strangeness, unreality, and isolation to much of the New Testament. I have heard Italian monks ridicule their parishioners for their belief in demons and admit that the priestly exorcisms by which the evil spirits were cast out were purely conventional.

Christian Science in Germany

THE KAISER ALARMED

APPARENTLY the German government is much concerned over the rapid spread of Christian Science, and both kaiser and *reichstag* have been discussing measures for checking it. Christian Scientists in this country do not seem greatly wrought up over the matter, if we may judge from this paragraph in the *Christian Science Sentinel*: "We deeply trust that the Germans who are now opposing Christian Science will give its claims a fair and sincere investigation; that they will satisfy themselves of its wonderful healing and sin-destroying works; having done this, in an understanding way, Christian Scientists will be content to abide the issue."

The *New York Times* gives a very plausible explanation for the new growth that might be applied to many other countries besides Germany. "Changes in material comforts have so altered affairs among the middle classes of Germany, more especially in the large cities, that the women lack employment in their homes. In these conditions the German woman is ready to fling herself into business or a profession, and as the ranks are full, she is easily turned aside from an effort in which she encounters the greatest obstacles in the way of prejudice and the struggle for bread, and receives Christian Science with open arms. It gives her mind occupation and flatters the sense of the mysterious at the same time. It supplies something novel and personally performed in the way of a religious rite for the dry husks with which the Lutheran and Evangelical churches have been regaling her. It combines the religious idea with the spice of fortune-telling and the flavor of mesmerism. Without subjecting her to the humiliating sense that she is a nonentity whose word and will do not count, as is the way of many religions and sects, it places her on a pedestal as a creature in certain ways godlike, in that by will-power and the force of prayer she can influence the march of events, as, for instance, that she can restore another person or her own self to health."

The Papal Jubilee

LEO XIII ENTERS ON TWENTY-FIFTH YEAR OF HIS REIGN

ON March 3, impressive ceremonies were held in Rome, and in all Catholic Christendom, to commemorate the completion of the twenty-fourth year of the reign of Pope Leo XIII. But one pope, Pius IX, the predecessor of the present incumbent, has occupied the papal throne for more than twenty-five years, the length of time assigned by tradition to St. Peter. The Rome correspondent of the *New York Sun*, after recounting in detail the many achievements of Pope Leo, summarizes his policy and his work. "His idea has been to subject the varied contingencies of our times to immutable principles, to adapt old methods of work to new needs, to increase the traditional patrimony by the addition and increase

of safe conquests, to point out the agreement of Christianity with whatever is right, true, and good in progress—in short, to enable the church to fulfill its beneficial mission in accordance with the demands of the century. He triumphs in philosophy, where he brings about the amalgamation of the old schools with the intellectual movement of our times. In history, where, alone among sovereigns, with a generous and bold hand he throws open the vatican archives, giving new life to the science and demonstrating the papacy's good wishes for the propagation of truth. In Biblical studies, where, through the commission lately appointed, he takes into the ancient organism of intellectual life the new treasures of criticism. In ecclesiastical science, where he raises clerical education to the level of present demands through his zeal in

Copyright by the American Mutoscope Co.

POPE LEO XIII

rejuvenating methods. In political economy, where he brings about the agreement of the principles of justice, fraternity, and love with the movement for reform. His ministry and his reign embody in an illuminating synthesis the two necessary elements of life: stability, or, in other words, tradition, and progress; that is to say, motion."

"There have been political popes and theological popes, but Leo XIII is above all things a philanthropic pope and an optimist," says the *Boston Transcript*.

"He has the sound idea that the more the physical condition of the hard worker and the poor is advanced, the more will their hearts be lifted toward a higher and better mode of life. He is regarded as the greatest Latin poet of modern times, his sonnets being of exceptional beauty."

It is the opinion of the *Philadelphia Press* that "the period of Leo has been a period of understanding, not a period of conflicts. It is indeed only in the strong Catholic countries that any setback to the church or any curtailment of its privileges has occurred. Countries such as Germany and Russia, outside the pale of the church, now maintain cordial relations with the vatican, while England officially is on the best of terms with the occupant of the papal throne. Famous for his wit, his keen sense of humor, his insight into men and affairs, Leo has steered the bark of church interests safely through the whirling currents, and his abilities as a man of affairs, his foresight as to the attitude the church should take in the issues of the social problems have all redounded to the credit of the papacy, and to his own glory as one of the most famous of the notable sons of the church who have followed in the footsteps of Peter."

The Student Volunteer Convention

Outlook, New York. Excerpt

THE fourth international convention of the Student Volunteer movement, held at Toronto, February 26 to March 2, showed the growing strength as well as the steady enthusiasm which has marked the movement from the beginning. Its significance is more apparent if a comparison is made of the ignorance and indifference which twenty years ago prevailed in American colleges toward Christian missions with the conditions now existing. An index of these was the attendance at Toronto of twenty-six hundred delegates from nearly eight hundred institutions, including both students and members of faculties—nearly twice the number represented at the Cleveland convention in 1898. Mr. John R. Mott, the chairman of the executive committee, fitly described the Toronto meeting as illustrating the hold of Christianity on the higher schools of learning, and as "representing the coming Christian leadership of the United States and Canada." It was, he said, a mighty challenge to the anti-missionary spirit, which had raised its head because of the terrible convulsions in northern China. By its inclusion of over fifty branches of the church it also accented the essential unity of the church. A noticeable feature of these conventions is the intermingling of older and younger men, conspicuous leaders of the churches with the active membership of the movement, and the resulting blend of sobriety and enthusiasm which characterizes the whole. Bishop Sweatman referred to the cordial approval bestowed by the Anglican conference at Lambeth, and regarded the idea of the Student Volunteers as "a splendid inspiration." Principal Caven, of Toronto, said that it was vindicated by "the telling and powerful influence it exerted on the religious life of the higher institutions of learning." Mr. Wishard, of New York, chairman of the young people's forward movement, said that it had spread into all the countries of Europe, besides portions of Asia and Africa. In the University of Madras, India, a thousand students had joined it. In all, not less than five thousand had devoted themselves to the cause.

During the last eight years, twice as many students have gone into missionary fields as during the first eight years, dating from 1886. Nearly two thousand have already sailed. It is felt, however, that only a small beginning has been made compared with the apparent possibilities. The number of students now engaged in the mission studies that have been organized has doubled since 1898, but the five thousand thus enrolled are but a fortieth part of the student body on this continent. A great deal is confessedly waiting to be done in organizing a more active interest in churches and Sunday-schools. Measures for an enlargement of this work were taken. Four additional secretaries are to be put into the field, and three-fourths of the increased expenses of the next four years was collected or pledged upon the spot.

Various Topics

THE FIFTH AVENUE PRESBYTERIAN Church of this city has installed Dr. J. Ross Stevenson, of Chicago, in the pulpit made vacant by the death of Dr. Purves. Dr. Stevenson has been the professor of ecclesiastical history in McCormick theological seminary since 1896.

THE PHILIPPINE CHRISTIAN ADVOCATE is the name of the first Protestant religious paper published in the Philippine islands. As indicated by the name, it is the organ of the Methodist church and is edited by the Rev. Homer C. Stuntz, presiding elder of the Methodist church in the Philippines.

PRESBYTERIAN STAGNATION: According to the analysis of church accessions in the Presbyterian church during the year ending March 31, 1901, by the stated clerk of the general assembly, the Rev. Dr. W. H. Roberts, of the 7,516 churches carried on the denominational roll, 2,141 went through the entire year without a solitary addition to their membership by confession of faith.—*The Church Economist*.

A CHRISTIAN THEATER: The Rev. G. W. Torbush, a Methodist minister of Pittsburg, recently came out for a church theater. He said in part: "I believe Christian men and women should endow Christian play-houses, where moral performances would do much toward destroying the influence of the immoral forces at work. The Christian theaters should be supported by the church and run even at a loss. As churchgoers are forsaking the church to attend showhouses, the evil should be met by giving human nature what it craves."

THE THIRD HASKELL LECTURER is President Charles Cuthbert Hall, of Union Theological seminary, New York, who has been chosen by the University of Chicago, which controls the endowment. The first was President Barrows, of Oberlin; the second was Principal Fairbairn, of Mansfield college, Oxford. The object of this foundation is to send Christian theologians and philosophers into India to represent before the educated classes the intellectual side of the Christian system.—*The Interior*.

MORMONS IN DENMARK: The authorities of the Mormon church seem to have decided recently that Denmark is an exceptionally good field for their operations, and there are now more than a hundred Mormon missionaries in this country, under the direction of a superintendent at Copenhagen. The missionaries publish an organ in this city and distribute thousands of tracts. A piece of property in the best part of Copenhagen has been purchased on which they intend to build a Mormon temple. Money for this purpose is being collected among the Mormons in the United States.

THE FRIARS IN SOUTH AMERICA: Exception has been taken to the article on The Friars in South America, quoted in our issue of January 16 from the *Interior*. The editor gave the authority for his statements, a Rio journal, and while we do not feel called upon to pass upon the worth or demerits of friars in any part of the world, we do regret the tone of the article, which was calculated to offend, and we acknowledge the injustice of reproducing such statements as that asserting that "the friars were separating the people from their slender accumulations by a thousand well-known devices."

MISCELLANY

When the King of Spain was an Exile in New York

New York Independent. Condensed for PUBLIC OPINION

THE presence of a king of Spain as an exile in the United States, familiar as it was fourscore years ago, has been almost forgotten in these later days, when the court across the sea has drawn the attention of the Americans away from the past to the problems and perplexities of the present. But Joseph Bonaparte, at one time king of Naples and later king of Spain, landed as a royal exile upon our shores in 1815, and three years afterward made his way to his great possessions in northern New York and along the northern border. The experiences of the Bonapartes in Baltimore and Bordentown have been dwelt upon by our historians, and are somewhat familiarly known by our people, but the fact that one of the family was an extensive land-owner in the empire state, and perhaps the first of the summer sojourners in the region of the St. Lawrence river and the Thousand islands, is not so well known. Count de Survilliers, as the royal Joseph preferred to be known, was the owner of 150,000 acres in Jefferson and Lewis counties.

Upon these possessions Joseph Bonaparte erected three dwellings. Near the village which is now known as Evans Mills he built a home for Madame Delafolie; at Natural Bridge he erected another, designed especially for his own use in the summer-time; and on the shores of Perch lake, in the present township of Pamela, was a third, a stone château, which he planned to occupy in winter. But while the charms of solitude and the wilderness were all well enough in summer, the king soon discovered that New York and Philadelphia were far more congenial than the tremendous snowfalls and the bitter cold of the region swept by the winds from off the great lakes, and the royal abodes were abandoned each autumn when the leaves fell from the trees. His journeys through the country in the autumn and spring-time are still related by the "oldest inhabitants," who received their stories from their fathers, many of whom were eyewitnesses of the majestic spectacles. The unsettled country was decidedly lonely, and King Joseph was compelled to busy his royal head in discovering means of relieving the monotony of the long summers. In addition to his large retinue of servants, he had with him Marshal Grouchy, whose obedience to the letter rather than to the spirit of the great Napoleon's orders was said to have brought defeat at Waterloo, and others whose names were well known throughout the stirring times when the emperor was in power. Many of these men purchased land and became permanent colonists.

There is little doubt that these royal exiles were plotting and planning for the great brother himself to join them. Indeed, it is said a house was erected at Cape Vincent which was designed for his use, but again, as at Waterloo, there were insurmountable obstacles in the way, only in this case it happened to be the vigilance of Sir Hudson Howe rather than the too implicit obedience of Marshal Grouchy. In a letter which Joseph Bonaparte received announcing the death of the Little Corporal, Count Bertrand wrote from the place of exile:

The hope of leaving this dreadful region often presented itself to his (the emperor's) imagination. We sometimes fancied we were on the eve of starting for America; we read travels; we made plans; we arrived at your house; we wandered over that great country, where alone we might hope to enjoy liberty. Vain hopes! vain projects! which only made us feel doubly our misfortunes.

As soon as there was a prospect in France that the interests of the Bonaparte family were about to be revived, the ex-king of Spain speedily forgot his devotion to the land "where the rights of man do best prevail," and sailed for home. His great interests in northern New York were placed in the hands of his agent, Judge Joseph Boyer, and soon afterward sold to John La Farge.

A Marionette Theater in New York

FRANCIS H. NICHOLS, in the March Century. Condensed for PUBLIC OPINION

WEDGED in between two tenements in the dense center of New York's Italian colony, there is a little theater in which, on every evening of the year, blooms the flower of mediæval chivalry. In the stock company of the theater are more than sixty members, but their play is never the subject of reviews by dramatic critics; the players are indifferent alike to praise and to censure. They are marionettes worked by iron rods, and their home is in Spring street, near the corner where it crosses the Bowery. The marionettes are about three feet in height. They have wooden heads and jointed, stuffed doll bodies, and are entirely the product of the theater. With more truthfulness than any other theatrical manager in the country their "director" can boast of "making actors." Their faces are carved, wigs are tacked on their heads, and their costumes are all made within the theater itself. The play is a continuous one. It began more than a year ago, when the theater first made its appearance in Spring street. The director will explain to you that he has an Italian book in three volumes called the "Seven Paladins." He familiarizes himself with one of its chapters every afternoon, and then, in accordance with its story, improvises the lines of the actors as he maneuvers them from behind the scenes. Feminine marionettes speak through the medium of Isabella, his eldest daughter. The same *dramatis personæ* appear every night, but their performance is never the same. The chapters in the last of the three volumes have not yet been seen in Spring street, and they must all be acted before the director turns back to the first chapter of Volume I and begins all over.

The "Seven Paladins" is a collection of the romance legends that surround the court of Charlemagne. It is an elaboration of the "Song of Roland," which Taillefer sang before William of Normandy at the battle of Hastings, and which, in one form or another, forms the basis of a large part of the early literature of Europe. All of the original tenth-century cast is in the production. There is Rinaldo of Montauban, whom Don Quixote used to admire, his horse Bayard, and his sword Flamberge. There is Malagigi, the magician, and Ganelon, the traitor; Charlemagne, Clarissa, and golden-haired Roland himself.

THE NEWS OF THE WORLD

MONDAY, MARCH 3

DOMESTIC.—St. Louis said welcome and farewell to Prince Henry and Chicago received him with wildest enthusiasm and a night of festivity....The directors of the Union Traction company of Philadelphia agreed to accept the proposed plan of combination with the new company headed by the contractor, John M. Mack....The United States supreme court sustained the Illinois law which prohibits trading in futures....Mr. Charles Broadway Rouss, widely known as a merchant and a philanthropist, died in New York....The United States supreme court declared irregular the Detroit, Michigan, ordinance fixing street-car fares at 3 cents.

FOREIGN.—The British government has pledged itself not to adopt preferential sugar duties in favor of the colonies until the new agreement is signed by the governments concerned....The rebel steamer *Bolívar* bombarded the Venezuelan seaport Guira in order to protect the landing of insurgents; fresh fighting is reported in the state of Caraboba, Venezuela....Pope Leo XIII celebrated the twenty-fourth anniversary of his coronation and his ninety-second birthday....H. H. Asquith, the Liberal leader, announced his opposition to home rule for Ireland and his support of Lord Rosebery's position.

TUESDAY, MARCH 4

DOMESTIC.—The secretary of the treasury purchased \$1,000,000 short 4 per cent bonds, which makes the total purchased since July 1, 1901, \$51,356,420, of all denominations, at a cost of \$64,908,622....Miss Ellen M. Stone, the released missionary, has contracted to lecture for the Chautauqua societies of the country during the coming summer....The new Chilean minister, Señor Don Joaquín Walker-Martínez, presented his credentials to President Roosevelt in Washington.

FOREIGN.—The rebellion in the province of Kwang-Se, China, has assumed alarming proportions....Ringleaders were shot for participation in Spanish strikes; the plot for an uprising is thought to be due to an anarchist uprising....Several German steamship companies reported a large decrease in dividends....The czar has sent 150,000 roubles for the relief of the victims of the recent earthquake at Shamaka, Transcaucasia.

WEDNESDAY, MARCH 5

DOMESTIC.—Prince Henry traveled from Chicago to Syracuse, making an exhaustive visit to Niagara Falls....A severe snowstorm is reported from many parts of the west, deranging traffic and isolating towns....The First National bank of Montgomery, Indiana, was robbed, the vault being blown open by dynamite, and \$10,000 in cash and bonds

stolen....As a result of the cut in wages between 300 and 400 trunk and bag workers, employed in the four leading factories in St. Louis, are out on strike....Leonard Lewisohn, the New York banker and large operator in copper, died of pneumonia in London.

FOREIGN.—The international sugar convention was signed by the delegates to the Brussels conference; pressure was brought to bear by the European cartels on England to have the operation of the agreement deferred until 1903, but without avail....The National congress of French miners adopted a resolution to the effect that the miners should strike immediately for the eight-hour day, without further negotiations with the government....General Chakir Pacha, a brother of the late Turkish grand vizier, was arrested by order of the sultan at Prinkipos island, Sea of Marmora.

THURSDAY, MARCH 6

DOMESTIC.—The steamer *Waesland*, of the American line, was sunk in the British channel by a collision with the British steamer *Harmonides*; two lives were lost....A court-martial was ordered for Major Waller on the charge of atrocities in the island of Samar....The Spanish Treaty Claims commission decided against the claimants for damages resulting from the destruction of the battleship *Maine*....The degree of Doctor of Laws was conferred upon Prince Henry by Harvard university....B. F. Stevens, for more than a quarter of a century the United States despatch agent at London, died there.

FOREIGN.—Strong opposition was manifested in Germany to the sugar agreement signed at Brussels....It was reported from Peking that future payments of the Chinese indemnity might be deferred, owing to the action of the banking commission....General satisfaction was expressed in Austria over the intention to send an ambassador to Washington....British civil service estimates showed an increase of nearly \$15,000,000 over the previous year.

FRIDAY, MARCH 7

DOMESTIC.—President Roosevelt signed the bill creating a permanent census bureau....A westbound Southern Pacific train was badly wrecked near Sanderson, Texas, with several killed and many injured....A bill has been introduced at Albany looking toward another North river tunnel, its Manhattan terminal to be near Christopher street....Prince Henry was entertained at Albany by the governor and the senate and house; the prince afterward went to West Point, where the cadets were inspected.

FOREIGN.—King Edward laid the corner stone of the new British naval college at Dartmouth....Foreign residents of Kobe, Japan, refused to pay taxes

until the question of a violation of treaties is settled between the powers and Japan.

SATURDAY, MARCH 8

DOMESTIC.—Conferences on reciprocity with Cuba were held between President Roosevelt and Republican leaders in congress....The Philippine tariff bill passed by congress became a law by the signature of President Roosevelt....Siam appointed a commission to be present at the Louisiana Purchase exposition.

FOREIGN.—The king and queen of England were present at the launching of the battleship the *Queen* and the laying of the keelplate of the battleship *King Edward VII*....Three thousand men of the Newfoundland sealing crews struck for higher wages....A large quantity of Boer ammunition was discovered by British in the Orange River Colony....Chinese rebels captured a town and released prisoners; looting is reported near Kao-Chau.

SUNDAY, MARCH 9

DOMESTIC.—United States Minister Newell at The Hague unveiled a window in the Anglican church, the gift of Mayor Low as a memorial of the work of the peace conference in that city....The controversy between the French and American consuls at Tien-Tsin over mission property has been transferred for settlement to the French and American ministers at Peking; no serious developments are expected from the affair....The American legation at Constantinople presented a second note to the porte pointing out Turkey's responsibility for the capture of Miss Stone.

FOREIGN.—The disabled Cunard liner *Etruria* arrived at Horta, the Azores, in tow of the steamer *William Cliff*, all well on board....The demands of the striking crews of the sealing fleet at Newfoundland were refused by the vessel owners....The French chamber of deputies held sessions on Sunday in order to dispose of the budget, which was adopted by a vote of 398 to 64....Cholera has broken out among the Moslem pilgrims at Mecca and Medina....The Italian government has agreed to the demands of the railroad men and will contribute \$8,400,000 for a workmen's fund.

"Life," he asserts oracularly, "is nothing but a great big bluff."

"Possibly, possibly," was the reply, "but the bluff is called when you least expect it as a general thing."—*Chicago Evening Post*.

"Well, how does it seem to be engaged to such a wealthy girl?"

"Fine! Every time I kiss her I feel as if I were taking the coupon off a government bond."—*Life*.

BOOK REVIEWS

Mary Johnston's "Audrey" "The Rending of Virginia" "The Mastery of the Pacific"

AUDREY. By Mary Johnston. Cloth, pp. 418, \$1.50. Boston: Houghton, Mifflin, & Co.

MISS JOHNSTON has mounted on the stepping stones of "Prisoners of Hope," and "To Have and to Hold," to better things in "Audrey." In this trilogy of early Virginian romances she has made a steady advance in art, chiefly noticeable in the matter of construction. The story of "Audrey" shows a tendency towards simplicity and consistency. There are fewer impossibilities than in its two predecessors, fewer complications, fewer horrors. One may breathe easily for whole chapters. It is by no means devoid of incident, however; there are still Indians, and duels, and assassinations. But these are made subservient to the main theme, the idyll of a man of fashion and a child of the forest. There is a gain, too, in style, though there was less need of it here. Miss Johnston's style has always been her greatest asset. It redeemed her first two books from stark sensationalism, and it serves as a sort of enchanter's wand in her third. In the opening chapters that form a prologue to "Audrey," she so paints the glories of her heroine's mountain home that throughout the rest of the story we sympathetically share her longing for "the valley that lay like a ribbon thrown into the midst of the encompassing hills." Miss Johnston has made least advance in the realization of her characters. Audrey, to be sure, is far more human than Lady Jocelyn Leigh, that "maid as cold as Dian," but she only seems real when her creator is describing her; as soon as she opens her mouth to speak for herself, she becomes positively wooden. We feel convinced of her beauty, so vividly is it painted, but not of her charm. That is too elusive a quality to be described, it must be revealed by the character herself, and none of Miss Johnston's men and women are endowed with the gift of self-revelation. The only one in "Audrey" who approaches it is the doughty Scotchman, Angus McLean.

The characters are all picturesque, however, and though individually vague, *en masse* they form a striking group, which may be regarded as typical of Virginia life in the eighteenth century. The most important historical personage is Col. William Byrd, "the most accomplished and wittiest Virginian of his time," whose writings have recently been published in a *de luxe* edition. His daughter, Evelyn, a famous beauty, is Audrey's rival in the affections of Marmaduke Howard, a gallant young planter, who returns to his Virginia

acres after ten years of wandering abroad. He is pictured as a man of many moods and many selves. "To certain of his London acquaintances he was simply the well-bred philosopher and man of letters; in the minds of others he was associated with the peacock plumage of the world of fashion, with the flare of candles, the hot breath of gamblers, the ring of gold upon the tables; one clique had tales to tell of a magnanimous spirit and a generous hand, while yet another grew red at mention of his name and put to his credit much that was not creditable."

AUDREY

He comes back to his Virginia plantation with the determination to settle down and take unto himself a wife, Mistress Evelyn Byrd, who has long commanded his admiration and respect. But his fancy is caught and held by his ward, Audrey, whom twelve years before he had discovered in her mountain home, orphaned by an Indian massacre. He begins to study her as a new and refreshing type of femininity, and ends by falling hopelessly in love with her. Their little idyll, which seems a natural and fitting accompaniment of their woodland life, develops tragic conse-

quences when transferred to the center of fashion at Williamsburg. Here Audrey finds herself the innocent victim of gossip, and spite, and slander. She renounces Haward's love when she learns that he is the suitor of Evelyn Byrd, takes to the stage, and eventually meets death at the hands of another lover, a villainous French-Indian half-breed, who has relentlessly dogged her for years. In these melo-dramatic closing chapters the story loses much of its charm. The barefoot Audrey of the garden so suddenly transformed into a second Siddons is a bit startling, and her fine lady manners are a trifle ridiculous. Her childish sweetness and simplicity give way to a marble-heartedness that would do credit to Lady Jocelyn Leigh. "There is no past," she says to Haward. "It was a dream and a lie. There is only today and *you are a stranger.*" The italics are the author's. It is well that Miss Johnston had the courage to risk an unhappy ending for the sake of consistency. Passing over the masquerade at Williamsburg, we can now remember Audrey as a woodland nymph; and are not subjected to the strain of imagining her as the haughty mistress of Fair View.

A pretty little comedy is played by the fire-eating Angus McLean and the dove-like Quakeress, Trulove Taberer. The great hearted, high-tempered McLean, loyal in his loves, vindictive in his hates, is more alive than any other person in the story. The scene in which he denounces his friend, Haward, is wonderfully well done. The worthless Parson Darden and his shrewish wife, Mister and Mistress Stagg, imported from the theater of Bath to amaze the colonies with their histrionic genius, and a company of ladies and gentlemen of Virginia, properly mannered and costumed, complete the cast. They play the parts assigned them with a certain sprightliness, and keep discreetly in the background when the stars appear.

While Miss Johnston has given her story an historical atmosphere, she has been wisely content to let history give place to pure romance. In the opening chapters, for example, she introduces a pretty picture of a May day in old Virginia, with its May-pole dance and other English survivals. But as soon as our interest is centered in Haward, Evelyn Byrd, and Audrey, the festivities are allowed to become a secondary matter. A similar treatment is noticed in a number of the scenes that follow. Evidently Miss Johnston is coming into a realization that her stronghold is romance, pure and simple.

Have You Read

the latest successful novel by Anna Katharine Green, author of the famous "Leavenworth Case"? All of the fascination, the illusion, the narrative charm, the ingenuity of Miss Green's best work appear in

One of My Sons

"Brilliant," "clever," "captivating," "ingenious," and all such adjectives are applied to it by the reviewers. Do not fail to read the book. It is pure, healthy and sustained enjoyment. Price, \$1.50. Illustrated.

Fords, Howard & Hulbert, Bib's House, New York

CONSTABLE. By C. J. Holmes. Cloth, pp. 60, \$1. New York: Longmans, Green & Co.

NEARLY three-quarters of a century have elapsed since Constable's death. During that period his reputation has increased enormously, not only because there has been time for his artistic powers to be fully appraised, but, also, because he is generally recognized as the father of the modern landscape. It is, therefore, a fitting thing that a volume devoted to Constable should be included in the Artists' Library, since it is the aim of Mr. Lawrence Binyon, the editor of the series, to select those artists who have had the greatest influence on modern art. This small volume does not strive to cover the same ground as Leslie's biography of Constable. It contains a short sketch, giving the most interesting facts of the painter's life, an essay on Constable and His Predecessors, and one on the Development of Constable's Art. Twenty-four admirable reproductions of Constable's most famous landscapes accompany the text.

THE RENDING OF VIRGINIA. By Granville Davisson Hall. Cloth, pp. 621, \$2. Glencoe, Ill.: Archie C. Hall.

We have here an interesting and well-written account of the severance of Virginia into two commonwealths, prefaced with an explanation of the causes leading up to the event: the internal antagonisms which had wrought toward disruption from an early day, and southern secession which precipitated the disruption between the eastern and western sections that had been brewing for fifty years. There is a minute description of the Virginia secession convention, of the restoration of the Virginia state government at Wheeling, and of the organization of West Virginia as a separate state. The author is a native of Virginia and was actively engaged in Wheeling journalism at the time the events of this volume transpired. He writes with the easy assurance of one who knows what he is talking about, and offers documentary evidence in proof of his statements.

POLICEMAN FLYNN. By Elliott Flower. Cloth, pp. 294, \$1.50. New York: The Century Co.

POLICEMAN FLYNN is a new and important character in American humor. His adventures no less than his philosophy are full of humor, and in the latter is also rich human nature, honesty, and wisdom, quaintly but effectively expressed. We can say no more than that Flynn, both in humor and philosophy, is fit to be ranked with Dooley. Both are from Chicago, and they are entertaining in almost equal degrees, the only important difference being that Dooley is a humorist at large, while Policeman Flynn's humor and wisdom, as well as the wit and wisdom of his wife, find expression only in connection with the events of a policeman's life. A few pages of Mr. Flower's book are a sure cure for the worst attack of blues.

TWO SIDES TO A QUESTION.

It was the exposure of a famous literary theft that brought "the deadly parallel" into vogue as a phrase. In its effect on fraud the parallel is always deadly, because it is unescapable. But applied to what is genuine it loses its terrors and becomes an illumination of the truth. Therefore it is without fear that we put to this test George Douglas' extraordinary novel, *The House With the Green Shutters*, giving herewith the opinions of it from both sides.

One side:

ENGLAND.

"It is the most important novel by a new writer that has appeared in the present year," says CLEMENT K. SHORTER in *The Sphere*.

"The success is one of sheer merit," says *The Spectator*.

"In fiction (of the year 1901-1902) I have been most impressed by 'The House With the Green Shutters,'" says ANDREW LANG.

"A notable and, in a sense, tremendous book," is the *Outlook's* opinion.

"Worthy of the hand that drew 'Weir of Hermiston,'" thinks *The Times*.

The other:

AMERICA.

"Far and away the most original novel of the year; a work of pronounced power and genius," *Harper's Weekly* considers it.

"A masterly piece of realism," is the *Chicago Inter Ocean's* verdict.

"It is like the tragedy of the Greeks... undeniably powerful," *The Sun* declares.

"A perfected piece of literary work," the *Book Lover's Weekly* pronounces it.

"It has a strange fascination," says *Brooklyn Life*, "so vigorous and sharp and realistically human are the character studies."

We could cite many other opinions of *The House With the Green Shutters*, varying only in expression, all testifying to the great power of the novel. It is now in its sixth edition and is attracting more serious literary notice than any other novel of the year.

McCLURE, PHILLIPS & Co.,
NEW YORK.

THE MASTERY OF THE PACIFIC. By A. R. Colquhoun. Cloth, pp. 430, \$4 net. New York: Macmillan Co.

MR. COLQUHOUN'S wide travels and careful observation have fitted him admirably to speak of the political future of the countries bordering on the western ocean; at least, so far as any man can speak understandingly or with authority of such a complicated subject. For our comfort and encouragement in the Philippines he says that we will do well to hold on and govern the best we can. Inasmuch as we don't seem to be able to do anything else the advice is not remarkable for its massive wisdom. On the whole, while there is little that is new in Mr. Colquhoun's book, it is all carefully planned and the treatment is good in a cursory newspaper fashion.

THE LOVER'S PROGRESS. Told by Himself. Cloth, pp. 498, \$1.50. New York: Bretano's.

HEREIN a man (or a woman masquerading as a man) tells of the three love affairs that influenced his life. First he loved an innocent young creature who rewarded his devotion by marrying a fat and wealthy relative. No. 2 was a professional dancer of great mental and physical attractions, but she died and the lover was again left forlorn. The narrative closes when the "goal is reached at last," our lover having married No. 3, a simple country girl who promises to make him happy for the rest of his life. The book has a certain degree of novelty, but an equal degree of absurdity, and we can not take his affairs as seriously as the lover would have us take them.

THE SIEGE OF LADY RESOLUTE. By Harris Dickson. Cloth, pp. 379, \$1.50. New York: Harper & Bros.

YOUNG Saint-Maurice, a soldier of Louis XIV, offends his sweetheart, a Protestant girl of the Cevennes, by his refusal to pardon an old man whom he has condemned to be flogged during the operations against the Protestants of the Cevennes. All his deeds of daring can not efface from the mind of the young lady the memory of his momentary cruelty, and it is not until he rescues her from the hands of a brother of Mme. de Maintenon, that mademoiselle grants him pardon and receives him into her favor again.

JOSE. By A. Palaccio Valdes. Translated by Minna Caroline Smith. Cloth, pp. 278. New York: Brentano's.

AN excellent picture of the daily life of the inhabitants of a little fishing village of the province of Asturias in Spain. The author has been successful in avoiding both the monotonous placidity and the gross sensuality so prone to show their ugly heads in stories of lowly life.

THE PAGAN'S CUP. By Fergus Hume. Cloth, pp. 290, \$1.50. New York: G. W. Dillingham Co.

A CHRONICLE of the love affairs of the men and maids of a quiet English parish.

BUSINESS AND FINANCE

The Business Situation

Selected and Condensed for PUBLIC OPINION
THE GENERAL SITUATION

Dun's Review, New York, March 8

Unsettled weather was the most unsatisfactory feature of the business situation. Manufacturing and transporting interests suffered severely, and consumers were urgent for shipment of delayed goods, while great quantities of merchandise became stalled in transit. Preparations for an enormous spring trade continue undiminished. There is still some uneasiness regarding the labor situation at the coal mines, and at Fall River there is disagreement as to the length of a cut of cloth, although increased wages are assured. Railway earnings for February make a remarkably good exhibit in view of the opposition of the elements, increasing 1.1 per cent over last year and 14.5 over 1900. Prices of commodities advanced during February, Dun's index number on March 1 being \$101.593.

IRON AND STEEL

Not only is there no improvement to be recorded in the iron and steel out-

look, but floods in the Pittsburg region added to the pressure by completely closing many plants and damaging much costly machinery. Supplies of coke failed to increase because the railroads were badly disorganized, and the net result was a week of light output when requirements were notably heavy. Recent destruction by the elements makes an unusual demand for structural material, and on spot business buyers gladly pay premiums of \$6 a ton above list prices. The situation has become so abnormal that it is impossible to gauge the market by ordinary standards or secure quotations of any value for comparative purposes. The encouraging feature is that despite present exorbitant prices the speculative element is not prominent, and orders are accepted for distant delivery with no effort at inflation.

COTTON AND WOOL

Cotton goods are well sustained, the stronger raw material giving all the advantage to sellers, but there is much uncertainty as to the labor situation. This tends to make the mills conservative regarding the acceptance of contracts for future delivery. Less activity is reported in the market for wools, buyers having apparently completed their round of orders.

CORN AND WHEAT

It was natural for grain to hold firm when wheat receipts at the west were 2,899,344 bushels, compared with 3,747,952 last year, while arrivals of corn were but 2,001,914 bushels, against 5,020,438 a year ago. Exports of wheat, flour included, were 4,174,894 bushels, against 3,185,032 in the previous week, and 3,715,930 a year ago. Even corn went out more freely, Atlantic exports exceeding 10 per cent of the movement a year ago, or 371,904 bushels, against 3,357,438. Speculation was quiet, with many guesses as to the coming report of farm reserves.

FAILURES

Failures for the week numbered 176 in the United States against 208 last year.

WIFE'S INGENUITY Saves Her Husband

The author of the "Degeneration of Dorothy," Mr. Franklin Kinsella, 226 W. 25th St., New York City, was the victim of a little by-play—but he can best tell the story himself. "I must confess that I have been the victim of an innocent deception which turned out all for the best, however.

"I had been resting under the belief, for some years, that coffee served as a lubricant to my cerebral convolutions, in other words, 'made the wheels go round,' and I had an idea that I could not work without it as a stimulant.

"I soon paid the penalty in nervousness, loss of flesh, insomnia, and restlessness, none of which troubles would yield to any or all medicines. I finally got in rather a bad way, and my wife took a hand in the affair all unknown to me. She purchased a package of Postum Coffee and first gave me one-half Postum and one-half coffee. In a little time she had me down to clear Postum, and I was none the wiser.

"I noticed that I was getting better, my nerves were steadier, and I began to gain flesh and sleep nights. My work was performed far better than in my old condition.

"Commenting upon my greatly improved health one morning I was told the truth. 'Tis to laugh,' so I submitted gracefully and joined the Postum ranks.

"Experience teaches that, boiling is one-half the game. When the directions are carried out the result will be as fine a cup of rich, fragrant coffee as ever delighted the senses without ruining the nerves."

Financial**THE MONEY MARKET***Bradstreet's, New York, March 8*

Further gold shipments and the threatened transfer of several millions from New York to San Francisco caused some uncertainty in the New York money market at the beginning of the week. Call loans advanced to 3 per cent, and at times that figure was the ruling quotation. Time money was also offered with less freedom, and lenders showed a disposition to hold out for better rates. The gold exports amounted to \$3,800,000, but the fact that some of the shipments were deferred from Thursday until Saturday and one shipment of \$1,000,000 was canceled seemed to have a good influence. The banks, however, are estimated to have lost altogether from \$4,000,000 to \$5,000,000 in cash this week. Time money was quoted at $3\frac{1}{2}$ @4 per cent for thirty to ninety days, and $4\frac{1}{2}$ @4 per cent for longer periods, the tone being a little firmer. Commercial paper was quiet, with a small buying demand and limited offerings, business being done at $4\frac{1}{4}$ @4 per cent for endorsed bills receivable.

THE STOCK MARKET

Restricted activity continues in the New York stock market owing to heavy gold shipments and uncertainty as to the money market and the Northern Se-

GOOD WORK**Proper Food Makes Marvelous Changes**

Providence is sometimes credited with directing the footsteps by so simple a way as the reading of a food advertisement.

A lady in Shelbina, Mo., says, "About two years ago I was compelled to retire from my school teaching because I was completely broken down with nervous prostration.

"I suffered agony in my back. My hands and feet would swell up nights. I was in a dreadfully nervous condition, irritable, with a dull, heavy headache continually, had no appetite and could not digest anything if I tried. I was unable to remember what I read and was, of course, unfit for my work.

"Some said I had consumption, others said dropsy. One day, as if by providence, I read the testimonial of a lady whose symptoms were much the same as mine, and she told of how Grape-Nuts Breakfast Food had cured her, so I concluded to try it.

"I left off the old-fashioned breakfast and began with Grape-Nuts, a little fruit, and a cup of Postum Food Coffee. That was 8 months ago and I have steadily improved in both body and mind. Grape-Nuts Breakfast Food has done more for me than all the medicine I have ever taken, and I am now well again and able to return once more to my school duties and able to do anything necessary in my work.

"My mind is clearer and my body stronger than ever before. Please do not publish my name."

Name given by Postum Co., Battle Creek, Mich.

curities deal. Liquidation, however, is limited and bear operators timid, prices accordingly responding to the bullish manipulation which has been seen in specialties like the minor steel stocks and low-priced railroad shares. Investment demands are large, bonds being firm, and some high-priced dividend stocks show a decided appreciation. Public interest in speculation, however, continues at a low ebb. Foreign exchange is firm at $4.87\frac{3}{4}$ for demand sterling.

BANK CLEARINGS

Clearings for the week ending Thursday, March 6, aggregate \$2,143,958,188, a gain of 9.7 per cent over last week, but a loss of 7.9 per cent from a year ago. Outside of New York the increase over last week is 22 per cent, while as compared with last year there is a gain of 9 per cent.

The Pennsylvania Railroad's Report

The report of the Pennsylvania Railroad company for the year 1901 shows increased traffic and continued prosperity. The gross earnings of all lines east and west of Pittsburg were \$198,626,878; operating expenses, \$133,713,386, and net earnings, \$64,913,491, the increase in gross earnings over 1900 being \$23,390,524 and in net earnings \$10,175,414. The tons of freight moved were 243,408,035, an increase of 24,331,658 tons, and 104,471,301 passengers, an increase of 20,794,855. Mention is made of the issue of \$100,000,000 of new capital stock for the purchase of stock of the Long Island railroad, redemption of bonds and various corporate purposes, besides a further issue of stock to purchase stock of the Philadelphia, Wilmington and Baltimore railroad, with a view to consolidating it with the Baltimore and Potomac, and facilitating improvements to be made at Washington. The lines east of Pittsburg and Erie had in the past year \$101,329,795 of gross earnings and \$36,070,252 of net earnings. If income from investments and rentals be added the gross income was \$44,655,166 and the net income after paying interest on debt, rentals, etc., was \$22,194,330. A 6 per cent dividend of \$10,857,672 was paid and the amount credited to profit and loss was increased to \$24,310,476. The lines west of Pittsburg also had a good year, the Pennsylvania company having \$29,054,544 of gross earnings and \$3,681,260 of net income after meeting fixed charges, while the Pittsburg, Cincinnati, Chicago and St. Louis railway had \$24,290,892 of gross and \$3,696,990 of net income after meeting fixed charges, leaving handsome sums in each case to go to credit of profit and loss.

Evidence of the partial recovery of South Africa from the effects of the war is seen in the trade returns of Cape Colony for eleven months of 1901. Imports of all kinds, including articles for the colonial government, ascended from £17,784,000 in 1900 to £22,094,000 last year, and exports, specie included, rose from £7,275,000 to £9,857,000.

PUBLIC OPINION is published Weekly (Thursday).
Subscription price, \$3 a year in advance, 10 cents a
copy. Subscriptions are continued until ordered
stopped. Remittances should be made by U.S. money
order or draft on New York. Requests for change
of address should be accompanied by the old as
well as the new address.

Have you Bright's Disease or
Diabetes?

Don't you know that the physicians
of the world cannot cure you?

Do you wish to know of treat-
ments that will cure both dis-
eases?

You surely are not too skeptical or
prejudiced to at least read what prom-
inent men say of our treatments—not
what we say.

Can you afford to drown because
you will not reach for the Life
Preserver we throw out to you?

Every day tells, as you know. Do
not waste valuable time.

Would we urge investigation if
we did not have what we claim?

If you suffer from Bright's Disease
or Diabetes, you need us more than
we need you. Our treatment is not
a "patent medicine" and cannot be
procured from druggists, but is ad-
ministered under the direction of Dr.
Tompkins after a careful study of
your case. You can be treated at
your own home.

Will you allow us to send you
convincing proof of what we
have done and are now doing?

We will gladly send our book with
letters and full details on request.
We never publish names or letters
without consent. Professional eti-
quette observed in all cases.

TOMPKINS-CORBIN COMPANY

Number 12
Volume XXXII

The Week

Thursday
March 20, 1902

WHATEVER may be the outcome of the proceedings instituted by the government against the Northern Securities company, no one can say that these proceedings have not been begun with vigor. The attorney-general charges directly that "the company was not organized in good faith to purchase and pay for the stocks of the Great Northern and the Northern Pacific railways. It was organized solely to incorporate the pooling of the stocks of said companies and to carry into effect the unlawful combination or conspiracy." If the anti-trust law can be so evaded, Mr. Knox says, there is nothing to prevent the consolidation of the entire railway systems of the country, thus "placing the public at the absolute mercy of the holding corporations." The prospect is that the government will win its case and then some new way of accomplishing the apparently inevitable consolidation of great enterprises will be discovered.

SECRETARY SHAW'S announcement that the treasury will discontinue for the present the purchase of government bonds on account of the sinking fund, discloses the fact that this means of expanding the money supply has failed on account of the action of the bankers themselves. Government purchases having raised the price of bonds, the bankers—who have been bewailing the locking up of the treasury surplus—have withdrawn bonds deposited to secure circulation in order to take advantage of the advanced price. Three millions a month have been withdrawn in this way for several months, and applications on file show that the process will be continued for some time to come. Besides placing the banks in a not altogether favorable light—no one, however, can seriously blame a banker for selling his bonds at the highest price he can get for them—the situation developed and the failure of the bond-purchase expedient should invite careful consideration of the bill just agreed upon by the banking and currency committee of the house.

THIS bill is outlined in another place in this issue, and our reason for not giving more comment upon it is that it has excited but little interest. The very comprehensiveness of this bill is likely to count against its passage, since one or another of its many provisions is sure to be objected to in many quarters. We must admit, too, that we have observed no enthusiasm outside of banking circles over the proposal to substitute bank assets in place of government foundation for the additional currency the bill aims to create. About the only thing in regard to the currency that is agreed upon is that it is inadequate. Here is a proposition, whatever its faults, to accomplish the desired result and it should have prompt, even if critical consideration.

CONGRESS, however, may not unreasonably conclude that it has enough on its hands without stirring up the currency question. Besides the routine business that clogs the end of the session—adjournment early in June is already being talked of—there is the tax-reduction bill passed by the house and now before the senate, the Pacific cable, Cuba, and most important of all, the isthmian canal to be acted on. Too much importance may easily be placed upon the action of the senate committee on isthmian canals in reporting favorably on the Hepburn Nicaragua bill. The senate, if not the public in general, knows that this report was secured by a snap vote which Mr. Morgan, favored by the circumstances of the moment, was able to obtain. It is not likely to have much influence with the senate and is not to be taken as an indication that that body is anywhere near an agreement as to the best canal route.

BOSTON, last week, passed through a strike that was wholly worthy of the traditions and reputation of the city. According to the highest estimates, 20,000 men, mostly teamsters and freight handlers, stopped work, and having thus registered their protest, they went back to work again, no acts of lawlessness having been committed, leaving the redress of their grievances in the hands of Governor Crane, convinced, as they announced themselves to be, of his "courage and integrity, the nobility of his manhood, and the strength of his character." Is there any other city in the United States where such a strike with such a termination ever took place? The tribute to Governor Crane is no less remarkable than the other unique features of this academic strike.

GOVERNOR DOLE, of Hawaii, is coming to Washington to straighten out the Hawaiian situation. When he arrives one may be able to form a just and accurate opinion as to the rights and wrongs of the dispute between the governor, the "missionary party," the natives, and the carpet baggers. The deadlock between the governor and the legislature appears to have arisen out of the fact that the latter was composed of utterly unfit material, and this in turn may readily be traced to the fact that too broad a voting power was given to natives who had no idea of how this power should properly be employed. Correspondence of the *Washington Star* has supplied us with most of our information on this subject, and if we have heard the whole story, it is safe to predict that whatever part the government takes in the matter will be in support of Governor Dole.

LORD METHUEN'S capture and release have been the main items of foreign news during the week. England, of course, takes the blow sturdily. She can well afford to do so, for the Boers gain no material advantage by their exploit; they only increase the British determination to see the thing through. One advantage, however, the Boers have gained through the recent operations of De La Rey. They have made untenable (and ridiculous outside of Great Britain) the contention that a state of war does not exist in South Africa, and that captured Boers may be executed as rebels as Scheepers was. The shrewd release of Lord Methuen will make it still more difficult for Lord Kitchener to deal summarily with Commandant Kruitinger, who is already in his hands, and any other "rebels" he may capture.

BARON VON RICHTHOFEN'S speech in the Prussian diet last week reads like an official notice that the government is tired of being embroiled with England by the German habit of hacking at England and Englishmen at every available opportunity. As much was already known, however, and the fact had no visible effect upon the habit referred to. It is a habit so deeply ingrained that no amount of official persuasion can do away with it. Impaired ministerial influence is also shown in the adjournment of the reichstag for the Easter holiday with the tariff bill in such a confused condition that there is small probability of its passage in any form. The agrarians refuse to show any consideration for the government's foreign obligations, and the government rejects the extreme demands of the prohibitive tariff party—a situation altogether favorable to American interests.

IT being known that "a cabinet crisis" in Spain is in reality no crisis at all, little importance is attached to the resignation of the ministry last week. A new ministry in all respects like its predecessor will take office and the game of politics as it is played in Spain will go on as before.

AMERICAN

The Old and the New Secretary of the Navy

THE RETIREMENT OF JOHN D. LONG AND THE SELECTION OF WILLIAM H. MOODY TO SUCCEED HIM

AS briefly announced in our last issue, Secretary John D. Long has been succeeded as secretary of the navy by William Henry Moody, who, for seven years, has represented the sixth congressional district of Massachusetts. Mr. Moody is a graduate of Harvard and a lawyer by profession.

Copyright, J. E. Purdy & Co., Boston

JOHN D. LONG

In the opinion of the *Boston Advertiser* (Rep.), "the choice of Mr. Moody has not only the high personal qualities of the appointee to recommend it, but the further advantage of bringing into the cabinet a gentleman fresh from the house of representatives." Secretary Long, the *Advertiser* adds, "has made his mark on national history. It will never be forgotten that under him the navy made a record unparalleled in modern history. With all due credit for the courage, skill, and determination of the men actually in the battles, the work that was done before the war and in its early days at Washington counted tremendously in the results." The *Boston Post* (Dem.) is "glad to see this important cabinet position retained in Massachusetts, and there is no doubt that Mr. Moody will sustain the reputation which Secretary Long has established through a term of service in which our new navy has made history for the world and a record for itself."

The *New York Tribune* (Rep.) takes advantage of the opportunity afforded to make "cordial recognition of the ability and faithfulness with which Secretary Long administered the navy department. Mr. Moody is highly esteemed by his colleagues as a man of executive talents and excellent sense, and there is no reason to doubt that he will direct the practical management of naval affairs with skill and sagacity." The *World* (Dem.) comments: "John D. Long was perfectly adapted to Mr. McKinley's disposition and needs; that he was not equally suited to Mr. Roosevelt's temper and ways was plainly proved during the latter's service as assistant secretary of the navy un-

der its late head, notwithstanding the very friendly and cordial tone of the resignation correspondence. The new secretary is of the Rooseveltian type— young, active, fearless, independent, an indefatigable worker, with plenty of convictions and the full courage of them." The *Press* (Rep.) has "no doubt that Mr. Moody will make as good a secretary of the navy as he has representative," but the *Press* regrets that the party is to lose so efficient an advocate of "right principles" in congress. The *Evening Post* (Ind.) explains Mr. Long's resignation by saying that "he never at heart favored the expansion policy which, as a member of the McKinley administration, he was forced to support, and he can not have enjoyed the anomalous position which he consequently occupied." The *Philadelphia Press* pays this tribute to the new secretary: "As secretary of the navy Mr. Moody will continue the record made by the Massachusetts lawyer who preceded him. He will not have to fight a war, though if he did, it would be well fought; but he is certain to do his full share to discourage and prevent war by keeping the navy at the highest efficiency."

As was to be expected, the Schley controversy has entered into many of the comments on the retirement of Secretary Long. "It was his misfortune," the *New York Sun* says, "to become the special target of the singular and malicious passion of Schleyism. The rage excited, first by the recital and then by the proof of facts as to Schley as a commander, turned upon Long in a ghastly sort of effort to hold him responsible. It was all the more to Mr. Long's credit, therefore, that he never wavered under the attack, but stood by the truth, from assertion to demonstration."

Photo by Bell, Washington

WILLIAM H. MOODY

The *Philadelphia Times* (Ind. Dem.), on the other hand, asserts that "nothing else in the history of his administration will be remembered so distinctly as the Schley case, in association with his name. Dewey and Schley and Clark and the others have won their individual fame; Long will be remembered, if at all, only as the secretary who allowed their services to

be belittled, and who held onto his office long after the general sentiment of the country had demanded his retirement." The *Washington Post* (Ind.) likewise fails to give way to any "hypocritical lamentations" over the resignation of Mr. Long. The *Post* grants that he is a "sincere, cultivated gentleman," but it "has never felt, however, that he made a strong, virile, active, and compelling force in the administration of the navy department."

The Supreme Court on the Illinois Anti-Trust Law

THE supreme court has pronounced unconstitutional the Illinois law which, while forbidding combinations among persons, firms, or corporations engaged in manufacturing or transportation, when the purpose of the combination was the restriction of competition, exempted from the operation of the act live stock and agricultural products in the hands of the raiser or producer. In giving the opinion of the court, from which Justice McKenna alone dissented, Justice Harlan said: "To declare that some of the general class engaged in domestic trade or commerce shall be deemed criminals if they violate certain regulations prescribed by the state, and that others of the general class, also engaged in such trade or commerce, shall not be bound to regard those regulations, but may combine their capital, skill or acts to destroy competition and to control prices for their benefit exclusively, is so manifestly a denial of the equal protection of the laws that extended argument to establish that position would seem to be unnecessary."

"From this time forth," says the *New York Tribune*, "it is the law of the United States that the octopus is as hideous and forbidden when he builds his rough lair in the cornfield of the farmer as when he dwells in pampered luxury in the palaces of capital. The decision of the court does not declare that state laws may not be passed prohibiting combinations in restraint of trade—very far from it. It says only that if such laws are passed they must apply equally

to all sorts of combinations. Now that it is decreed that the agricultural classes may not, through their representatives, exempt themselves from the penalties of anti-trust laws, it remains to be seen whether their eagerness to impose restraints upon capitalists and corporations will not undergo measurable abatement."

The *Brooklyn Eagle* points out the fact that Justice Harlan's decision practically seals the fate of similar laws passed by the legislatures of thirteen states. Georgia, Illinois, Indiana, Louisiana, Michigan, Mississippi, Montana, Nebraska, North Carolina, South Dakota, Tennessee, Texas, and Wisconsin have all erred, as did Illinois, by holding that, in constructing laws which aimed to regulate the business affairs of citizens they had a right to exempt one class from the operation of those laws. The *Eagle* believes that "the decision conveys a lesson which the lawmakers of every state in the union should take to heart. It does not say that anti-trust legislation is wrong, but it insists that such legislation shall apply indiscriminately. There must be no exceptions and no exemptions in favor of farmers or of anyone else. If the capitalist is to be restrained for the general good of the community, then the term 'capitalist' must not be surrounded by absurd legal limitations of meaning; a farmer worth a few thousand dollars is just as much entitled to be called a capitalist, if he uses his money for purposes of investment, either individually or in combination with others, as is the multi-millionaire who consolidates a dozen railroads before lunch and three or four steamship lines before dinner."

Miss Roosevelt in Politics

THE VISIT TO LONDON ABANDONED

THE announcement that Miss Roosevelt would not attend the coronation has been the subject of more comment than was visited upon the statement that the president's daughter would be present on that occasion as the guest of Special Ambassador White-law Reid. The London correspondent of the *Philadelphia North American* cables that "the action of the

WILL HE EVER REACH THE SHORE?

—*Minneapolis Tribune*

THE LATEST INFANT AND THE GREEDIEST

—*Philadelphia Record*

president in making this decision is regarded here as having more or less political significance, with particular application to the relations of the United States with England and Germany. It is known, for instance, that Emperor William, in recognition of America's tribute to Prince Henry, has invited Miss Roosevelt to become his guest in Berlin during the coming summer. The assumption is that acceptance of either invitation would, in the president's opinion, be misconstrued into some official meaning, and that to avoid this he has decided that both shall be declined. There is another aspect of the situation which may have had quite as much influence with President Roosevelt. It is no secret that Prince Henry's visit to the United States and the evidence of Germany's good-will contained therein has not been pleasing to England, and Miss Roosevelt's attendance at the coronation was expected to offset this feeling. Now that Emperor William has played another card by asking her to be his guest, this purpose has been defeated, and, after all, the points of the game are in favor of the kaiser."

The *Pittsburg Press* (Rep.) asserts that "it is the judgment probably of nine out of ten people everywhere in the United States that the president would have committed a most serious blunder had he permitted his daughter to attend the coronation of King Edward of England," and the *Press* accordingly commends the later decision of the president. The *Chicago Chronicle* (Dem.) explains the abandonment of the visit on the ground that "the president came to the conclusion, reached by the leaders of his own party weeks ago, that the trip might have a serious effect upon the fortunes of Republican members of congress who will have to seek reelection next fall. Nothing that the president has done during the few months of his term has aroused such strenuous and bitter opposition as his decision to permit Miss Roosevelt to visit London in company with Special Ambassador Whitelaw Reid. None of the Republican leaders of congress has attempted to minimize the importance of the effect of this publication. They were especially displeased with the president because he did not seek advice or counsel before he consented to Miss Roosevelt's trip to London."

The *Kansas City Star* (Ind.) offers quite a different explanation: "It may be taken for granted," the *Star* says, "that Mr. Roosevelt is not the man to be governed by the absurd criticisms that have reached his ears from some sources as to the proposed visit of his daughter, in any capacity, to the crowning of the king of a friendly nation. Other considerations aside, there is no reason why the daughter of the president of the United States, as the guest of the special ambassador from this country at the coronation,

and under the chaperonage of her aunt, should not visit England, as any other American girl would be privileged to visit a foreign country to witness some especially interesting proceeding. But it can readily be understood that the discussion that has been provoked by the proposed visit has been highly distasteful to the president and Mrs. Roosevelt, as well as to the young lady herself. It is not pleasant to see a young girl brought into such a controversy, even if the criticism has no legitimate basis." The *New York Journal* (Dem.) thinks "the president should have treated with contemptuous indifference criticism that was equally shallow and impertinent."

The New Currency Bill

THE BANKING AND CURRENCY COMMITTEE AGREES ON A BILL

A NEW currency bill has been agreed upon by the Republican members of the house banking and currency committee. The means by which it is proposed to reorganize the monetary system are:

By national banks assuming to redeem currently \$130,000,000 of United States notes. By permitting national banks to issue under proper safeguards and during a term of seven years asset currency proportioned to their capital. By limiting issues of silver certificates to \$5 or less. By increasing the coinage of subsidiary coins. By providing for the exchange of gold for silver. By permitting national banks to have places of business in any part of the United States, colonies, and foreign countries. By requiring national banks to pay interest at the rate of one per cent per annum on all deposits of public money.

The *Boston Transcript* (Ind. Rep.) calls attention to the "challenging points the bill presents" and concludes, therefore, that it is impossible to "question the possession of the courage of their convictions by those who have drawn it up; for if they have sought to conciliate a strong political sentiment by requiring the banks to pay interest on deposits of public money, they have defied another by their provision for maintaining the parity of silver with gold by providing for an exchange of gold for silver and by the feature for the redemption of United States notes. In fact, they challenge two different kinds of opposition, that which is chronically hostile to any extension of the powers of national banks by the expansion of their functions in our monetary system, and the Republican sentiment, much more generally encountered at the Capitol than in any other part of the country, that it is better to let the sleeping dog, silver, alone."

"One of the main purposes of the whole scheme is to give the banks a complete monopoly of the business of supplying the credit part of the currency, with the exception only of silver,"

MISS ALICE ROOSEVELT

says the *Chicago Evening Post* (Rep.). "To this end the greenbacks are to be retired. Here we have the meat of the scheme. It is the project of asset note circulation, of which we have heard so much during the last few years."

A more favorable criticism is that of the *Philadelphia Record* (Ind. Dem.). The two main objects at which the bill aims, the establishment of the gold standard and the retirement of the greenbacks, seem to the *Record* very desirable. "The bill will lead to long debate, and it is doubtful whether it can be acted upon at this session of congress, but it furnishes a solid groundwork for the effort to harmonize and solidify our system of finance after many years of disastrous experiment. The fact that the committee on banking and currency has at last been able to reach conclusions of substantial agreement is in itself matter of good augury."

The Death of John P. Altgeld

Born, Berlin, Dec. 1847. Died in Joliet, Ill., March 11, 1902

JOHN PETER ALT-GELD was brought to this country in infancy, his parents settling in Ohio. At the age of sixteen he entered the union army and served until the end of the civil war. In 1875 he moved to Chicago, having previously studied law and been elected state's attorney of Andrew county, Mo. He was judge of the superior court of Chicago

from 1886 to 1891, and governor of Illinois from 1893 to 1897. His pardon of the Chicago anarchists, Fiel-

den, Schwab, and Neebe, and his conflict with the federal authorities at the time of the Chicago strike riots are the incidents in his career for which he is best remembered.

Although Mr. Altgeld was the object of much abuse and criticism while he occupied a prominent place in politics, the comment upon his career is almost uniformly kind, even laudatory. "All citizens of this state," says the *Chicago News*, "without regard to party have recognized Mr. Altgeld's ability, and even his political opponents have admitted his sincerity. It can not be questioned that in many matters of practical management he was one of the greater Illinois governors. His extreme radicalism weakened his hold on public confidence and lessened his usefulness. He will be remembered, nevertheless, as an advocate of all policies which in his opinion tended toward a larger individual liberty for his fellow man." The *Chicago Evening Post* comments in a similar strain, describing Mr. Altgeld as a man of "exceptional intellectual force, great natural ability, and unusual aggressiveness." His failure in a political sense is attributed by the *Detroit Journal* to "the taint of virtual complicity with anarchy, which followed him to the grave. It made weak a man naturally strong. It prevented justice from reaching his case while he lived. But when the righteous verdict is given it will be seen that John P. Altgeld offered much in speech and example that was rejected on insufficient grounds purely out of prejudice."

The *Boston Transcript* grants Mr. Altgeld's "great intellect," but adds that it was this, coupled with his "mischievous teachings," that made him a dangerous man. "It was entirely characteristic of him that he passed away after an impassioned speech in behalf of the Boers."

The *New York Sun* believes that "the cause of extreme radicalism has lost its most powerful leader in this country. Mr. Altgeld was by all means the strongest and most original mind in that political school." The *Journal* describes him as a man who had millions of enemies. "The real Altgeld, though a practical politician, was also a political philosopher with high ideals, who possessed the courage to stand

THE LAUNCHING OF SHIP SUBSIDY.—*Minneapolis Tribune*

LOOKS EASY, BUT OH MY!—*Minneapolis Journal*

by them. This courage made him dangerous, and he was hated with consuming fervor." Altgeld's political career, the *New York Commercial Advertiser* says, met with the fate it deserved. "The example of his career is worth much as a proof that demagogism can not hope for success in this country, even when political power gives it the opportunity."

Congressional Summary

CONGRESS DAY BY DAY

MARCH 10.—Mr. Tillman and Mr. Vest spoke against the shipping subsidy bill in the senate. The bill to classify the rural free delivery service was passed by the house after its opponents had succeeded in radically changing its provisions.

MARCH 11.—In the senate there was a lively debate on the question of popular election of Senators, Mr. Hoar speaking against the proposed amendment to the constitution; the shipping subsidy bill was discussed. A resolution for an investigation of the alleged connection of the sugar trust with Cuban reciprocity was defeated in the house; there was a debate on the war in South Africa, in which Mr. Hitt defended Secretary Hay's course.

MARCH 12.—The senate devoted practically the entire session to the shipping subsidy bill; a few bills were passed, including one providing for the redemp-

tion of Hawaiian silver coins and the substitution therefore of American silver coins. The house continued the debate on the post office appropriation bill.

MARCH 13.—The senate passed a number of unobjectioned bills, and then resumed debate on the shipping subsidy bill; Mr. Berry, of Arkansas, spoke against, and Mr. Perkins, of California, in favor of, the measure. The house again devoted its session to the post office appropriation bill.

MARCH 14.—In the senate Mr. Foraker spoke in support of the shipping subsidy bill, which was opposed by Mr. McLaurin, of Mississippi, and Mr. Harris; in executive session The Hague treaty, relating to the conduct of war, was ratified. The post office appropriation bill was passed by the house.

MARCH 15.—In the senate, Mr. Allison (Rep. Ia.) and Mr. Spooner (Rep. Wis.) expressed dissatisfaction with the shipping subsidy bill as it stands, and suggested a number of amendments; the bill was defended by Senators Hanna (Rep. O.) and Elkins (Rep. W. Va.) and opposed by Senator Teller (Sil. Colo.); arrangements for closing the debate on Monday were made. The legislative session of the house was chiefly devoted to private pension legislation, 229 bills being passed, breaking all records.

GENERAL FUNSTON doesn't remove a vast amount of doubt when he says there is no more war in the Philippines than there is in Kentucky. We continue to ship considerable ammunition to both places.—*Washington Post*.

FOREIGN

The Latest British Mishap in South Africa

LORD METHUEN'S CAPTURE AND THE STATUS OF THE WAR

THE English press is represented by the London correspondents as discussing Lord Methuen's defeat philosophically. It is more sensitive respecting foreign opinion. The extracts printed from the Berlin, Vienna, and Paris journals are not pleasant reading, since they imply contempt for British military skill. American comments are more charitable. The English press, after its usual fashion, enlarges upon the magnitude of the disaster and the brilliancy of De La Rey's tactics. The current military view is that the burghers, being unhampered by supply trains, and having the mastery in the art of rough riding and of the management of cattle, are the best guerillas whom the world has ever known, and that no European army could avoid an occasional defeat and mishap. The effect of Lord Methuen's defeat is admitted to be serious, since it will light up Boer enthusiasm; but military men assert with confidence that hostilities have been restricted to three districts, that De Wet's power is broken, that Botha's forces are kept well under restraint, and that the western Transvaal, where blockhouse lines have not been established, is the only section where serious work remains to be done.

In view of the dispersal of the 1,200 men under Methuen and the preceding defeat by De La Rey of a convoy of 600 British, the *New York Times* thinks Lord Kitchener's September proclamation seems very absurd in the light of actual events. "Here," says the *Times*, "six months after the issue of the proclamation, one Boer commander has, within a few weeks, contrived to rout 1,800 troops. According to any

scale of warfare known among men, this is certainly not bushwhacking or guerrilla warfare, but 'regular operations,' entitled to all the immunities and privileges of war as such. Any attempt to enforce Lord Kitchener's proclamation, by inflicting capital punishment for any crimes not universally recognized as offenses against the laws of war, is almost sure to be resented by means of bloody reprisals. And for this the Boers will not be to blame. They have demonstrated to all the world that the state of facts which that proclamation assumed to exist, and which alone could have justified the issue of it, does not exist; that they are engaged in regular warfare and entitled to all the rights of combatants." Methuen's defeat indicates to the *Chicago Post* that "the Boers are not quite at the end of their resources. When they are capable of routing so large a force of British soldiers, of capturing one of England's most noted generals in the field, and of taking so many prisoners and yet avoiding severe punishment themselves, it were idle to say that they are not prepared to give their enemy still further trouble of a most serious and startling character. They are still unconquered, still led by men who have never learned to spell defeat, still among the bravest of the world's brave men that have fought to the point of annihilation in defense of what they considered their own and their right. The Boers have won all for which they have battled, and suffered and sacrificed, and humanity will be still more severely staggered if, when the end comes, England fails properly to reward such unfaltering devotion to the cause of liberty."

The *Chicago News* thinks "it will be extraordi-

THE FLYING DUTCHMAN.—*New York World*WOULDN'T THAT JAR YOU?—*Phila. North American*

nary if this Boer success against one of the most experienced of British generals does not stir the British people at home to serious self-questioning and further demands for a more competent administration of the war office. The capture of a British general will put fresh heart into the Boers. What assurance can the British public have that the war is nearing its end while reverses like these are possible?" The *Detroit News* grants the brilliancy of the Boer general's exploit, but asks: "What doth it benefit the Boers? The only result of this desperate fighting is a certain number of men killed and wounded and some financial loss, which brings the Boers no nearer their goal and which does not discourage the British side. The war in Africa is one of the saddest pictures imaginable." Of course, says the *Philadelphia Press*, "such a situation can not last forever, but that the Boers, with probably not over 5,000 men in the field, can hold up 245,000 and deliver such stunning blows as that inflicted by De La Rey on Methuen is a crushing indictment of Kitchener's over-vaunted blockhouse system. It divides up his enormous force, spreads it out in a thin line which the Boers can not only pierce but even attack with success. And it is this that makes the disaster to Methuen mean much more than a mere isolated case of British folly and Boer pluck." The *Toronto Globe* defends General Methuen in a long editorial, describing his disaster as of "the normal type, to be expected in such a mode of warfare as that prevailing now. As British columns pass and repass through the country, small parties hang about them, sniping and worrying them on every occasion, watching them closely, and on the alert for any opportunity. The British must, of course, take these risks. They can not subdue the country by moving about in big columns; when they separate into small columns some of these will suffer. The balance of losses, of course, goes heavily against the Boers." The *Washington Post* institutes a vain inquiry into "The Mystery Behind It All." "A compact, thoroughly equipped and organized force is attacked on the march, not surprised in bivouac, and put to utter rout within a few moments. Who ever heard of either a union or a

confederate body of 1,200 well-armed and disciplined men taking to their heels in frenzied panic at the first fire from the enemy? General Methuen's casualties were only about 100 in killed and wounded. The other 1,100 or 1,200 seem to have run away without even trying to make a stand. What is the matter with Kitchener's armies? Nobody can be made to believe—in this country at least—that the individual Englishman is less than a gallant fighter. What, then, can be the explanation of these astounding performances, this indescribable demoralization?"

Germany Britain's Friend

THE SIGNIFICANT STATEMENT OF FOREIGN SECRETARY VON RICHTHOFEN IN THE PRUSSIAN DIET

IN the house of deputies of the Prussian diet last week, Baron Von Richthofen, Prussian foreign secretary, read an answer from the British government allowing the distribution of German gifts to the inmates of the concentration camps in South Africa under the surveillance of the English camp authorities. Baron Von Richthofen declared that the answer was a guarantee of justice in the distribution of the gifts. Baron Von Richthofen then made an important declaration in regard to the relations between Great Britain and Germany. He said that German critics very often viewed England's action in South Africa unjustly. The baron continued: "Our criticism should be more just. England has sacrificed in South Africa many men and large sums of money. The English and German nations are connected by ties of blood, race, and friendship. They are cousins who may again find themselves side by side. If we feel ourselves cousins and kin to England, we will be able the more effectively to help our common cousins in South Africa. Let us not always assume from the very first that everything that happens on the English side is wrong and bad."

In England there is a certain, but not over-eager, readiness to accept Baron Von Richthofen's declarations in a generous spirit. It will require, says the *London Times*, a good many such expressions to re-

move the resentment Germany awakened among a people very slow to harbor it. The paper speculates upon what it calls this remarkable change of tone. It says the clue may perhaps be found in the observation that if Germany shares the susceptibilities of her cousins on this side of the water, she may be able to approach her cousins on the other side of the water, and so perhaps become of some service to her other cousins, the Dutch, and their friends the Boers. The *Times* adds that Prince Henry had various opportunities for learning that America, though pleased to have Germany's friendship, does not wish to enrich herself in that way at the expense of her friendship with Great Britain. Since the English and American cousins stand together, Germany probably considers it time to be cousin of both; but the English people will not forget that it is to America they owe this rather touching *rapprochement*.

The New York *Sun* thinks "Englishmen will rub their eyes in astonishment when they read the friendly and sympathetic speech of Baron Von Richthofen. The baron expressed sympathy for Lord Methuen in his defeat. Truly, this is the era of good feeling among the trading nations. But you can't fight and sell goods simultaneously. So much the better! The world has had a surfeit of war, and it will profit by the lesson that victory may not rest on the side of the heaviest battalions. The magazine rifle is a great civilizer. As to Germany, she is emerging from a period of depression that has shaken her industries to their very foundations. She needs time and opportunity to get them on their feet, extend her export trade, and find employment for her merchant marine, which is growing like the prophet's gourd. When Germany makes friendly overtures to the United States and Great Britain and solicits their good-will, she is in downright earnest." In the opinion of the *Pittsburg Gazette*, "This expression of a high official of Prussia is all the more noticeable because it comes at a time when a portion of the English press is indulging in unkind flings about the American visit of Prince Henry. The fact is, there ought to be a unity of sentiment between Germany and the two English-speaking nations. There are ties among them sufficient to justify the German emperor's recent inclusion of his empire among the Anglo-Saxon peoples, and reasons enough for perpetual peace among the three nations."

What France Has Accomplished in Algeria

AT a dinner given recently by the Paris Algerian club, at which, besides members of the colonial group of the Palais Bourbon, there were present several of the highest officials of the colonial department in active service, M. Révoil, governor-general of Algeria, delivered an address on the work of France in Algeria, in the course of which he said:

Within 70 years of occupation, 40 of which have been years of fighting, we have reached and far exceeded the limits which our guide in antiquity, the leading colonizing and administrative people of history, took four centuries to cover. We have created a trade of 600 millions, constructed more than 3,000 kilometers of railways and more than 120,000 kilometers of roads, opened up 1,500,000 hectares, made a dozen ports, one of which as regards tonnage is the second port in France. We have above all—and this is our real title to glory—within this short and troubled period, amid a resisting and energetic native population already established on the soil, which in peace has doubled in number—we have, I say, installed and definitively acclimatized more

than 600,000 souls, of whom nearly 400,000 Frenchmen have received the guardianship of our genius and something of our destinies. I declare that the history of European colonization offers us during the past century no more comforting example of national energy and vitality, and with feelings of pride and also of pain I declare that there is no heavier or more engrossing task than to watch over the accomplishment of this magnificent work.

A London paper finds in these utterances "a happy reply to those who affirm that the sterilizing latitude of Algeria paralyzes the efforts of those who endeavor to develop the agricultural and industrial prosperity of that country."

The Railway Situation in Italy

London Times. Excerpt

FOR the second time in the course of four years, all Italian railway servants liable to military service have been placed under martial law. The exact number of men affected by this measure is not certainly known, but it is probably about 24,000. It includes all station-masters, pointsmen, stokers, engine drivers, guards, and other employees who, not being exempt from military service for family reasons, are still under forty years of age. In addition to their ordinary pay the "militarized" servants will receive the regular army pay according to their various ranks.

For several months past there has been a growing agitation among the railway men on the principal lines for an increase of pay, better conditions of work, and a fixed bureaucratic position with regular scales of pay and promotion. Italian railways belong to the state, but are worked by private companies. The government has, consequently, a right to intervene in important questions, since it is stipulated in the railway conventions that in case the companies should be unable to guarantee the continuance of the railway service, the control of the lines should revert to the state. In the month of January the railway men presented an ultimatum to the companies, drawing attention to their demands and reserving liberty of action in case the demands should not be acceded to. Before the expiration of the ultimatum on February 10, the companies announced their readiness to add some £68,000 a year to their pay-roll, to improve the terms of service, and to study the compilation of a bureaucratic plan. The resignation of Count Giusso, late minister of public works, who had conducted most of the negotiations between the government and the companies, seems, however, to have persuaded the railway men to seize a golden opportunity and to strike while the portfolio was still vacant. On February 22 and 23 news reached the government that a general railway strike would be proclaimed on February 25. At a cabinet council on February 23 it was decided to promulgate the decree of militarization previously prepared and to call out the 1878 class of the reserves, some 55,000 men. The minister of war assumed control of the telegraph system, stopped all private telegrams referring to the situation, and the decree of militarization, together with the order for the recall of the reserves, was placarded all over Italy. There is no doubt that the tacit encouragement given by the government to hundreds of private strikes has fostered the agitation among the railway men. The alliance between the Marquis di Rudini and the late Radical leader, Cavallotti, led to the disturbances of May, 1898; the alliance between the present Zanardelli-Giolitti cabinet and the Extreme Left has produced the present situation.

SOCIOLOGICAL

Pensions for Street Railway Men

THE SYSTEM ADOPTED BY THE METROPOLITAN COMPANY

THERE has been posted in the twenty-six barns, stables, and power-houses of the Metropolitan street railway company throughout Manhattan a notice from President Vreeland announcing the establishment of a pension system for the superannuated employees of the concern, to go into effect on July 1. This is said to be the first pension system ever established for street railway employees in this country. The avowed object of the Metropolitan company in establishing this department is "to preserve the future welfare of aged and infirm employees and to recognize efficient and loyal service." The system provides for all employees of the company whose annual maximum wages have not exceeded \$1,200. It makes seventy years the age for compulsory retirement and provides for the pensioning of those between sixty-five and sixty-nine who may become physically disqualified for service. The pension allowance to retired employees shall be as follows: For thirty-five years or more of continuous service, forty per cent of the average annual wages for the ten previous years; for thirty years of continuous service, thirty per cent on the same basis; and for twenty-five years of continuous service, twenty-five per cent. The fund from which these payments are to be made will be appropriated each year by the company, and employees will not be required to contribute to it. The Metropolitan system comprises more than twenty constituent street railways, and it employs about 15,000 men. The greater part of these will come under the provisions of the new pension plan, and through them President Vreeland computes that directly and indirectly the scheme will affect nearly 100,000 persons in the city of New York.

The Chicago *Evening Post* notes that the adoption of this commendable plan is the direct and natural outgrowth of new ideas in management that were impartially applied to the combined systems by the Metropolitan company. "The first of these was the application of merit in deciding on the applications of men for employment. The second the development of a system of discipline, at once rigid and equal. The third the encouragement of means for securing to the workmen social amusement and mutual benefits in case of sickness, etc. These naturally raised the standard of efficiency and character among the company's employees and thus insured permanency of position. Logically and justly, it followed that provision should be made for those who, by meeting all the demands of their employers, had given a lifetime of faithful service and thus unfitted themselves for other employment when incapacitated by age for the positions they had held so long. It would be manifestly unjust and cruel to set such men adrift at a time when new employment is not readily learned and in an age when advancing years are generally held to be a bar to usefulness. Fortunately, the Metropolitan company took a humane and proper view of this phase of the question in establishing its pension department. It was also liberal in not requiring the employees to contribute a percentage of their wages to the pension fund, and it has set an excellent example for other street railway corporations."

The New York *Tribune* says: "This is the first attempt in this country to pension street railway employees, give dignity to their work, and attach them for a lifetime to that service, and it deserves the highest commendation. It is to be noted that the retirement pension will be paid by the company without any contributions from the employees. They maintain, at their own expense, reading-rooms, help one another in sickness, and pay benefits in case of death, so through their years of active work their own manhood and independence are allowed to play their full part in the development of character." The Baltimore *Sun* says: "It is good business and, at the same time, humane. Nothing is sadder than to see a faithful employee discharged, after many years, to perish from want." The Baltimore *Herald* is of the opinion that the prospect of provision against penury in advanced age will undoubtedly be a potent factor in promoting loyalty and efficiency.

A Patagonian Utopia

SHATTERED ILLUSIONS OF THE WELSH COLONISTS

THE Welsh settlers who, thirty-five years ago, sought to establish a Utopia in Patagonia, are now seeking a new heaven and a new earth among men of their own race. They have asked Mr. Chamberlain to assist in transplanting the colony to the Dominion of Canada. The story of their exile, misfortune, and fortitude, as told by Mr. W. J. Griffith, the Canadian government agent for Wales, and Mr. W. S. Rees, who accompanied him in an official visit to the Welsh settlement, is outlined as follows by Mr. I. N. Ford, in the New York *Tribune*:

The Welsh colony in Patagonia was a ministerial enterprise based on serious miscalculations. Professor Michael Jones, of Bala, and the Rev. Lewis Jones, of Festiniog, were the leaders, who advocated the project about thirty-five years ago, when the mechanics, artisans, and small farmers of Wales were restless and discontented. They sank their private fortunes and misdirected the energies of a credulous company of Welsh followers through carelessness in selecting a barren desert as a site for an agricultural Utopia, where land would be free from taxation and the community absolutely self-governed. When the Welsh emigrants arrived off the coast of Patagonia they found that they had been grossly deceived. A sterile, rainless tract, without trees or rich soil, had been chosen as their farming center. If they were free from church rates and local taxes, and able to live by themselves in democratic simplicity, with immense estates of their own, they were also forced back upon the desert, compelled to dig caves for temporary refuges, and exposed to terrible hardships in wresting a precarious living from one of the most forsaken and unpromising regions on earth. Their only resource was what Mr. Griffith happily describes "as a certain blend of optimism and tenacity, which is, perhaps, the exclusive possession of the Welsh-

man." In their hopeless plight they kept plodding away and making the best of adverse conditions.

At the outset they lived apart from the South American races, and were not taxed. Their Utopia, such as it was, was a little, self-governed principality of their own. When their affairs began to improve, owing to their own energy in constructing irrigation works, the Argentine authorities imposed taxes upon the farms, appointed governors and officials to keep the colonists in order, opened schools where Welsh children could learn Spanish, and enforced the requirements of compulsory military service, with Sunday as the regular day for parade and drill. The Welsh settlers were not allowed to regulate in their own way the public business of the little valley which they had reclaimed from sterility. The Argentine gauchos insisted upon governing them in accordance with Spanish-American ideas, and upon exposing them to the hardships of military service. There were frequent conflicts of authority and fierce agitations against Argentine methods of government.

The statements made by Mr. Griffith and Mr. Rees in the interview at the colonial office revealed the eagerness of these Welsh refugees to emigrate to Canada. At least five hundred of the settlers in Chubut had pledged themselves to go to Canada, if transportation could be provided by the imperial government, but the colonial secretary could not establish the precedent of assisting self-governing commonwealths from the imperial treasury. The Welsh refugees in Patagonia consequently will have to remain where they are, and take the risks of recurring floods and the certainties of Argentine conscription unless the dominion government ekes out private subscription with a substantial money grant, and undertakes to transport the colony from remote Patagonia to the northwest range of untilled wheat lands.

Increase of Tramping in the United States

TRAMP REFORMATORIES AS A REMEDY

PROFESSOR JOHN J. MCCOOK, in the *Outlook*, estimates that there are now 56,896 tramps in the United States, a gain since 1870 of 235.4 per cent—three and four-fifths times that of population. He says that these men cost the country at least \$11,000,000 a year, and produce nothing. In dealing with the tramp problem, he asserts that we have scarcely got beyond an impatient "Move on"; that our tramp laws in the several states have been so fierce and panicky that after a year or two they have everywhere ceased to be enforced. Professor McCook suggests that, since reformatories are effective in seventy-five out of every hundred cases of ordinary felons, there is no reason why they should not be tried upon at least the younger among our tramp population. He offers an authentic report of one such institution, which exhibits the following results in 206 cases:

- 24 have kept straight for 5 years and over.
- 22 have kept straight from 4½ to 5 years.
- 15 have kept straight from 4 to 4½ years.
- 22 have kept straight from 3½ to 4 years.
- 26 have kept straight from 3 to 3½ years.
- 18 have kept straight from 2½ to 3 years.
- 21 have kept straight from 2 to 2½ years.
- 26 have kept straight from 1½ to 2 years.
- 32 have kept straight from 1 to 1½ years.

"Here are tangible results," says Professor McCook, "and it is only necessary to multiply 206 by \$200, the

ascertained annual cost of these people for arrest and maintenance, to see how important they are in dollars and cents. A number of these men have found employment in the place and some of them have been traced by me with the following result: One establishment has had seven for permanent places as salesmen, porters, clerks, etc.—four of whom were what I should call downright 'bums'—and six more for temporary jobs. 'None have ever disappointed me,' the proprietor says; and he always sends there when he wants a man. Another establishment has found them part good and part bad. A third has had a number, and none of them have gone back. On the other hand, two other employers have tried in all from eighteen to twenty-seven of them, and found them thoroughly unsatisfactory. This testimony is, on the whole, corroborative of the modest claims of the institution—much failure, much uncertainty, but definite success sufficient to pay for the effort and cost."

Class Distinctions Among the Poor

London Spectator. Condensed for PUBLIC OPINION

SOME sort of class feeling is, we believe, inherent in human nature. People often speak as though these demarcations in England existed only among the middle and upper classes, but such is not the fact. Below the middle classes the dividing lines of society are held to with rigor. Looked at from the top, they often appear arbitrary and unreasonable, just as from the bottom our distinctions must appear to be without foundation. The tacit social laws are only fully comprehended by those who live under them, at either end of the scale. Those who have had to do with the ordering of social clubs among the roughest factory girls tell us that certain persons who desire to join are unanimously black-balled, upon social grounds, by the existing members. It is hopeless to inquire the inner meaning of this exclusiveness. The questioner is merely answered that the persons concerned are "no class," and will probably be obliged to yield to popular feeling or to break up the club. To West End eyes, the girls received and rejected are equally dirty and rough, just as to the East End observer all ladies are equally genteel and clean.

The position of the woman of a family is greatly affected by whether or no she has help from the outside. It means a little leisure spared from the necessities of life, and bestowed upon its amenities. It means that the wife and mother rules as well as serves in her little domain. That one woman should cook and clean and wash and mind three or four children, one of whom is probably quite helpless, necessitates, or seems as if it must necessitate, that she should be a drudge. How it is that such is not always the case is another of those secrets which can not be conveyed from class to class. Below the servant-keeping class comes the one whose married women do no work out of the house, with an aristocratic subdivision for those who "put their washing out." A great deal more opportunity for exclusiveness is implied in this abstinence from hard labor than at first appears. All the dwellers in one house, or in one block of flats, do not necessarily belong to one stratum of society, and unless they meet to wash in a common backyard, they need hardly know one another. Besides this, to hang one's clothes on a line in front of one's neighbors' eyes is to run the risk of all sorts of offensive criticism, and is a fruitful source of "unpleasantness." A

frequent subject of discontent in almshouses is the impossibility which exists of maintaining social differences in the leveling atmosphere of a charitable institution.

On the upper rungs of the social ladder, we should say that those social distinctions which can be defined at all rest upon birth, money, and brains. Among the poor, they rest upon money and manners, and the latter, alas! are, below a certain wage, woefully dependent upon the former. Good wages are almost essential to the maintenance of a fair degree of civilization, especially in cities. "Soap and water are cheap" is a common saying; but a high standard of cleanliness is dear to uphold. It means time, work, and a certain amount of new clothes, and a mind at leisure to think of something besides the actual feeding of the family. Again, a high standard in the matter of decency necessitates space, and space in London is the most expensive of all commodities. Nevertheless, money is not an absolute criterion of social position. Character—in so far as it is reflected in propriety of behavior—counts for a great deal; a rowdy family sinks directly, though it may have money to waste, and a respectable widow may retain her superiority in the face of grinding poverty. The acme of good manners—the very badge of gentility—is to be "quiet," never to let the sound of mirth, quar-

reling, or lamentation proceed out of your dwelling. This sign of social distinction is appreciated down to the very bottom.

Various Topics

TO ABOLISH MARRIAGE BUREAU: Borough President Cantor, of New York, has announced that he will do away with the "Marriage Bureau," a private speculation conducted in the basement of the city hall in the interests of the aldermen. This "bureau" has been responsible for much of the crime in the city and the borough president will try to have the ordinance repealed. Many young girls have been married by the aldermen to the notorious "cadets" through this means and the aldermen receive from \$5 to \$15 for each ceremony. President Cantor has been largely commended and especially from societies for prevention of crime.—*Municipal Journal and Engineer*.

THE NEW DIVORCE BILL IN ITALY is based on the claim that the lack of a law for divorce is an injustice to the poorer classes. The wealthy who may desire divorce are able to take up their residence abroad long enough to become naturalized, and then, having obtained release under the laws of a foreign state, can return to Italy and induce the Italian courts to sanction foreign verdicts. This has been done often, but manifestly is an expedient open only to the rich. Religious people have another way out of the difficulty, always provided they are wealthy. The church does not sanction divorce, but it is always possible to obtain the annulment of a marriage. But only the rich can pay the heavy fees demanded.

LETTERS & ART

Is the Royal Academy a "Fool's Hospital"?

A STUDY OF RECENT STUDENT COMPETITIONS

WRITER in the current *Studio* says that James Northcote's designation of the Royal academy as a "Fool's Hospital" retains to this day an air of half-truth. Northcote himself was a distinguished academician one hundred years ago, and his main grievance against the institution of which he was a member was that "its schools produced a commonplace manner, and that its social influence was so strong as to be harmful to its artistic purpose, so that many who hankered after membership found time-serving of greater use to them than talent." The *Studio* critic says that the recent student competitions show that the academy is still what it was in Northcote's time—a backward institution, "having a strong tendency, if not toward its own ruin, at least toward the weakening of its public utility; that is to say, its utility as a national pioneer in all matters affecting the prosperity of the arts in their relation to the country's needs."

This writer directs his severe criticism of the competition not at the individual students, but at a system of training which "fails to get in touch with the strong adventurous qualities of the British character, being far more favorable to the gentle and imitative talents of girls than it is to male abilities. If British art students have a right to err in any one way more than another, it is not that way which leads to a boudoir-like elegance or sweetness; and yet in the recent competitions most of the erring was of this effeminate kind. The manner of drawing, considered as a whole, was round and feeble in its constructive planes, and the style of painting was often either timid and lax, especially in its suggestions of anatomy, or else so sweetly accomplished as to be unstudent-

like. Then, again, there was but little evidence of bold, masculine invention. Here and there a student broke away from the fetters of a tame routine, and showed that he was glad and proud to enjoy his strength; but the result of this salutary holiday-making was not always artistic, being more remarkable for a sort of scenic bravado than for dramatic fervor and vigor."

The competition for historical painting is cited as an example of the bad results that may be expected from such an unfortunate theme as "Saul and the Witch of Endor." "As Saul visits the witch by night, it is a subject that brings into the difficulties of composition an artificial lighting. Apart from this, too, the story in the Bible is told with such masterly art, with such graphic brevity, that a painter's realization of its literary realism is apt to seem like a travesty charged with superfluous detail and theatrical emotion. The students, overburdened by the difficulties of their subject, do not rise above a very moderate level of attainment. Even Mr. George Murray, the winner of the gold medal and the traveling scholarship, is not an exception, though his picture has many good points. The witch, brooding before her fire, is ably studied, but she comes to us all from our childhood's idea of what a witch should be in appearance, so that she seems out of keeping with the Witch of Endor's womanly kindness to Saul at the end of their adventure with the spirit of Samuel. Mr. Fred Appleyard, on the other hand, struck by that kindness, does honor to her womanliness by making the witch young and pleasing, but this pretty touch of chivalry does not save the rest of the picture from being ineffectual as a dramatic composition."

This writer admits that from time to time some

By George Murray

By Fred Appleyard

SAUL AND THE WITCH OF ENDOR

virile new blood is forced into the old corporate system of the academy; but, he asks, can anyone say with justice that the new blood has the effect of giving a youthful vigor and alertness to the whole governing policy of the institution? If so, why is it that the academy is still content to dawdle behind the times? Not only does it treat with contempt the renewed interest taken in decorative handicraft, but with equal short-sightedness it still persists in giving undue encouragement to one art, the art of painting easel pictures, as though such pictures were not already so numerous as to exceed by a thousandfold the people who have surplus money enough to invest in modern paintings. It is not kindness, but a foolishness having tragic consequences, to train large numbers of boys and girls for a profession which not only unfits them for other occupations, but in which not one in fifty can hope to earn even a scanty livelihood. Painting, indeed, having ceased to be a general need of life, ought to be made like the edelweiss—an object of love placed far beyond the reach of most passers-by, and therefore most attractive to those whom nature has best fitted for the perils of the slow ascent to its high solitudes."

An American Invasion of the American Stage

Harper's Weekly, New York. Condensed for PUBLIC OPINION

NO one can reasonably complain that the various phases of American life which are, or should be, interesting to the multitude have been neglected by the playwrights who have provided this season's entertainment. Indeed, in this respect the season has been exceptionally notable. In past years it has been a notorious shortcoming of the American stage that it has seemed to be devoted to the exploitation of complications, scenes, and episodes, foreign to American life, in plays written, naturally, by foreign authors, French and English chiefly, and for the most part played by imported actors. Latterly, however, there has been a decided reaction in favor of the domestic article, and since last September, when the present dramatic year began, we have had a succession of very excellent productions which bear testimony to an awakening on the part of playwrights and managers which is most propitious; we have had ten new, and one left over, American plays, discussing themes of American interest, at our metropolitan

theaters. Two of these were pseudo-historical, "Alice of Old Vincennes" and "D'Arcy of the Guards"; three of them, "Eben Holden," "New England Folks," and "Colorado," may be classed as color plays; four were of the social type, "The Way of the World," "The Unwelcome Mrs. Hatch," "The Girl and the Judge," and "Captain Jinks"—the last named having, through the attractions of the star, Miss Barrymore, survived its first season; and one of them a character sketch, "The Hon. John Grigsby," which is historical, social, and atmospheric all rolled into one. With two exceptions, these plays as produced were written by American authors, and even the exceptions may count in favor of native talent, since they were dramatizations of already successful American books. Moreover, the actors, whose talents these eleven plays were chiefly designed to display, were American-born, except in the case of Mr. Henry Miller, the star in "D'Arcy of the Guards."

From all of these facts it becomes evident, then, that the American stage is at last being invaded by American dramatic forces: theme, actor, playwright—all made in America, not in Germany, England, France, or Scandinavia; and as a consequence the outlook for a future of healthful and vigorous dramatic activity of native cast is gratifyingly bright. The outlook for plays which shall be normal and elevating and instructive is equally bright, for, with one or two exceptions, wherein the exotic tendency to bait unfortunate or impossible women, and to exploit a cynical and glib society which fondly thinks of itself, because of its notoriety, bad manners, and inherited wealth, as the best we have, has proven too strong for the playwright to resist, these American plays have had inspirational qualities; have presented for our consideration types of a sturdy and high-minded citizenship; have depicted for our delectation methods of life to be found in widely separated American communities, and without bathos have shown us the sweetness, the truth, the humor, the virility, and the little weaknesses of existence in the new world.

It is a curious measure of public taste as it exists today that the play which among these is intrinsically the best, the strongest dramatically, the most convincing, and in many ways the most notably acted, has enjoyed the shortest run in New York. This drama to which we unhesitatingly accord such high praise is "The Hon. John Grigsby," presented at the Manhattan theater, for the all too brief period of

three weeks, by Mr. Frank Keenan. It is a sane, sound picture of American life during a particularly interesting period of our history, and while in the leading character, John Grigsby, a Sangamon county, Illinois, lawyer, we have not an avowed study of Abraham Lincoln in his early professional struggles, there is enough in the detail of the sketch to suggest that the author of the play, Mr. Charles Klein, had studied with much care the Lincoln type. To the appetite that is surfeited with the horrors of Campbellitis and Belascomania, with the boisterousness and unrest of the Drama of Noise, and to which the struts and poses and ridiculous sword-play of the red, white, and Bellevue historical play are becoming wearisome comicalities, "The Hon. John Grigsby" will come as refreshingly as a breath of fresh air to the dwellers in charnel-houses and swamps.

English and French Fiction Compared

A WRITER in the London *Academy* compares English and French fiction to the disadvantage of the former. He confines himself to the nineteenth century, and selects twelve novels as the basis of comparison: "The Chartreuse of Parma," by Beyle; "The Two Young Brides," Balzac; "The Black Tulip," Dumas *pere*; "Mauprat," George Sand; "Carmen" and "Colomba," Merimée; "Notre Dame," Hugo; "The Romance of a Poor Young Man," Feuillet; "The Lady of the Camellias," Dumas *fils*; "Madame Bovary," Flaubert; "Fromont and Risler," Daudet; "Renée Mauperin," J. and E. de Goncourt; "Une Vie," de Maupassant. "The sight of this glorious panorama of French fiction," exclaims this writer, "naturally induces the question: Can England match it?" He answers with assurance: "England can not. She can not show twelve novels by twelve dead authors which, in variety and intensity of power and beauty, might hold their own against twelve such French novels. For steady, unintermitted, various brilliancy French literature has been unique for centuries, and in this respect it easily maintained its superiority during the nineteenth. We have been forced to this conclusion by the logic of figures and schedules, which surpasses that of adjectives and rhapsodies." The writer then presents a chart of nineteenth century fiction, which shows seven English authors with thirty works, and thirteen French authors with thirty-eight works. On the English side we have the names of Jane Austen, Scott, Dickens, Thackeray, Charlotte Brontë, George Eliot, and Stevenson. On the French side we have the twelve names cited above, with the addition of Madame de Staël. The chart excludes living novelists, and it is meant to exclude all novelists not absolutely in the first class. Thus, on the English side, Edgeworth, Ferrier, Galt, Lover, Lytton, Mitford, Peacock, Reade, Marryat, Gaskell, Trollope, Ainsworth, Borrow, Kingsley, and Disraeli are intentionally omitted; and on the French side, Chateaubriand, Constant, Sue, Murger, About, Sandeau, Feuillet, de l'Isle Adam, and others. Only the finest books of each author are admitted, and in no case more than seven; there are seven of Scott and seven of Balzac, six of Dickens, and five of Dumas.

The Providence *Journal* says that questions in literature can not be settled by such rough-and-ready methods. "Twelve novels in one language might be supreme in their class, and twelve novels in another

language might be equally supreme in a far different class. The first thing to be determined in an inquiry of the kind is the purpose of the novel and the standard to be applied to it. Art has many forms, and the artist is entitled to the choice of his own medium. Balzac, for example, is one of the sternest of realists; his figures are minutely drawn, yet they stand out boldly on the scene; and their creator regards them with that impersonal aloofness which some critics would have us believe is the highest genius. Thackeray drew his world quite as accurately, and his characters are certainly no less vivid; but his attitude toward them gives them a place in our affections, and thus a vivid human interest, which Balzac's characters do not have. If the artist is great by what he accomplishes, therefore, then the assumed superiority of Balzac's method must yield to the obvious superiority of Thackeray's results. If we are to make a list of English novelists to oppose to the list of French novelists, Thackeray, then may be held to overbalance Balzac. It might also be argued that Dickens, inferior as he is in art, is a greater genius than Daudet, who has often been compared with him. Scott might well hold his own against Dumas and Hugo together, who were both in a certain sense his imitators. George Sand is quite as certainly the superior of George Eliot. The great writers are to be judged by themselves and not by others. To all such lists the opinion of the lamented Mr. Bunsby may best apply."

The Bend of the Road

BY GRACE DENIO LITCHFIELD, in the *Century*

Oh, that bend of the road, how it baffles, yet beckons!
What lies there beyond—less or more than heart reckons?
What ends, what begins, there where sight fails to follow?
Does the road climb to heaven, or dip to the hollow?
Oh, what glory of greenness, what lights interlacing,
What softness of shadow, what bounty of spacing,
